LITERATURE

Law and Opinion in England. By A. V. Dicey. (Macmillan & Co.)

IN the field which Prof. Dicey has chosen for himself he has no rival. The elucidation of the legal structure of English civilization by acute analysis of contemporary circumstances, combined with a wide power of generalization and knowledge of the relevant historical facts, makes his books unlike those of any other writer. More of a philosopher than Sir William Anson, less, far less, of an historian than Prof. Maitland, Prof. Dicey does what the latter does only for a distant, and the former only in a very limited field. He lays bare to the general reader the dominating influences, intellectual and moral, which characterize the general body of law-making or are operating to change it. The spirit of the constitution and its relation to the English temperament are the real subject of what probably will remain his greatest book. In the same way this volume, which is not, except very incidentally, concerned with constitutional questions, affords in a small compass invaluable aid to all who are interested in the inner significance of the last seventy years of English civilization. It is not professedly a history of the dominating social and political theories of the time; nor is it merely an account of the general trend of legislative development; although on both these topics more illuminating essays have hardly been written than Prof. Dicey's sixth and seventh chapters. But the professor's objects are those neither of the historian of pure law nor of mere thought. What he seeks to do is to display the constant relation between legislative action and the currents of public opinion; and to show that the ebb and flow of individualism, even the hesitations and confusions of the public mind, tend to find expression in the statute book.

It is in this recognition of the change of general opinion, and in the illustrations he offers of it, that lies the originality of the book. Prof. Dicey meets the suggestion that the legislative development of the past century means simply the progress of democracy by pointing out that this rests upon the absurd assumption that democratic opinion is constant. He shows how it differs in different countries—is, in fact, as distinct as national character—and points out that democratic feeling in one set of conditions may be simply conservative, in another strongly individualistic, in another collectivist. This, of course, is true of all forms of purely legal democracy; but it might be argued that the fundamental doctrine of pure democracy being that of equality, it is likely in the long run to be hostile to individuality, and even to property. As Acton said: "The doctrine of equality must, in the end, destroy both liberty and religion." This, however, is a theoretic point, and there is no doubt that in practice a universal, or nearly universal, suffrage is compatible with any and every view of the ideal of legislative activity.

Mr. Dicey then goes on to divide the dominant forces of public opinion in the nineteenth century into three—those of optimism or quiescence, Benthamite liberalism or individualism, and collectivism or belief in State action. The greater part of the book is concerned with the latter two doctrines, and their mutual relations and reactions upon Parliament. Mr. Dicey is very careful to avoid the "compartment" theory of history, and points out that at no time is any current of opinion more than predominant; it is never exclusive in influence; indeed, very often when its power is at its height its foundations have been already undermined by some opposing doctrine. True throughout the history of opinion, this statement is especially true of the relations between individualistic and collectivist sentiment in this country. Further, it is wisely declared that actual legislation, framed, as a rule, by middle-aged men, reflects rather the opinion of their youth than contemporary feeling, while judge-made law is often that not of yesterday, "but of the day before yesterday," owing to the influences which develope the legal mind.

It is clear that Prof. Dicey's sympathies are very largely with Benthamite individualism, although his criticism of the defects of the philosophic Radicals is trenchant and acute. He points out how very middle-class was the democratic fervour of James Mill, how hopelessly at sea he was in regard to the influence of religion, and how the whole body of individualists hardly even asked themselves the difficult questions involved in the relation of minor associations to both general and individual interests. In regard to the Alien Immigration Bill, he says

"It is impossible for any candid observer to conceal from himself that the Bill harmonizes with the wish to restrain any form of competition which may come into conflict with the immediate interest of a body of English wage-earners";

and in this and other passages displays a strong dislike of all forms of Protection. His account of the growth of collectivism is interesting; but more, surely, might have been said of the influence of Ruskin and even Matthew Arnold. Nothing is more significant of the changed *ἦθος* of educated men than the tone of Matthew Arnold, writing as a lover of education, in regard to State intervention.

The most valuable chapter, however, in the book, and the most original, is that in which Mr. Dicey estimates the debt of collectivism to Benthamism. He points out that the modern believer in State action owes far more than he is willing to admit to his despised predecessors of *doctrinaire bourgeoisie*. He says, and says truly, that they owe to Bentham a legislative dogma, the principle of utility, dubbed "dangerous" in the eighteenth century, a legislative instrument, parliamentary sovereignty, without which *laissez faire* could never have had its heyday; and a legislative tendency, the improvement and extension of the mechanism of government. He points out that the belief in *laissez faire* had only to give way before desire for governmental action for all these assets to be used in a very different way from that contemplated by Bentham and his disciples, and he concludes the chapter with some remarks universally true in the history of ideas:—

"The effect actually produced by a system of thought does not depend on the intention of its originators; ideas which have once obtained general acceptance work out their own logical result under the control mainly of events. Somewhere between 1868 and 1900 three changes took place which brought into prominence the authoritative side of Benthamite liberalism. Faith in *laissez faire* suffered an eclipse; hence the principle of utility became an argument in favour not of individual freedom, but of the absolutism of the State. Parliament under the progress of democracy became the representative, not of the middle classes, but of the whole body of householders; parliamentary sovereignty, therefore, came to mean, in the last resort, the unrestricted power of the wage-earners. English administrative mechanism was reformed and strengthened. The machinery was thus provided for the practical extension of the activity of the State.....Benthamites, it was thus seen, had forged the arms most needed by Socialists."

This process is analogous to that by which a "plebiscitory republic" may come to mean an imperial autocracy. One further point is to be noted. Prof. Dicey rightly refuses to treat the relations of public opinion and law as unilateral; he points out that law by crystallizing often intensifies public opinion, and gives positive illustrations. He has also an exceedingly valuable chapter on judge-made law, in which he shows that the courts no more than Parliament are exempt from the all-pervading influence of opinion. In a final lecture the professor attributes the decay of Benthamism to three main causes—to the general disintegration of beliefs, which weakens the absoluteness of individualism, even where no other social faith is substituted; to the apotheosis of sentiment or instinct, which is contemptuous of the narrower utilitarianism, and appeals to strongly ideal ends, like nationality or

empire; and, lastly, to the growth of the historic sense, which is essentially hostile to the Benthamite habit of digging up all institutions by their roots, and reinstates "prejudice" in Burke's sense, and treats social development organically rather than rationalistically. It is, indeed, another world, as Luther said, in which the present generation lives. We have lost the optimism, and also the narrowness, of our grandfathers. The facile faith in the "cash nexus" to reform the ills of society has disappeared, and we are beginning to learn that the lasting elements of national life are spiritual. We are not so contemptuous of one another, we have less belief in ourselves (unless we are confessed Socialists) than of old. As Mr. Dicey says, the collective management of business, companies, and, still more, trusts, gives the *coup de grâce* to the old individualism on its chosen ground. The world, at least, seems ready for some changes. Are we coming back to an organization of life on a model similar to the mediæval, in which reasonable wages and corporate control formed the basis of the economic structure, and spiritual forces were admitted into the general relations of society? In other words, Western ideals seem inadequate for human life. Are we once more to learn of the Easterns?

Demeter: a Mask. By Robert Bridges. (Oxford, Clarendon Press.)

In 'Demeter,' which was written for performance by the ladies of Somerville College in June, 1904, Mr. Bridges returns to the form of his early "mask in the Greek manner," one of the best of his dramatic poems, 'Prometheus the Firegiver.' 'Demeter' is full of grave beauty—the beauty of graceful thought, of sober meditation. It brings the Greek myth before us with respect for its essential qualities as a Greek myth; and if it does something to interpret that myth to us, it adds nothing, it spoils nothing. When Tennyson recast Malory for the early Victorian public, he deliberately altered the outlines of the design; he did not merely fill them up according to his own taste. But Mr. Bridges has given to the learned ladies of Somerville College no modern woman, learned like themselves, but a Greek maiden who has been in the shades, "and keeps their fallen day about her," and a Greek mother who has learnt a mysterious wisdom through sorrow. The Oceanides are bright, unthoughtful creatures, and except for their chatter on pp. 33, 34, speak in blithe song. The main part of the play is written in a very simple, very easy and adequate blank verse, which is as plain as prose, and lacking in none of the formal qualities of poetry. There are several choruses in Greek metres, and there is some lyrical verse spoken in dialogue.

Perhaps the most beautiful passage in the mask is the speech of Persephone gathering flowers. It begins:—

> Thou tiny flower!
> Art thou not wise?
> Who taught thee else, thou frail anemone,
> Thy starry notion, thy wind-wavering motion,
> Thy complex of chaste beauty, unimagin'd
> Till thou art seen?—And how so wisely, thou,
> Indifferent to the number of thy rays,
> While others are so strict? This six-leaved tulip,
> —He would not risk a seventh for all his worth,—
> He thought to attain unique magnificence
> By sheer simplicity—a pointed oval
> Bare on a stalk erect: and yet, grown old
> He will his young idea quite abandon,
> In his disheveld fury wantoning
> Beyond belief.....Some are four-leaved: this poppy
> Will have but four. He, like a hurried thief,
> Stuffs his rich silks into too small a bag—
> I think he watch'd a summer-butterfly
> Creep out all crumpled from his winter-case,
> Trusting the sun to smooth his tender tissue
> And sleek the velvet of his painted wings:—
> And so doth he.

This is grave and dainty verse, fit for Persephone, who speaks of flowers with a sisterly intimacy. Yet is there not, even here, that lack of vital heat which we find almost everywhere in Mr. Bridges's dramatic verse? We have only to think of any single line of Perdita among the flowers to see what ecstasy can come into poetry at any flicker of vital heat. Persephone repeats poetry with charm and naturalness; but on the lips of Perdita poetry is born, as if no lips had ever spoken it before.

It is in his lyrical works that Mr. Bridges is at his best, and many of his 'Shorter Poems' are among the most beautiful songs that have been written in our time. They are best when they are simplest, both in substance and in form, and it is not without regret that we see Mr. Bridges more and more intent on various kinds of elaboration, metrical and other. He has written admirably on prosody, and has done much by his own work to loosen English metre, to make it more flexible, less sing-song, more definitely expressive. But of late he has been experimenting in new directions. Not content with English metre as English metre, he has tried to bring new cadences into it out of Greek, forcing himself, with a difficulty which he admits, to "measure the length of syllables by ear." There are three choruses in this mask written in classical metres; each is pleasant as a lyric, and interesting as an experiment; but is it not to some extent an argument against the wisdom of the experiment when we find in this work scarcely a suggestion of the ripe and exquisite quality of the best of the 'Shorter Poems'? An experiment in classical metres is but poor compensation for an achievement in English ones.

Mr. Bridges has several pages of notes in defence of his practice of "occasionally using certain Greek accents to determine the pronunciation of certain syllables in the verse"; but it does not seem to us that he succeeds in justifying a practice which, in our opinion, is either needless because the verse is clear without it, or worse than needless because the verse, not being clear without it, cannot become good through its help. Poe has rightly said that "it is the business of the poet so to construct his line that the intention *must* be caught *at once*"; and it has hitherto been a part of Mr. Bridges's own theory

> "that there shall never be a conventional or imaginary stress—that is, *the verse cannot make the stress, because it is the stress that makes the verse.*"

When, in the pages before us, he prints:—

> I claimed from Zeus that of the fair immortals
> One should be given to mè to grace my throne,

his accent is needless, because no one who read the lines for their sense could help laying the emphasis on "me"; and the same is true of the only slightly more difficult line below it:—

> And of mere justice thêre had granted me
> Whome'er I chose.

It is not accurate to say that the circumflex accent on "there"

> "distinguishes the word from the unaccented *there* which often occurs before *had*: as in such a sentence as this, *Without the accent there had been an ambiguity.*"

No such distinction is necessary, because it is obvious, even at a first glance, that a sentence in which the "had" is governed by a previous "he" could not carry the sense, and therefore could not carry the sound, of a sentence in which "there had" might be written, as Mr. Bridges says, "thér'ad." But in the next instance of accentuation the line

> Poseidon's chariot whên he rebukes the waves,

which occurs in a chorus written in the metre of

> Mæcenas atavis edite regibus,

has an accent on "when," in order to show that "he" is "enclitic or proclitic, and consequently a short syllable"; and Mr. Bridges says that if this were not shown it would be quite as natural for some readers to stress the verse with the accent on "he," making it a long syllable. But again, how could any reader, reading for the sense, emphasize the word "he" in such a sentence as that in which the line occurs? No one, reading for the sense, could; but it is one of the dangers of writing in classical metres that to unaccustomed ears there is an instinctive attempt rather to balance syllables according to a realized metre than to listen simply for the metre as it comes out of the strict sense-accentuation of the words. Thus it seems to us that a line like

> Thereat shé will adorn Zeuses honor'd banner

is really a bad line, because here the accent is necessary, or would be, certainly, if the line stood by itself. And thus it seems to us, further, that what Mr. Bridges calls a "freak" and an "experiment" in the rhymes which he has added in the second stanza of this chorus is, on the contrary, an act of wisdom, if not a necessity, if verse written according to classical accentuation is ever to be wholly clear to English readers. In such lines as these:—

> Now all bursteth anew, wantoning in the dew
> Their bells of bonny blue, their chalices honey'd,

we get at once a metre plainly English, a metre very little different from Nash's in

> The palm and may make country houses gay,
> Lambs frisk and play, the shepherds pipe all day.

The Oxford, Gloucester, and Milford Haven Road. By C. G. Harper. 2 vols. (Chapman & Hall.)

Mr. Harper's industry and devotion are worthy of all praise. He is already the author of some dozen books on the road, and apparently he is bent on pursuing his self-imposed task to the pleasant end. For what work could be pleasanter than this, which involves the leisurely itinerary of a route filled to overflowing with historic memories? Mr. Harper very properly

ridicules the phrase "historic county" applied to Buckinghamshire by Lord Beaconsfield, asking what English counties are not historic. The road which is the subject of these two volumes, agreeably illustrated partly by Mr. Harper himself and in part from old prints, runs out of London by Oxford Street and the Bayswater Road, and is two hundred and fifty-six miles in length. Virtually it started at Tyburn, when the old toll-gate separated town from country. We cordially endorse the author's view that it would have been better to retain the old St. George's cemetery in the Bayswater Road. There was no necessity to turn it into an open space, with the innumerable acres of the park facing it; and it was positive vandalism to destroy the old chapel, as was done in 1892.

The first coach to Oxford ran in 1661, and for long these coaches were under licence from the Chancellor. Notting Dale seems to have inherited its present bad repute from an evil past under the *régime* of highwaymen. Mr. Harper recalls that in 1895 there was an agitation to change the name of Shepherd's Bush, on the ground that its reputation was unsavoury. The movement was not without precedent, as one remembers that the south side of Euston Square blossomed into Endsleigh Gardens, at the instigation of residents who were tired of reading about Euston Square murders. But the agitators were unsuccessful in respect of Shepherd's Bush, despite the grievance they had against Miss Braddon for "locating" her objectionable characters there. And since the institution of the Central London Railway, Shepherd's Bush has parted with its associations.

The highway to Oxford is not so favoured with traditions as some other highways. The poet Waller was born and died by Beaconsfield, and, of course, Oxford itself is full of associations. This was, naturally, too big a business for Mr. Harper to tackle. But he devotes some space to the University city, and is disappointing. Oxford seems to leave him cold, if we may judge from this:—

"New College also includes shocking examples of this eighteenth-century fury, set beside William of Wykeham's fourteenth-century work, and suffering horribly by comparison. There are quads in New College more hideous and depressing than prison exercise-yards, and some in Trinity the very picture of squalor; but Worcester College.....certainly possesses the grimmest and most desolating forefront of all."

Mr. Harper's method of criticism, which is too often mere denunciation, lacks taste. For example, one of the finest works of the late Onslow Ford was an effigy of Shelley, which has found place in the University which expelled him; and on this Mr. Harper remarks:—

"The Shelley memorial is indeed one of the outcomes of the damnable modern doctrine that genius is superior to the laws and customs guiding and restraining ordinary humdrum mortals, who pay their taxes, settle their butchers' bills, and remain faithful to their wives. Jones, who is no poet, and cannot, by reason of impecuniosity, render unto the local and Imperial Cæsars, who compounds with his creditors, passes through the Bankruptcy Court, or deserts his wife, receives no posthumous praise, and, if he be remembered at all, is just a figure of obloquy. But your poet may outrage all the laws of God and man, and yet garner sheaves of honour."

This is so perverse that it is not worth comment. It is not an unfair example of Mr. Harper at his worst. His style is common; it sets the teeth on edge over and over again; and it is only because of his unquestionable knowledge of and interest in his subject that you push on. Why should he write "quite privately, between you and me and the gate-post"? It is not funny; one doubts if it is even used nowadays on the music-hall stage. Why should he write, "It was at Ealing that Spencer Perceval, Prime Minister in 1812, was living—ahem! residing — when shot by Bellingham"? And why, once more, should he write, "We shall, I promise you, early have a bellyful of Gilbert Scott on this road"? One must, however, accept Mr. Harper with his limitations.

In 1874 Ruskin engaged the enthusiasm of a number of young men in a return to the dignity of labour, and the result of their road-making near the village of Hinksey is thus described:—

"When the short stretch of less than fifty yards was completed, the wayside bank was planted with primroses, and Ruskin looked upon it all, and pronounced a professorial benediction. And then? Why, as the 'road' had been made merely with dirt, without any foundation of 'hard core,' the last state of that meadow was very speedily worse than the first, and the rustics in the succeeding winter waded through such depths of mud as they had never before known."

On the whole, Mr. Harper must be pronounced more interesting and less open to criticism when he reaches Wales. This part is not so well known to the ordinary Englishman, who is not wont now to go by road so far afield, and consequently Mr. Harper's information, conscientiously accumulated, comes gratefully. It may be as well to point out to him, however, that Edward II. (p. 26, ii.) was not Longshanks, which was the nickname bestowed on his father. The same objection may be taken to these volumes as to Mr. Harper's previous books, that they lack a map, although there is a good index. A map would enable a reader to journey in the author's gossiping company with considerably more pleasure and ease.

Milton. By G. C. Williamson. (Bell & Sons.)

IT is thought, apparently, that the mob of scioliats who read with ease in consequence of modern Education Acts require to be fed with morsels, as children are fed by nurses. Literature is made to descend on them in a gracious rain of pilulous duodecimos. Five-and-twenty years ago the Rector of Lincoln excused his 'Life of Milton' on the plea that Mr. Masson's book contains five thousand pages, while he was writing for clients whose appetites would be satisfied by two hundred. The Sibyl comes to us to-day with a yet further reduction to one-third of the Pattisonian allowance. Dr. Williamson has worked efficiently within his limits in this member of the "Miniature Series of Great Writers." He gives all the main incidents of Milton's life; the savagery of his 'Eikonoklastes' period is handled without Pharisaism; the 'Eikon' authorship is judiciously left undecided; choice extracts from prose and poetry are selected; and a critique of the 'Samson' has a chapter to itself. The little book is illustrated by the best accepted portraits of the poet—is, in short, as good as such a book can be.

We wonder how far these *libelluli* answer their very laudable purpose. Messrs. Bell's "Art Manuals" were meant to be, and are, useful guides to the intelligent artisan who haunts picture galleries on a Saturday afternoon; but what about their literary series? How many men have bought, or will buy, a Chaucer or a Milton or a Spenser as the result of reading these? Take Milton alone: you must know him intimately or not at all — must, as Ruskin has pointed out, enter not only into his thoughts, but also into his heart, abiding with him till you share his passion. This outcome of prolonged and disciplined study comes to boys and girls essaying examination, comes to adult attendants on Extension lectures, wherever the teacher's knowledge is creative and his enthusiasm contagious; rare, indeed, are the unguided learners who can achieve it for themselves. Foreigners know more of him than we do; Germans pore upon him till they pass within the veil and assimilate him; the modern Greek, we are told, who does not care for Shakspeare, annexes Byron greedily, Milton patiently. We have already noted the very interesting fact that Mr. Maurice Baring found 'Paradise Lost' popular throughout Russia amongst peasantry and private soldiers. When John Bright used to harangue half-educated audiences, and spouted Milton, as was his wont, in reverent solemn tones, his hearers thought that he was quoting Ebenezer Elliott. Yet all who have steeped themselves in his immortal verse, and felt it pulsate through their intellectual and moral being, understand the cleansing influence which intimacy with him, as with all our greatest poets, must needs exert upon the meanness and the sordor of society. And since a tiny fire may burn up a vast forest, as says the Apostle James in a passage which our translators have done their best to spoil, let us hope that these minims of literary biography may kindle ordinary readers to study for themselves and make their own one or other new planet as it swims into their ken.

Duly to understand Milton's writings, to see how the suppressed instincts of the poet gave white heat to the 'Areopagitica,' and how the blighted hopes of the patriot lent pathos to the 'Paradise Lost,' we must be acquainted with his life; and the research of his biographers should lie not so much in notation of its events, which interest us chiefly as having befallen him, as in extracting his inner history from his writings. Externally he was aloof and solitary beyond any other great English writer. His character, like his genius, is awful; it is reflected in that lurid portrait by Van der Plaas, which of itself explains to us why his wife and children ran away from him. Through life he had no mate. Marvell, Skinner, Ellwood, admired him, but sat at his feet as juniors.

XUM

He was Cromwell's secretary, but there is no trace of personal intercourse between them. His literary knowledge was unbounded, but he consorted neither with scholars nor with poets; a deep philosopher, he shunned the acquaintance of Hobbes; a theologian of the highest order, he corresponded neither with loyal nor with Presbyterian divines. Like the beloved son of Jacob, he was through life separate from his brethren. His soul, says Wordsworth, was like a star, and dwelt apart; but such a star as, in his own words, with fear of change perplexes monarchs. And if he coldly repelled intimacy of equals; if he lavished on those who presumed to differ from him all the coarse vituperation which the Latin language, enriched by centuries of clerical controversy, enabled him to wield, a deeper resentment still was reserved for all who, at college or in the world, in Church or State, claimed to exercise over him official or personal authority. He was a born rebel, his ideal of life was to live *sans entraves;* he hated prelates, kings, magistrates; hated press censorship; hated even, because it was compulsory, the *irrupta copula* of the marriage bond. "My master? My master is in heaven," said angrily the proud Highland Duinhé-wassel to Waverley; in heaven, not in any corner of the earth. This feeling forged the link between all Milton's treatises; not so much defence of liberty as defiance of control; this is the key-note of 'Paradise Lost.' Satan is, we know, its hero — dauntless, self-contained, unmurmuring in defeat and fall. That we all can see; it is no less certain to the present reviewer, though pointed out less often, if at all, that in his intellectual might, his unbroken energy, his sedate and godlike patience, his calm dependence on himself amid overwhelming sorrows from without, the Titanic form of Satan is a mask through which we see the face and hear the speech of Milton's self.

Macaulay has remarked upon the strange sensation, experienced from no other writer, which affects us in reading Milton: an incantation he calls it, a magical influence, an occult power. It is due, we think, to the agency of sound alone. In Milton, above all English poets, burned the flame of musical genius; he had it in him, subject to the imperfect instrumentation of his time, to become a Handel or a Bach. The vein remained scientifically unworked, but the latent creative force developed it in the structure of his poetry. The laws of sound are still occult, the rhythm of poetical intonation has never yet been formulated and measured. If ever this triumph is achieved, it will be seen that Milton is the Beethoven of written verse; that over and above the intellectual charm with which the creations of his genius enthral us, his utterance has power to unlock those springs which respond to perfect harmony, with a readiness and a certainty that we ascribe at present only to the great masters of the orchestra and the organ.

And not his poetic utterance alone: the same mysterious spell is exercised by his prose. Commentators impugn his sentences as inordinately long:—"it shall to the barber's with your beard!" Careful analysis of any one amongst them will disclose a more elaborate mechanism than in the written eloquence of any contemporary writer. The two great masters of style whom we should name with Milton are, we suppose, Jeremy Taylor and Hooker. Taylor's periods are pure melody; stroke succeeds to stroke, image to image, like a bird's consecutive trills. His sentences are all co-ordinate; some perfectly simple thought is heaped upon with illustrations, and embroidered with cumulative ornaments. In Hooker equal melody is present, but enshrined in stately and harmonious framework; thoughts and sentences are balanced, contrasted, antithetical; rhetorical artifice is consciously employed. Read aloud, from the 'Holy Dying,' the description of the rising sun, or the changing aspect of the dead with its simile of the rose—from the 'Ecclesiastical Polity,' the rhapsodies on Law, or the inscrutableness of the Divine Nature. Then take up and examine one of Milton's colossal paragraphs. See how he strays from the path, squanders his gorgeous epithets, loses himself seemingly in irrelevant ideas; how statement is obscured by qualification—qualification outrivalled by simile, till by and by the master hand comes in, links the entanglements, resolves the discords, justifies the digressions, sweeps the grand phrase to its close in a diapason of satisfying yet unexhausted harmony. If Taylor's be the music of the song, Hooker's of the chorale, Milton's is the music of the fugue.

Purple patches abound in his least eloquent pamphlets: in 'The Reason of Church Government' there are his Apologia and the forecast of his poetic mission; his youthful study of the poets in the 'Smectymnuus'; but above them all soars the 'Areopagitica': the "sevenfold choruses and harping symphonies" interspersed throughout the other essays vibrate here continuously. Many years ago we were in company with Sir Henry Taylor. Well-read men were present, and the talk turned on the relative merits of seventeenth-century prose. There were *quot scriptores, tot sententiæ;* Hooker and Taylor, of course, but also Bacon, Hall, Fuller, found champions, while others pleaded, with ourselves, for Milton. The old man listened, playing with his vast grey beard. Presently from his lips came forth in deliberate, sonorous cadences, "They who to States and Governors of the Commonwealth direct their speech, high Court of Parliament"—the long opening sentence of the 'Areopagitica.' And Milton, as we listened, gained the day: *tu missus abibis* was said to every other claimant. And the opening sentence is perhaps the least majestic. Sustained and unflagging as is the whole, it rises from time to time into empyreal heights of inspiration; as in the likening of books to men, the comparison of a fugitive and cloistered with a battle-soiled and tested virtue, in the parable of Typhon and Osiris; grandest of all, perhaps, in the "noble and puissant nation." Is there anything in the Greek or Latin orators and poets so elevating to the literary taste, so purging to the literary style of an English learner, as texts like these or parallel splendours from the poems? Yet thousands of boys pass from our public schools, adepts in Demosthenes and Virgil, having never critically read a line of the 'Areopagitica' or 'Paradise Lost.' It used once to be thought in France that no warmer eulogy could be passed upon a promising young student than the words "il sait son Rabelais"; will the time ever come when a far higher tribute to the scholarship of a young Englishman is to say that "he knows his Milton"?

Anecdota Oxoniensia. — Classical Series. Part X. *The Vetus Cluniacensis of Poggio.* By Albert C. Clark. (Oxford, Clarendon Press.)

It cannot be denied that the majority of scholars in England who are interested in classical literature are repelled by inquiries into the history of ancient texts. But we hope that many will go out of their way to read this original and laborious monograph. It supplies an admirable example of the profit which strict scientific method and unwearied industry may yield when applied to textual problems. Mr. Clark has added greatly to the debt which Latinists already owed him. For the most part, the results which he has attained in his latest investigation are solidly established, and afford little opening for criticism or controversy. In the main, therefore, our notice will consist of a *compte rendu.*

Mr. Clark begins by quoting from Voigt ('Die Wiederbelebung des Classischen Alterthums') a statement concerning the famous Ciceronian MSS. discovered at Cluni and Langres by Poggio. The former contained, among other Ciceronian orations, the 'Pro Sexto Roscio' and the 'Pro Murena,' previously unknown to scholars. The latter is commonly thought to have revealed eight new speeches, which have often been entitled 'Orationes Lingonenses,' but Mr. Clark gives good reason for thinking that of these only the 'Pro Cæcina' was actually found at Langres. Next, inquiry is made into the date and circumstances of the discovery of the Cluni codex. Attention is drawn—apparently for the first time in this connexion — to an entry in the twelfth-century catalogue of the Cluni Library, in which a volume is mentioned comprising the speeches for Milo, Cluentius, Murena, and "certain others" (*quibusdam aliis*). As the Cluni Library is the only one known to have possessed the 'Pro Murena' before Poggio's discovery, and as his Cluni MS. certainly had in it a copy of the 'Pro Cluentio,' it is highly probable that his codex is the one mentioned in the catalogue. Hence we have the important conclusion that it also contained the 'Miloniana.' As the lost 'Cluniacensis' is the sole known source for the speeches in defence of Sex. Roscius and Murena, it becomes a matter of moment to trace the pedigree of its existing descendants. Mr. Clark shows that the task has never been seriously taken in hand before, and that some MSS. which have figured prominently in the critical editions of these speeches have often been treated unscientifically. Next follows a description of a MS. in the Laurentian Library, which guided Mr. Clark on a long journey of discovery. It owes its origin to Bartolommeo da Montepulciano, the friend and colleague of Poggio, though it is not, as has been supposed, in his handwriting. Among

its contents are excerpts from five orations, four of which, there was already reason to believe, formed part of the 'Cluniacensis.' The fifth is the 'Pro Cælio.' The presumption is very strong that Bartolommeo, who copied the famous St. Gall codex of Asconius which Poggio unearthed, also borrowed from him the 'Cluniacensis,' and made from it these excerpts. This presumption is rendered a certainty by detailed examination of the evidence, which yields several interesting conclusions. As regards the 'Cluentiana,' the text of that speech has, since Classen's time, rested mainly on two manuscripts of the fifteenth century, which are superior to one of the eleventh (a not very uncommon phenomenon). The 'Excerpta Montepulciana' agree with the better source. In the 'Miloniana' they coincide remarkably with the Harleian codex of which Mr. Clark gave an account in an earlier number of the 'Anecdota Oxoniensia.'

The next step taken was to examine at Paris a MS. which was once the property of the Abbey of St. Victor. This (which Mr. Clark denotes by Σ) presented a striking feature. The texts of the 'Pro S. Roscio' and 'Pro Murena' had obviously been taken from a MS. which was very hard to read. Lacunæ had been left at first in many places, which had been filled in later by matter intended to represent the original in graphic facsimile. The condition of the parent codex agreed therefore remarkably with that of the 'Cluniacensis' as described by F. Barbaro, who declared himself unable to read a word of it. Mr. Clark's conclusion that Σ was copied from 'Cluniacensis' early in the fifteenth century, before Poggio saw it, will not be questioned, and its importance is obvious. Among other things, it turns out that a Wolfenbüttel MS., which has figured largely in the *apparatus criticus* of editions of the two speeches, must now retire from notice. It is derived from Σ, of which, even so, there exist two better representatives. And Σ is also important for the text of the 'Cluentiana,' the 'Cæliana,' and the 'Miloniana,' not because of the readings given in the body of the MS., but on account of copious marginalia and supplements, which are drawn from the 'Cluniacensis.' Unfortunately some corrector has wholly or partly erased many of the marginal additions. It is possible that on the discovery of these erasures some telepathic influence proceeding from Mr. Clark disturbed the repose of that corrector's soul. A very interesting feature of Σ in the 'Pro Cluentio' is that "the first four lacunæ have been filled up by pages or half-pages stitched into the MS., written in the same hand as the marginalia to the rest of the speech."

We cannot follow very closely the remaining stages of Mr. Clark's inquiry. He examined a great number of MSS. with the view of finding out to what extent scribes had resorted to a fresh examination of the 'Cluniacensis.' Only a few interesting details can be mentioned here. Incidentally a statement authorized by Prof. Robinson Ellis appears, withdrawing his objection to the identification of Dr. Peterson's Holkham MS. as a former possession of the Cluni Library. As to the text of the 'Pro Cælio' presented by the 'Cluniacensis,' it is shown to have agreed notably with that of the two palimpsests (A, T), and to confirm in a noteworthy manner conjectures made by scholars, Madvig in particular. It also renders "a signal service" in vindicating certain passages omitted by the oldest extant MS. (of the ninth century, at Paris), which have generally been regarded as interpolations. Many lessons of the kind are to be drawn from the history of codices, but scholars have been slow to learn them. The 'Pro Cælio' has been a favourite playground for the game of hunting after glosses. Perhaps Mr. Clark himself may be inclined to modify the opinion he once expressed that the 'Miloniana' is "honeycombed with glosses."

There is only one portion of Mr. Clark's monograph which seems to us to challenge criticism. His examination of the errors of transcription presented by the 'Cluniacensis' has led him to the conclusion that in date "it cannot have been later than the end of the eighth century, and may have been considerably earlier." The evidence is, we believe, very far from proving the conclusion. Among the long array of mistakes which are quoted are many which might well have originated many centuries later. Of the confusions in the earliest Virgilian MSS. which Ribbeck tabulated, there are a large number which might have come into existence *de novo* with equal ease centuries after the Carolingian reform in orthography. An example to illustrate this may be taken from Mr. Clark's list. It is true that to confuse *c* and *g* by visual error is not easy in the Carolingian script, but it was easy in English script; easiest of all, of course, in capitals and uncials. Yet the interchange has often come about in late MSS. through blundering of another kind. It may well be that the scribe of the 'Cluniacensis' (or a near predecessor) who wrote *re agitaretur* for *rea citaretur* in the text of the 'Pro Milone' (§ 50) was merely trying to produce what he thought to be sense after having wrongly divided the words. Among Mendelssohn's MSS. of the letters 'Ad Familiares,' the Harleian alone gives in 13, 68, 2, the reading "Cagius" for Gaius. It is exceedingly improbable that this came into existence in the age of the oldest MSS. of Virgil and persisted down into the Harleian. There was probably a vulgar form *agio* for *aio*, actually heard in speech. It may have lived on far into the Middle Ages; but the *g* may also have arisen in many instances by graphic mistake arising out of the spelling *ajio*. Two spheres of error in which scribes wandered—the one consisting of mistakes of the ear, the other of mistakes of the eye—are hard to delimit. Ribbeck criticizes Schuchardt sharply at several points. In all these matters it is doubtful whether canons leading to precise dates for vanished codices can ever be established. Occasionally a strictly statistical method may afford some foothold. The Carolingian reform did not, as Mr. Clark seems to assume, clear away at once forms which were undoubtedly archaic. On the contrary, many of them survive in quite late MSS. For example, the confusion of *c* and *q*, which was never easy in any script but the capital, is found a good many times in the later of the Palatine MSS. (A, B) of Cicero's 'De Finibus,' and other works (*e.g.*, *corum* for *quorum*). It has given rise to a remarkable reading *cauod* for *quod* at one point in the 'Cluniacensis.' As a rule, the removal of archaisms was gradual, but there are not a few exceptions. Sometimes an archaic form came into existence again by mere chance. That we take to be the case with *pepugisset*, which the 'Cluniacensis' gave in 'Pro S. Roscio,' § 60. Gellius does indeed declare that Cicero used the form. But, like many another archaist, he occasionally discovered philological mares' nests. Even if he found *pepugisset* in a Ciceronian MS. it may have been due to a mere blunder. And, curiously enough, Diomedes the grammarian quoted *pupugisset* from this very passage of the 'Pro Sexto Roscio.' The best evidence of an early date for the 'Cluniacensis' is its illegibility; this, however, is not conclusive. But we cannot pursue details further, and must here part unwillingly from Mr. Clark's monograph, which is bound to meet with high approval from all who have any acquaintance with investigation such as he has undertaken.

La Domination. By the Comtesse Mathieu de Noailles. (Paris, Calmann-Lévy.)

IN 'An Unsocial Socialist' there is a sentence to the effect that the race has not yet produced in its evolution a man fit to be loved, or who can be loved if known thoroughly. To read Madame de Noailles one would think the paradox a truism. Her new book has but one likeness to that of last year, 'Le Visage Émerveillé'—the worthlessness of men in face of the absolute preoccupation of her women with sex. It is not even the case of the drones and the female insects, for the latter, at all events, provide for nature's chief claim upon them, while the heroines of Madame de Noailles fall short in this respect of the non-human standard. She named, in her book of 1904, St. Clare as having been inspired by human passion, and not, as St. Clare herself thought—poor lady!—by divine love. If it were so, we should like to cross-examine Madame de Noailles as to whether St. Francis, then, was not a male type. We might feel inclined to go on to ask her great master, and infinite superior, "G. B. S.," who knows better than he sometimes pretends to teach, whether St. Francis was not worthy of the devotion he inspired.

The genius of Madame de Noailles has hitherto displayed the blending of the extraordinarily diverse races from which she is sprung. Her new book—the best in the finish of its style—is spoilt by the weakness, before the mere desire of the male, of the women who people the world depicted by her. We cannot think that this is really modern teaching, as our author evidently believes. To many who live among women who take their own share in the daily work of life it seems as much out of date as the daydreams of Obermann or the sorrows of Werther. To us, then, Madame de Noailles appears to present an ignoble picture, but one so veiled in poetic language as to seem at first sight beautiful. Her vain male hero provokes the love

XUM

of every woman that he meets, and then both makes a scientific law and afterwards establishes a philosophy, based on his inconstancies. When the British Philistine says, shortly, of such a book that there is not a character in it "that ought not to be shut up," he is perhaps not altogether wrong, and can defend his view either from a consideration of the existing order of society, or from that of the ideal Socialist State. It is possible that we are living in a bastard revival of the worst phases of a pre-Revolution period, with its wish to know and to experience everything, without the trouble of taking a single step towards deserving such felicity. The attitude is wholly different both from that of Hellenism and from that of the Renaissance, and apart from the beauty of the style would be merely vulgar and pretentious.

Madame de Noailles has taken far more pains with the early part of the present volume than with any of her former work. But the later parts strike us as somewhat stilted, and she seems to have become bored with her own book, of which the ending is weak.

HISTORY.

A History of Modern England. By Herbert Paul. Vol. III. (Macmillan.)—The third volume of Mr. Herbert Paul's survey of modern English history begins with the formation of the Russell-Gladstone Ministry after the death of Palmerston, and ends with the Tichborne case, which is included, strange to say, in a chapter headed 'Intellectual and Social Progress.' Though written with the ability and impartiality of its predecessors, it is not so well proportioned. Military reform does not interest Mr. Paul overmuch, and therefore the labours of Cardwell are dismissed with brief, but hearty praise. Ecclesiastical matters do, and so we get not only a full summary of the reports of the Ritual Commission, but also elaborate accounts of various cases in which High Church clergymen, like Purchas or Bennett, were charged with illegal practices. The effect is to make Mr. Paul's account of the developments in the Establishment too much a history of exceptions, to attach undue importance to the few who were unfortunate or misguided enough to come into collision with the authorities, and to ignore the many who performed their duties in reasonable contentment with existing circumstances. He is also disposed to be too severe on Gladstone for declining to submit ecclesiastical affairs to the review of Parliament. After the Purchas case had been decided, "the proper course," we read, "would have been to secure future uniformity in the Established Church by fresh legislation." But, when Parliament did take the Church in hand a few years afterwards, the Public Worship Regulation Act was far from producing concord; nor is it quite fair to argue, as Mr. Paul appears to do, that the appointment of Lord Penzance as judge in the new court was chiefly to blame. The debates had excited popular passions to a most unhealthy heat, and such indecorous displays as the Hatcham riots were the direct outcome of the oratorical duels between Gladstone and Sir William Harcourt, and Disraeli and Lord Salisbury. Mr. Paul's estimate of individuals, on the other hand, deserves high commendation. Nothing could be happier, for example, than his remark that "there are men for whom the Church of England is too large, and others for whom it is too small," but that "it was exactly the right size for Mr. Keble." Dean Church and Harold Browne, a most characteristic product of Anglican theology, would, for that matter, fit this description quite as appropriately.

Mr. Paul's ecclesiastical disquisitions have led us astray from his politics, which cover, of course, such important legislation as the Reform Bill of 1867, the Disestablishment of the Irish Church, and Forster's Education Act. His materials are naturally more abundant when he comes to examine the motives of Liberal statesmen than when he deals with those of their Conservative rivals. Sir Spencer Walpole, Mr. John Morley, and other biographers have disclosed the inner workings of the Cabinets over which Lord Russell and Gladstone presided. But we are never, apparently, to have a life of Lord Derby based on the family papers, and Mr. Monypenny has still to produce the evidence illustrating the most fascinating passage in Disraeli's strange career. What did he mean by educating his party? Mr. Paul puts the question, and justly observes that "unless education consists in the object-lesson of voting one way in office and another out of it, the metaphor or analogy is obscure." When Disraeli's correspondence is published the process will become clear, no doubt. Meanwhile the conjecture may be hazarded that his reference was mainly to the logic of events. If the Adullamites had joined the third Derby Administration it might have been possible to dispose of Reform, for the time being, by some half-and-half measure. But when they refused there was nothing for it, in Disraeli's opinion, but to adopt household suffrage, or to incur the odium of opposition to the enlargement of the franchise in any shape or form. His conversion was, we think, much less abrupt than it is popularly supposed to have been, and his difficulties arose less from the bulk of the party than from his colleagues Lord Cranborne, Lord Carnarvon, and General Peel. Mr. Paul declares, and with much truth, that for Disraeli the supreme test in human affairs was success, and if he succeeded he attributed hostile criticism to the pique engendered by failure. But his confidence in the measure termed by Lord Derby, with inconvenient candour, "a leap in the dark," came out in the spirited defence:—

> "I think England is safe in the race of men who inhabit her; that she is safe in something much more precious than her accumulated capital, her accumulated experience; she is safe in her national character, in her fame, in the tradition of a thousand years, and in that glorious future which I believe awaits her."

From the party point of view, Disraeli was justified by the general election of 1874. But there can be no doubt that by that time age had told upon him, and he was content, accordingly, to leave the work of active legislation to his colleagues. Mr. Paul will surprise a good many people by calling the Cabinet of that year "one of the strongest that had ever been formed in England," and, to our thinking, he decidedly overestimates the value of Lord Derby as Foreign Secretary. Still, it was a combination strong in administrative ability, and its record, which Mr. Paul sets forth with striking impartiality, by no means stands to its discredit.

Mr. Paul's incursions into foreign and imperial affairs are a trifle perfunctory. His account of the causes of the Franco-German war is accurate so far as it goes, but it is based too exclusively on De la Gorce. The movements of labour as exemplified in the consolidation of their position by the trade unions, and Mr. Arch's agitation on behalf of the agricultural labourers, are fully treated, with the one exception of the wave of discontent which swept through London in 1872, embracing carpenters and masons, gas-stokers, and even the police. The literary estimates, as always, sparkle with happy phrases, though Mr. Paul might have mentioned that Robert Buchanan apologized for 'The Fleshly School of Poetry'—his blundering attack on Rossetti and Mr. Swinburne—in the preface to 'God and the Man.'

Historical Memoirs of the Emperor Alexander I. and the Court of Russia. By Madame la Comtesse de Choiseul-Gouffier. Translated from the original French by Mary Berenice Patterson. (Kegan Paul & Co.)—From America comes the first translation into English of the once popular memoirs written by Madame de Choiseul-Gouffier. This lady, who was of Polish origin, had married a Frenchman, and published her work in French at Paris three years after the death of Alexander I., her great hero. The value of the book consists in the graphic social sketches and interesting conversations which are reported at a great crisis in Russian history. They at once attracted attention, and the edition of 1828 was soon exhausted; the interest in the subject, however, gradually declined, and a new edition was not demanded till 1862. About twenty years ago a translation into Russian appeared, which was issued as a supplement to that very meritorious literary journal *Drevniaia i Novaia Rossia* (*Old and New Russia*). The central figure of the 'Memoirs' is Alexander, who is portrayed with the greatest enthusiasm. Although a Pole of the family of Tiesenhausen—we think the spelling Tisenhaus cannot be correct—she was overpowered by the generous utterances of the Russian Emperor. Alexander is still to most readers a sphinx, and Prof. Bestuzhev Riumin, in the chapter of his 'History' in which he enumerates foreigners who have contributed valuable information about Russia, tells us that implicit credit cannot be placed in these 'Memoirs.' There is too much rosewater. About no sovereign have opinions varied so much as Alexander; according to some he was an arch-deceiver, mendacious, and false as a Byzantine Greek, as Napoleon said, who had in vain attempted to outwit him. On the other hand, his admirers see in him every virtue. It seems to us that the truer view is that of Schilder in his valuable 'Life' of the Emperor. He treats him as a man of feeble will, who had good intentions, but was unable to cope with the discordant elements around him. His plans for the welfare of his subjects and the newly annexed kingdom of Poland seem to have been benevolent, but they did not succeed. His reign began with many liberal measures, but towards the close a reactionary spirit developed itself, and such men as Arakchéev were all-powerful. The conversations with Alexander recorded by Madame Choiseul-Gouffier place him in a very agreeable light. He seems amiable and playful, and shows a refined and well-cultivated mind. Among other figures which the author presents to us is the Empress Elizabeth, who is described much more favourably here than in the pages of other memoir-writers. It is well known that the marriage of Alexander was not happy; the bride had few personal attractions, and the husband and wife lived apart, and were reunited only a short time before their deaths. The picture drawn of Elizabeth by Madame Smirnov in her interesting memoirs, which appeared a few years ago, is not pleasing. She was a little, lean woman, with a bad complexion, and older than her husband. Marie Feodorovna, the wife of Paul, was, on the contrary, a very handsome woman. Madame Choiseul-Gouffier describes at some length the condition of Russia in the time of Paul. Volumes of anecdotes might be written dealing with his tyranny and caprice. Many accounts have been published of the circumstances of Paul's death, but in reality very little has of late been added to our knowledge. The account of Sablukov, one of the officers on guard at the palace during the fatal night, is interesting.

Much of the matter contained in the book is gossip such as a fashionable lady of the period would write. Alexander evidently suited his conversation to his interlocutor, and seems to have almost invariably been a favourite with ladies. If we read contemporary memoirs written by ladies—among others those of Miss Wynne, edited by Abraham Hayward—we find nothing but praise. Miss Wynne extols the manners of Alexander as being so much more gentlemanlike than those of the other allied sovereigns. Her *bête noire* appears to have been the King of Prussia, whom she calls a boor. The visit of the allied sovereigns to England is described at some length in this book. Degrees were conferred upon them at Oxford, and poems recited in their honour. The 'Memoirs' furnish very pleasant reading, even if they do not greatly add to our knowledge. The translation is fairly well done. A few of the names ("Ogisinski" for *Oginski*, &c.) are oddly misspelt, but it seems this must always happen where Slavonic words are introduced into English books.

Mathilda, Countess of Tuscany. By Mrs. Mary E. Huddy. (John Long.)—Mathilda, Countess of Tuscany, the friend of Gregory VII., has found in Mrs. Huddy a biographer as enthusiastic as her contemporary panegyrist Donizo, and not less uncritical. It is obvious at the first glance that this book has no serious value, and must be charitably judged as a popular work by one who has no historical training and few qualifications except zeal for her self-imposed task. Her first-hand knowledge of the authorities of the period is virtually limited to Donizo's poem. She follows it with simple faith, apparently unconscious that it has to be used with considerable reserve, since it was intended for Mathilda's eye. The best, indeed, that can be said for her effort is that it supplies a fair paraphrase of Donizo. The specimen of his work which she presents on p. 189 does not illustrate the "quaintness" of his verse or the "glow" of his pen, but rather ominously suggests the extent of Mrs. Huddy's acquaintance with Latin. Her own pen is fluent, and her book will be a source of considerable pleasure and profit, we have no doubt, to readers who have no knowledge of the subject, and are able to put up with, or even enjoy, sentimental exuberance, misplaced rhetoric, and remarks of an edifying nature. The style is, indeed, irritating. Mrs. Huddy appears to think that it is ornamental to describe the Normans as "valiant sons of Mars," and that by substituting for Mathilda's name here "the great Countess," and there "la grande comtessa," she has achieved a pleasing variety of diction. It is exciting to learn that "the cardinals are not angels, but men subject to the usual infirmities of flesh and blood." We are curious to know whether the theory which this statement controverts is widely prevalent.

THEOLOGICAL LITERATURE.

Christian Character. By J. R. Illingworth. (Macmillan.)—Mr. Illingworth's high reputation as a thinker and writer is well sustained by this book. At first it strikes the reader as a little thin and commonplace, neither so original nor so important as the author's other works. But on reading further this impression disappears. The fact is that in this book, or rather in the standpoint and methods of this book, is the true reply to Mr. G. E. Moore's 'Principia Ethica.' Part of that fascinating and original piece of dialectic was occupied in showing that fixed systems of moral rules, based on alleged immutable ethical foundations, are of no permanent value, for neither the superstructure nor the foundation is really secure. A great deal of the destructive criticism of Mr. Moore is, in our opinion, perfectly legitimate, though it must be a very hard nut to crack for the believer in Kantian ethics. But this is not the case with Christian ethics rightly conceived. They are, or ought to be, founded on those personal affections which Mr. Moore declares to be with artistic pleasures the sole real "goods." It is true that Mr. Moore would repudiate with scorn any such notion as the Christian ideal of holiness, of union with God, or love to a Christ still living. But that does not alter the fact that Christian ethics are not a system of moral rules logically deducible from an original principle, and as certain or uncertain as its fundamental proposition is well founded. Christian ethics are not the mathematics of conduct. They are the spirit of lives directed by love to a living person. That is their idea. It will readily be seen that against this idea the shafts of Mr. Moore's ethical criticism break in vain, or rather they are not directed against it. His object is to destroy all systems of immutable ethical maxims, and to substitute the ideal of life for that of geometry—at least, so it seems to us. Now that is exactly what the Christian thinker ought to be doing, and Mr. Illingworth does it. The gulf, or rather the abyss, that separates Christian from philosophic and deductive ethics, was never so well expressed as it is by Mr. Illingworth. It has been the fashion on both sides either to ignore this gulf, or to make futile attempts to throw over it temporary bridges. But there is all the difference in the world between the mere principle of altruism and loyalty to a friend, however much the two may result at times in similar conduct. The same fact is largely the cause of certain discredited forms of Christian ethics. Casuistry and the sophisms of the Jesuits are deservedly despised. Yet their fundamental justification is surely this—the essence of Christian conduct being personal loyalty, not submission to an abstract standard of perfection, all maxims are merely rough and inadequate generalizations, useful in most cases, but to be disregarded in the limiting positions when the essential principle of love to Christ conflicts with the moral maxim, which is merely its fragmentary and imperfect expression. How dangerous it is to speculate on these limiting positions the history of Probabilism affords evidence. Yet the fact that they exist is due to the fundamental conditions of our thought, to the truth that all propositions are abstract, while life is concrete, or, in other words, that all codes of morality are inelastic, while the principle of all morality, being personal love, is sensitive to every breath of our spiritual atmosphere, and alive to every change of the moral climate. It is this fundamental character of Christian morality, its relation to a person, which Mr. Illingworth so nobly expounds. We have heard much of the resemblance between Christian and non-Christian ethics. It is time we realized that if the resemblance be great it is on the surface, while the difference is unfathomable, because it goes down to the root-idea of the religion. This is an equally welcome truth whether or no we accept that root-idea. Mr. Illingworth's book is, we hope, the first of a new series of works in which this distinction and all that it implies will be more completely elaborated.

The Life of Christ: a Continuous Narrative in the Words of the Authorized Version of the Four Gospels. With Introduction and Notes by Joseph John Scott. (Murray.)—Canon Scott desires to assist students and teachers who are "becoming afraid of the inroads on the Bible made by modern criticism, and shaken in their belief in its reliability." A few pages of the introduction are devoted to such subjects as 'Textual Criticism' and 'The Higher Criticism,' and the work itself takes the form of a Diatessaron. The Diatessaron ought to be of advantage to readers of the New Testament, since it arranges the different parts of the Gospels, with the variations of these parts, in the form of a continuous narrative; and there are many helpful notes on difficulties presented in verses of the Gospels. It is not easy, however, to understand in what way the work, with or without the notes, can calm those who are afraid of modern criticism; though it may safely be commended to those who wish to see the Gospel narrative as a whole, and at the same time to appreciate the significance of the variations of the parts. Thirteen pages of the introduction are devoted to the subject of the Higher Criticism, and little can be done in such a space to explain, establish, or refute the work of a host of eminent scholars dealing with the Gospels. Canon Scott himself ventures on criticism, and is "inclined to put the date of S. Mark's Gospel.....between A.D. 60 and 64." The determination of this date requires the acceptance of the tradition "that S. Peter wrote his First Epistle from Rome between A.D. 58 and 64, and that he died at Rome in the Neronian persecution." The acceptance of the tradition, however, is surrounded by difficulties. Then, again, in the section of the introduction dealing with the Higher Criticism, Canon Scott speaks of St. John, and asserts that "during some period of his life, either in the time of Nero or Domitian, he was banished to Patmos, and wrote the Apocalypse or Revelation." It is enough to point out that care should be taken to distinguish between tradition and historical fact.

In another part of the introduction attention is given to the question of the inspiration of the Gospels. Canon Scott has little to say on behalf of inspiration, beyond this—that none of the ascertained facts of Modern Criticism "is opposed to the doctrine that the Evangelists were taught and aided by the Holy Spirit." He offers, indeed, one far-fetched and extraordinary argument. He accounts for the comparatively small use of the Gospel of St. Mark by Christian writers of the second century, and proceeds to say that

> "at this very period this almost disused, almost lost Gospel was rescued by the Church, and even in its mutilated form included in the Canon of Scripture as one of the authorized Gospels. Here the action of the Church appears independent of her teachers and congregations. How is it to be accounted for? Was it not a guidance? An inspiration? And if the Church were thus guided in the formation of her Canon, does it not stand to reason that the same guidance or inspiration would be extended to the authors of the books which are thus to be included in the Canon?"

The inclusion of the second Gospel in the Canon does not require to be explained by any theory of inspiration; but what does require to be explained is the idea of the Church in the second century "independent of her teachers and congregations." In any case the argument for the inspiration of the canonical books rests on a most insecure basis, if that basis be nothing more than an inference from an assumed inspiration of the Church in a given period.

The Word and Sacraments. By T. D. Bernard. (Bemrose & Sons.)—In the interval which has elapsed since we received this book from the publishers its author has passed away from the scene of controversies and party struggles. We think that those who loved him could hardly wish for a better legacy than the widespread perusal of this slight but not unimportant volume. No controversies are so dreary as ecclesiastical, or seem so devoid of the spirit of Christianity, so squalid and futile. Yet from time to time even controversy seems to attract the best energies of some superior mind, and we

XUM

are furnished with evidence (as in the case of Hooker) that circumstances are not the matter but merely the material for noble thinking and high ideals. This book is an example of this. Papers written for the "Ladies' League" would not be, in anticipation, agreeable reading. Even if we approved their principles, we should expect (as is natural in a purely party warfare) the expression to be acrid and contemptuous, and the motives of adversaries to be equally evil and imaginary. Nothing of the kind is here. The author simply seeks to go to the bottom of the various matters that were concerned in the ritual dispute; to show himself the true meaning, and therefore the necessary limits, of sacramental life, the appeal to the Scripture, the need and importance of Church order, the nature of the religious society, the place of the layman. He does this in a style singularly graceful, and with a very evident note of distinction. To use a common phrase, he takes us into higher air. It is not his opinion, but the spirit in which he expounds and justifies it that is so valuable. Nor is there a page without the mark of a fine and delicate intelligence.

At the same time the book read in connexion with others is very noteworthy. If any one will read this book, Dr. Gore's 'Body of Christ' or 'Lux Mundi,' and Dr. Rashdall's 'Christus in Ecclesia,' he will see evidence that there is far more agreement among the superior minds of the three great parties in the Church than the correspondence of the religious newspapers or the utterances of the rank and file lead him to expect. We find in the Chancellor of Wells, along with a strong Evangelical grasp of personal religion and inward life, a marked sense of the value of order; the need of outward dignity and beauty in worship; and the claims of the Christian society on the allegiance of the individual. The spirit of the writer is that of a lover of truth, not a controversialist, and he shows how a higher mind could harmonize differences that seem irreconcilable to the mere partisan, and unify points of view that ignorance calls contradictory. It is difficult to analyze the charm of this book, and to state in a few words its outcome. But the charm is very definitely a fact; and we trust that its influence will be no less a reality.

EDUCATIONAL BOOKS.

The Principles of Education. By T. Raymont. (Longmans.)—Prof. Raymont has written an interesting and comprehensive treatise on education—and education, he tells us, is an applied science—founded on the experience of the schoolmaster and the theory of the psychologist; and he seems, happily for his readers, to follow a *via media* between the two sources of information: "the final word" in the study of education "cannot rest with the empiricists," nor must educational theory "be content to trot at the heels of psychology, but must vindicate its claim to an independent position." A result of this sane outlook in educational matters is a volume which may be commended for perusal to persons who are about to adopt the profession of teaching; and more strongly, perhaps, to parents and guardians who are perplexed by the question of a school for youngsters when infancy merges into boyhood.

The earlier pages of the volume are devoted to the elucidation of the meaning of education. The author shows that the word itself is used in two different senses, one considerably more comprehensive and less definite than the other; but for the purposes of this treatise we are concerned with the narrower meaning of the term, and the final aim of the corresponding process. Prof. Raymont states that the "ultimate aim of education—that from which the significance of all proximate aims proceeds—is the formation of character." This fundamental notion underlies the whole treatise, and in the author's opinion should underlie the work of all schoolmasters. We might, perhaps, object to this presentment of the subject on the score of vagueness; but in the hands of Prof. Raymont it seems fairly adequate to harmonize the processes and methods of school training.

Schools of different grades and their functions are discussed, and the best relations between education and the State are explained; then follows a suggestive chapter devoted to the study of children themselves. The growth and development of body and mind have been patiently and accurately studied by many competent observers, and already we possess much definite knowledge concerning them; but this treasury of fact is not always directly available for educational use. The results of these observations may be abused as well as used, and many of them are "irrelevant to our purpose." The teacher is warned that

> "the value for educational purposes of the mere presentation of unrelated facts, of anecdotes of child life, or even of particular investigations into certain details, may be greatly exaggerated."

In no part of the treatise does the author sink to the level of an ordinary manual of method, but several chapters bear directly on the practice of education as an art, *e.g.*, the choice and scope of school studies, maxims of methodical procedure, and the like. A chapter to which the attention of teachers should be specially directed is that on the 'Correlation of Studies.' The question of "correlation" has already received considerable attention in our more efficient public elementary schools, and is gaining prominence in the organization of secondary ones; it is undoubtedly a principle which would lighten class time-tables, and infuse greater interest into class studies. We are glad to find that Prof. Raymont considers the "material conditions of teaching," *i.e.*, the arrangement, furniture, and equipment of a schoolroom, a subject worthy of treatment in a work of this kind. He wisely abstains from going too minutely into details of arrangement, &c., but he elucidates the principles on which arrangement depends.

Prof. Raymont, having passed in review the chief material aspects of the school and the scholar, and the scope and methods of satisfactory intellectual development, devotes a few final pages to some more characteristically moral aspects of education—the problems of (moral) training, the authority and influence of the teacher, and the school society and its influence. In the last chapter, which is one of great interest, we read how and to what extent the "corporate life of the school helps to place upon the boy or girl the mark or stamp that we call character." This chapter should be read and pondered by parents.

Report on Secondary Education in Liverpool. By Michael E. Sadler. (Eyre & Spottiswoode.)—The city of Liverpool did wisely in ordering an "inquiry into the work, the aims, and the needs of the secondary schools of all types" within its boundary, and the Education Committee was fortunate in entrusting the carrying out of the inquiry to Prof. Sadler, whose lucid report will be read with interest by educationists, and will be found useful and suggestive by educational authorities in districts remote from the great Lancashire port. From the few remarks made concerning public elementary education we gather that the primary schools of Liverpool are reasonably satisfactory in respect both of sufficiency and efficiency. There is, however, considerable need of improvement in the secondary education of the city—in supply, efficiency of organization, and convenience of local arrangement:—

> "The University has appealed, with remarkable results, to the intellectual imagination of Liverpool. The more charitable side of elementary education has appealed to its benevolence. But secondary education has been its Cinderella, left too long in comparative neglect."

Schools of this grade remain "considerably below modern standards of accessibility and popular support." In the improvement of premises, curricula, and methods of teaching in elementary schools, "Liverpool has been in the van of progress"; but few children pass from the primary to the secondary schools. In this respect Liverpool compares unfavourably with New York, where, in the year ending July 31st, 1903, 24 per 1,000 of the elementary scholars passed to secondary schools at an age between 14·5 and 15 years, while in the same year the proportion of scholars so passing in Liverpool was only 3 per 1,000. We are not aware whether corresponding statistics are available for other large English towns and cities; but it is not likely that the case of other places is any better.

Mr. Sadler describes in detail the secondary schools of Liverpool (including private schools), as well as institutions for the preparation of pupil teachers, and colleges for the training of elementary certificated teachers. He also reports on technical schools and classes and evening continuation schools, and the teaching of domestic science, and gives an account of the municipal schools of art and science. The suggestions and recommendations for the improvement and extension of secondary education are the most interesting part of the volume, and are of general application. The report shows what secondary education now is under the favourable conditions of municipal control in Liverpool; the suggestions and recommendations show what it would be if the principles underlying it were rightly appreciated, and what Mr. Sadler is sanguine enough to expect it will be, under the enlightened control of his Education Committee.

People—many even of those who discuss national educational needs—have not yet adequately realized what secondary education is. They consider it as something that may be tacked or patched on primary instruction—that this, in fact, grows, as stones have been said to grow, by a process of accretion, into secondary education; whereas Mr. Sadler shows that the higher education is a slow growth or development occupying a long period in a scholar's life, the interval from about the age of twelve to sixteen; that it is organically connected with primary instruction; and that while it is very largely concerned with inductive science (experimental and theoretical), it has mainly to do with the humanities. This view is accepted and acted upon in European continental countries and in the United States; but it has hardly yet gained full acceptance with us. As matters stand at present in Liverpool, there are three marked impediments to the advancement of secondary education—insufficiency of salaries paid to assistant masters and mistresses, insufficiency of time spent by boys in school, and excessive attention devoted to the preparation of pupils for local (and other external) examinations. The evils springing from these three causes are manifold; Mr. Sadler traces and explains them, and suggests remedies.

The appendixes which close this very serviceable volume and complete its usefulness contain a rational memorandum by Mr. Cloudesley Brereton on the teaching of modern languages in Liverpool, as it should and might easily be. The utility of many of Mr. Brereton's suggestions is so obvious that we should have thought his advice was superfluous. The second and third appendixes consist respectively of useful notes on the curricula of

secondary schools, and valuable statistical tables.

An Unwritten Chapter in the History of Education. By H. Kingsmill Moore, D.D. (Macmillan.)—The history written by Dr. Kingsmill Moore is that of the Dublin Kildare Place Society, which was founded in 1811, and, after many years of prosperity and successful work, came to an end in 1831, wrecked by the opposition of political partisanship and religious intolerance. The existing Church of Ireland Training College appears to occupy premises that were the house of the Society, but there is no organic connexion between the two institutions.

The Kildare Place Society was formed to promote the education of all the poor of Ireland; the schools were to be opened (so runs the resolution passed at the first formal meeting of the Society) "upon the most liberal principles, and divested of all sectarian distinctions in Christianity." The members of the Society and of the Committee were Anglicans, Roman Catholics, and Nonconformists, who "joined hands and laboured zealously together for the common good." Throughout its career the Society remained true to its fundamental principle of liberality and toleration, and although many charges of attempting to proselytize Roman Catholic children were brought against it, not one was substantiated. The Bible — either in the Authorized Version or in one more acceptable to the Roman Catholic bishops—was read without doctrinal note or comment; but the religious instruction so supplied proved to be of little use, and satisfied no church or sect; its comparative inefficiency was the weak point in the educational system of the Society, and towards it the attacks of opponents were in the end successfully directed, the chief leaders of the opposition being O'Connell and Dr. Doyle, Roman Catholic Bishop of Leighlin.

The activity of the Society was at first seriously impeded by want of money, but in 1815 a petition for parliamentary aid was presented, and within a month 6,980*l.* were voted for the purchase of site and erection of premises. Sir Robert Peel was Chief Secretary at the time, and strongly advocated the cause of the Society. This grant is especially interesting as being the first sum voted by Parliament for primary education. From this time till 1831 the Society was liberally subsidized by Parliament, and was enabled to carry out a work of remarkable efficiency in all parts of Ireland. The schools —there were 1,624 of them in the last year (1830) of the Society's existence—were easily ahead of anything in England or Scotland, so far as instruction, discipline, and equipment were concerned; and if we may credit the testimony of the Count de Lasteyrie, the model school in Kildare Place was "le plus bel établissement de ce genre qui existe dans le monde entier." The English ratepayer of to-day will learn with no little interest and some surprise that the annual cost of each child in the Society's schools for the year 1829 was two shillings and fivepence.

The efficiency and success of the Society's activity rapidly increased, and at the same time the scope of its work became more comprehensive. As the elementary schools were multiplied, the Committee realized that one of the most pressing educational necessities of the time was the supply of well-educated, skilfully prepared teachers of both sexes. To satisfy this deficiency a training school was founded; and so enthusiastically was it carried on that it became a prominent feature in the work of the Society. It was a training school only—*i.e.*, the students admitted into it had completed their own education, and received in the school merely professional training during a period varying, with the aptitude of the student, from six weeks to six months. Students were sent for training to Kildare Place from schools of different kinds—not always in connexion with the Society—and, when qualified, returned to the schools of their own choice. The Society also carried out a careful and efficient system of inspection throughout the provinces of Ireland; and so far and so long as financial resources allowed, the Society gave gratuities to schools on the reports of the inspectors, "who were an exceptionally fine body of men."

In addition to the management, maintenance, and inspection of primary schools, the Society undertook the business of school publishers, and issued the best elementary text-books of the time. These school-books became widely known, and were soon highly valued and found numerous purchasers not only in Ireland, but also in Great Britain and North America. It was, moreover, soon apparent that to ensure to the scholars in primary schools permanent benefit from their school training, suitable books were desirable for use after they left their class-rooms. The Society therefore in 1816 took over the effects and business of the Cheap Book Society, and on this foundation built up a large publishing business. The books issued were cheap, amusing, and of kinds that appeal to boys and girls. This department of work was developed with wonderful rapidity, and we cannot doubt that the good it did throughout the island was great and lasting. Dr. Kingsmill Moore tells us that

"the sales everywhere went on increasing. The figure for the first ten months of 1820 was 108,000; by the beginning of 1825 the output had reached the total of 1,000,000; and by 1831, the last year for which definite figures are available, the grand total was 1,464,817."

We thus find that in all departments of its work, excepting religious instruction, the Society was thoroughly successful; and the readers of this account of a brief but brilliant period in the educational history of Ireland will regret its fall. Dr. Kingsmill Moore has marshalled his facts with so much literary skill, that this almost forgotten chapter will be read with interest as well as advantage by all students of education in our islands.

We noticed recently a little book on *The Teaching of Latin*, by Mr. W. H. S. Jones, and expressed a doubt as to whether boys could advance so quickly as he intimates. We now learn that the system he inculcates is at work in a well-known school, and that practical results justify his statement. This means that a great saving of time is effected, and we understand that the plan adopted is being taken up by other educational authorities who have seen the result of three years' actual work. This reform is of great importance, and we may return to it later. It is claimed that languages can be taught in one-sixth of the period usually allowed.

OUR LIBRARY TABLE.

AN interesting book on a most important subject reaches us from Messrs. Blackwood. Col. Callwell, who is a well-known writer upon tactics, in his *Military Operations and Maritime Preponderance: their Relations and Interdependence*, ventures into a discussion of the whole of the vexed question of the command of the sea. He does not treat it, however, in a thoroughly satisfactory fashion, and his general principles, which are those usually received, are obscured by too much technical anecdote, not always appropriate. A large part of the volume constitutes, in fact, a somewhat fierce attack upon the Fisher policy lately adopted by Government for the British fleet, and as the main basis of the scheme of Imperial defence. Col. Callwell entertains as high an opinion of the need of naval bases and naval fortresses as that put forward by the Carnarvon Commission. He declares naval bases indispensable, and attempts to prove that

"these bases carry fixed defences in their train by the irresistible force of circumstances. There has been in this country a kind of crusade against fixed defences, a crusade for which there is some justification. But because the fortification of defended harbours has been carried to excess, and has in some cases been developed in utter defiance of strategical conditions governing the particular locality, that is no reason for going into the other extreme and hampering mobile force by burdening it unduly with the guardianship of the shore establishments which are vital to its efficiency, and with the protection of ports of call to which the mercantile marine instinctively flies in the early days of a maritime contest. The primary object of overthrowing the hostile sea-going fleets, or in driving them to their lairs, is best accomplished by concentration of fighting strength. And concentration of fighting strength means the abandonment for the moment of certain seas. If there are no defended posts in those seas a single hostile cruiser may inflict serious injury on commerce, and may even throw serious difficulties in the way of ultimately recovering domination within their area."

In other portions of the volume Col. Callwell returns to the same subject. He gives a list of naval bases, in which, curiously enough, we open with three "dockyards abroad" which have been closed—"Halifax, and Bermuda, and Esquimalt." The importance of St. Lucia is also dwelt upon in many portions of the volume, that being a post of which, it will be remembered, Government have declared in the present session of Parliament that it is to be "abandoned and its garrison withdrawn." In the historical side of the book this matter is also dwelt on:—

"The attack and defence and occupation of posts has been a feature in naval warfare since the days of the Phœnicians, and it will continue a feature in naval warfare till the reign of universal peace..... Rodney sailing out to fight his great fight with the Comte de Grasse from St. Lucia, captured two years before."

Another subject in which Col. Callwell is opposed to the policy recently adopted concerns submarine mining, of which he says:—

"The development of submarine mining makes attack upon coast fortresses from the sea far more difficult than it was before this form of fixed defence came into prominence.....It is only of recent years that these engines of destruction have become a formidable bar to the passage of ships..... The warship of to-day is much too valuable for it to be placed in the deadly peril which it incurs when it traverses a mine-field controlled by a vigilant foe."

It is, however, the case that submarine mining has been abandoned during the present year by Government for the defence of all naval ports.

The best part of Col. Callwell's book lies in some paragraphs, of which the chief is headed 'Influence of Popular Opinion cannot be Left Out of Account in War.' The importance of this consideration is too often neglected. It is certain that the rejection of the invasion doctrine is often an aimless or somewhat dangerous peace process, however scientific may be the reasoning on which it is based, inasmuch as when dangerous war arises a wave of panic will sweep away the authors of the doctrine, unless they set their sails to the passing storm.

The English of Col. Callwell, without being altogether bad, is somewhat feeble, and deprives his volume of the interest for the general reader which invariably attaches to a sound style.

MESSRS. MACMILLAN & Co. publish Dr. Nansen's *Norway and the Union with Sweden*, a sound little book on the Norwegian side of the dispute, by the Norwegian who is most competent to write upon it. Of the three Norwegians who have a world-wide reputation,

Dr. Nansen is the only one who can be considered a statesman in the international sense of the word; and in the event of his country having to carry on the struggle, there can be no doubt that he will be called upon to render service to it as the one of its people who can be best trusted to accomplish a considerable diplomatic mission. The cause of the separation is, in fact, the usual one—"incompatibility of temper." Norway and Sweden are two of the most "respectable" countries in the world, with excellent ideals and admirable power to carry them into effect. But Sweden is the most aristocratic of all countries, and Norway the most democratic. The difference is in the blood as well as in the history.

The Annual Register for 1904 is published, as usual, by Messrs. Longman, and is in the ordinary form and of the usual merit. The account of the foreign policy of Germany will be read with interest at the moment, inasmuch as it relates the snub administered by the German Government to the demands of their Colonial Society, and of a Pan-Germanic Congress for the vindication of Germany's rights in Morocco in view of the Anglo-French agreement. It is also pointed out in this chapter how greatly the German Emperor favoured last year a policy of virtual alliance with Russia; and his telegrams as to Russian mourning being German mourning, and those of congratulation to Russian regiments, are set forth in a fashion to remind us of the suddenness and completeness of the change in German policy since the defeat of the Russian army and destruction of the Russian fleet. The charges of German Liberals against their Government of undue subserviency to Russia in police matters contain an interesting reference to the Russian police centre at Darmstadt, which has this importance—that it is understood that that German city is the capital to which the Russian Liberals and the Russian autocratic party equally desire that the Emperor should retire, the latter promising him that he shall return to a country pacified by the Police-Master Trepof, and the Liberals, no doubt, hoping that he will not return at all. The chapter on Sweden shows the obstinacy by which the Swedish people failed to make the concession which would have kept Norway in the personal union, and made a rupture certain. If it was not intended to fight, it is clear that it would have been wise to yield upon the details. One of the few points which seem to call for criticism is the failure to give in the excellent American chapter (by Mr. Maurice Low) the date of the interesting dispatch of Mr. Secretary Hay on contraband of war. The dispatch is one of so much importance for the future that it might well have been given in full. This brings us to an old difficulty of ours about 'The Annual Register,' namely, that of the arrangement and the index. How, for example, in future years are we to find the Hay dispatch? "Neutrality" would be the natural heading in a full index, with a cross-reference from "Contraband." It is, as we have said over and over again, difficult suddenly to change the arrangement, and not easy to improve the index without rearrangement. Still we regard such a change as essential to the continued usefulness of 'The Annual Register,' except, indeed, for obituaries, which can always be found, and for which it is regularly and universally searched.

THE 'London Argus' Office sends us *The Argus Municipal Guide, 1905-6*, a volume which contains particulars of the City of London Corporation, the London County Council, and other bodies in London and the provinces. It is edited by Mr. Arnold Wright, and contains many portraits.

THE situation and the personality of Mr. Washburne when United States Minister in Paris during the war and Commune were of so much interest and historical importance that it is well to have a reprint of his dispatches. From that point of view we welcome Mr. Adolf Hepner's volume, published in German and English at St. Louis. We object to the title *America's Aid to Germany in 1870-1*, because, as a fact, Mr. Washburne was more useful to France unofficially than he was to Germany officially. Any one could have done the official work, which was, indeed, divided between several persons, the Swiss Minister being the best known of the others. Few would have risked doing what Mr. Washburne did to help France. He is incorrectly styled on the title-page "ambassador." Mr. Washburne was a bitter enemy of the empire to which he was accredited, and one of the dispatches which was published by his Government contains an expression of rejoicing "at the overthrow of the dynasty." From the moment, however, of the revolution of the 4th of September, Mr. Washburne became a strong friend of the Republic, and did everything that was possible to assist it. So far, therefore, as the author sets out "to acquaint Germans with the services rendered them by the United States" the book is misleading. The author of the present notice had frequent access to Mr. Washburne during the period referred to, and there was no secret made of the sympathies, and even of the preferences, of that great minister. As it is, the book contains repeated complaints by Bismarck and by the German military authorities of Mr. Washburne's violations of neutrality — for example, when he communicated, as he did throughout the siege, to the French Government the contents of the English newspapers which he received regularly from London by bag by means of the daily flag of truce for his service. No wonder that the German military authorities were angry when the capture of French dispatches sent out by balloon-post proved to them the use which had been made of the information. No doubt Mr. Washburne's services were also of value to the Germans, inasmuch as it is essential in war to have an easy means of communication with the enemy, such as compromises no one. It was from the American dispatches that the world first learnt that it was through Mr. Washburne that the peace conferences between M. Favre and Count Bismarck were arranged. We are reminded also by the present book that Bismarck himself was mollified by a present from Mr. Washburne of "those excellent cigars." These came out of Paris by one of the first of the regular flags of truce within a week after the German authorities had allowed Mr. Washburne's American friends from London to bring him his first bag. A few days later, however, Bismarck was bitterly complaining of the military effect of the communications which had been brought through the lines by the persons authorized to pass in and out. It is curious to find Mr. Washburne giving passports to persons who were neither Americans nor Germans; but in many cases there is no doubt he did so, and the irregularity was winked at. When his relations with the Germans became strained, they detained his bag for several days, and thus punished him through the staleness of his news. It is interesting to see the German Commander-in-Chief writing to M. Paschal Grousset as late as May 21st, and the Committee of Public Safety replying through the Delegate for Foreign Affairs as late as May 22nd to General Fabrice, while on May 24th Mr. Washburne applies to the other (or Versailles) side to protect the German Embassy in the Rue de Lille, and notes that he had succeeded in securing the escape of the German and Alsacian nuns. After the Germans had claimed to have annexed Alsace, and before the annexation had been recognized in a peace, much difficulty arose as to the nationality of Alsacians. There are a good many small mistakes in the book. The name of the Marquise de Galliffet is misspelt in the dispatch which relates the authorization to her to leave Paris. The name of the Duc de Gramont is spelt two ways. "The Mayor of Paris" is an imaginary person; and the German "occupation" referred to did not take place, but merely a march-in to one end of the town. The statement "There is a precedence to be found in our book" means *precedent*.

Robert Browning. By C. H. Herford. "Modern English Writers." (Blackwood & Sons.)—Prof. Herford's study of Browning is in many respects complementary to that of Mr. Chesterton published last year. The latter was a vivid and illuminating introduction to a personality, a temperament: the man lived and moved in the world. But the treatment of the poetry was unsatisfactory: the author considered merely, with little sense of proportion, the poems in which he was interested. 'Paracelsus' passed unmentioned, while 'Mr. Sludge' received several pages of criticism. The present volume conveys an impression entirely opposite. Browning is an elusive figure, scarcely appearing alive, except in quotations from his letters. But the body of his work receives consideration, and the poems are assigned something approaching their real value. This is perhaps a more satisfying treatment of the characteristics in form and thought of an immense output of verse than has been given in any of the numerous recent monographs.

The style is, for the most part, sober and balanced, though there are occasional flashes of a rather loose rhetoric, and the author has an odd habit of falling at intervals into comments which are banal or tasteless. Such are, for example, his description of "well-to-do Camberwell," in which "the life-blood of political and social interests throbbed vigorously." Or take the criticism of Pompilia: "Remote enough this illiterate child must seem from the brilliant and accomplished Elizabeth Browning"; or the comment upon Browning's later life, "mingling freely, an ever welcome guest, in the choicest London society"; or the announcement that "bright spiritual beings like Pippa shed their souls innocently and unwittingly about like a spilth of X-rays"; or the affirmation that Browning "certainly 'came eating and drinking.'" In the life itself the chief omission is (as it would seem) lack of acquaintance with the Story letters in the life of Story by Mr. Henry James, published two years ago. These form the most revealing account of the great catastrophe of Mrs. Browning's death, and of the deliberate course of action subsequently adopted. "Even the neighbourhood of the spot in which all that was mortal of her had been laid," says Mr. Herford, "had no power to detain him"; and he even suggests that Browning's departure from Florence was in part due to the fact that "he had his child to educate and his own life to fulfil." The facts, as the Story letters show, were indeed that this departure had been always present before him as the inevitable consummation of a loss which he could never set himself deliberately to contemplate as a future possibility. He fled from Italy as from the plague, with all the memories of the enchanted time henceforth locked away secure; the key turned in the chamber door (in Mr. James's comparison) and then flung away. Only there always remained the flickering hope that some time, in a far future, it might be possible once again to enter those sacred and deserted halls: "My end of life and particular reward for myself will be one day, years hence, to just go back to Italy, to Rome, and die as I lived, when I used really to live."

Mr. Herford's criticism is in the main secure. He is inclined, perhaps, to over-emphasize the distinctive features of the poems as influenced by differing epochs and external events, finding earlier "poems of Art," later "poems of religion," beginning with 'Christmas Eve and Easter Day' in 1850; after the death of Mrs. Browning seeing in 'Dramatis Personæ' "the hectic and poignant splendor of Autumn," with the sense of tragic loss brooding over all its music. The religious interest is directly attributed to the influence of Browning's marriage: "There can be little doubt that the devout Christian faith of his wife was principally concerned in this new direction of his poetry." Yet all this faith was implied in 'Paracelsus,' with its defiant affirmation of Power and Love as the ultimate reality of the universe; and it is surely an artificial interpretation which finds tragic loss and autumn splendour in a volume containing 'Rabbi ben Ezra' and 'Abt Vogler,' 'Caliban on Setebos' and 'A Death in the Desert.' Mr. Herford's criticism of the later "poems" is everywhere excellent, though he offers perhaps too lavish a space to work already dead, which no power on earth will be able to revive. He rightly notes the miraculous change in the 'Asolando' poems which has led "one, not the least competent of his critics," to refuse to accept them as the work of old age.

The last hundred pages, which form a study of Browning's work surveyed as a completed whole, are full of value and suggestion. Mr. Herford demonstrates one characteristic not generally emphasized—Browning's delight in colour. Here, indeed, he is all in the tradition of romance against the classical cultivation of Tennyson's grey and white light. But few have classed Browning with Rossetti and the great "colour-drunken" artists of the nineteenth century. Yet the man thirsted for colour like the young Burne-Jones in the streets of a drab Birmingham; Italy, with the sharp colour-contrasts of the South, satisfied the heart of the one and the other. It was a thirst for primaries, bold, simple, and intense. "He dazzles us," says Mr. Herford,

"with scarlet and crimson, with rubies and blood and 'the poppy's red effrontery,' with topaz and amethyst and the glory of gold, makes the sense ache with the lustre of blue, and heightens the effect of all by the boldest contrast."

He loves the play of light on golden hair, light and the imagery of flame.

"He neglects the mellow harmonies of autumnal decay in order to paint the leaf which is like a splash of blood, intense, abrupt, across the flame of a golden shield."

This same passion, indeed, is revealed in all his letters. "I never grow tired of sunrises," he confesses in one; in another, delight in "the herbs in red flower and the butterflies on the top of the wall under the elm trees"; in a third, "such a love for flowers and leaves" as to lead him, in a kind of impatience, "every now and then.....to bite them to bits."

Next to this joy in colour Mr. Herford notes a joy in form—and form especially as revealing a sense of motion and energy. Here, indeed, he is able to make a good case against the charge of "mistiness," first advanced by *The Athenæum*, which caused Mrs. Browning such indignation—"an infamous word," as she writes to him, "for your kind of obscurity." The form desired is the sharp, ragged edges of things, the angular, the indented, jagged teeth, "the white line of foam against the shore, the lip of a shell." A "prolific family of spikes and wedges and swords runs riot in Browning's work." Beyond this, though entirely congruous, was that joy in power which found subject for special exultation in the sudden outpourings of energy, human or divine. Mr. Herford finds in the man himself a "savage energy" with a "brutal scorn" and loud voice: in his work a contempt or neglect of the normal secular processes of Nature, and those concerns of the particular hearth and home which provided Wordsworth and, in some degree, Tennyson with a source of inspiration. Power is revealed not by the rose's birth, but the comet's rush, always "pre-eminently sudden"; in the uprush of the molten ore amongst the rocks, the sudden boiling up of young volcanoes—all changes which make an instant transformation. "The metamorphoses of plants," says Mr. Herford, with a fine critical insight,

"which fascinated Goethe by their inner continuity, arrest Browning by their outward abruptness: that the flower is implicit in the leaf was a fact of much less worth for him than that the bud suddenly passes into something so unlike it as the flower."

From these elemental attractions Mr. Herford attempts at the end to sum up Browning's philosophy of life. As in all the philosophy of poets, it is intuitive rather than rational, leaving large gaps and ragged edges if it is viewed as a complete scheme of things. Power he recognized, love he demanded, though with a demand enduring a heavy strain as the years passed. "Of outward evidence" for the conviction that the world is governed by love Browning saw less and less. His love was all interpreted in terms of the mystic fascination of sex; children scarcely enter into his poetry, nor the love of parent for son or child for father. The claims of the community or State were but fragile bonds upon the soul of so unashamed an individualist. God beside the soul stood sure, and "infinity is ever at hand behind the closed door." But this God, chiefly revealed in sudden miracle, was sharply divided from man's being—here, or under any condition of future change. "Deeper in Browning than his Christianity" is the conclusion of this acute critic, "and prior to it, lay his sense of immeasurable worth in all life, the poet's passion for being." The ultimate exaltation of life is here rightly interpreted as the key-note to all his writings. But that life must possess capacities of passion and violence, explosive energy, the potency of sudden change. And it is difficult to interpret such a demand for the perpetual shock of a new stimulus, with its implied contempt for or indifference towards normal experience, into a cosmic philosophy adequate to all the slow, silent actions of Nature and man.

Schiller after a Century. By John G. Robertson. (Blackwood & Sons.)—After the tributes of ardent and unstinted eulogy that have recently been paid to Schiller, this little essay will probably strike a good many people as uncomfortably chilly. It deserves attention, however, for it is no mere restatement or summary of earlier opinions, but a fresh and independent study, marked by discrimination, scholarship, and the evidences of exceptionally wide reading. Mr. Robertson attempts to show that the popular view of Schiller as the national poet of Germany—the view which was expressed with the greatest conviction and emphasis on the occasion of the celebrations in 1859, and which is still prevalent, especially in educational and official circles, where it is carefully fostered—has really little foundation in fact. Schiller was, on the contrary, cosmopolitan:—

"As a poet he had exceptional gifts, but his work was not, in any special sense, national; still less was it for all time."

In support of this contention Mr. Robertson points to the dramas. The three earliest, 'Die Räuber,' 'Fiesco,' and 'Kabale und Liebe,' were distinctively German in character, and gave promise that Schiller might succeed in laying the basis for a national drama; but then, on a sudden, with 'Don Carlos,' came a marked break—the only really great break observable in his work. Mannheim, it is argued, exerted an unfortunate influence on its "Theaterdichter," europeanized his genius, and brought him under the sway of Latin ideals; henceforth he abandoned the attempt to create a specifically German drama; his outlook on life and his attitude towards nature, motive, and character were Latin, and though he continually sought to evolve a national form for the German drama, he never succeeded in rectifying the consequences of that fatal step. He was dominated by the spirit of the eighteenth century, and did not reach beyond it:—

"His work belongs in its ideas, as well as in its form, to the past; his noble dream of perfected humanism and moral idealism has no immediate message for a generation whose outlook upon life has been moulded by the pessimism and individualism of the nineteenth century, and his dramas have ceased to awaken more than a historical interest.....for the cultured classes."

Such is, briefly stated, the thesis of the essay, and it is ably and forcibly maintained. With much of it we agree, and we find it interesting and instructive, even when we fancy that a slight want of sympathy is discernible. That Schiller fed his genius too full on the Latin classicism of the eighteenth century is, we think, perfectly true; but surely he managed to infuse a Germanic element into much of his work, by virtue of which it remains alive, and appeals to his countrymen and kindred races. Certainly it is able to touch many of them whom the French *tragédie classique* would leave unmoved, and probably there will always be men who will find refreshment and inspiration in those "noble dreams" at some period of their lives. So far, at least, Schiller's influence is still strong, and though the conventional idea of the German nation regarding him is, no doubt, exaggerated, perhaps it is not so utterly mistaken as Mr. Robertson would make out.

What I have seen while Fishing and How I have caught my Fish. By Philip Geen. With 73 Illustrations. (Fisher Unwin.)—This is a new edition of an attractively illustrated account of fishing for pollack, salmon, and trout in Ireland, salmon fishing in Scotland, and general fishing in the home counties. Mr. Geen, who for nearly thirty years has been President of the London Anglers' Association, in addition to very useful practical accounts of his sport, gives his book an interest for the general reader by his pleasant descriptions of the human and other life, and the scenery of many delightful districts. Mr. Geen kills nearly all his salmon (and he has killed a great many) spinning with an 11 ft. 6 in. Grant, "vibration" greenheart rod—little more than a trout flyrod really. He carries a tin tray strapped to his side, and into this he coils the line between each cast. For accuracy and delicacy of casting no other method can equal this, but there are disadvantages, including hooking a lively fish with a lot of line in your tray. An adept like Mr. Geen, however, rarely loses a fish when he has well hooked him. His breezy chapters gave delight to thousands of anglers when they first appeared in the pages of *The Fishing Gazette*, and they certainly deserve wide circulation in book form.

IT is curious to note the number of books published in recent years—lives, reminiscences, miscellanies, and the like—which rely for success in the market on the *cachet* conferred by a few letters from Lamb or Coleridge. The staple of *A House of Letters* (Jarrold), the latest of these cannily ingredienced olios, consists of correspondence addressed by Charlotte Lady Bedingfield, her mother Lady Jerningham, and her sister Lady Rouse Boughton, to Matilda Betham, minor poet and painter of miniatures. But in the number of her friends Miss Betham counted

Elia and cousin Bridget also, and thus it comes about that amongst pages reflecting the life of the *haut ton* a hundred years ago at such centres of fashion as Bath and Yarmouth, about a score of letters from Charles and Mary are here interspersed. To the presence of these letters—by which the commercial rather than the literary value of the book is greatly enhanced—and of some half-dozen characteristic outpourings from Coleridge, the prosperity of 'A House of Letters' will be mainly owing.

The Bedingfield correspondence, however, is pleasant reading. Charlotte Jerningham, while gaily indifferent to the pedantries of syntax and punctuation, possessed ardent feelings, a lively fancy, and enough at least of the artist's temperament to qualify her for appreciating the work and stimulating the efforts of her friend. "Write, write to me," she entreats, in a scrap dated 1797;

"I love Your Letters. Surely I give you example enough of Incoherence in the Epistolary way to put You at Your ease on that head.....Yours most affectionately Without either Grammar or Rhetoric."

And, towards the close of an intercourse which lasted from 1794 to 1840, she signs herself "your attached old friend," adding, prettily, "You took me for better and for Worse years and years ago." In 1806 she writes from her "old grey Towers" of Oxburgh, in Norfolk: "We go to Yarmouth next week. Departures are always to me like little deaths"—a phrase which recalls Elia's words to Hood: "To change habitations is to die to them, and in my time I have died seven deaths." A passage in one of her letters of 1800 illustrates the contemporary opinion of the Principality as a place to live in:—

"I love Wales! I wish one could spend a year or two there without being supposed to be ruined. Why should so beautiful a Country from this Idea be looked upon as the Botany Bay of English Gentlemen?"

Her letters abound in such quaint fancies as the following:—

"We have got the widowed Mrs. C—— here, she is a Clever well-bred woman, but so slow that I feel as if it would relieve me if I could bark at her as dogs do at Sheep."

Lady Jerningham desired to meet Coleridge, and, while in town during the season of 1811, requested Matilda Betham to arrange an interview, which, through the friendly offices of Mary Lamb, ultimately took place at her ladyship's dinner-table on Sunday, March 10th. The hostess records her impressions of the literary lion in the following somewhat caustic epistle:—

"My dear Miss Betham,—I have been pleased with your Friends, tho' (which is not Singular) they sometimes fly higher than my imagination can follow. I think the author ought to mix more, I will not say with fools, but with People of Common Comprehension. his own intellect would be as bright, and what emanated from it more Clear. this is perhaps a very impertinent Remark for me to venture at making, but your indulgence invites Sincerity."

In a temperate and dignified chapter on the 'Llanthony Maze,' the editor, Mr. Ernest Betham, successfully repels the calumnies of Landor and the misrepresentations of Landor's biographer, John Forster, regarding Matilda Betham's brother Charles, who in 1812 became tenant of a farm on the Llanthony estate. The story is too long to be retold here; enough that it reflects nothing but credit on Charles Betham, to whom Landor was compelled to pay damages for libel. We cannot, however, accept the editor's assertion that "the identity of the children of Lepus's (Lamb's) 'old friend Captain Beacham' with the 'Welsh annoyancers, the measureless Bethams,' is no identity of fact." There really can be no doubt whatsoever that, when he wrote that "Lepus" Paper, No. I., Lamb had in mind the brothers of Matilda Betham, though here, as often elsewhere, he blends fact and fiction inextricably together. The volume contains several interesting portraits of the Betham family, together with an early miniature of Queen Victoria, reproduced in colours, which proves at least that the painter, Sir William Ross, if not a great artist, was undoubtedly a clever courtier. A score of letters from Southey, and half a dozen from Bernard and Lucy Barton—these latter now printed for the first time—together with some genealogical and antiquarian gossip concerning the house of Betham, make up the *farrago libelli*.

The Story of Etain and Otinel. By E. Hamilton Moore. (Nutt.)—The story tells of three men who loved one woman:—

"They were Otinel, king of Farlands, Owain, king of the Marshes, and Brand, who was kinsman to Owain, and whom men called the Viper. The woman was Etain, daughter of Madeglaut and Morna, rulers in Overseas. One out of the three she loved, and one she wedded, but at the last none of them might possess her."

These, the opening sentences, give an adequate idea of the story and its manner. In form it challenges comparison with the prose and verse tales of William Morris, though Mr. Hamilton Moore's style lacks the purity and eclecticism of what we take to be his models. Neither can the use of alliterative verse—the metre of 'Beowulf'—be considered wholly in accord with the spirit and atmosphere of this book, which are almost Arthurian. This is, in our opinion, a grave fault. The author uses modern spelling, yet he writes:—

For both are riddles that I may not rede,

an avoidable blunder involving the misuse of a word. The verse is not remarkable, but serves its purpose well enough. There is more merit in the prose, though this is often stilted and prone to frequent lapses into metre. In a tale written in prose and verse it is particularly desirable to keep the two distinct from one another. As for the story itself, it has no great originality either of person or incident—witness the episode of the sword drawn from the stone—and the names used are fantastic and without significance. Here and there we come across pretty word-pictures, but the prettiness is apt to be reminiscent, as in the following, with its echoes of Tennyson:—

"And as he spake the sunlight pierced the mist, and lo! a waste land, bright with golden coloured grass, and a blue water, and on a little hill a moss-grey stone, and none was there beside them, nor were there other voices than the cry of birds, the ripple of the water and the rustle of the wind."

The book is attractive in appearance, and pleasant to read if the reader is not disposed to be critical.

In *Specimen Letters*, selected and edited by Prof. A. S. Cook and Mr. A. R. Benham (Ginn), we have a capital collection of eighty-eight examples of the last two hundred years, including the work of Gray, Lamb, Horace Walpole, Cowper, Keats, Edward FitzGerald, and Stevenson. An appendix includes Cicero, Pliny, Trajan, Madame de Sévigné, and Voltaire. The preface is very brief, and the annotation only refers to a phrase here and there. The selection is admirable, exhibiting the mixture of grace and familiarity which makes the best letters. We are glad to see the humour of Lowell, as well as the clear-cut conciseness of Abraham Lincoln. There is only one great man absent here who should, we think, have supplied a taste of his irony and grace—Ruskin.

In *Wild Flowers Month by Month in their Natural Haunts* (Warne & Co.) Mr. Edward Step takes readers a hunt after wild flowers with a camera. Vol. I. takes us through March, April, May, and June, and offers 166 illustrations, reproduced from original photographs by the author. These are admirable, and in many cases of great beauty. Mr. Step is a competent botanist, and writes easily, in a natural style, which is just the thing to lure the ordinary reader on to strict science, which will not, we hope, involve the dropping of the folk-lore and poetry which are introduced in these pages. The writer has an eye, too, for natural objects outside the world of flowers, such as the moths which haunt oak fences, the dragon-fly, and the eggs of the pheasant. The book is delightful, and we wish it every success.

We are delighted with Messrs. Bell's *Horace*, the Latin text with Conington's translation on the opposite page. The little book is elegantly and securely bound in stamped sheepskin, and contains all Horace's pedestrian efforts, as well as the Odes which everybody is, or was, supposed to know. It is a marvel of compactness, and should find its way into many pockets this summer. More than any other author, perhaps, Horace appeals to the man of the world. But the critic, too, may well study his admirable 'Art of Poetry.' Here Conington shines as a translator, being wonderfully near to the original.

Messrs. Routledge send us, in one volume, the *Philosophical Works of Francis Bacon*, reprinted from the texts and translations, with the notes and prefaces, of Ellis and Spedding, and further equipped with an introduction by Mr. J. M. Robertson, who has added some judicious annotations. The few who know Bacon's philosophical work well will not expect to find that its mass allows of good type when compressed into one volume. We have here, at any rate, at a popular price, all the more important prose works of Bacon edited in masterly style, including not only the 'Novum Organum' and the 'De Augmentis Scientiarum,' but also didactic works like the essays, the 'Wisdom of the Ancients,' and 'Apothegms' from various sources. The printing in every case in which we have tested it is well done, and there is a good index. We hope that the volume may be widely studied as a remarkable exposition of the ideas of a great Englishman in a great time. They are not all obsolete either, for has not Mr. Wells reverted, in his 'New Utopia,' to Bacon's splendid conception of a House of Solomon? We know, we may add, some world-improvers who would be benefited by a study of Bacon on the 'Advancement of Learning.' Cicero, quoted by Bacon, complained that Cato talked "as if he were in the republic of Plato and not in the dregs of Romulus." A little idealism of the sort would not harm us to-day, combined, as in Bacon's case, with a study of natural science, which should go with philosophy, not with blatant materialism.

The Angel in the House, together with *The Victories of Love*, has just appeared in "The Muses' Library," published by Messrs. Routledge. Mrs. Meynell contributes a discriminating preface on Patmore's place in poetry, now secure, and his reception in his own day.

We have on our table *John Knox*, by H. Cowan, D.D. (Putnams),—*John Knox*, by J. Glasse, D.D. (Black),—*The Blessed Virgin and all the Company of Heaven*, by A. T. Wirgman, D.D. (Mowbray),—*A Daily Message from Many Minds* (Allenson),—*The Story of the Beginning*, by Mrs. Frederic Green (Wells Gardner),—*Sayings of Jesus and a Lost Gospel Fragment*, by H. D. Rawnsley (Laleham, the Beaver Press),—*The New Testament and the Pentateuch*, by C. F. Nösgen, D.D. (R.T.S.),—*The History and Life of the Rev. Dr. John Tauler of Strasbourg*, with twenty-five of his Sermons, 1340, translated by S. Winkworth (Allenson),—*The Second Epistle to Timothy*, by H. C. G.

Moule, D.D. (R.T.S.), — *The Prince of Judah*, by Lumen (Stock), — *The Coming Church*, by the Rev. John Hunter, D.D. (Williams & Norgate),—*The New Testament in the Light of the Higher Criticism*, by R. Balmforth (Sonnenschein), — *Tea-Table Rhymes and Others*, by L. Romayne (Brimley Johnson & Ince),—*William the Conqueror: an Historical Drama*, by J. F. Waight (G. Allen), —*Poems*, by G. Addington D'Arcy-Irvine (Nisbet),—*Poems*, by J. Gordon (Appleton),—*The Love-Song of Tristram and Iseult, and other Poems*, by C. Emra (Stock),—*Sanctuaires et Paysages d'Asie*, by A. Chevrillon (Paris, Hachette),—and *Espagnols et Portugais chez eux*, by M. Quillardet (Paris, Colin). Among New Editions we have *The Truth of Christianity*, by Lieut.-Col. W. H. Turton (Wells Gardner),—*Peter Binney*, by A. Marshall (Alston Rivers),—and *A Handbook of the Ordinary Dialect of the Tamil Language*, by Rev. G. U. Pope, Part III. (Clarendon Press).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Harnack (A.), The Expansion of Christianity in the First Three Centuries, Vol. 2, translated by J. Moffatt, 8vo, 10/6

Laud (Archbishop) and Priestly Government, by H. Bell, 8vo, 10/6 net.

Rouse (G. H.), Old Testament Criticism in New Testament Light, cr. 8vo, 3/6

Law.

OXFORD NOTES.

WHATEVER movements may be astir in the hidden depths, the surface of Oxford life has been more than usually placid. Perhaps the greatest shock to our quiet was afforded by Dr. Ray Lankester's Romanes Lecture on 'Nature and Man,' which has now been published at the Clarendon Press, and can be read by all the world. When, in the course of the first few sentences he delivered in the Sheldonian Theatre, it became apparent that his purpose was *écraser l'infâme* in the shape of the Humaner Letters, members of the Classical Association and others might be seen feeling towards the legs of their chairs, as if the day of final battle between gods and giants were indeed come. But if ever bull in china-shop behaved considerately and circumspectly, it was the professor. His tone remained moderate, even whilst the statements he uttered were almost grotesquely extreme. Nay, so manifestly exaggerated and one-sided was his attitude on the practical question, that the layman was driven to suspect, if not the intrinsic value, at all events the relevancy, of the purely scientific portion of the address. And yet, if stated with the impartiality one expects from science, surely the case was strong. Our best men neither at school nor at the University come into contact with "nature," nor to any great extent with man considered as part of "nature." This aspect of man's place and function in the world is, however, on Dr. Lankester's own showing, less important, because less fundamentally characteristic, than the complementary aspect presented by man's struggle to achieve his own self-chosen ideals in absolute defiance, as it were, of those "laws of nature" which seem to hem him in. Now, to the knowledge of man on this his spiritual side, as it may conveniently be termed, Philosophy and History plainly contribute far more than, say, Biology. But a pottering antiquarianism that parades as History or Philosophy is another matter, being no better, and no worse, than the niggling specialism which some men of science would impose as a form of general culture on all. Now at Oxford we endeavour, despite the antiquarians, to inculcate broad views of the purposes and conditions of human life in our Honour Schools, more especially in the School of *Literæ Humaniores*, with its well-organized philosophical department. On the other hand, it is undoubtedly true that with us philosophy is bound up far too closely with the classical course. It is certain, however, that, if in the future the attempt be made to extend the privileges of what is in practice found to be a truly liberalizing discipline to a class of students at present debarred therefrom by weakness in the matter of Latin prose or what not, that attempt must come from the classical side. Natural science in all its branches has shown itself insensible to the advantages of philosophical and cultural training, or, at all events, unable to devise on its own account any system of teaching or of examination whereby the investigator of the laws of nature may be given a chance of reflecting on the "previous question," namely, what "law" and "nature" mean. The uncritical dogmatism with which the Romanes Lecturer described the universe as a "mechanism" was itself an eloquent proof of the incapacity of science, in its present state of enlightenment, to arbitrate between nature and "rebel man," conscious of that high destiny which he would accomplish at all costs. If "naturalism" and "spiritualism" are to work together for man's good, it must be on the basis of a common education in first principles.

Dr. Fairbairn has circulated amongst the resident members of the University copies of his letter to *The Times* of March 16th, in which we were invited to direct our energies "towards reducing the expenses of graduation and enrolment by two-thirds, and increasing by two-thirds the number of the men who keep their names on the roll of Convocation." It is to be feared that this arithmetic is more specious than sound. Indeed, a note is now added to point out that the letter "was meant to call attention to an evil in our academic system, not to propose a remedy." Hence public opinion waits for more light to be thrown on the question of means. As to the end suggested, all seem ready to approve, though on sentimental rather than on political grounds. Indeed, so far as University politics is concerned, it would be scarcely irrelevant to quote Mommsen's remark about the Sulpician proposal to give votes to the freedmen—"looking to the nullity of the comitia, it was politically of very little moment whether one sewer more emptied itself into that slough."

Though it is, perhaps, a little late in the day to call attention to it, a word ought to be said in praise of the 'Programme of Special Studies,' issued, if not by, at any rate in the name of, Oxford University, for the academical year just drawing to a close. It is thereby made patent to all who may be interested, notably to students hailing from the other side of the Atlantic, where post-graduate study is a recognized and honoured institution, that our resources for assisting research are really very considerable. At the same time any one with local knowledge must perceive that this "first gleaning" is somewhat incomplete. This is but natural, seeing that it is the work of a few enthusiasts who had neither the spare time nor the authority to coax each reluctant specialist from his coy retreat. Another year, it is to be hoped, the University will definitely assume responsibility for the scheme announced, and thus lend force to the public opinion now rapidly taking shape, which demands of the University teacher that he should aspire to some higher function than that of imparting to boys the knack of writing four-page essays.

A burning question of the moment is whether Eights Week is to continue to infect Summer Term from the fourth week onwards with that spirit of Saturnalian revel from which it never recovers. The justice of this description is borne out by statistics which show the honours man to be shaken and the pass man to be wholly upset. This year things have perhaps been even livelier than usual, partly owing to the perfect weather which ushered in the festival, and partly, it may be, to the fair visitors who flocked hither from afar to add a crowning grace to the reign of international lovingkindness inaugurated by Cecil Rhodes. Whether any reform is attempted will depend

in no small measure on the attitude of the rowing man. He is said, however, to be favourable to the postponement of the races to a later date. At the worst a few candidates for Final Honours might be prevented from rowing—perhaps a blessing in disguise. Meanwhile, though all sorts of opinions are current as to how precisely the change ought to be brought about, the general impression prevails that "this is one of the things they manage better at Cambridge."

Cambridge, meanwhile, is said to believe that forestry is not one of the things that can be more profitably studied in Oxford. Owing, however, to our position in the centre of what is—relatively, at all events—a forest region, we are to be given first chance of showing ourselves worthy to step into the shoes of Cooper's Hill. The students of forestry will be of the same age and social standing as the rest of the undergraduates, and will doubtless fall in naturally with the life of the place. They will spend two years here and the third in Germany. The experiment is, in the first instance, to be made for three years only, but Oxford does not intend, so far as it rests with her, to forego the opportunity of coming into practical relations with a scientific subject at once highly interesting in itself and with direct bearing on the imperial responsibilities of the country.

The statute establishing a diploma in Anthropology was passed in the teeth of a small but insistent opposition. Rumour (which, however, it is not well to take too literally) has it that the obscurantists expressed fears lest comparative mythology would not know where to draw the line, and that the wholly satisfactory reply was forthcoming that the diploma was especially intended to meet the intellectual needs of missionaries. It remains to be seen how a course of study is to be arranged that shall assign to each of the somewhat heterogeneous departments of anthropological research its meed of attention. Since, however, there seems to be room for all the experts on the board of studies, they may be trusted to fight it out amongst themselves.

Benefactions are "in the air." The Goldsmiths' Company have nobly contributed 5,000*l.* towards the cost of the 'New English Dictionary'; Mr. Watney (of Cornbury Park, Charlbury) has presented 500*l.* to the Bodleian; and at least one other act of munificence, which it would, perhaps, be premature to designate further, is on the way to accomplish itself. England seems to be, at last, waking up to the fact that the ideal of the older universities is not *manger ses rentes* untroubled by the world, but, on the contrary, to grow with the growing needs of the times. And, to recur to the point from which these notes took their start, possible benefactors are invited to consider whether the most practical way of bringing the higher education into touch with natural science is not the endowing of this or that college with scholarships and exhibitions for science students. If such students were more numerous and of better quality, the colleges would be bound to see that the philosophical and cultural side of their education was not neglected; and thus, at the instance of the colleges, our system of education might gradually undergo an improvement, which "the museum," of itself, has neither the power nor, perhaps, the broad-minded desire to effect. M.

THE REGISTER OF HUGH DE WELLS, BISHOP OF LINCOLN.

THE newly formed "Canterbury and York Society," established last year for printing bishops' registers and other ecclesiastical records, has made a beginning. Sixty-four pages have been issued to (guinea) subscribers, in a thin paper cover, of the first part of one of the rolls of Bishop Wells (1209–35), of Lincoln. The plan adopted is to give the institutions—for this is merely an institution roll—in full, with extended abbreviations, each entry being preceded by a short English abstract. On the whole, this seems a good plan, and is well carried out. The type is excellent, and the size of the page—a large octavo—convenient and suitable.

The institutions given in this fragment are widely distributed over this great diocese; there are 37 in Lincolnshire, 32 in Northamptonshire, 20 in Oxfordshire, 17 in Buckinghamshire, 16 in Leicestershire, 13 in Huntingdonshire, 11 in Bedfordshire, 5 in Hertfordshire, and 1 in Rutland. The actual documents are often of interest to general historians or ecclesiologists, apart from topographical or local value. There are no two exactly alike, and a far greater diversity of information can be gleaned from them than would be the case with a like number of institutions of fourteenth, fifteenth, or sixteenth century date. Two, casually selected, may be cited as examples. Walter de Toriton, clerk, was presented by Lettice de Saucey to the parsonage of Kiddington, Oxon, saving a vicarage of four marks to a chaplain; the bishop accepted him subject to a re-examination in music and singing, otherwise he was to be deprived and the patron to appoint another. Geoffrey de Dunville was instituted to the church of Whitchurch, Oxon, on the presentation of Warin, son of Gerald; saving the vicarage of Silvester, who was to hold the church, paying ten marks yearly to the parson. The vicar was to be ordained priest at the next ordination; he was always to have a chaplain living with him, able to minister in confession and other spiritual matters, in a tongue known to the parishioners.

As this is the outset of an undertaking that ought to prove of exceptional value if well carried out, it is best to be critical even in comparatively minute points. To begin with, there is no name of transcriber or editor attached. This is a matter of almost vital importance, for a great scheme of this kind loses very much of its value unless it is known who is responsible for particular issues; it is a point on which the subscribers, if they are wise, will be specially tenacious. It is not necessary that the name should be that of a scholar or record agent who has already won repute; but much credit is due, and ought to be given, to those who do good work of this kind, whereas those whose work may be characterized by blunders should not be again trusted. There seems to be good reason to believe that the Society has secured a capable and conscientious worker for this small transcript. We do not know who is responsible for placing the name of the county in the margin opposite each entry. It is stated that this is done for "the convenience of the topographer." Whoever is responsible for this minor part of the work might easily have shown greater ingenuity. It is difficult to allocate such commonplace names as Barton, Sutton, or Weston to the right parishes in a great diocese like Lincoln of mediæval days; nevertheless, a little skilful labour might have filled up the several gaps left in the county names. On p. 2 there is the record of an institution to the church of "Westone"; in this case, as the presentation was made by the abbot and convent "Sancti Georgii de Baskervilla," it is sheer laziness to leave the place for the county name blank.

The name of "The Canterbury and York Society" was felt by many to be a somewhat awkward choice when it was accepted last year, but the outer cover has a Latin rendering of the title in big capitals, which is a singularly unhappy example of the coining of a composite word—it is actually styled "Societas Cantuareboracensis"!

Apology is made, in a long statement on the inside of the cover, for the delay in issuing the first portion to subscribers. For this there seems scarcely any necessity, for the Society was only established last summer, and it seems to us that it would have given far more satisfaction to the subscribers, and promoted a material addition to their number, had the committee waited until a longer period had elapsed, when they might probably have been able, with careful administration of their funds, to put out a bound volume of fairly respectable dimensions, instead of this paper-covered pamphlet. It is stated that "the Committee hope to issue quarterly at least one hundred pages." It is just because we are exceedingly anxious to see this Society prove a success, and imitate the wonderfully good work done by the Henry Bradshaw Society, that we express a decided conviction that the issuing of paper-covered driblets of transcripts will prove unattractive as well as singularly inconvenient. We sincerely hope that the Committee, which we notice is still only an "interim" one, will reconsider this question. As time goes on the Society certainly ought, with a sufficiency of guinea subscriptions, to be able to produce more than one volume a year. But if it is only one, let it at least be put in a stout cover, and not issued in fragments and unindexed.

Another cover announcement might also, with advantage, be reconsidered. It appears to be proposed before long to undertake the registers of the Reformation see of Gloucester, and to begin the Canterbury series with that of Archbishop Parker. All the sixteenth-century episcopal registers, though often very meagre, have, of course, their own special interest; but to take up such as these in preference to the many remarkable and invaluable ones of the fourteenth and fifteenth centuries could not fail at once to damp a great deal of the interest that is gradually springing up about these much-neglected sources of social, ecclesiastical, and national history.

The long statements on the inside of the cover are initialed "W. P. W. P.," and are, therefore, obviously the work of one of the honorary secretaries, to whose pains the inception of the Society is due. He has thought it well, *inter alia*, "to indicate to the reader what so far has been done" in the way of rendering these ecclesiastical records available by means of the press. The student will, we think, naturally expect an hon. secretary of the Societas Cantuareboracensis to know all about the subject. Nevertheless he has ignored the latter half of this wondrous compound word. In the list here of work done the archiepiscopal diocese of York is omitted, as though its registers had not been touched. Nevertheless the important register of Walter Gray, Archbishop of York 1215–55, appeared as one of the publications of the Surtees Society in 1872, forming vol. lvi., under the editorship of the late Canon Raine; whilst only last year the register of Walter Gifford, Archbishop of York 1266–79, was one of the volumes (cix.) of the same society, edited by Mr. William Brown. It is certainly surprising that Mr. Phillimore should have either forgotten or been ignorant of the existence of these two important volumes when drawing up his list for the members of the new society.

LAMB'S LETTERS.

Harrow, June 27th, 1905.

IT may be worth while correcting a slight error in my communication of last week. I spoke of the letter to Coleridge (August 14th, 1800) as having been printed from a new collation. But as a fact that collation did not cover the whole letter, and the passage in question was outside its range. As I had only to deal with it in type—and that at a time of perplexity, ultimate fatigue, and driven work—it was easy to forget for the moment which part of this patchwork epistle had new authority and which was traditional text.

For the rest, this rather strengthens my conjecture; for it is more likely that the word "Ops" should have been once misread, and the error perpetuated, than that it should have been misread again on the making of a fresh collation. Talfourd's "etc." was probably an easy way of dealing with a doubtful word; and when the collators of 1868 tried to be more faithful, they went astray.

One word more. Readers of my preface to the 'Letters' will remember that this is not the only passage in that glorious epistle which has been found difficult to decipher; as was, indeed, likely to be the case if the writer's hand was "suffering"—or humorously affecting to suffer—"from the combined effects of two days' drunkenness." And so to what is said in the preface I would now add that it seems to me extremely likely that "my religion burning blue and faint as the tops of burning bricks" is a misreading of "my religion turning blue," &c.

W. MACDONALD.

*** We cannot insert any more on this subject.

'WILLOBIE HIS AVISA.'

IN support of my contention that Lord Southampton wrote 'Willobie his Avisa,' I cite the following witticism from Sir John Harington's 'Apologie' for his 'Metamorphosis of Ajax,' 1596, sig. Bb 3, verso:—

"For suppose you could get three or fower [noblemen] to appeare: one at Petworth, another harde by there at Coudrey (where in the old Viscount's time *Jupiter hospitales* is saide to haue dwelt), and the young Lorde I heare dooth *patrysare*, or rather I shoulde saye *Auisare* (and that is a goode worde, if hee will marke it). Say also an other dwelt at Raglande in Monmouthshire," &c.

The old viscount at Cowdray was the first Viscount Montague, the grandfather of Lord Southampton, who is "the young lord" of the above. Harington hears that he doth *patrissare*, "take after his father," or rather *Avisare*, "take after his grandfather." The latter is a verb coined for the occasion, printed with a capital letter to pun upon *Avisa*, and declared to be a good word if he (Southampton) will mark it. Unless for those who

> by geometric scale
> Would take the size of pots of ale,

this contemporary allusion should clinch the evidence which I have put together before, that 'Avisa' was the work of Southampton.

C. CREIGHTON.

A QUOTATION IN WORDSWORTH.

New College, Oxford, June 23rd, 1905.

IN the course of tracing some quotations made by Wordsworth, I have just identified the passage from which he borrowed, and did not improve, Fulke Greville Lord Brooke's

> Discipline the rule whereof is passion.

In his 'Ode: the Morning of the Day appointed for a General Thanksgiving, Jan. 18, 1816,' l. 122, Wordsworth wrote

> And discipline was passion's dire excess,

and appended a note, "'Discipline the rule whereof is passion.'—Lord Brooke." Wordsworth's well-known and far happier adaptation of words from Lord Brooke's 'Life of Sir Philip Sidney' in the sonnet

> Another year!—another deadly blow!

led me to hunt through that work, although the phrase quoted in Wordsworth's note suggested verse. The quotation comes, in fact, from the poem 'A Treatise of Warres,' stanza vii., which is, I think, worth quoting in full, as the poem is little read:—

> Where neither Throne, nor Crowne have reverence,
> Sentence, nor Writ, nor Sergeant be in fashion;
> All terror scorn'd, of guiltinesse no sense;
> A Discipline whereof the rule is passion:
> "And as mens vices, beasts chiefe vertues are,
> So be *the shames of Peace, the Pride of Warre*."

I reproduce the exact state of the stanza in the original edition of 'Certaine Learned and Elegant Workes,' &c., 1633. This book, as is well known, was a favourite with Coleridge; and it is a coincidence perhaps worth noting that Coleridge adapted a stanza (lxvi.) of this very 'Treatise of Warres' as a motto for his 'Lay Sermon,' &c., in 1817, the year following the composition and publication of Wordsworth's 'Ode' above mentioned. Cp. a note by Dykes Campbell in *The Athenæum* for Sept. 9th, 1893, and an interesting account of Coleridge's copy of the 'Certaine Learned and Elegant Workes,' &c., by H. S. Young, in *The Athenæum* for Sept. 2nd of the same year. If any reader whose eye falls upon this could tell what has become of that volume, I, and probably others, would be very glad to know.

NOWELL SMITH.

'DICTIONARY OF INDIAN BIOGRAPHY.'

(Sixth List.)

June 10th, 1905.

BY the courtesy of the Editor of *The Athenæum*, I have been permitted to publish the following list of names of the deceased persons (1401–1565) who have been provisionally selected for inclusion in the 'Dictionary of Indian Biography,' to be published by Messrs. Swan Sonnenschein & Co. in the autumn. This work is intended to contain biographical notices of about 2,000 to 2,500 persons, living or dead, Europeans or natives of India, connected with India since about the year 1750 A.D. Suggestions are invited, and it is hoped that readers of *The Athenæum* will bring any important omissions to my notice, and state where materials for short biographies can be obtained. Letters should be addressed to 61, Cornwall Gardens, S. Kensington, S.W.

C. E. BUCKLAND, Editor 'D.I.B.'

Temple, Sir Richard, Baronet, Governor of Bombay, 1826–1902
Tendook Pulger, Raja, Revenue and Political Officer, ?–1902
Tennant, Sir James, Brigadier-General, 1789–1854
Thackeray, William Makepeace, the Novelist, 1811–63
Thackwell, Sir Edward Joseph, Lieutenant-General, 1781–1859
Thanawala, Khan Bahadur Cursetji Rustamji, ?–1903
Thomas, Edward, Indian Civil Service, Numismatist and Indian Antiquary, 1813–86
Thomas, George, Adventurer, Military Commander, 1756?–1802
Thomas, John Fryer, Member of Council, Madras, 1797–1877
Thomason, James, Lieutenant-Governor of the N.W.P., 1804–53
Thompson, Sir Augustus Rivers, Lieutenant-Governor of Bengal, 1829–90
Thompson, George, Agitator in England and India, 1804–1878
Thomson, George, Lieutenant-Colonel, R.E., 1799–1886
Thomson, Sir George, Surgeon-Colonel, 1843–1903
Thomson, Thomas, Botanist, 1817–78
Thorn, Sir William, Lieutenant-Colonel, 1781–1843
Thornhill, Cudbert, Captain, Master Attendant at Calcutta, 1723–1809
Thornton, Edward, Indian Historian, 1799–1875
Thornton, Edward Parry, Indian Civil Service, in the Panjab, 1811–93
Thornton, William Thomas, Public Works Secretary at the E.I. House, 1813–80
Tippoo Sultan, Ruler of Mysore, 1753–99
Titcomb, Right Rev. Jonathan Holt, Bishop of Rangoon, 1819–87
Tod, James, Lieutenant-Colonel, Historian of Rajasthan, 1782–1835
Todd, Elliott d'Arcy, Major, Political Agent at Herat, 1808–1845
Tolfrey, William, Soldier, Pali scholar, 1778?–1817
Tombs, Sir Henry, Major-General, V.C., 1824–74
Tonk, Sahibzada Sir Obeidullah Khan, of, ?–1900
Torrens, Henry Whitelock, Indian Civil Service, Author, 1806–1852
Torriano, John Samuel, Brevet Major, defended Onore, ?–?
Travancore, Sir Rama Varma, Maharaja of, 1837–84
Travers, James, General, V.C., 1820–84
Trevelyan, Sir Charles Edward, Baronet, Member of the Supreme Council, Governor of Madras, 1807–86
Trimbakji Danglia, Minister of the Peshwa, ?–?
Troupe, Colin, Lieutenant-General, ?–1876
Trübner, Nicholas, Oriental Publisher and Orientalist, 1817–1884
Trumpp, Ernest, Professor, Editor of the *Adi Granth*, 1828–1885
Tucker, Charlotte Maria, Missionary and Authoress, 1821–1893
Tucker, Henry Carr, Indian Civil Service, Commissioner of Benares, 1812–75
Tucker, Henry Pendock St. George, Member of Council, Bombay, 1823–1905
Tucker, Henry St. George, Chairman of Court of Directors, E.I.Co., 1771–1851
Tucker, Henry Todd, General, 1808–96
Tulloch, Sir Alexander Murray, Major-General, 1803–64
Tulsi Bai, Regent of Indore, ?–1817
Turner, Sir Frank, General, R.A., 1813–90
Turner, Right Rev. John Mathias, Bishop of Calcutta, 1786–1831
Turner, Samuel, Envoy to Tibet, Ambassador to Mysore, 1749? or 1759–1802
Turton, Sir Thomas Edward Michell, Baronet, Registrar, Supreme Court, Calcutta, 1789–1854
Tweeddale, George Hay, eighth Marquis of, Governor of Madras, 1787–1876
Tytler, John Adams, General, V.C., ?–1880
Unwin, Robert, Major-General, 1821–1903
Valiant, Sir Thomas, Major-General, ?–1845
Van Cortlandt, Henry Charles, General, 1815–88
Vandeleur, Sir John Ormsby, Lieutenant-General, 1763–1849
Vansittart, Henry, Governor of Bengal, 1732–70
Van Straubenzee, Sir Charles Thomas, General, 1812–92
Venables, Edward Frederick, Planter, Volunteer, 1818–58
Ventura, a General under Maharaja Ranjit Singh, ?–1858
Verelst, Henry, Governor of Bengal, ?–1785
Vidyasagar, Isvar Chandra, Principal, Sanskrit College, Calcutta, 1820–91
Vigne, Godfrey Thomas, Traveller, 1801–63
Vivekananda, Swami, Religious Devotee, Lecturer, 1863–1902
Vivian, Hon. Sir Robert John Hussey, General, 1802–87
Vizianagram, Maharaja Sir Mirza Gajapati of, ?–?
Vizianagram, Maharaja Sir Pasupati Ananda Gajapati of, 1849–97
Vousden, William John, Major-General, V.C., 1845–1902
Wade, Sir Claude Martine, Colonel, Political, 1794–1861
Wadeson, Richard, Col. V.C., 1826–85
Waghorn, Thomas, Lieutenant R.N., Promoter of the Overland Route, 1800–50
Wake, Herewald Craufurd, Defender of Arrah, 1829–1901
Wales, James, Artist, 1747–95
Walker, Alexander, Brigadier-General, Political, 1764–1831
Walker, Sir George Townshend, Baronet, General, 1764–1842
Walker, James Thomas, General, Surveyor General of India, 1826–96
Walker, Sir William Harrison, E.I.Co.'s Naval Service, 1800–72
Wallace, James Robert, President Anglo-Indian Association, 1856?–1903
Wallich, Nathaniel, Botanist, Author, 1786–1854
Walpole, Sir Robert, Lieutenant-General, 1808–76
Walsh, John, Private Secretary to Clive, 1725?–95
Warburton, Sir Robert, Political in the Khyber, 1842–99
Ward, Sir Henry George, Governor of Madras, 1797–1860
Ward, Rev. William, Missionary, Author, 1769–1823
Warre, Sir Henry, General, Commander-in-Chief, Bombay, 1819–98
Warren, Henry Clarke, Oriental Philosopher and Linguist, 1854–99
Wasoodew, Jonardun, first Native Judge, Bombay High Court, 1804?–98
Watson, Charles, Admiral, Commander-in-Chief, East Indies, 1714–57
Watson, Henry, Chief Engineer, Bengal, 1739–86
Watson, Sir James, General, 1772–1862
Watson, John, Member of Council, Bombay, ?–1774
Watson, John Forbes, Director of the India Museum, Author, 1827–92
Waugh, Sir Andrew Scott, Surveyor-General of India 1810–78
Wazir Ali, Deposed Nawab of Oudh, 1781–1817
Webber, Charles Edmund, General, 1838–1904
Weber, Albrecht Friedrich, Professor, Orientalist, 1825–1901
Weguelin, Thomas Matthias, Colonel, ?–1828
Wellesley, Richard Colley, Marquess, 1760–1842
Wellington, Arthur Wellesley, first Duke of, 1769–1852
Wells, Henry Lake, Lieutenant-Colonel, Director Indo-European Telegraph, 1850–98
Wells, Sir Mordaunt, Judge, at Calcutta, 1817–85
Welsh, James, General, Author, 1775–1861
Wenger, Rev. Dr., Missionary, Linguist, 1811–80
West, Sir Edward, Chief Justice, Bombay, 1782–1828
West, E. W., Authority on Pahlavi, 1824–1905
Westergaard, Niel Ludwig, Oriental Scholar, 1815–78
Westland, Sir James, Member of the Council of India, 1842–1903
Weston, Charles, in business in Calcutta, 1731–1809
Westropp, Sir Michael Roberts, Chief Justice, Bombay, 1817–90
Wetherall, Sir Edward Robert, Major-General, ?–1869
Wheeler, Sir Hugh Massy, Major-General, 1789–1857
Wheeler, James Talboys, Indian Historian, 1824–97
Wheler, Sir Francis, Baronet, Lieutenant-General, 1801–78
Whish, Sir William Sampson, Lieutenant-General, 1787–1853
White, Sir Henry, Major-General, 1742–1822
White, Sir Michael, Lieutenant-General, 1791–1868
Whitley, Right Rev. Jabez Cornelius, Bishop of Chota Nagpur, 1837–1904
Whitlock, Sir George Cornish, Lieutenant-General, 1798–1868
Whitney, William Dwight, Professor, Orientalist, 1827–94
Whittingham, Sir Samuel Ford, Commander-in-Chief at Madras, 1772–1841
Wilayat Ali, Nawab Syad, Khan Bahadur, 1815–99
Wilde, Sir Alfred Thomas, Member of the Council of India, 1819–78
Wilkins, Sir Charles, Indian Civil Service, Orientalist, 1749 or 1750–1836
Wilkins, Henry St. Clair, Lieutenant-General, Architect, 1828–96
Wilkins, William J., Missionary, Author, 1843–1902
Wilks, Mark, Colonel, Author, 1760?–1831
Williams, Clement, Minister of State at Mandalay, 1834–79

Williams, Sir William John, Lieutenant-General, 1828—1903
Willock, Sir Henry, Chairman of the E.I.Co., 1790—1858
Willock, Henry Dundas, Indian Civil Service, 1830—1903
Willoughby, Sir John Pollard, Baronet, Member of the Council of India, 1798—1866
Willshire, Sir Thomas, Baronet, General, 1789—1862
Wilmot, Sir Henry, Baronet, V.C., 1831—1901
Wilson, Andrew, Traveller, Author, 1831—81
Wilson, Sir Archdale, of Delhi, Baronet, Lieutenant-General, 1803—74
Wilson, Charles Robert, Student of Indian Historical Records, 1863—1904
Wilson, Right Rev. Daniel, Bishop of Calcutta, 1778—1858
Wilson, Horace Hayman, Orientalist, 1786—1860
Wilson, James, Captain, Indian Mercantile Service, 1760—1814
Wilson, James, Member of the Supreme Council of India, 1805—60
Wilson, Rev. John, Missionary, Educationist, Vice-Chancellor, Bombay University, 1804—75
Wilson, Sir John Cracroft, Indian Civil Service, 1808—81
Wilson, Thomas Fourness, Lieutenant-General, Member of the Supreme Council of India, 1820?—86
Windham, Sir Charles Ash, Lieutenant-General, 1810—70
Wingate, Sir George, Major, Revenue Survey, Bombay, 1812—79
Wingfield, Sir Charles John, Chief Commissioner of Oudh, 1820—92
Wodehouse, Sir Philip Edmond, Governor of Bombay, 1811—1887
Wolff, Rev. Joseph, Missionary, Traveller, Author, 1795—1862
Wood, Sir David Edward, General, 1812—94
Wood, Sir Henry Hastings Affleck, General, 1826—1904
Wood, John, E.I.Co.'s Naval Service, Explorer, 1811—71
Wood, Sir Mark, Baronet, Surveyor-General, 1747—1829
Woodburn, Sir John, Lieutenant-Governor of Bengal, 1843—1902
Woodrow, Henry, Director of Public Instruction, Bengal, 1823—76
Worsley, Sir Henry, Major-General, 1768—1841
Wright, William, Professor, Linguist, 1830—89
Wyllie, John William Shaw, Indian Civil Service, Essayist, 1835—1870
Wyllie, Sir William, General, 1802—91
Wynn, Charles Watkin Williams, President, Board of Control, 1775—1850
Wymer, Sir George Petre, General, 1788—1868
Yardley, Sir William, Chief Justice, Bombay, 1810—78
Yates, Rev. William, Missionary, Linguist, Author, 1792—1845
Yeatman-Biggs, Arthur Godolphin, Major-General, 1843—98
Young, Sir William, Baronet, Director E.I.Co., 1773—1848
Yule, Sir George Udny, Member of the Supreme Council, 1813—85
Yule, Sir Henry, Colonel, Author, Member of the Council of India, 1820—89
Zeman Shah Abdali, Afghan Invader, before 1793—after 1800
Zoffany, John or Johann, Artist, 1733—1810

Literary Gossip.

MR. UNWIN has in the press a story by Miss Margaret Watson entitled 'Driven!' The period is the time just before the repeal of the Corn Laws, and the book gives a picture of rustic life in those days. Its record of the sufferings of the poor is based upon facts related by old men and women at cottage firesides and in workhouse wards.

ON Monday last the Rev. J. P. Mahaffy laid before the Royal Irish Academy an advance (and complete) copy of the third and concluding volume of the Petrie Papyri, which he undertook to decipher and explain in the year 1891. The second volume appeared in 1896. The present instalment gives all the remaining fragments, together with numerous corrections of the former texts and a very full index. It is mainly the work of Prof. Smyly, who has been associated with the editor for some years.

MR. BLACKWELL, of Oxford, is about to publish 'Simples from Sir Thomas Browne's Garden, gathered by H. C. Minchin,' a little volume of selections on the occasion of Browne's tercentenary. A leading idea has been to let Sir Thomas paint his own portrait. There will be a prefatory appreciation of his writings and home life by Mr. Minchin, followed by selections from his works, including the correspondence. The edition will be limited.

A NEW volume of Australian poems is about to be published through Mr. Elliot Stock by Mr. W. H. K. Yarrington, under the title 'Celestine, and other Verses.'

AN English translation of Bielschowsky's life of Goethe, by Prof. W. A. Cooper, is to be issued before the end of the year by Messrs. Putnam.

A SUGGESTION for the foundation of an American School of Historical Research in London, on the lines of the well-known foreign schools in Rome, has recently been brought under the notice of those American scholars who are specially interested in historical researches in European archives. The matter is now under consideration.

THE following papers have been specially arranged for the next session of the Royal Historical Society: 'The Minority of Henry III.' (Part II.), by Mr. G. J. Turner; 'The Diplomatic Relations between England and Portugal during the Middle Ages,' by Miss V. M. Shillington; 'The Foreign Policy of England in Northern Europe in the Reign of George I.,' by Mr. J. F. Chance; 'The Study of Nineteenth-Century History,' by Mr. Percy Ashley; 'Archbishop Sharpe and the Restoration Policy in Scotland,' by the Rev. J. Willcock, together with papers by Prof. Pelham and Dr. J. H. Rose, on the subjects with which their names are specially associated.

THE Early English Text Society has, during its forty-one years' life, spent on its work 31,099*l.*, of which 28,533*l.* has gone for printing its texts, an average of 696*l.* a year, besides 62*l.* for yearly copying and miscellaneous expenses. It has kept back its Extra Series Texts for 1904 till now—'The Macro Plays,' from Mr. Gurney's unique MS., edited by Dr. Furnivall and Mr. A. W. Pollard; 'Lydgate's De Guileville's Pilgrimage of Man,' Part III., edited by Miss K. Locock; and Lovelich's 'Romance of Merlin,' Part I., edited by Dr. E. A. Kock—in order to issue them with the first Original Series Texts for this year—'An Alphabet of Tales,' edited from the unique MS. by Mrs. M. M. Banks, and 'The English Registry of Godstow Nunnery,' *c.* 1450, edited from the unique MS. by the Rev. Dr. Andrew Clark. The third Original Series Text for 1905, Part II. of 'The Mediæval Records of a London City Church, 1420–1559,' edited by Mr. Henry Littlehales, is ready, all but its glossary; and the other Extra Series Texts for this year are at press: 'Respublica,' 1553, a play on the social condition of England in Queen Mary's reign, re-edited from Mr. Gurney's unique MS. by Mr. Laurence A. Magnus; 'The Romance of Emare,' re-edited by Dr. Edith Rickert; and 'Lydgate's Troy Book,' Part I., re-edited by Dr. Henry Bergen, or 'Mirk's Festial or Liber Festivalis,' re-edited by Dr. Erbe. Many other books are at press, which the Society needs more subscribers to bring out.

THE list of names brought before the Senate of Dublin University for honorary degrees includes Prof. Graham (author of 'The Creed of Science'), the Hon. Emily Lawless, Prof. Schäfer, the physiologist, and some provincial persons of importance.

M. A. BELJAME, Professor at the Sorbonne, has been appointed Clark Lecturer in English Literature at Trinity College for 1905–6, a choice which those who know his work will appreciate.

MR. WHITELAW REID mentioned in his address to the Society of Pilgrims that the house where Joseph Severn nursed the dying Keats in Rome, situated in the Piazza di Spagna, was being bought by English and American admirers of the poet. The Americans might well recognize in some way the residence of Nathaniel Hawthorne in Rome, and perhaps that of W. W. Story. Hawthorne's visit gave the world 'Transformation' and 'Italian Note-Books'; while the sculptor wrote 'Roba di Roma' and 'Castle St. Angelo' from fullness of knowledge. The Pincian Gardens are already dotted with busts of celebrated Romans of modern and classic times, while the Borghese Gardens contain memorials of Goethe and Victor Hugo.

MR. RICHARD LE GALLIENNE'S library has just been sold at auction in New York by the Anderson Company, the total amounting to 4,800 dollars. The collection comprised a good many presentation copies and other books with a personal interest, as well as the MSS. of several of Mr. Le Gallienne's publications. That of 'The Quest of the Golden Girl' produced 155 dollars.

THE decay of Latin in the House of Commons, to which we referred in our review of 'Byways in the Classics' a fortnight ago, has been exemplified by Mr. W. Crooks, M.P., who asked Mr. Balfour on Tuesday last to give an English rendering of the phrase "in pari materia," as "he had no notion of Latin."

WE have received the following from the University Library, Cambridge:—

"Upon examination of the library of the late Lord Acton (presented by the Right Hon. John Morley, M.P., to the University of Cambridge), it appears that a considerable number of volumes are wanting to complete sets forming part of the library. In some instances it will be very difficult, if not impossible, to supply these *lacunæ* by purchase. It is well known that the late Lord Acton was in the habit of lending books freely to friends and fellow-students. In the interests of the Cambridge University Library, which this great benefaction has so notably enriched, the University Librarian would be greatly obliged if any of these desiderata which may inadvertently have been retained in private hands could be restored to the collection with as little delay as possible. All communications addressed to him at the University Library, Cambridge, will be promptly acknowledged."

THE provisional programme has been issued of the Twenty-Eighth Annual Meeting of the Library Association, which will take place at Cambridge on August 22nd and the two following days. The University Librarian will preside, and contributions are promised from Mr. J. W. Clark, Mr. H. R. Tedder, Mr. Cyril Davenport, and others. There will be various exhibitions of bookbindings, literary appliances, and the best books of 1904, selected by authorities in special departments.

MESSRS. CHRISTIE'S book sale on Wednesday next will include two important rarities. One is a magnificent copy of Caxton's 'Book of Caton,' 1483, probably the largest, and certainly one of the finest, in existence. It forms part of the library

of the late Henry Willett, the well-known Brighton collector. The other rarity is a perfect copy of Tyndale's 'Pentateuch,' 1530, which belonged to the late Mr. John Quicke, of Newton St. Cyres, Devon. It is considerably taller than the Grenville copy in the British Museum, which has hitherto been regarded as the only perfect one in existence. The single example of this edition which has occurred in the saleroom of recent years was Lord Crawford's, which brought 255*l.* in 1887; but this was "made up," and wanted title and Prologue to Genesis.

A FURTHER list of awards of prizes in the gift of the Académie Française has been issued. The Prix Bordin, instituted for the purpose of encouraging "la haute littérature," has been divided among five competitors, the highest amount, 1,000 fr., going to M. Paul Decharme for his 'Critique des Traditions Religieuses chez les Grecs, des origines au temps de Plutarque.' The Prix Marcelin Guérin has been divided into five of 1,000 fr. each, one of which is awarded to Dr. Bucher, the editor of *La Revue Alsacienne Illustrée;* another to M. Jules Derocquigny for 'Charles Lamb, sa Vie et ses Œuvres'; and a third to M. Émile Lauvrière for 'Edgar Poë, sa Vie et son Œuvre.' The Prix Guizot of 3,000 fr. has been divided between two, M. Doumergue getting 2,000 fr. for his 'Jean Calvin, les Hommes et les Choses de son Temps,' and M. Edmond Biré 1,000 fr. for his study on 'Armand de Pontmartin, sa Vie et ses Œuvres.'

HERMANN LINGG, whose death in his eighty-sixth year is announced from Munich, is almost the last of the talented band of poets who gathered at Munich in the early sixties, and who included Geibel, Scheffel, and Bodenstedt. His life was comparatively uneventful. He studied medicine, and became a military surgeon in the Bavarian service, but ill-health obliged him to resign in 1851. King Maximilian granted him a pension, so that he was able to devote himself to literature, and he was specially successful as a writer of lyrics and ballads. His talent was distinctly original, though his name has little chance of permanent pre-eminence. His dramatic efforts were failures, but many of his stories were popular.

RECENT Parliamentary Papers include Code of Regulations for Public Elementary Schools, with Schedules (3*d.*); Regulations for the Training of Teachers and for the Examination of Students in Training Colleges (4½*d.*); Regulations for Evening Schools, Technical Institutions, and Schools of Art and Art Classes (2*d.*); Report by H.M. Inspectors on Intermediate Education in Ireland (1*s.* 11*d.*); and also a Paper noticed by us under 'Science Gossip.'

SCIENCE

RESEARCH NOTES.

THE attempt in the daily press to make sensation out of Mr. J. B. Burke's supposed discovery of the origin of life seems to be dying away. As has been said elsewhere, the capacity of gelatine when treated with certain saline solutions to form cells resembling those of animal tissue has been known for some time. In 1902 M. Stéphane Leduc showed that if a film of gelatine were spread on glass and sprinkled with a few drops of solution of potassium ferrocyanide, it would form regular polyhedric cells, each containing what he called a cytoplasm, with its nucleus and membrane. An illustrated account of this, under the title of 'La Cytogenèse Expérimentale,' can be found in *La Nature* of March 1st, 1902. So, too, M. Leduc found that if he allowed any metallic salt to crystallize in a colloid solution, such as gelatine, the usual form of the crystal would be changed, a phenomenon which he attributes to the field of force of crystallization being able to act in the contrary direction to the osmotic attraction. Some discussion of this can be found in M. Le Bon's new work, 'L'Évolution de la Matière,' where he recommends experimenters to try the effect of crystals of potassium nitrate placed in a shallow glass cup filled with a weak solution of the same salt and a few drops of defibrinated blood. Yet, however closely the cells thus formed may resemble the forms of life, there is no reason at present to believe that they possess its essential qualities. They show no capacity for self-nutrition, for regular growth, nor for reproduction by fission or otherwise. As for radium having anything to do with their formation, all recent experiments go to show that radium is more likely to arrest the growth of living cells than to promote it. The reason for this was given in these notes some weeks ago (*The Athenæum*, No. 4050).

Most of the pother over these so-called "radiobes"—have we not enough hybrid words in science already?—seems to have arisen from a confusion in the minds of their advertisers as to the real touchstone of life. Self-movement, which has been suggested, is no sufficient test, for the Brownian movements of solutions, whose existence has again been vindicated of late by MM. Chifflot and Claude Gautier, although they may be sometimes connected with protoplasmic life, have no necessary link with it. As for nutrition and growth, the experiments of Prof. von Schrön, which seem to have been confirmed by Ostwald, show that these qualities are possessed by crystals; and as for propagation by division, even without Von Schrön's testimony, it is evident that crystals must possess this power, else we might have diamonds the size of mountains. The platitude quoted from Herbert Spencer about adaptation to external relations is hardly worth considering in this connexion, because a brickbat in running water adapts itself to external relations, by submitting its angles to attrition. Perhaps the only real touchstone of life that can be found is the capacity of the cells to pass into "higher," that is, more complicated forms; but there is a great deal to be said for Prof. Bose's suggestion that only that animal tissue should be called living which will respond to electrical stimulus.

The neurone theory, often alluded to in these notes, on which the physical machinery of thought finds its mainspring in the pyramidal cells of the grey matter of the brain, has just received its first serious "set-back" in an experiment by Dr. Albrecht Bethe, reported by him to the last Physiological Congress. He has always denied the amœboid movements of the neurone, and has lately established, to his own satisfaction at all events, the fact that the life of the nerve extends throughout its length, and is not concentrated in any part of it. As evidence of this, he has lately cut through a nerve transversely, and completely extirpated the central part which communicates with the brain. This naturally produced what is known from its discoverer as Wallerian degeneration, and rendered the remaining end of the nerve insensible to electrical stimulus. But then this extraordinary fact occurred. At the end of several weeks the nerve began to recover its excitability and to cause muscular contractions as before the injury. Yet the true bearing of this experiment was by no means established at the Congress, and Dr. Léon Fredericq, who summarizes the discussion, is of opinion that the effect of it will be that the neurone will in future be regarded as a pluricellular rather than a monocellular individual. In any event, it seems impossible any longer to regard the nerves of the periphery as simple prolongations of the nerve-cell. The experiment, also, still lacks independent confirmation.

Not unconnected with this is the subject of "nerve-foods," lately undertaken by M. Armand Gautier, in the course of which he examined the food value of substances like tea, coffee, spices, beef tea, and alcoholic drinks. He thinks that the nutritive value of coffee, tea, *maté*, and the *guarana* of Brazil is almost *nil*, but that all these, by increasing the circulation and the output of carbonic acid by the lungs, help to get rid of waste products and to diminish the fatigue of both muscles and brain. Chocolate, on the other hand, he considers a true food as well as an excitant, and, as such, far superior to beef-tea, although he says it has its own dangers for the rheumatic and dyspeptic. As to alcoholic drinks, he is altogether in favour of their moderate use, and points out that within limits the whole of the alcohol imbibed is burnt within the organism, and therefore produces none of the ill effects often attributed to it. On the other hand, the rapidity of its effect, and the fact that its use enables the patient to dispense with some portion of sugar, starch, and fat in his diet, give it special value in certain cases. The quantity on which he founds his calculation seems to be about three-fourths of a litre of *vin ordinaire* per day.

What is influenza? is the question lately propounded by Dr. R. Bernard to a recent meeting of the Société Médicale des Hôpitaux de Paris. According to him, there are at least five kinds, of which he distinguishes the grippe pneumococcique, the grippe streptococcique, and the grippe à bacille de Pfeiffer, all named after the special bacilli attached to them. Besides these, he distinguishes several "grippes" caused by microbes the nature of which is not yet perfectly ascertained, among which that of Friedländer is the most recognizable. As for the real "grippe influenza," he declares that it must have a special germ, although he is unable to identify it. The paper gave rise to a long and somewhat heated discussion, the balance of opinion being, on the whole, in favour of the author's view as to the microbian origin of the main disease. If this be so, it will probably not be long before we hear of a protective inoculation against it. F. L.

ANTHROPOLOGICAL NOTES.

DR. J. DECORSE has contributed to *L'Anthropologie* a memoir on tattooing, ethnic mutilations, and hair-dressing among the populations of the Soudan, illustrated by sketches. Three forms of tattooing are adopted—the mere incision, the formation of a ridge, and the budding out into a raised excrescence like a pea. Cranial deformation and mutilation of teeth are also practised, as well as the insertion of foreign objects in the lips. L'Abbé Breuil continues his valuable inventory of objects belonging to the Bronze Age discovered in Paris and its vicinity.

Dr. E. Demonet laid before the Society of Anthropology of Paris on January 5th the first portion of a lengthy memoir entitled 'Researches on Absolute and Relative Vital Capacity according to Sex and according to Certain Dimensions of the Body,' and it has now been issued to the members. The vital capacity is defined as being the quantity of air put in movement by a maximum inspiration followed by a maximum expiration. The author arrives at some in-

teresting conclusions, such as: When a woman wears a corset her vital capacity is diminished by one-sixth; as the vital capacity increases, all the dimensions of the body augment also; a well-formed man would have a thoracic circumference at least equal to the length of his lower members; and in the female sex weight has no influence on vital capacity.

The Government of the Philippine Islands is engaged in a study of the natives, of which the first part of vol. ii., concerned with the Negritos of Zambales, is before us. It is prepared by Mr. William Allan Reed, of the Ethnological Survey, and published by the Department of the Interior. The group reported on by him is the largest in number, and probably the purest in type, of the Negritos of the Philippine Islands. He remarks that

"the social state of the Negritos is everywhere the same. They maintain their half-starved lives by the fruits of the chase and forest products, and at best cultivate only small patches of maize and other vegetables. Only occasionally do they live in settled, self-supporting communities, but wander for the most part in scattered families from one place to another."

They are small in stature, averaging 4 ft. 9 in. for males, and 4 ft. 6 in. for females. The colour of the skin is a dark chocolate brown. They sharpen the teeth, and scarify the breast, shoulders, back, and occasionally the legs. The report gives full particulars of their amusements and dances, their industrial and social life, and their superstitions. In an appendix to the report are anthropometrical measurements and vocabularies. It is illustrated by sixty-two plates, representing the natives in full face and in profile.

Man for June contains an article by Mr. Henry Balfour, illustrated by thirteen specimens, mostly from the Pitt Rivers Museum, drawn by himself, of bird and human designs from the Solomon Islands, tending to show the influence of one design over another. Thus the frigate-bird is frequently represented with human attributes, and the human form with an extreme prognathism, due to the influence of the bird design. Dr. Haddon contributes two photographs, taken by the late A. Wilkin, of a woman in the act of performing the operation of tattooing on another belonging to the Motu tribe, at Hula, in British New Guinea. Mr. R. Campbell Thompson, in giving some views of the ruins of the temple at Sarâbit-el-Khadm, in the Sinaitic peninsula, challenges the conclusion of Prof. Flinders Petrie that it is of Semitic origin. Mr. Gray suggests a method of classifying records of anthropometric measurements to ensure more certain identification. Dr. Keith, in a criticism of Thomson and MacIver on the ancient races of the Thebaid, challenges the method adopted by those authors for distinguishing between negroid and non-negroid skulls.

At a meeting held at Lord Avebury's house on June 21st to promote the success of the Congress of the Institut International de Sociologie, to be held in London in 1906, general and executive committees were appointed, and a guarantee fund opened.

SOCIETIES.

BRITISH ARCHÆOLOGICAL ASSOCIATION.—*June* 21.—Mr. C. H. Compton, V.P., in the chair.—Mr. Patrick, Hon. Secretary, communicated a discovery of much interest recently made by Don Enrique Salas in excavating upon land belonging to him in the province of Murcia, in Spain. The discovery consists of thirty-one objects in red and black clay of the Celtiberian period. A careful drawing of one of the subjects on a cinerary urn, in red colour, was submitted as a specimen. This represented two warriors, one on foot with shield and dart, the other on horseback with a dart, while a third is lying on the ground seemingly pierced with a dart.—Dr. Birch remarked at some length upon the exhibit, and Dr. H. J. D. Astley considered the illustration showed evidence of Mycænean civilization. These interesting objects have been deposited temporarily by the owner in the National Archæological Museum of Madrid.—A paper was read by Dr. Astley on the Ninth Iter of Antoninus, with special reference to the sites of Sitomagus and Venta Icenorum. This was a carefully reasoned argument in favour of the views of the older antiquaries, as Camden and Sir Thomas Browne, that Caistor and Thetford are the true sites of Venta Icenorum and Sitomagus, in opposition to modern theories which assign to Norwich and Dunwich that identification. Although the latter theory is ably supported by the learned antiquary Dr. Raven, Dr. Astley contended that it was improbable and untenable with reference to the Itinerary of Antoninus and the Tabula Peutingeriana. The Tabula Peutingeriana is a copy made in the thirteenth century of the only Roman map of the Imperial epoch that has come down to us. It derives its name from Conrad Peutinger, of Augsburg, who possessed it in the sixteenth century; and it is now preserved in the Imperial Library of Vienna. On the original map of the Roman Empire the British section is, unfortunately, imperfect, the section to the west and north of Ad Taum being missing, and Venta Icenorum does not appear. We must, therefore, look for Venta Icenorum, the chief centre and emporium of trade, the market of the Iceni in Roman times, in a locality where everything will prove its importance during the period of the Roman occupation, and nowhere is there a more fitting situation than that of Caistor, with its mighty camp and remains of Roman residences in its neighbourhood. In like manner Thetford also provides just the site that the Romans would fix upon for a station, and when the data of the Itinerary and the Tabula are taken together, the conclusion appears to be irresistible that Thetford is the true site of Sitomagus. — Mr. Emanuel Green, Mr. Gould, Dr. Birch, the Chairman, and others joined in the discussion.—Mr. Gould drew attention to the newspaper reports of Mr. Edward Wooler's discovery of an early camp or defensive enclosure in the county of Durham, and said that he was especially glad to do so, as the discovery was the result of a suggestion he had made to Mr. Wooler that a work would be found on the spot. Mr. Gould had noticed an embankment shown on Maclauchlan's survey of the Watling Street, published in the middle of the last century, and judged that it probably extended across a promontory otherwise naturally defended by streams. This surmise was found to be correct, and there is little doubt that an early fortress, or stronghold, of the promontory type existed. Mr. Wooler's investigations show that, probably at some late period, the southern portion of the great area was further defended by banks, thus forming a complete enclosure. The site is at the extreme west of the parish of Brancepeth.—Mr. S. W. Kershaw drew attention to an exhibition which is to be held at St. Albans from June 27th to July 15th, in illustration of the history of the Church in the British Isles. (See last week's 'Fine-Art Gossip,' p. 794, and *post*, p. 24.)

ROYAL NUMISMATIC.—*June* 15.—*Annual Meeting.*—Sir John Evans, President, in the chair.—Mr. A. E. Weightman was elected a Fellow.—The reports of the Council and of the Hon. Treasurer were submitted and adopted.—The medal of the Society, which had been awarded by the Council to Sir Hermann Weber, M.D., in recognition of his services to numismatics, especially in the department of the early Greek coinages, was presented, and in the unavoidable absence of Sir Hermann Weber was received by his son, Dr. Parkes Weber.—The President delivered his annual address, in which he first made mention of the Fellows who had died during the previous year. He also gave a detailed account of the work of the Society during that period, and mentioned the chief numismatic publications which had been issued.—The following were elected Council and officers for the ensuing year:—*President*, Sir John Evans; *Vice-Presidents*, Sir Henry H. Howorth and Mr. Horace W. Monckton; *Hon. Treasurer*, Mr. W. C. Boyd; *Librarian*, Dr. O. Codrington; *Secretaries*, Mr. H. A. Grueber and Prof. E. J. Rapson; and *Foreign Secretary*, Dr. Barclay V. Head.

STATISTICAL.—*June* 27.—*Annual Meeting.*—Sir Francis Sharp Powell, President, in the chair.—The Report of the Council on the work of the Society during the past year was unanimously adopted, and the following were elected to serve as President, Council, and officers for the ensuing session:—*President*, Earl of Onslow; *Council*, W. M. Acworth, A. H. Bailey, J. A. Baines, H. Birchenough, Sir James Blyth, A. L. Bowley, E. W. Brabrook, Sir Ernest Clarke, T. A. Coghlan, N. L. Cohen, R. F. Crawford, Rev. W. Cunningham, Geoffrey Drage, A. W. Fox, Sir John Glover, Lord George Hamilton, F. Hendriks, N. A. Humphreys, A. W. W. King, B. Mallet, R. B. Martin, F. G. P. Neison, L. L. Price, L. C. Probyn, R. H. Rew, W. N. Shaw, H. L. Smith, D. A. Thomas, T. A. Welton, A. Whitelegge; *Treasurer*, R. B. Martin; *Hon. Secretaries*, J. A. Baines, R. H. Rew, A. W. Fox; *Hon. Foreign Secretary*, J. A. Baines.—It was announced that the Guy Medal in silver had been awarded to Mr. R. H. Rew for his work in connexion with the preparation of the Reports of the Special Committee appointed by the Society to investigate the Production and Consumption of Meat and Milk in the United Kingdom, and for his paper entitled 'Observations on the Production of Meat and Dairy Products.' It was also announced that the tenth session of the International Statistical Institute would be held at the Imperial Institute, South Kensington, from July 31st to August 5th next, and that the Honorary President of the Society, H.R.H. the Prince of Wales, had consented to act as Honorary President of the Congress, and to preside at the opening meeting on Monday, July 31st. The committee for organizing the arrangements for receiving the Institute, which was referred to in the last annual report, had been considerably enlarged, and had established a guarantee fund for meeting the necessary expenses.—A paper was read by Mr. S. Rosenbaum entitled 'A Contribution to the Study of the Vital and other Statistics of the Jews in the United Kingdom.'

PHYSICAL.—*June* 16.—Prof. J. H. Poynting, President, in the chair.—A paper 'On the Ratio between the Mean Spherical and the Mean Horizontal Candle-power of Incandescent Lamps' was read by Prof. Fleming.—Dr. H. A. Wilson read a paper on 'The Electrical Conductivity of Flames.'—A paper on 'Contact with Dielectrics' was read by Mr. Rollo Appleyard.—The following papers were taken as read:—'The Pendulum Accelerometer: an Instrument for the Direct Measurement and Recording of Acceleration,' by Mr. F. Lanchester; and 'A New Form of Pyknometer,' by Mr. N. V. Stanford.—Mr. Appleyard exhibited a refractometer for the determination of refractive indices which can be used as an ordinary spectrometer, as an Abbe refractometer, or as a Pulfrich refractometer.

MEETINGS NEXT WEEK.

MON. Royal Institution, 5.—General Monthly Meeting.
— Faraday, 8.—'Some Notes on the Rapid Electro-deposition of Copper,' Mr. Sherard Cowper-Coles; 'The Use of Balanced Electrodes,' Prof. W. W. Haldane Gee; 'Electrolytic Oxidation of Hydrocarbons of the Benzene Series': Part II. 'Ethyl Benzene, Cumene and Cymene,' by Messrs. H. D. Law and F. Mollwo Perkin; 'Electrolytic Analysis of Antimony,' by Messrs. Law and Perkin; 'Notes on Heat Insulation, particularly with regard to Materials used in Furnace Construction,' by Messrs. R. S. Hutton and J. R. Beard.
WED. Archæological Institute, 4.—'Chepstow Parish Church,' Mr. C. Lynam.

Science Gossip.

THE death of Dr. William Thomas Blanford, C.I.E., F.R.S., has removed a well-known figure from the scientific circles of the metropolis, where he was deeply respected for his intimate knowledge of the geology and zoology of India. With his brother, the late H. F. Blanford, he received his early scientific training partly at the Royal School of Mines, soon after its establishment in Jermyn Street, and partly at the Royal Mining Academy at Freiberg, in Saxony. Both brothers became attached to the Geological Survey of India, but whilst Henry branched out into meteorology, and ultimately became head of the Meteorological Department, William retained his official connexion with geology, though developing also great interest in zoological science. Dr. W. Blanford accompanied the Abyssinian Expedition in 1868, and the Persian Boundary Commission in 1872. In association with the late Dr. Medlicott he prepared the well-known 'Manual of the Geology of India,' whilst he wrote works of high authority on the 'Geology and Zoology of Abyssinia,' and on the Second Yarkand Mission. Since his retirement from the Indian service, which took place in 1882, he had worked modestly but unceasingly in London, devoting much of his time to editing the 'Fauna of British India,' to which he was himself a large contributor. Dr. Blanford, at the time of his death, was treasurer of the Geological Society—a society over which he presided some years

ago. After a very short illness, he died on the 23rd ult., in the seventy-third year of his age, having been born on October 7th, 1832.

THE report on the Swiss glaciers shows that the retrograde movement is still continuing, for of the seventy-three glaciers of which measurements were taken, forty-four were found to have decreased, while four remained unchanged. In twenty a decrease seemed probable, but was not actually proved, while in the case of five the suspected advance was not fully established. The Upper Grindelwald glacier has formed a moraine of some ten metres high, and has begun to shrink at a rate varying from 4 to 45 metres. The lower glacier, which receded 221 metres during the period 1895–1903, remains unchanged.

AN unfortunate hunting accident on his estate in Steiermark has caused the death of Hermann von Wissmann, the well-known African traveller. Wissmann by his explorations, one of which was undertaken in company with the notorious Tippo Tip, opened up East Africa for Germany, and enabled her to establish her colonies there. He explored the Congo district for the King of the Belgians, and discovered the connexion between the Congo and Kassai rivers in 1883. He was prevented from taking part in the Emin Pasha relief expedition by the great Arab outbreak in German East Africa, which he promptly suppressed by desire of the German Government, but retained his post as Imperial Commissioner for two years only, as he was opposed to the bureaucratic spirit of the German colonies. In 1895 he was appointed Governor of East Africa, and during the eighteen months that he occupied this post did much for the civilization of the country. He was uniformly recognized as a very humane man, against whom no charges of cruelty were brought, such as disgrace the career of some colonial officials. Wissmann, though only in his fifty-second year at the time of his death, had spent some time in retirement owing to ill-health. He was the author of a number of books on his travels: 'Im Innern Afrikas,' 'Unter deutscher Flagge quer durch Afrika von Ost nach West,' &c.

THE first part (or General Report) of the Annual Report of the Fishery Board for Scotland has just been published as a Parliamentary Paper. The price is 1*s.* 7*d.*

THE death in his fifty-seventh year is announced from Halle of Prof. Wernicke, Director of the Royal Asylum for the Insane, and author of a number of valuable works on the treatment of diseases of the brain.

THE earth will be in aphelion on the afternoon of the 3rd inst. by Greenwich time. The moon will be new on the evening of the 2nd, and full on the afternoon of the 16th. The planet Mercury will be visible after sunset during the second half of the month, in the western part of Leo, passing very near Regulus on the 25th. Venus is at greatest western elongation from the sun on the 6th, and very brilliant in the morning, situated in the constellation Taurus, and passing due south of the Pleiades on the 5th. Mars is moving in a south-easterly direction in Libra and visible in the evening, but diminishing in brightness. Jupiter is in conjunction with Venus on the 4th, and will rise soon after Greenwich midnight at the end of the month. Saturn is in the constellation Aquarius, and will be due south at 3 o'clock in the morning on the 13th, and at 2 o'clock on the 27th.

IN *Circular* No. 98 of the Harvard College Observatory, Prof. E. C. Pickering states that an examination of the photographs of the Henry Draper Memorial has led Mrs. Fleming to the discovery of a number of variable stars and other objects having peculiar spectra. The variables will be reckoned as var. 64 and 65, 1905, Cassiopeiæ; 66, 1905, Eridani; 67, 1905, Ursæ Majoris; 68, 1905, Virginis; 69, 1905, Lupi; 70, 1905, Pegasi; and 71, 1905, Piscis austrini. The discovery of var. 72, 1905, Cygni at Heidelberg has already been announced in *The Athenæum*. The variations of 64 Cassiopeiæ, 66 Eridani, and 69 Lupi seem to show a range of about 2½ magnitudes; those of 67 Ursæ Majoris not much less, and of 65 Cassiopeiæ about 1½. In many, if not all, of the variable stars of long period the bright hydrogen lines are not present when the star is faint.

THE small planets Nos. 485 and 486, which were discovered by Dr. Carnera at Heidelberg on the 7th and 11th of May, 1902, have been named, at the request of Prof. F. Porro, of Milan, Genua and Cremona respectively.

FINE ARTS

The Eighteenth-Century Architecture of Bath. By Mowbray A. Green. (Bath, Gregory.)

MR. MOWBRAY GREEN is well qualified, both by technical and local knowledge, to write an interesting account of the architecture of Bath; but he has not on that account spared effort in arranging his material. His book is fully supported by documentary evidence, and his descriptions written in a pleasant style.

In confining himself to architecture of the eighteenth century he has not missed much that would be called for in a general survey, for the eighteenth century made Bath a popular health resort, and John Wood, sen., made Bath a city of architectural pretension. There were, and are, buildings in the city designed by other men, but the general character and style were fixed by John Wood.

Bath has not a plan of the symmetry of Carlsruhe or Mannheim, nor was it laid out under the direction of a grand duke or other whimsical patron. Circumstances rendered its enlargement necessary. Its popularity, long on the wane, was suddenly revived by the visits of Charles II. and Queen Anne. Simultaneously the study of classical architecture, after the style of Palladio, had become almost popular; Inigo Jones had been followed by Christopher Wren and John Vanbrugh. The Gothic feeling which marks the Elizabethan and Jacobean treatment of the classic styles had disappeared.

The amount of illustrated architectural literature which appeared about this time suggests that the interest in the revival of classic building was not restricted to those professionally interested in it. The architects themselves had other interests in life. Jones, Wren, and Vanbrugh engaged in artistic or scientific pursuits unconnected with the art and science of right building. John Wood, sen., was a different kind of architect; he engaged in building as a business speculation. He did not build merely to please the whims of his patrons. As a matter of fact he had few patrons, and when he built Prior Park for Ralph Allen it was mainly as an advertisement for Bath stone. Allen, having made a fortune as an official of the Post Office, acquired the Combe Down quarries, and wished to supply his stone for use in the erection of Greenwich Hospital. It was passed over in favour of Portland stone, and, to show the qualities of the product of Combe Down quarries, Prior Park, with its offices, garden houses, and Palladian bridge, was built. The scheme was magnificent; in it Wood showed imagination and power in piling up stone masses, and in disposing them in a landscape.

In his Bath street architecture he showed the same talents, but he did not build himself; he bought land and let it at ground-rents, in present-day style, to builders. He bound them to follow his designs in the laying out of streets and spaces, and in the fronts of the buildings, thus assuring unity of treatment in long vistas. This is the characteristic of Bath architecture, and, as stone was plentiful and cheap in the neighbourhood, the buildings in such quarters as Queen Square and the Circus have a grandiose effect which is very unusual in British town architecture, where, as a rule, each building is designed solely to please its owner, and has no relation to what adjoins it.

Opinions may differ as to Wood's taste in architecture, but at least it was not inferior to that of most of his contemporaries, and he certainly did not allow his taste to be overruled by his desire to make profit from his speculations.

Of the several other architects whose work Mr. Green has described and illustrated we have small space to speak, but the Pulteney Bridge is a good example of his method. Of it he gives tracings of the original drawings by Robert Adam, preserved in the Soane Museum; an excellently reproduced woodcut dated 1794; and a photograph of the bridge as it now is, from which it is apparent that vandalism is not peculiar to any nation or period.

Besides excellent photographic illustrations, we find here measured drawings and plans fully figured, with constructional details marked upon them. Many of these are reproduced in facsimile from the originals, and, with similarly treated building contracts, give a very fair idea of the business methods of the Bath architects.

Bath is an interesting subject for study on account of its association with the notabilities of a century in which politics, literature, and art passed through great transformations in England. This book, with its five maps showing the development of the city, will assist those who wish to do so to reconstruct many scenes that might be hazy without such material to rely upon, and can be read with profit even by those who have small technical acquaintance with architecture. To the architect it will appeal rather as the history of a phase which made architecture somewhat more of a business and somewhat less of an art than it had been before.

MUNICIPAL ART PATRONAGE AT BRADFORD.

WE learn that the Bradford Art Gallery Committee,

"with the substantial profits of last year's Exhibition at their disposal, feel themselves justified in launching out freely. They will recommend to the City Council the purchase of ten pictures."

It is excellent news in these days that a city council should feel itself able to "launch out

freely" in the patronage of art — still more excellent when we reflect that the money which it is proposed to spend was itself in large measure due to the success of what may be considered the best retrospective exhibition of modern British art that has ever been held. That exhibition, organized by a London committee which consisted of well-known artists, such as Mr. Strang, Mr. J. M. Swan, R.A., Mr. Shannon, Mr. Steer, and Mr. Rothenstein, was arranged on lines the very opposite of those followed by the ordinary provincial showman, that is to say, the endeavour was to make the standard of admission one of artistic excellence rather than one of popularity or academic prestige. What the effect of this endeavour was may perhaps best be understood by a quotation from Count Kessler's evidence before the House of Lords' Commission on the Chantrey Bequest. When asked for his opinion on the collection purchased under the Chantrey Bequest, Count Kessler, who is a vice-president of the Deutsche Künstler Bund, compared it with the exhibition then being held at Bradford :—

"I have recently been at Bradford, where there is an exhibition of modern English pictures going back as far as Gainsborough ; and certainly I must say that this exhibition in Bradford has given me a totally different idea of the course of English art from what I had gathered up to now from the Chantrey Collection."

As Count Kessler's view of the Chantrey Collection was highly unfavourable, it may be gathered that he considered—as did, we believe, all competent judges in this country—that the Bradford exhibition was remarkably representative of what is best in modern English art. In a subsequent answer Count Kessler expressly mentioned Mr. Steer, who was an exhibitor at Bradford and one of the London committee, as one of the representative English artists whose work ought to find a place in a national collection.

Now the Bradford Town Council having availed themselves freely of the energy and devotion to art of this group of painters, whose names are respected by the profession, and having by that means secured not only a *succès d'estime*, but also a very handsome profit of some sixteen thousand pounds, have this year felt themselves at liberty to "launch out freely" not in the purchase of any of the masterpieces—such as Cecil Lawson's 'Hop Gardens of England' or Alfred Stevens's portrait, or the pictures of Watts and Rossetti—which hung in their galleries last year, and which would have set a standard of dignified and serious art to their townsmen, nor in the work of those modern artists, such as Strang, Legros, Shannon, Ricketts, Bone, Clausen, A.R.A., Rothenstein, and John, to whom they owed their success, but in paintings which are mostly the very antithesis of this—in just that trivial and popular kind of painting which claims and receives official and State recognition in this country, and against which the Bradford exhibition was a triumphant protest. They propose, in fact, to buy Mr. Herbert J. Draper's 'Golden Fleece,' Mr. Blake Wirgman's "Gather ye roses while ye may," and works by Mr. J. W. North, Mr. Hornel, Mr. F. D. Millet, Mr. E. J. Sullivan, Mr. W. A. Gibson, and Mr. Hughes Stanton.

Now some of these painters approach more and some less towards a standard of praiseworthy endeavour ; but their practice as a whole is precisely of the kind which, as the Chantrey Bequest inquiry showed, is condemned by the great men of responsible critical opinion, both in this country and abroad.

We must leave it to the ratepayers of Bradford to say whether they are satisfied with such a use of their money ; but of this we may be sure, the Bradford Art Gallery Committee have taught artists a lesson which they are not likely to forget. It will, we think, be a long time before such a body of distinguished artists as met in the London committee of last year's exhibition at Bradford devotes the time and energy necessary for organizing such an exhibition to the services of a provincial town, unless, indeed, some guarantee be given that its profits will not be devoted to encouraging precisely that kind of art which, as it pleases most the uncultivated public, makes the very existence of scholarly art in England problematical.

A PORTRAIT BY TITIAN.

AT Messrs. P. & D. Colnaghi's is now on view a portrait of the greatest interest and the highest artistic quality. It has long been known that Titian did two portraits of his friend Pietro Aretino, and that besides the splendid picture in the Pitti Gallery, there existed in the Chigi Palace at Rome another version by Titian's hand of his ingenious and disreputable friend. It is this version—known to historians of Titian, but scarcely ever seen—that Londoners now have the good fortune to study at their leisure. It certainly counts among the great portraits of Titian, and therefore of the world. It has, as might be expected from Titian's relations with the sitter, an intimacy and subtlety in the expression of character greater even than is usual with Titian ; but this is combined with a stateliness in the movement and a breadth in the treatment which raise it out of the level of a merely curious psychology and make it universal and poetical. It is not, of course, poetical in the sense in which Titian's earlier Giorgionesque pieces were ; it has no trace of that charm of a lyrical mood ; it is altogether drier and more objective. But it is poetical in that great dramatic feeling which Titian discovered for the first time when he was already past middle age. In fact, just about the time that Titian must have painted this portrait he executed the first of his great dramatic compositions, the 'Christ before Pilate' at Vienna, in which Pietro Aretino, with complacent cynicism, posed for the figure of Pilate. Here, at all events in the Chigi picture, the man stands before us magnificently revealed. So objective, so entirely above any *parti pris*, is the rendering that it is impossible to say that there is a hint of satire. But here is Pietro Aretino, with his bold yet shifty eyes, his brazen mask and satyr's mouth. He is obviously the poet and blackguard, *littérateur* and blackmailer, art critic and scoundrel, the terror of princes and obscene castigator of vice. The possibility of all his incompatible qualities is seen here, the unscrupulousness as well as the fine intellect and the sensibility which made of him the first of modern landscape painters in words. And all this is given with a senatorial dignity and reserve of bearing which make one respect the man in spite of his sins. He remains, above all, magnificent—almost, indeed, a gentleman. Such was Titian's power, and such, to do him justice, Pietro's love of truth, that neither shrank from so unsparing an interpretation.

The painting is masterly beyond description ; it has at once the infinity of the most complex and the directness of the most simple methods. One cannot imagine how these thin scumbles of paint — for it is scarcely more loaded than a Whistler — produced such solidity of relief, such luminous brilliance and transparent depths of colour. Titian was always a supreme master of his craft, and each stage of his development brings with it fresh adaptations of the means of expression to the idea ; before each in turn we stand amazed and think it the most wonderful of all ; and certainly here the treatment is consummate. The most complex effects are produced by what look like the simplest means ; the subtlest gradations of tone seem to be due to a single fine stroke of the brush. The calligraphy throughout has the utmost expressiveness with perfect beauty and restraint. Nor is the colour less perfect than the handling. Out of three simple notes—the dull orange of the robe, the ruddy flesh, and a marvellous neutral grey in the background—Titian has built up a most sumptuous harmony. It has not the seductive charm of his earlier schemes ; it is drier and less enticing ; but it is at once resplendent and restrained, magnificent and austere.

THE CHURCH HISTORY EXHIBITION AT ST. ALBANS.

(First Notice.)

A NOTABLE exhibition, the first of its kind, was opened by the Bishop of St. Albans, at the see town of his diocese, on June 27th. So remarkable a collection of every kind of movable object that could illustrate the evolution and history of the Church in the British Isles from the earliest days down to the middle of last century has never before been brought together. Much that is of the highest value has left its home for the first time for centuries to enrich this laudable endeavour to illustrate the story of the Church's career.

The Committee is to be specially congratulated on the orderly sequence of exhibits. The great show, excellently and cleverly arranged in the big hall and adjoining anteroom and lobbies of the Town Hall of St. Albans, is so planned that down to 1549 books, plate, ornaments, pictures, &c., all go on, side by side, each illustrating the art of the other. The MSS. gradually turn into printed books, which include examples of all the old service-books. With the year 1550 the series divides into two parallel columns, namely, the Book of Common Prayer and the Bible in one set of cases, and the continuation of objects and plate, &c., in others.

On entering the great hall plain directions meet the eye, suggesting that the visitor should begin his inspection with the cases at the west end that deal with the pre-Conquest and Norman periods, and so on in regular progression. In this notice we propose to mention only some of the more remarkable of the actual books, whether in manuscript or type, and such things as charters or proclamations, leaving out photographic or other facsimiles (though they have their value), and putting aside what are termed the "objects" for future comment.

But first a word should, in justice, be said as to the catalogue, for it reflects considerable credit on all responsible for its production. It is no mere dry title-list of the exhibits, but contains such a variety of scholarly information as to make it a book of some permanent value. We are glad to notice that a revised and illustrated edition is to be issued in the autumn at a modest price. Moreover, the writers—whether wisely or not is not for us to say—have managed to impress on its pages, here and again, their own decided notions and opinions, with the result that many paragraphs are stirring and even amusing. One example must suffice. The character of William III., in connexion with royal injunctions issued in 1694 to the bishops and clergy, is summed up in such terms that if the catalogue had been issued at Belfast, instead of St. Albans, whole cohorts of police would have been necessary to prevent the Town Hall and its contents from being wrecked. William of Orange is described on p. 106 as "a Calvinistic Dutchman, of foul life and disagreeable manners."

In the first case is an eighth-century Book of the Gospels, from the Chapter of Hereford, with coloured titles. Near by is one of the chief treasures from Lambeth Palace ; it is the first part of Bede on the Apocalypse, an inscription recording its gift in 1018 to the minster of St. Mary, Crediton, by Alderman Athelward.

Against the wall over the next case is the Conqueror's charter of confirmation to the Abbey of Ramsey, Hunts, with the king's first great seal in red wax, and the attestations of the two archbishops, and divers bishops, abbots, and earls. Sidney Sussex College, Cambridge, contributes an eleventh-century Ordinal, once the property of the monastery of Durham; bound up with it is a thirteenth-century Bestiary. An interesting volume lent by the Bishop of Truro, said to have belonged to Beverley Minster and afterwards to Roche Abbey, opens with part of a twelfth-century Mass-book; whilst Magdalen College, Oxford, contributes a valuable twelfth-century Pontifical, formerly at Hereford, with remarkable alphabetical musical notation. A noble late twelfth-century Bible, in three great volumes, comes from Winchester, where it was written; Lambeth sends a splendid Old Testament of the same date, with illuminated letters and pictures. A place reserved for the Eton Bible of the like period was not occupied at the time of our visit. Hereford sends a glossed Psalter which is also late twelfth century.

To pass to the next century, there are a Gospel Book (Hereford), a Psalter (Mr. Huth), two Vulgate Bibles (Mr. Cockerell), *temp.* Henry III.; also a valuable Psalter (Duke of Rutland), and some others, *temp.* Edward I. Sidney Sussex College sends a finely illustrated Bible, in double columns, of the opening of the fourteenth century. Of the same century there are two Missals, and one Manual of Salisbury Use, a Missal of Hereford Use, and two Psalters. Of different periods of the fifteenth century there are a Missal of Bangor Use, a book of services of some unknown Welsh Use, a Missal of York Use, various Missals, Portifers, Graduals, &c., of Sarum Use, and two Books of Hours.

The Bishop of Truro contributes a highly interesting connecting link between the MSS. and books printed from movable types; it is a Biblia Pauperum, *circa* 1420, having on each page a New Testament picture between two appropriate Old Testament pictures, printed from wood-blocks. The Earl of Crawford sends the Directorium, popularly known as the "Pie," which regulated the services, printed, according to Sarum Use, at Antwerp in 1488. At this date, although there are several later manuscripts, the printed books begin. Of the time of Henry VIII. we notice several printed Horæ; a Sarum Missal printed on vellum, 1527 (Lord Aldenham); a Sarum Processional, 1528 (Mr. Dewick); a Sarum Gradual, 1532 (Lord Kenyon); a most rare York Breviary, 1533 (Bishop of Truro); and a Sarum Manual, 1537 (Mr. Dewick).

Making a slight return chronologically, we find next an interesting group of early printed books, outside immediate service-books, arranged with admirable catalogue notes. Of this group, the more important are the book of prayers in English, printed by Wynkyn de Worde in 1494, by command of Elizabeth, Henry VII.'s queen; 'The Rosary of our Saviour Jesus,' printed by Richard Pynson about 1510; 'A Notable Treatyse.....for all crysten men,' 1506; 'The Pomander of Prayer,' and three other little devotional books, *circa* 1525, from Lord Kenyon's collection; 'A Goodly Prymer in Englyshe,' 1535; a Primer in Latin, 1536; and a considerable variety of Primers, &c., up to 1545, chiefly from the noble collection of Lord Aldenham.

Mr. Eeles contributes an invaluable book, the Pontifical of 1542, used in England during Queen Mary's reign. This copy belonged to Thomas Cheetham, titular Bishop of Sidon, and suffragan of several English sees. It is a Roman Pontifical, printed at Lyons, but contains various marginal references which bring it into accord with old English uses. "This is the only example," says the catalogue, "known at present of a printed book of Roman Use ever having been used in the Church of England." There are several Primers of the time of Edward VI.; the one of 1552, issued in the same year as the second Prayer Book of that reign, contains prayers for the dead.

The collection of English Prayer Books is as fine and complete as can be imagined, beginning with the Order of Communion printed March 8th, 1548, and ending with 'The Prayer Book of King Edward VII.,' 1903, from the Essex House Press. These are chiefly taken from the priceless series of such works belonging to Lord Aldenham, but contributions of great value are made by Canon Gibbs, and others by Mr. Huth and Dr. Freshfield, and several chapters and colleges.

The Bibles in English form another masterly collection, beginning with a MS. Wyclif, written soon after 1400, and belonging to Christ Church, Oxford. To this collection Lord Aldenham is again the chief contributor. The brief catalogue notes here are most satisfactory. The collection closes with the stereotyped Douay version of the Bible, as printed at Dublin in 1840. This version is most quaint in parts—witness this rendering of part of the Song of Deborah:—

"His Mother looked out a window and howled; and she spoke from the dining-room, Why is his chariot.....One that was wiser than the rest of his wives returned this answer to her mother-in-law."

The series of original broadside royal proclamations on matters affecting the Church, beginning in 1603, is full of instruction and interest, and admirably elucidated in the catalogue.

The large number of seventeenth and eighteenth century documents and printed books on matters germane to this exhibition, extending from No. 399 to 459, are of great value and well arranged. Among the more striking are an autograph letter of Laud to the city of Edinburgh, 1637, unknown to the editors of his works; the actual notebook of the Wirksworth Presbyterian Classis, 1651–8, lent by the Hon. F. Strutt, and edited by Dr. Cox in 1882; a Primer of 1686, with prayers for James II. and the different members of the royal family; the Oath of Fidelity, &c., of 1714, directed against the "Old Pretender"; the Non-jurors' Liturgy, of 1718; and 'The Oxford Methodists,' of 1738.

A valuable collection of prints and photographs of the Abbey of St. Albans, arranged in an anteroom, has been lent by the Dean, the oldest of which gives an exterior view of the south-east in 1804. There is an interesting group of views of the interior *circa* 1824. There are also pictures of the Grammar School in the Lady Chapel as late as 1868. Various views of the Abbey before its wholesale restoration are also included. No place has been found for the clever set of caricatures of Lord Grimthorpe's ideas of restoration, which caused much amusement at the time of their issue; and this is as it should be, at a period so little removed from the time of his death. The only reference, however, that we have found in the catalogue to his lordship is of a slightly contemptuous character. A photograph is exhibited of a beautiful door-hinge, *circa* 1160, one of a pair that once ornamented the door from the south transept of St. Albans Abbey Church into the slype. "When the slype was destroyed by the late Lord Grimthorpe in 1888," says the catalogue, "the door was cast aside, and the hinges have since found their way to the Victoria and Albert Museum, where they are properly treasured."

There is a fine series of photographs in the lobby illustrating the architecture of Hertfordshire churches, taken and exhibited by Mr. M. Whitford Anderson. Among the noteworthy interior details are the Early English screen at Gilston, and the 1727 Renaissance chancel screen at St. Paul's, Walden; and the seventeenth-century reredos of Oxhey Chapel. Only one real "low-side" window is pictured, an Early English example from Furneaux Pelham. Hitchin supplies an example of a late Decorated pulpit, and Knebworth an Elizabethan one dated 1567. The early sixteenth-century brass eagle lectern at St. Stephen's, St. Albans, was brought here from Edinburgh. Some hopes have been expressed that it might be restored to the northern capital. Worthy of the close attention of the ecclesiologist are the canopied piscina at Wheathampstead, and the canopied stoup of another church. Remarkable, too, are the details of the sculptured reredoses of Wheathampstead and Great Munden. The former is in the north transept, of fourteenth-century date, and consists of a series of handsome sculptured niches; the latter is probably unique and of the next century; in the centre is a sunk parallelogram for a "table" or set piece of sculpture, having two image niches on each side of it and one above.

There is much valuable matter of various kinds left for discussion in a second notice. The trouble taken by many, over a period of some months, to gather and arrange so great a collection can scarcely be overrated. Among the most assiduous workers have been Mr. St. John Hope, Mr. W. J. Hardy, and Canon Gibbs; whilst the hon. secretary, Miss M. A. Wix, with a number of well-qualified lady assistants, has rendered invaluable and methodical aid. Mr. Eeles has laboured with characteristic energy, travelling to Cambridge on the very morning of the opening to bring up some belated exhibits. It is sincerely to be hoped that the results of all this work will be appreciated by a large number of visitors.

SALES.

MESSRS. CHRISTIE sold on June 21st the following engravings:—After Trumbull: General Washington, by V. Green, 105*l.* After Cosway: Sportive Innocence, by E. Scriven, 25*l.* After A. Buck: The Princess Mary, by Wright and Ziegler, 52*l.*; Olivia Primrose, by Roberts and Stadler, 29*l.* After Singleton: Lord Nelson, by G. Keating, 29*l.*; Mrs. Loraine Smith, by W. Bond, 29*l.* After Hoppner: Lady Charlotte Greville, by J. Young, 115*l.* After Reynolds: Maternal Affection (Lady Dashwood), by C. Hodges, 31*l.*; Mrs. Montagu, by J. R. Smith, 27*l.* After J. Ward: Compassionate Children, by W. Ward, 30*l.* After E. Dayes: An Airing in Hyde Park, by T. Gaugain, 131*l.* After Wheatley: Rustic Sympathy, by G. Keating, 28*l.*; The Itinerant Potters, by J. Whessell, 48*l.*; Duke Cherries, by A. Cardon, 42*l.*; Sweet China Oranges, by L. Schiavonetti, 47*l.*; Old Chairs to Mend, by Vendramini, 43*l.* After Morland: Guinea-pigs, and Dancing Dogs, by T. Gaugain (a pair), 136*l.* After Greuze: Le Baiser Envoyé, by C. Turner, 47*l.*

The modern pictures and drawings forming the collection of the late Mr. C. J. Galloway were dispersed by Messrs. Christie on June 24th, 26th, and 27th. The sale was noteworthy for the excellent prices realized for the works of contemporary British artists, those of Mr. E. J. Gregory being especially numerous. The prominent examples on the first day included the following. Drawings: S. Bough, The Return from Hunting, 90*l.* C. Green, A Country Circus, 75*l.*; The Quack Doctor, 54*l.* E. J. Gregory, Last Touches, 84*l.*; A Look at the Model, 136*l.*; Fanny Bunter in 'New and Old Acres,' 147*l.*; Portrait of the Artist, in German costume of the sixteenth century, 52*l.*; A Stitch in Time, 110*l.*; First Act of a Comedy, the Student's Visitor, 183*l.*; Après, 420*l.*; A Morning Gallop, 54*l.*; In the Dumps; or, on the Nursery Stairs, 131*l.*; St. George, 157*l.*; A Young Botanist; or, Little Psyche, 294*l.*; Boulter's Lock, 147*l.*; Run Dry, 94*l.*; Overtures for Peace, 105*l.*; The Pirate Ship, 73*l.*; Hide and Seek, 131*l.*; 'Tween Acts, 50*l.*; Morning News, 50*l.*; Butterflies, 136*l.*; Divided Attention; or, a Reverie, 50*l.*; A Step on the Stairs, 60*l.*; The Standard-Bearer, 68*l.* Sir J. D. Linton, Off Guard, 89*l.* Sir E. J. Poynter, A Surrey Arcadia, 75*l.* F. J. Shields, The Drummer-Boy's Dream, 57*l.* Pictures: Sir E. Burne-Jones, A Sacrifice to Hymen, 210*l.* G. Clausen, Harvest: Tying the Sheaves, 241*l.*; An Offering, 105*l.* D. Cox, Rhyl Sands, 115*l.* E. J. Gregory, Boulter's Lock, Sunday Afternoon, 808*l.*; Dawn, 357*l.*; Portrait of the Artist, in fancy costume, 115*l.*; Intruders, 294*l.*; Marooned, 294*l.*; The Grand Canal, Venice, 136*l.*; The Captive, 136*l.*; Fishing, Marlow, 110*l.* H. H. La Thangue, In a Cottage Garden; or, the Sawing-Horse, 189*l.*; An Autumn Morning, 141*l.*: Clearing the Orchard,

199*l.*; Gathering Watercress, 136*l.* H. Moore, Outward Bound, 131*l.*; Coming Home, 120*l.* Erskine Nicol, A View in Tipperary, 199*l.* E. Stott, The Golden Moon, 162*l.* J. W. Waterhouse, Dolce far Niente, 178*l.* G. F. Watts, Love and Death, 1,417*l.*; The Dove that Returned Not, 609*l.*; The Rider on the Red Horse, 199*l.*; Eve Tempted, 210*l.*; Rain Passing Away, 273*l.* Corot, The Edge of a Wood, with a peasant-woman, a view of buildings on the right, 1,365*l.*; A River Scene, with a man fishing out of a punt, 577*l.* H. Fantin-Latour, Roses in a Glass Vase, 241*l.*; Dahlias in a Green Vase, Grapes, and Peaches, 378*l.*; Roses in a Glass Vase and a Spray of Roses on a Table, 210*l.*; A Bunch of Stocks, 315*l.*; The Bather, 141*l.*; White Roses and Grapes, 252*l.*; Grapes, Peaches, and Pear, 120*l.* Greuze, Head of a Girl, 304*l.* L. L'Hermitte, The Fish-Market, St. Malo, 567*l.* C. Troyon, A Forest Glade, 367*l.*

On the 26th were sold the following drawings: E. J. Gregory, Gateway of the Poggio Imperiale, Florence, 57*l.*; Æsthetic Amenity, 90*l.*; The Doom of the Ditch-Flowers, 99*l.*; Head of a Girl, 92*l.*; The Lifeboat, 81*l.*; Peveril Point, 84*l.* R. W. Macbeth, A Lullaby, 65*l.* G. J. Pinwell, The Old Clock, 65*l.*

On the 27th the examples included an engraving after F. Walker, The Harbour of Refuge, by R. W. Macbeth, 25*l.* Drawings: H. G. E. Degas, The Ballet, 273*l.* L. L'Hermitte, Interior of a Church, with figures, 67*l.*

Fine-Art Gossip.

MR. GOULD'S original *Westminster* Cartoons, 1904–5, and other political caricatures, are on view at the Doré Gallery till July 22nd inclusive, and are, as might be expected, attracting a good deal of attention.

MR. TOM BROWNE is holding at the Modern Gallery an exhibition of over two hundred of his original drawings which have appeared in *Punch*, *Sketch*, *Graphic*, *Tatler*, and other papers. The private view is to-day.

TO DAY is the private view, also, of the collection of old Wedgwood formed by the late Lord Tweedmouth, now to be seen at Mr. Charles Davis's Galleries, 147, New Bond Street.

AT 158B, New Bond Street, an exhibition is open of English miniatures of the sixteenth, seventeenth, and eighteenth centuries.

YESTERDAY was the private view of the first exhibition of the Japan Society—a collection of arms and armour of Old Japan—at the Galleries of the Royal Society of Painters in Water Colours.

THOSE who take an interest in bookbindings should not miss Mr. Douglas Cockerell's excellent show of them at the new rooms of the Booklovers' Library, 17, Hanover Street, W.

WITH the support of the Royal Institute of British Architects an exhibition will be held in the Scottish National Portrait Gallery, Edinburgh, in August and the two succeeding months, of the collection of photographs, drawings, and surveys made by Mr. W. H. Goodyear, Institute of Fine Arts, Brooklyn, U.S.A., illustrating 'Architectural Refinements.'

AN exhibition of the works of G. F. Watts will be held in the Royal Scottish Academy Galleries, Edinburgh, in the month of October.

THE first article in the July number of *The Burlington Magazine* is by Prof. W. R. Lethaby, and is an exhaustive account of the Painted Chamber and the early masters of the Westminster School. Mr. Lawrence Weaver writes on some English architectural leadwork, dealing this month with the early period down to the middle of the seventeenth century. Mr. Egerton Beck contributes the first of a series of articles on 'Ecclesiastical Dress in Art,' which will help students to identify the figures in pictures. Mr. Robert Dell writes on 'A Tudor Manor House,' the house in question being Sutton Place, near Guildford. The exhibition of English embroidery at the Burlington Fine-Arts Club is dealt with by Miss May Morris; Mr. A. G. B. Russell writes on a seventeenth-century wall-paper in a house at Wotton-under-Edge, which has been in its present position since the reign of William and Mary; and Dr. Robert Eisler describes the frescoes by Guido Reni, Paul Bril, and Roazio Gentileschi in the Palazzo Rospigliosi at Rome. Prof. C. J. Holmes criticizes 'Some Recently Exhibited Pictures of the British School,' dealing chiefly with the Huth, Tweedmouth, and J. S. Forbes collections. The 'Miscellaneous Notes' include a recently discovered portrait of A. W. Pugin, which has been acquired by the National Gallery, and a picture which Mr. D. S. MacColl attributes to Françoise Duparc. Mrs. Herringham calls attention to the repainting of several of the pictures which fetched high prices at the recent Tweedmouth sale. The frontispiece is a photogravure of Gainsborough's 'Mr. Vestris' from the Huth Collection.

THE many friends, artistic and literary, of Mr. Fred Reilly, will learn with great regret of his death from malaria on his way home from British Guiana, whither he had gone in the spring to report on the projected engineering undertakings of the British Guiana Company. Mr. Reilly was a son of the late Prof. Reilly, of Cooper's Hill, and was for many years in the Indian Civil Service, from which he retired and studied art under M. Cormon in Paris. About two or three years ago he took a studio at 11, Holland Park Road, and painted many portraits and landscapes, some of which have appeared at the Salon, and in various exhibitions in London. His landscapes show an intimate, tender love of nature, and his excellent portraits prove him to have been a careful and conscientious worker. His widow is holding an exhibition of his works at his studio on Friday and Saturday next.

THE death, in his forty-eighth year, is announced of Dr. Alois Riegl, the distinguished Professor of the History of Art at the University of Vienna. His knowledge of history and his thorough methods enabled him to find traces of artistic development in times which till then had been looked on as periods of decay and degradation. His theory was that there is no real break in the continuity of art development. His studies on the textile fabrics of the East and their influence on art are of great interest. His most important works are: 'Die spätrömische Kunstindustrie in Oesterreich,' 'Stilfragen,' and 'Das holländische Gruppenporträt.'

THE purchases of the City of Paris at the two Salons of the present year include the following pictures: A. Bertram, 'La Baie de la Somme'; Karl Cartier, 'La Vieille Porte de Moret (le soir)'; Frank Lamy, 'Le Ponte Vecchio, Florence'; D. L. Saubès, 'Autour du Berceau'; Paul Steck, 'Le Retour de Viroflay'; E. Trigoulet, 'Le Jardin'; Henri Zo, 'Un Coin de Marché de l'Encarnacion, Séville'; René Andreau, 'Le Berger'; Gaston Hochard, 'Les Chantres'; and Albert Moullé, 'Les Bords du Loing à Moret.' The works of sculpture similarly purchased included J. Desbois, 'Chasseresse'; X. Barthe, 'Prière,' a statue in polychrome marble; and H. Evrard, 'Chasseur Surpris,' marble statue.

M. PAUL CHEVALLIER'S latest sales at the Hôtel Drouot have included three interesting portraits of Jacques Louis David: Monsieur Desmaisons, three-quarter figure, signed and dated 1782, and exhibited at the Salon of the following year, 40,000 fr.; Madame Buron, half-figure, signed and dated 1769, 8,500 fr.; and the companion portrait of her husband, also dated 1769, 6,000 fr. The Bayer collection included some important modern pictures, notably Decamps, 'Dans le Désert,' 10,250 fr.; Diaz, 'Enfants Turcs jouant aux Boules,' 14,000 fr.; Jules Dupré, 'Les Chiens dans la Vallée,' 13,100 fr.; and Corot, 'Pêcheur au bord de l'Étang,' 22,000 fr.

THERE have been 400 applications for a share of the 30,000 francs which, as we mentioned some weeks ago, the French Government has set aside for the benefit of those whose work at the Salon shows promise, and whose private means are limited. The Conseil Supérieur of the fine arts has decided upon ten grants of 1,000 fr. each, and forty of 500 fr. each.

ON Thursday afternoon next, at University College, Gower Street, the bust of the late Mr. S. Arthur Strong will be received from Lord Burghclere, as representing the subscribers, by Lord Reay, as President of University College.

ALTHOUGH both Salons nominally closed yesterday, they will, on the request of M. Georges Berger, Deputy, and President of the Société des Amis du Louvre, remain open to-day (Saturday), and all the proceeds of the extra day will go to the funds of that excellent society.

GREAT indignation is felt in art circles at the removal of Leo Putz's picture 'Die Bachanale' from the Munich International Art Exhibition, because it is offensive to some of the visitors—"sittlich anstössig" is the expressive German phrase. The general feeling is that the Board of Management should either have rejected the picture at once, or, having accepted it, should have refused to remove it. Exaggerated prudishness in art has long been noticeable in certain circles in Germany, but it does not pass without protest.

THE Sixteenth Congress of Archæological Societies in union with the Society of Antiquaries will be held at the rooms of the latter at Burlington House next Wednesday. Lord Avebury will preside, and the agenda include 'Report of the Committee for scheduling Earthworks,' by Mr. I. Chalkley Gould; 'The Preservation of National Monuments,' introduced by the Dean of Wells and Mr. J. Willis-Bund; 'Local Records: the Government Bill for their Safe Custody'; and 'The Preservation of County Boundaries,' by Mr. H. Laver, President of the Essex Archæological Society.

MUSIC

THE WEEK.

COVENT GARDEN.—*Orfeo; L'Oracolo; Aida; Faust.*

GLUCK'S 'Orfeo,' which is heard pretty frequently in England, is the one opera of the eighteenth century — with the exception of three or four of Mozart's stage works — which has survived. Hasse, Jomelli, and Dittersdorf were prominent composers of that period, but their works have long since been consigned to oblivion. Mozart, by reason of his wonderful musical gifts, threw Gluck more or less into the shade. Now, however, the latter is recognized, not, perhaps, quite as a Wagner of the eighteenth century, but as one of that master's greatest predecessors. In Gluck's 'Orfeo' dramatic power is expressed in simple terms, and its calm beauty and dignity offer a striking contrast to the elaborate and often restless music and big orchestras of the present day. Writers are constantly speaking of the development of the art, but all development does not make for progress; and in some respects Gluck is a truer model than Mozart, and certainly a safer one than Wagner.

The opera was performed last Thursday week, with Madame Kirkby Lunn as

Orphée, who, owing to hoarseness, was unfortunately unable to do herself justice. Last Wednesday the *rôle* was taken by Mlle. Gerville-Reache. Some of her singing was very good, though her rendering of the "Che farò" was stagey. Her conception of the part was sound, but her acting somewhat formal. Madame Jeanne Raunay as Eurydice sang well. The choral singing in the lovely third act was delightful; the demons and furies in the second act need not, however, have sung or acted in such a quiet, orderly manner. M. Messager conducted admirably.

The second performance of 'Orfeo' was followed by the new music drama 'L'Oracolo,' based on C. B. Fernald's 'The Cat and the Cherub,' the libretto by Camillo Zanoni, the English version by Percy Pinkerton, the music by Franco Leoni. In 'Ib and Little Christina' the composer wrote music in keeping with the emotional story. In 'L'Oracolo' emotion certainly plays a part — there is a pair of lovers, and there is mourning for a murdered son, while the close is tragic—but the effect of the whole is strange rather than moving, and at times the action on the stage degenerates almost into burlesque. We find some dramatic touches in the music; local colour is introduced with restraint, and there are many pages which bear testimony to the skill of the composer. But the lyrical portions of the work are of the true modern Italian type, with signs especially of the influence of Mascagni and Leoncavallo, and music of this kind seems ill assorted with the personages and action of the piece. 'L'Oracolo,' by reason of its peculiarities, may excite curiosity for a time, but its life cannot be of long duration. The piece was well mounted and well performed. The principal parts were taken by Mlle. Donalda, Madame Paulin, and MM. Dalmores, Scotti, and Marcoux. M. Messager conducted. The composer was called at the close.

Of other performances during the week we note a very fine one of Verdi's 'Aida,' in which Mlle. Destinn and Signor Caruso sang and acted with special intensity and brilliant results. Signor Sammarco, too, was excellent as Amonasro.

The performance of 'Faust' was not ideal. Mlle. Donalda displayed good qualities as Marguerite. M. Herold's production of voice is often uncomfortable, but it is of excellent quality. Mr. Whitehill, who made such a fine Wotan, was disappointing as Mephistopheles.

Crystal Palace.—*British Festival Concert.*

The British Festival Concert at the Crystal Palace last Saturday attracted a large audience, and although some of the delicate music—as, for instance, the first of Dr. Cowen's 'Old English Dances'—was almost inaudible, and although Mr. Coleridge - Taylor's 'Hiawatha's Wedding Feast' is scarcely suited to a choir of Handelian size, the performances generally, under the direction of Dr. Cowen, were excellent. The well-known singers Miss Agnes Nicholls, Mesdames Clara Butt and Ada Crossley, and MM. Ben Davies, Kennerley Rumford, and Andrew Black, were engaged, and they all sang well, and were received with marked enthusiasm. So far, then, the festival was a success. If regarded, however, from an artistic point of view, it certainly seems as if a more representative programme could have been drawn up. On such an occasion — for festivals devoted exclusively to native art are rare—one or more old masters, such as Purcell or Orlando Gibbons, might have been introduced. Again, although no exception could be taken to the names included, which were those of prominent composers, there were others deserving of a place. Why, for instance, were three numbers assigned to Sullivan, three to Sir Edward Elgar, and three to Goring Thomas? By reducing these, room could easily have been found for more names. And once more, Would it not have been well to include some of the rising composers—that is, of men who, if not spoilt by praise, if not tempted to write for mere money, may one day be held in highest honour? A scheme of that kind would have attracted notice at home and abroad. We know the answer to such criticism. The organizers of the festival were well aware that favourite songs, sung by favourite singers, draw the public more than works by old or coming masters, and they were naturally anxious to secure a financial success.

Musical Gossip.

The ninety-third season of the Philharmonic Society came to a close last Thursday week. The programme included Dr. Cowen's Symphony in F, No. 5, a work originally produced at the Cambridge Musical Society in 1887, and noticed in *The Athenæum*, June 18th of that year. It has been compressed and partly rescored. Some bright Bohemian dances, cleverly arranged for orchestra by Mr. Alberto Randegger, jun., were successfully performed for the first time.

Mr. Mark Hambourg gave a recital at Queen's Hall on Wednesday afternoon. His many fine qualities as a pianist have often been recognized; but his performances of some pieces of Chopin deserve special mention. They were free from any suspicion of virtuosity; there was restraint without any touch of coldness.

There will be an eight weeks' season of Italian opera at Covent Garden, commencing in October, with the band and chorus which came to London last year from Naples. The enterprise will be carried out by the Grand Opera Syndicate, Messrs. Rendle and Forsyth, and some one at Naples whose name is not stated.

The Sheffield Triennial Musical Festival will take place in the Albert Hall of the Yorkshire city, October 4th to 6th. The choir will be over three hundred in number. 'The Messiah' will be given on the opening day; the evening programme will include Mr. Nicholas Gatty's 'Fly, Envious Time,' Schumann's 'Paradise and the Peri,' and a symphony by Weingartner. The second day will be devoted to Bach's Mass in B minor, Brahms's 'Nänie,' Max Bruch's 'Frithjof,' and, as novelty, Mr. Frederic Cliffe's 'Ode to the North-East Wind.' The morning programme of the third day commences with Mozart's 'Requiem,' followed by two eight-part choruses by Weingartner and the 'Eroica' Symphony; while in the evening will be given Berlioz's 'Faust.' The festival will be under the direction of Felix Weingartner, and Dr. Henry Coward, to whom so much of the success of previous festivals was due, will resume his post as chorus-master.

The valuable musical library of the late T. W. Taphouse will be sold at Messrs. Sotheby's on July 3rd and 4th. The catalogue contains interesting letters and manuscripts, rare printed books, various collections of anthems, songs, catches, many old editions of harpsichord lessons by Frescobaldi, Froberger, R. Aylward, Purcell, D'Anglebert, Couperin, Dieupart, Wagenseil, &c., and the MS. collection containing the only known composition of Purcell for violin with accompaniment.

A Fantasia in F sharp minor, a youthful work by Wagner, edited by Rudolf M. Breithaupt, will shortly be published by C. F. Kahnt Nachf. The Wagner family have allowed this for the benefit of the Wagner "Stipendienfond." The work, bearing the date November 27th, 1831, was composed at Leipsic when Wagner was studying under Weinlig.

A Mozart Festival will be held next year at Graz to celebrate the 150th anniversary of the composer's birth. It will commence on January 27th, Mozart's birthday. As part of the festival the company from the Vienna Court Opera, under the direction of Gustav Mahler, will give a Mozart Cycle at the Municipal Theatre.

Ernst von Possart, the well-known intendant of the Royal Court theatres at Munich, is about to resign the post he has so long and so honourably held. He will, however, conduct the Prinz Regent festival performances this autumn.

PERFORMANCES NEXT WEEK.

Sun.	Sunday League Concert, 7, Queen's Hall.
Mon.	Miss E Leginska's Concert, 3, Bechstein Hall.
—	Mlle. Zena Broxia's Concert, 8.30, Queen's Hall.
—	Royal Opera, Covent Garden.
—	Grand Opera, Waldorf Theatre.
Tues.	Royal Opera, Covent Garden.
—	Grand Opera, Waldorf Theatre.
Wed.	Royal Opera, Covent Garden.
—	Grand Opera, Benefit Performance for the Italian Hospital, Waldorf Theatre.
Thurs.	Royal Opera, Covent Garden.
—	Grand Opera, Matinée, Waldorf Theatre.
—	Mr. Charles Williams's Orchestral Concert, 3.15, Queen's Hall.
Fri.	Royal Opera, Covent Garden.
Sat.	Royal Opera, Covent Garden.
—	Grand Opera, Matinée, Waldorf Theatre.

DRAMA

THE WEEK.

Waldorf.—*Signora Duse in Odette and La Gioconda.*

Such novelties as have recently been given at the theatres are virtually confined to the foreign performers lingering in our midst, and the one or two promised productions are valedictory as regards the present season, or anticipatory as regards the next. More and more occupied with outdoor entertainments, and accustomed, in the words of Conington's translation of the first Ode of Horace, to

> Love the dust they gather in the course,

the cultivated public, if such exists, neglects the theatre, and brings about with each succeeding year an earlier period of summer closure.

In the 'Odette' of M. Sardou, in which she has been seen for the first time in London, Signora Duse is at her best. Not one of the greatest of Sardou's works is this, and it has not, since its first production at the Vaudeville, a quarter of a century ago, when Mlle. Blanche Pierson played the heroine, and other parts were taken by Mlle. Réjane and MM. Dupuis, Parade, Berton, and Dieudonné, been much heard of in Paris. Before Signora Duse, indeed, no

artist had, so far as we know, included it in her travelling repertory. In England knowledge of it is confined to an adaptation by Clement Scott given at the Haymarket almost immediately after its appearance in France. Of this version Madame Modjeska was the heroine, other leading parts being taken by the Bancrofts, Arthur Cecil, Mr. Conway, Mr. Pinero, and Mr. Brookfield. It is a curiously constructed work, the first act of which—showing a woman caught by her husband almost *in flagrante delicto*—constitutes something like a drama in itself. Its strongest scene is reached when the erring, and till then prosperous and unrepentant, woman insists upon an interview with the daughter who thinks her dead, and issues from it to commit suicide, having heard the death sentence unconsciously passed upon her by the pure lips of her child. To this situation Signora Duse assigned harrowing intensity. Almost for the first time she showed us a woman of evil life who had the hardness and brazenness, as well as the allurement, of her profession. In the dispute in the third act as to whether she will accept terms to efface herself, and make way for the happiness of her child, she displayed remarkable power. Odette, indeed, reveals a seldom-seen facet of her powers.

Considered as drama 'La Gioconda' is not wholly convincing. In the scene between Silvia Settala and Gioconda Dianti—in which the mistress, goaded by the gibes and misled by the statements of her rival, imperils the statue, which at the cost of her *belle mani* the wife saves—such dramatic significance as the scheme of the play involves seems to be missed. The treatment should be either more imaginative or more realistic. In the dispute between the two women a high pitch of intensity is reached. Signora Maty Wilson appeared for the first time as Gioconda. In both pieces the principal share in supporting La Duse is assigned to Signor Carlo Rosaspina.

TERRY'S.—*La Passerelle*. By Madame Fred Grésac and M. Francis de Croisset.

ORIGINALLY produced at the Vaudeville on January 31st, 1902, 'La Passerelle' was transferred by Madame Réjane to London and given at the Garrick on June 29th of the following year. Between those two dates, however, it had been seen at the Duke of York's in an English rendering by Mr. Cosmo Gordon Lennox, which subsequently migrated to Wyndham's and the Criterion. Its saucy heroine is accordingly fairly familiar to the London public. When now she revisits us, Jacqueline, afterwards Baronne de Gardannes, has gained in vivacity and in *désinvolture*, to use a French word for which, in one sense, we know no precise English equivalent. No absolute necessity exists for being shocked at proceedings on behalf of which may be advanced the plea that they are sanctioned by wedlock. Like 'Tristram Shandy,' however—the work, not the individual—according to the statement of Sterne, the proceedings in question show a great deal that is generally concealed. It may be doubted, indeed, whether any other living actress could with equally tranquil avoidance of offence be equally indecorous. Whatever may be said on a subject that is open to debate, it is, at least, certain that in no other character—not even Madame Sans-Gêne herself—is the method of Madame Réjane productive of more amusement. The general cast is good, though one or two of the artists rival the heroine in what we will call skittishness.

Dramatic Gossip.

THE last performance of the season given by the Incorporated Stage Society at the Royalty Theatre on the three opening days of the week consisted of 'The New Felicity,' announced as a modern comedy in three acts, by Laurence Alma Tadema, and 'One Day More,' a drama in one act, by Joseph Conrad. Neither of these has much claim to dramatic significance, and the latter may, in the language of the day, be characterized as "a piece of impressionism." Both were received with equanimity by the select public for the benefit of which they were supposedly given. It is to be wished that the Society would aim at a more cheerful and definite form of entertainment.

IN the retold story of 'Adrienne Lecouvreur,' which she has produced at the Coronet Theatre, Madame Bernhardt scarcely proves herself an inspired dramatist. The new play simply shows the contest between the actress and the Duchesse de Bouillon for a Maurice de Saxe who is not worth the pother he causes. Madame Bernhardt's performance retains its beauty and fragrance, but the Scribe and Legouvé rendering is to be preferred.

IN a promiscuous entertainment given at the St. James's on Tuesday afternoon for a benefit, a novelty by Elizabeth Strode, Edith Balfour, and J. Coudurier was performed for the first time under the title of 'The Faddists.' It is nominally in one act, but really in three, and is more remarkable for length than brilliancy.

WITH the production on the 10th inst. of Mr. Comyns Carr's adaptation of 'Oliver Twist' the season at His Majesty's will close. No announcement as to the period of reopening is, as yet, put forth. Mr. Tree's Fagin should be an interesting and fantastic creation.

THE Criterion reopens this evening, under the management of Miss Ethel Irving, with 'The Axis,' a three-act comedy by Mr. Cyrll Harcourt, and 'Where the Crows Gathered,' a one-act romantic play by Mr. Stephen Bond. The action of the first opens in Oxford in Commemoration Week. One or two of the original exponents of the piece on its production at Worthing on September 12th are retained; but the general cast is much altered. Miss Irving, who has no part in the performance, enacts the heroine of the after-piece.

THIS evening witnesses also the last performance at the Adelphi of 'Under which King?' On Tuesday the house will pass into the possession of Mr. F. R. Benson, who will open it with 'The Comedy of Errors' and a new one-act play by Mr. Stephen Phillips entitled 'Aylmer's Secret.'

SIR HENRY IRVING'S farewell appearances in America will begin in January next, instead of a year later, as previously announced.

WHEN, in the course of the month, the Haymarket closes, the joint tenure of Mr. Cyril Maude and Mr. Frederick Harrison will expire. During the autumn the house will reopen, under the management of Mr. Harrison, with 'On the Love Path,' by Mr. McLellan, the author of 'Leah Kleschna.'

TO CORRESPONDENTS.—F. S. B.—H. J. D. A.—W. F.—J. H. R.—W. L. A.—received.
A. E. K.—Not vacant. J. F. K.—Many thanks.
No notice can be taken of anonymous communications.

LITERATURE

Russia. By Sir Donald Mackenzie Wallace. New and Revised Edition. 2 vols. (Cassell & Co.)

WHEN we reviewed (No. 2569), in January, 1877, the first edition of this book, we pointed out that it constituted the most "serious" work on Russia, and declared it "excellent from first to last." We have seen no reason during the twenty-eight and a half years which have followed the appearance of the original book to modify our judgment with regard to it, and in comparing the two volumes on the shelves with their successors we are struck with the solidity of judgment in the work done in 1876, large portions of which remain unchanged.

The most important part of the new book consists in the account of the revolutionary movement and in the general considerations contained in the last chapter. Sir Donald Mackenzie Wallace declares in his last paragraph that he is offering only a very lame and impotent conclusion, and that he will not make predictions. It is only necessary, however, to compare this chapter with the sensational works which have been appearing recently at the rate of one per day to see that Sir Donald Mackenzie Wallace writes with real information, and is, alone among the hosts of writers on Russia whose books are just now coming out, to be trusted as a man of authority. In two or three sentences he blows to pieces the wild assertions of the popular writers on Russia of the present journalistic times:—

"The Grand Duke Vladimir.....is not in favour, and for nearly two years he has never been consulted.....The so-called Grand Ducal party, of which he is supposed to be the leader, is a recently invented fiction.....M. Witte..... is not likely to have an opportunity.....for he does not—to state the case mildly—possess the full confidence of his august master."

Just as in the Revolution chapters Sir Donald Wallace has stated the case for the subscriptions of the Russian Whigs towards revolutionary funds, even when they were almost certain to be used for assassination, so in these last words he grimly says of Plehve that he is "no longer available." It is always pleasant to find that a writer of unquestioned weight and authority agrees with us in the whole of his views on a difficult question. If we rejoice to find that the opinions expressed or hinted at in *The Athenæum* in all its recent reviews of books on Russia are shared at every point by Sir Donald Wallace, frankness forces us to confess that this may be at least in part because those opinions of the paper and of its critics have been based through many years upon that writer's original work. The doubt which was expressed by others was whether things had completely changed in Russia, so that knowledge of the country founded upon its history through all periods had become useless or misleading. We are convinced that the volumes before us will persuade reasonable men that there is no ground for thinking that Russia has become more inclined towards Parliamentary or Western institutions than she has been at any previous period of her existence as a state. Sir Donald Mackenzie Wallace evidently anticipates that if the present "autocracy without an autocrat," and the existing despised bureaucracy, should be forced to call a Parliament, the Whigs will discover that they would be utterly powerless in face of the possible adoption of democratic institutions. The result of democracy in Russia would be autocracy. The peasantry may be indifferent about the mere adoption of constitutional forms, but the moment an attempt is made to give to these some reality upon a democratic elective base, the Girondins, as usual, will be the first to have their heads cut off, and the Jacquerie, as in the Slav provinces of the Hungarian kingdom two generations ago, will be turned to the advantage of a reconstituted and still more autocratic autocracy.

As regards the future, Sir Donald Wallace confirms the views which have always been entertained by many cautious observers as to the certain effect of the bad government of Russia upon her military situation. He quotes the remark of the highest Russian official authority upon the subject in November, 1903, to the effect that if Japan had attacked in the early summer Russia would have been in a sorry plight, "but now we are ready." So it has ever been from the days of the Emperor Paul. Sir Donald Wallace, however, while he does not believe in the real power of Russia for military expansion, or operations outside her territory, is firmly convinced that she will, when possible, return to "her irrepressible tendency to expand." He does not suggest fresh or more rapid action in Persia, but he does suggest the Bosphorus, unless for some years "infiltration in Mongolia" should suffice.

As regards government and the interior, Sir Donald Wallace gives a most interesting account of the growth and nature of modern Russian Liberalism. In the days of Alexander II. the autocrat showed "more perspicacity and energy than were expected of him," but under Alexander II. and Alexander III. "the existence of the Autocratic Power was never seriously endangered." Nowadays the Liberals have no fear, and there work together for some purposes four bodies more or less looked upon by Western Europe as reformers — the Liberals, or Whigs; the Social Democrats, with their hold upon trade unions in the towns; the Revolutionary Socialists, who organize the labourers; and the "various subject nationalities," who have "their little national flags ready to be unfurled at the proper moment." The partial union between these four oppositions is unreal. The Liberal nobility, who are so shocked by the course of events and by their own history ever since the Crimean war that they do not regret the military disasters to their country, are certain to be eaten up by the Revolutionary Socialists, who are leading their peasantry to demand from them their lands. For obvious reasons these Liberal members of the nobility will be the first to be so eaten. The present Emperor, with all his weakness, is determined to maintain the principle of autocracy, and he gave his firm support to Plehve throughout the year 1903, in which Sir Donald Wallace states that he learns from a trustworthy source that "4,867 persons were condemned inquisitorially to various punishments without any regular trial." Sir Donald thinks that the educated classes have come to agree upon some adoption of reformed Government; but while this view is universal in St. Petersburg, there are in Moscow, even among Liberals, many who have still a sentimental tenderness for the autocratic power, and who think that Parliamentary Government would be dangerous. Events have moved rapidly on account of the defeats, and Sir Donald Wallace gives an interesting account of the connexion between the strikes and the Social Democratic organization. It was, however, the Revolutionary Socialists who assassinated Plehve and the Grand Duke Serge, and Sir Donald Wallace states that there is every reason to expect that they will continue in the course of assassination, meeting Terror by Terror. They are also engaged, in a fashion which he describes in detail, in embarrassing the Government by agrarian disturbance brought about by the dissemination of forged imperial manifestos, "sometimes written in letters of gold," promising the peasants the land of the proprietors and stating that the local officials are frustrating the Emperor's benevolent intent. One case is quoted of a revolutionary agent, dressed as an imperial aide-de-camp, who induced the village priest to read the forged manifesto in church.

It is increasingly probable that the peasantry will make it impossible to work the estates, and that, in attempting to dislodge them from the possession of the land belonging to the proprietors, the Government will have to employ in the country a larger and larger portion of the army, and thus allow greater freedom to the strike-rioters in the towns. Sir Donald Wallace, whose knowledge of Nihilism in the early seventies was

equal to that of the two or three best-informed Europeans and Americans, and inferior to none, has continued his studies into Russian revolution, and evidently writes with an insight far more complete than that claimed by some of the new journalists who call these revolutionists "we." It will even be a shock to some of his Whig friends in St. Petersburg to find from him the extent to which their subscriptions have been applied to movements of which they will undoubtedly become the earliest victims.

Sir Donald Wallace has a picture, which seems to us perfect, of the opinion entertained by Nihilists of the Liberals of Russian literature—the heroes of the stories of Turgenief, and men who people the pages of Tolstoy's early novels:—

"To the 'beautiful souls' of the older generation, who had habitually, in conversation and literature, shed pathetic tears over the defects of Russian social and political organization without ever moving a finger to correct them—especially the landed proprietors who talked and wrote about civilization, culture, and justice while living comfortably on the revenues provided for them by their unfortunate serfs—they had the strongest aversion."

The aversion entertained for those Liberals by the Nihilists of 1870 is naturally continued by the Social Democrats, and still more by the Russian Revolutionary Socialists of the present day, and the autocracy can count with certainty upon the support in the long run of the Russian masses against any serious attempt to limit its prerogative. All this, however, implies return to a non-revolutionary state of things, and that return, given the failure of the bureaucracy and the extreme weakness of the present autocrat, is improbable. On the whole, therefore, there is reason to expect for Russia the most appalling calamities that slow but unchecked Revolution may present.

We do not altogether approve of the transliteration of Russian names adopted by Sir Donald Mackenzie Wallace in his first and continued in his present writings. Any system must, as we have often shown, lead to absurdities in contradiction of the usual forms, or else be full of inconsistency. The present reviewer cannot, however, see without impatience the constant occurrence of such a word as "muzhik."

In Peril of Change. By C. F. G. Masterman. (Fisher Unwin.)

MR. MASTERMAN possesses some of the qualities needed by the social historian. He has a singular gift for correlating widely different phenomena, and is always quick to discern the inner significance of literary and other fashions. He attempts to describe the tendencies of English civilization, to estimate the nature of its dominant ideals, and to point out recent changes which have occurred in these, the nature of the foundation upon which they rest, and the likelihood of catastrophes in the future. That he is also filled with a passionate sense of the injustice of the system which both creates and evangelizes the slums, and with a hatred for the idols of the market-place, is evident on every page, and lends pathos to much of his writing. The root of our present condition, according to Mr. Masterman, is not so much the growth of wealth as the unexampled security of England since the Crimean war. This condition, which has been accompanied by a vast increase of mechanical and scientific appliances, has led to a general belief in the gospel of comfort, to a complacent ostentation of riches on the part of those who have them, and to a wild and unscrupulous struggle to obtain them on the part of those who have them not. With the development of modern philosophy, Puritanism, which used to be the main religious refuge of the middle class, has become unthinkable; with the increase in the means of pleasure and travel, and the development of nervous energy, all forms of restraint are vanishing, and the love of excitement is the main uniting bond of rich and poor alike; while practical or conscious materialism, or at least infidelity, forms to those who need it the intellectual justification for lives conditioned on the one hand by external order, political and physical, on the other by internal self-indulgence.

The ridicule which Disraeli in 'Tancred' heaped upon the idea of progress as existing among those who thought that "the application of some mechanical contrivances had developed a society which has mistaken comfort for civilization," is in fact echoed by Mr. Masterman; and we commend that interesting book as recording the impression which the inadequacy of ideals purely Western made on an eminently Oriental mind. Disraeli is not, we gather, one of Mr. Masterman's heroes, yet Disraeli's work is of value, not merely because it draws attention to the evils of our society—any one might do that—but also because it is so clear to the writer that these evils really consist in the bagman's ideal, the commercial paradise. In earlier days this ideal was not yet divorced ostensibly from Christianity. Now, however, it is, or very much more so. Moreover, the gospel of selfishness has been preached, and preached with great success, by an acute and savage critic of "Christian civilization," Friedrich Nietzsche; and we wonder that Mr. Masterman says nothing about him. At any rate, it was Disraeli who first drew attention to the need of once more orientalizing the Western world, if it were not to be ruined by the limitations of its own success; this was exactly the work of Christianity in the early days of the Roman Empire, and it is clear that Mr. Masterman feels, like Mr. Dill, the parallel between the "spiritual apathy" which killed ancient civilization, and our present condition.

At the same time we feel bound to point out distinct limitations in the value of this book. A good deal of it is mere journalism. With the modern journalist's eye for effect and instinct for phrasing, Mr. Masterman has also a good deal of his love of sweeping statements. Was it worth while to republish the papers on Disraeli and Gladstone? Mr. Masterman had not the personal knowledge needed for a contemporary impressionist portrait, and to treat them as subjects of philosophic history he has neither the requisite calmness nor the acquaintance with documents. The account of Creighton, again, fails to reach the essence of the man, and the description of the noble sermon on 'Liberty' is not even correct.

Worse than these defects is an intolerance which leads the writer to condemn, either explicitly or implicitly, all other views as immoral. The doctrine of the "white man's burden" may be erroneous, but it is not cant, except as repeated hypocritically. Nor does Mr. Masterman ever tell us what he makes of British rule, either in India or Egypt. In his discussion—on the whole a very illuminating discussion—of the religion of London, Mr. Masterman speaks of the entire West-End as the place where is gathered "the spoil of Empire," and even regarding the suburbs says nothing about those in which the larger merchants and professional men live. The vast majority of the cultivated class is not considered at all, and yet probably the religion of the country depends more upon the views of the well-to-do doctor or solicitor who sends his son to a public school than upon those of any other class in the community. Here, indeed, Mr. Masterman displays the defect of writers of his school. In speaking of modern civilization they habitually speak as if there were but two classes, the plutocracy and the proletariat; or, even if they admit the artisan and the small shopkeeper, display little knowledge or appreciation of the extreme complexity of the social organism. The contrasts thus artificially deepened are effective, like the black-and-white masses of Aubrey Beardsley, but they fail to represent fairly the chiaroscuro of life.

So it is with Mr. Masterman's whole view of things. We are in sympathy with much that he says, especially on the need of nobler ideals, and the temporary character of the outwardly impregnable edifice of modern prosperity. His contrast between St. Francis and Chicago is effective, yet the logic of that essay, carried to extremes, would be destructive of all civilization, for it implies that no form of material industry beyond the bare necessaries of life is worthy of man.

Moreover, the author ignores the enormous influence which the protection of the weak has had upon our legislation and even our sentiments. Those who take the trouble to read Mr. Dicey's new work will find evidence that an acute and well-balanced mind regards with apprehension rather than approval the growing legislative influence of unthinking philanthropic sentiment. It is just this lack of balance, this emotionalism, which we think injures the writer's style. His rhetoric is too monotonous, and his pathos too recurrent, to be effective. In our opinion, then, the book is clever, interesting, and useful, but hardly great. At the same time we welcome its appearance. It serves to bring into relief the intellectual and moral narrowness of our present civilization; it emphasizes rightly the approaching national bankruptcy which is the nemesis of dead ideals; it shows the rare and artificially limited character of the facts which the mechanical theory of life alone regards, and points out that the supreme truths of human society are to be found neither in science nor in accumulation, but in the inevitable contingency of death and the eternal inspiration of love.

Handbook of Homeric Study. By Henry Browne, S.J., Professor of Greek at New College, Dublin. With 22 Plates. (Longmans & Co.)

IN this book Mr. Browne attempts too much. There are only 330 pages, yet into this space he compresses a survey of the Homeric field which includes literary history and criticism, archæology and excavation, dialect and grammar. It is possible, no doubt, in the space to indicate the main lines of controversy or discovery; but in some of the matters which he treats of, so much depends upon detail that they cannot adequately be dealt with without more space. The most striking instances of this are the sections on grammar, and on the relation of Homeric culture to Mycenæan. We find also a note of amateurism in the book, and a lack of proportion, especially in the author's estimate of authorities. He quotes the opinions of Oxford lecturers by allusion, without giving details or evidence, as though they should carry the same weight as the views of scholars who have placed their evidence before the world for examination. The book would have gained greatly had the author waited a few years to digest his material. We also complain that there is no bibliography —not even short lists of books for further study, which such a book ought always to have.

The best part of the work, in our opinion, is the account of the literary side of the Homeric question, which includes the history of the text, with the proof that it existed in antiquity much as we have it, the relation of Homer to the Cyclic poets, the discussion of authorship, and the question what Aristarchus did for the text. Mr. Browne rightly rejects the view that Peisistratus himself compiled it from scattered pieces; and in the main he follows Geddes in his analysis of the poems by means of classifying their contents. On the question of the personality of the author or authors, he is not quite so clear as usual; but we gather that he does not join Geddes in assuming one author for the Odyssey and the later parts of the Iliad. To the present reviewer it is clear that, however many poets had part in the work, there were three at least of commanding genius; for passages of the finest quality are found in both sections of the Iliad and in the Odyssey. We do not think Mr. Browne would find fault with this way of stating the case, only he does not exactly say so.

In the latter part of his book Mr. Browne deals with the excavations, and the connexion of Homeric and Mycenæan culture. This is a very difficult subject to summarize clearly and fairly, and we hardly think Mr. Browne's knowledge of archæology is sufficient to enable him to do so. He is always eager for compromise: even wants to make Prof. Ridgeway with his round target, and Reichel with his hour-glass shield, stand shoulder to shoulder. He wants everybody to be a little right and a little wrong. No doubt he has reason for saying that Prof. Ridgeway's book is not judicial in tone; but he does nothing like justice to the enormous mass of evidence, consisting of hosts of details, on which that scholar relies. As for special pleading, nothing was ever heard equal to Reichel's. His treatment of the passages in Homer, numerous enough, which go counter to his views, stamps him at once as uncritical. Mr. Browne even wants to make out that the phrase *παντόσ' ἐΐσην* may be applied to a shield of the hour-glass shape. There is more in the compromise, however, when he reminds us that there may be elements both of Mycenæan and Achæan in the Homeric age, and also that later bards may have modified what they found to suit their own day. The word Achæan reminds us that Mr. Browne identifies Achæan and Mycenæan, and will have naught of the Pelasgic theory.

A few details, and we have done. The confusion assumed between *ἔῆος* and *ἐοῖο*, producing *ἕῆος*, may be a mistake of scribes simply. On p. 182, l. 9, Mr. J. L. Myres is quoted as suggesting that the Doric settlers in Crete "may have come by sea"; the belief is not peculiar to Mr. Myres. The explanation of *χθαμάλη*, as applied to Ithaca (p. 180), that it lies low under Cephallenia as seen from the east, had occurred to the present writer independently, and so may perhaps be more than a fancy; the fact is striking. There are a considerable number of misprints: p. 35, read *ἀναλογίας*; 46, *ὑπέρσχοι*; 78, *'Οδυσσεύς*; 98, *ἔμεναι*; 148, Kiel; 209, demesne; 211, Achæans.

Faiths and Folk-lore. Forming a New Edition of 'The Popular Antiquities of Great Britain,' by Brand and Ellis. Largely extended, corrected, and now first alphabetically arranged by W. Carew Hazlitt. 2 vols. (Reeves & Turner.)

MR. HAZLITT has founded on older materials what he further styles in his sub-title a 'Dictionary of National Beliefs, Superstitions, and Popular Customs, with Classical and Foreign Analogues.' We may trace the genesis of his volumes. Bourne's 'Antiquitates Vulgares,' published about a hundred and eighty years ago, was a useful book in its day, but in no sense scientific. Its author evidently took a great interest in the subjects he treated, but, like almost every one else in his time, he was wholly ignorant of the chief reasons which render folk-lore of value. He could not have understood them had they been explained, and there are, even at the present hour, many survivals of the same mode of thought. We find men and women who regard the misbeliefs of bygone times as amusing, but who do not see that they have any more scientific value than the last new novel. Such people are surprised and often not a little scandalized when they find these things lingering in the present, and producing evils which are commonly thought to belong only to the dark ages. John Brand, the historian of Newcastle-on-Tyne, brought out an enlarged edition of Bourne's book in 1777, and continued collecting further materials all his life. These papers after Brand's death fell into the hands of Sir Henry Ellis, who issued in 1813, in two volumes quarto, the old book with additions. Sir Henry as editor did his work well, but, like his predecessors, laboured under the impression that many of our insular superstitions were derived from settlers here during the Roman occupation. That the four hundred years' rule of the Cæsars had some effect on British thought no one can reasonably deny; but the people who made their home here were by no means all of them natives of Italy—they seem, in fact, to have come from nearly all parts of the world-empire. Notwithstanding, as is probable, that they were most of them romanized as regards the arts of life, they would undoubtedly bring their tribal folk-lore with them.

Our conceptions are now far wider. We have learnt to realize that because a statement occurs in Pliny or some other Latin author, it by no means follows that the parallels which yet survive here have necessarily been derived from a classic source, for new folk-lore is even now evolving; for example, some of the popular superstitions regarding firearms, umbrellas, and railway trains must be of recent date. There is no doubt, we think, that nearly the whole of our folk-lore is very old, though it is constantly liable to be transferred from one thing to another. As a whole, however, we must regard it as going back ages beyond the Roman invasion. Though it has been frequently altered, and sometimes added to, as religious and domestic manners have changed, yet the foundations from which later developments have sprung are, it is certain, of as remote prehistoric antiquity as any of the material objects that have come down to us from the earliest races of mankind. There cannot be much doubt that all of us have near at hand neighbours who, if they be descended from palæolithic man, have inherited from him their beliefs in luck, charms, witchcraft, and much else which clings to them as pertinaciously as did the darkest superstitions of the Middle Ages to their ancestors of a few centuries back.

That a dictionary of folk-lore is required no one who has studied the subject will deny, and as an experiment in that direction Mr. Hazlitt's volumes may be of some service; but he tells us too much, and at the same time far too little. The time has not come for a satisfactory compendium of the sort to be produced. Though folk-lore is now recognized as a science, with its own methods, and in some measure a special system of classification, its limits have not been, and cannot as yet be, defined. It blends with theology on the one hand and history on the other, and it is by no means easy to mark out a sharp line of cleavage when it touches on the domains of anthropology and psychology. Comets have had their effect on history, pestilences have been fostered by superstition, and it seems by no means unlikely that an abnormal egg laid by an Italian hen may have influenced the subsequent career of Pope Gregory VII. Until we have mapped the outlines of the folk-lore kingdom, it is futile to endeavour to compile such a dictionary as we all desire.

Popular pastimes have, it is evident, folk-lore blended often with them. In some instances it is probable they are survivals of ancient forms of worship. Religious dances have been widely spread among Christians. We hear of them in Spain, Brittany, Burgundy, and Mexico taking place in the churches. These ought to be recorded, but popular amusements ought to be excluded

XUM

except where their connexion with folk-lore is at least probable. We regret to find Mr. Hazlitt thinks otherwise, for he gives his readers disquisitions on archery, cricket, golf, and other things of the same kind, containing very little or nothing that is new, and matter that, if worthy of print at all, would go naturally into some dictionary of sports. Many other papers are far too long; for example, under 'Devil' we encounter a most unreasonable amount of padding. Fairs ought to have been much cut down, and the paper on 'Nuptial Usages' might have been abridged with advantage. We do not regard the things told of taverns, tobacco, or the Shetland Islands as coming within the limits of a book like the present.

Notwithstanding such drawbacks, we feel bound to say that the author has collected a good deal of folk-lore which it is useful to possess in alphabetical order, but many of the entries would have been improved by revision. Under 'Thraw' there are some lines from a nameless authority where the death thraw of Scotland is spoken of. If Mr. Hazlitt had consulted Scott's 'Minstrelsy,' he would have found the whole of the fine ditty which he quotes. There it is entitled 'Young Benjie.' To draw straws, or, as it is more commonly called in the north of England, "to draw cuts," is a well-known method of deciding things which are doubtful. A man or boy who is independent of the question at issue holds in his closed hand three short pieces of straw of unequal length; each of the litigants draws one, and he who gets the longer has the victory. We have known men settle most important decisions by this simple method of appealing to luck. In one case three men drew straws to decide which of them should be snatched away from his native place by an imperious Press Gang, and abided by the result. Mr. Hazlitt has an article on the 'Mercheta Mulierum.' He thinks that once upon a time it was, in all its atrocity, an incidence of serfdom, but that as time went on it became commuted into a money payment. We regard this as a mistake, and are supported in our opinion by the high authority of Dr. Karl Schmidt in his 'Jus Primæ Noctis,' and of the late Mr. Elton in his 'Origins of English History.' What may have been the case in heathen times we cannot be sure, but we should require very strong evidence before we could accept such an overwhelming evidence of the savagery of our forefathers. The rose of Jericho is a plant entered here. It may not improbably have become the nucleus of folk-lore in the extra-European lands of the Mediterranean, where it flourishes; but we do not call to mind any evidence of its having done so. When the plant has flowered it shrivels up, and becomes like a little ball of wicker-work. It is then carried about by the wind, and often blown into the sea. When wetted it unbends and the pods open. The plant retains for a long time the property of expanding when moistened, and curling up again when dry. We are told that specimens collected ten years ago exhibit this faculty as perfectly as at first, and there is a tradition that the plant expanded on the first Christmas Day. The author, quoting Bellonius, says it is "only a monastical imposture." This surely cannot mean that the action of the plant is a fable. If it be true, as it certainly is, even though it be exhibited at Christmas time, the people who know it well can hardly be so simple as to be imposed upon by a miracle that any of them can perform at will. There is a grave error as to the "Benedictio Panis," which is described as "the blessing on the consecrated bread used in the Communion." The benediction here spoken of is that of the holy-bread—that is, common household bread given after Mass, in days preceding the reign of Edward VI., as a symbol of the brotherhood that ought to exist among Christians. This was one of the rites which the Devonshire men claimed to have restored when they rose in arms in opposition to the new order of things.

Louis XIV. et la Grande Mademoiselle (1652–1693). Par Arvède Barine. (Paris, Hachette et Cie.)

THIS volume is the continuation and completion of the theme dealt with in the author's previous work, 'La Jeunesse de la Grande Mademoiselle.' It treats of a period which she is probably not far wrong in describing as being, despite its prominence, one of the least well known in French history, since the Louis Quatorze with whom the world is familiar is not the youthful patron of Molière, nor even the middle-aged prosecutor of the poisoners, but Saint-Simon's Grand Monarque of Versailles, an old man, now even more intent upon the religious unity of France than upon her external aggrandizement. The writer has undertaken the task of showing absolutism in the making, of depicting the transformation of semi-feudal anarchy into monarchist uniformity, and of pointing out the very serious blemishes which, to the eyes of an historic connoisseur, mar the obvious merits of a superficially brilliant picture. Serene judgment and a wide outlook are set off by an idiomatic style, which renders them all the more acceptable. The method is, as it were, to personify the period in the figures of Louis and his cousin—the one representing a determined destroyer of the old world of the Fronde, the other a typical survivor of it, and on that account, as well as because of her personal idiosyncrasies, fated to be a victim. The name of the Comte de Lauzun might perhaps fitly have appeared with theirs upon the title-page as one who tried to make the best of both these worlds.

The author has relied largely upon material coming directly from the two principal personages of the book. Perhaps, on the whole, too much is made of the memoirs of the king, which, in one passage at least, are discounted. They were "spoken" in his old age to secretaries, and were supplemented by notes which he himself corrected when reduced to regular form. But defective as these may be considered as an authority for long-past events, the 'Mémoires' of Mlle. de Montpensier present, on the other hand, the most vivid and patently veracious impression of a striking personality and a strangely chequered career. They were begun during her first period of exile at St. Fargean, then abandoned for some years, and finished five years before her death. The two principal sources are supplemented by the journal of D'Ormesson, and the contemporary memoirs of Bussy Rabutin, Madame de Motteville, and others, whilst the letters of Madame de Sévigné are, of course, not neglected. Moreover, the author is able to bring to bear with the happiest effect an intimate knowledge of Molière and La Fontaine, and can introduce felicitously on occasion an illuminating criticism of M. Jules Lemaître, or embody in the text the results of the latest monograph upon a special department of the subject. The treatment is many-sided if not exhaustive. Almost the only criticism we have to offer, and that tentatively and with diffidence, is that we find the account of Louis XIV.'s erection of his absolutist system treated too exclusively as the mere result of his mind's recoil from the impressions left upon it by the Fronde. Not to go back to Louis XI. or Catherine de Médicis, surely Richelieu's name should not have been totally omitted as that of one who laid the foundations upon which Le Roi Soleil himself, under the tutorship of Mazarin, built. Although the author may be right in her contention that "la monarchie absolue n'était pas dans la tradition française," it is surely too much to affirm that it was simply a Spanish importation.

Leaving this large question undecided, let us look at some points in the book before us. The chapter on the neglected education of the young Louis, and the determined, but only partially successful attempts made by him to remedy them, enables one to judge his character in its strength and weakness. For a young king, who had been deliberately encouraged to idle away his time, suddenly "se remettre sur les bancs"—to take lessons in Latin at twenty-three—was in those days an act of the highest conceivable courage. But slowness of intelligence seems to have thwarted the best intentions, combined with a good memory and judgment, so that the royal scholar was fain to repeat "I am ignorant" up to his dying day. That the methodical attention which he gave to State business, from the day when a certain letter of Catherine de Médicis to her son Henri III. came under his notice, and his diligent devotion to Court spectacles, sometimes of several days' duration, may have had something to do with the result, is very likely. It was remarked that the young king's various activities would have been impossible without an unusual faculty of doing without sleep which he possessed. Solidity and precision were the best qualities of Louis's mind; it was totally lacking in that inquiring spirit ("la curiosité," our author terms it) which in the modern is the beginning of wisdom. Thus it was out of no intellectual sympathy that he was led to uphold Molière and sanction the performance of 'Tartufe'; it was merely that he refused to be thus early captured by the *dévots*, and objected to the political influence of a secret society like the mysterious Compagnie de Saint-Sacrement. Another of the Grand Monarque's characteristics—and this comes out fully in his relations with his unfortunate cousin, "la Grande Mademoiselle"—was that "sensiblerie à

fleur de peau" which leads to a comparison with Diderot:—

"Il trompait la reine du matin au soir, et il pleurait de la voir pleurer quand il la quittait. Il trouva des larmes de crocodile pour la mort de son beaupère. La main tournée, il n'y pensait plus, encore comme Diderot, et n'en perdait ni un pas de danse, ni un rendezvous galant."

Like the writer of this interesting book, we have allowed ourselves to be diverted from its main stream into interesting side channels. To come to closer quarters with it, the conduct of Louis in first endeavouring to force Mlle. de Montpensier into two unwelcome marriages, and then in thwarting her own matrimonial inclinations, is much more than an interesting episode in the family history of the Bourbons. It typifies generally the slight esteem in which individual wishes were held, and specifically the king's own determination to subordinate everything to considerations of State. There is little to show that Louis had that personal feeling against Condé's quondam ally which Anne of Austria entertained, but his absolutist instincts were none the less on the alert against an old *frondeuse*. His revocation of the sanction of the match with Lauzun was certainly immediately due to Madame de Montespan, but it would probably in any case have been forced upon him by the unanimous stand made against it by all sections of social opinion except that represented by the deputation of nobles which the favourite induced to approach the Crown in his own interest. La Grande Mademoiselle figures in this part of her story no longer as the amazon who stirs up Paris to fire upon the king's troops, and looks scornfully upon such suitors as an exiled English prince and a Duke of Savoy; she is now an old maid, tolerated at Court on condition of good behaviour; a "pauvre héroïne en disponibilité," who owes her importance almost solely to the fact that she is the best match in the kingdom. Not that she is wanting by any means in character; she learns to manage her estates to the admiration of her contemporaries, and she holds a *salon* which is in some sort the successor of the Hôtel de Rambouillet. But she cannot accommodate herself to the new conditions; even in literature she is unable to reconcile herself to seeing the grandiose Corneille of her youth superseded by the graceful Racine of the new *régime*. Finally she, once the darling of Paris and the ally of *le grand Condé*, makes herself the laughing-stock of her world by falling in love with an adventurer from Gascony, younger than herself, almost a dwarf in stature and of mean and slovenly appearance, whose chief quality is matchless impudence, and from whom she is able to extract not a gracious word, much less the slightest proof of affection. When some dire offence to the all-powerful Montespan lands this worthy in the dungeon of Pinerolo, to be the fellow-captive of Fouquet and the mysterious "Iron Mask," she is faithful to him throughout long years of captivity, only to be rewarded by insolent indifference from the object of her devotion. The romance, never without its comic elements, gives place to pure farce when the two finally take to beating one another. Whether the general opinion of a secret marriage is justified cannot be discussed here—there is, at least, nothing to show for it; nor can we enter into the subordinate question of the date of the supposed union. The whole story is a strange medley of pathos and farce, almost unequalled of its kind. The writer adduces some reasons for thinking that La Grande Mademoiselle was the original of La Fontaine's 'La Fille,' and that "le malotru" of the fable was Lauzun.

Apart from the immediate theme of the book there are notable descriptive passages such as that detailing the elaborate etiquette which marked the marriage of Louis to his Spanish wife, incidents which afforded material to both Molière and La Fontaine; the "Plaisirs de l'Ile Enchantée" of May, 1664, when Louis XIV. figured as an actor by the side of Molière, and Lully's music helped the latter's 'Princesse d'Élide' to grace the loves of the king and La Vallière; and the curious picture of the king, the queen, Montespan, La Vallière, and La Grande Mademoiselle spending the night upon mattresses in a cottage on the banks of the Sambre, while Lauzun's orderlies passed through to take commands from him in his quarters in the adjoining room. A dissertation upon the rise of dramatic music in France, and its influence upon the national *morale*, is also notable; and there are some acute reflections concerning the disastrous effect upon the nobility of the new Court life of Versailles, thoroughly destructive as it was of that love of open-air life which had been so important an element in its strength. The fatal effect upon the fortunes of the monarchy of the virtual boycotting of Paris by Louis XIV. is also traced to its culmination in the Revolution.

NEW NOVELS.

Will Warburton. By George Gissing. (Constable & Co.)

OBVIOUSLY 'Will Warburton' was written before 'Veranilda,' but how long before does not appear. There is no word of preface or explanation in this book, which, in the circumstances, would have been welcome, if not desirable. It is clear, however, that this is a late work, and that Gissing had advanced in the knowledge of his art and of life considerably further than when he wrote 'Demos' or 'New Grub Street.' There is some resemblance between the latter and 'Will Warburton'; but there is a vast difference in treatment and in spirit. A more genial temper characterizes this novel, which is described as "a romance of real life." It is, indeed, a realistic romance, which is not a contradiction in terms, and it is importantly different from Gissing's characteristic work. There is a positive sense of humour presiding over these chapters, and only occasionally does that humour become grim. As a rule it is amiable and friendly. Gissing seems to have been on his way to discovering a further interpretation of life when he wrote this, which makes our regret at his premature death all the sharper. He so persistently and for years painted in grey and drab that it is a relief to read a story by him with lighter effects. The sunshine here is not bright, but it is light—it is not all the winter of our discontent. And Gissing seems also to have developed a sense of irony. Take, for example, the two portraits, Amy Reardon from 'New Grub Street' and Rosamund Elvan from the last novel. There is a good deal in common between them; they are both temperamentally selfish. But one feels that Gissing has conceived his later character with more kindliness, has used her with more toleration, and dismisses her with a cynical smile of which he was not capable in his more zealous days. All this marks a gain in power, in grasp, and in sympathy. But apart from this important development there is no change observable in style. It is open to the same objections as before; it has the same virtues. It is undistinguished, but it is clear and efficient. It lacks colour, but it has balance. Its matter-of-factness makes it easy for the reader, while at times chafing him when he feels it might rise to the occasion. It never does; it plods along like a devoted pedestrian. But it is making for the proper goal all the same; and there are evolved slowly before the reader's eyes real characters, firmly endued with flesh and blood, not painted shadows. That is the first essential of good fiction, and Gissing's was always good. It is sad to think that what is in some respects his best work should also be his last.

Miss Bellard's Inspiration. By W. D. Howells. (Harper & Brothers.)

MR. HOWELLS pleasantly disappoints one with this story. Its opening chapters seem to suggest that he is bent on offering us a study in that meticulous histology of mind and manners to which he is so greatly addicted. Miss Bellard's English lover is too particular for words to characterize, and the situations are composed of over-sensitized sentiments such as make one begin to feel uncomfortable for being in existence. There is no delicacy so delicate as that of the delicate American. Indeed, it passes over the borders into positive indelicacy. Yet these misgivings prove premature; for Mr. Howells opens up his little comedy with perfect grace and skill and humour. He is laughing all the time, sometimes at his American girl, and a little at her English lover, but generally at the former. Out of elements so simple as an engagement and an incompatible married couple, Mr. Howells has evolved a charming and idyllic comedy which at once tickles and instructs. One feels that Miss Bellard is the embodiment not only of the feminine sex, but also of the American woman. She is as clear-cut and as positive on her side as the Englishman on his. Both characters have the defects and virtues of their qualities. But Mr. Howells is not here writing pure comedy without the ironic. His interjection of the unhappy married couple is the inspiration of cynicism, that excellent cynicism with which the readers of his books are familiar. There is something even tragic in the pair, who yet set off the changing humour of the unmarried lovers. Mr. Howells has written no more delightful story for years.

Grand Relations. By J. S. Fletcher. (Fisher Unwin.)

MR. FLETCHER has written no better book than 'The Paths of the Prudent,' a delight-

ful rustic comedy with a sense of character; and it is high praise to tell him that his latest story is almost as good. 'Grand Relations' is more frankly humorous, and, indeed, at times touches the farcical; but the farce is irresistible. The soul of this *jeu d'esprit* is one Rousby Parker, a lawyer's clerk. He is wholly attractive, and a wonderful *deus ex machina*. His incursions into dramatic effects do not always result successfully, but providence is on his side, and brings a happy conclusion. We know no more comfortable portrait of a Yorkshire farmer than that of George Gosling, who is as distinctively indistinctive as Gabriel Oak in 'Far from the Madding Crowd.' Mr. Parker is the sprite of the piece, bnt he is assisted by some amiable barmaids. One has the feeling of looking on at a big joke, and one is risible all the time. When Mr. Gosling explains his reluctance to abandon his sweetheart on the ground that "I been coortin' Victoria for three year, and I'm beginnin' to fancy her a bit, like," we are in genuine comedy. But there is no complementary tragedy; the play works itself out ideally. It is designed, no doubt, in the interests of good humour, and has not one ache in it; and with that recommendation in its favour, it yet manages to keep close to life—an admirable achievement.

The Friendships of Veronica. By Thomas Cobb. (Rivers.)

ANYBODY who, attracted by the title, turns to this story with the expectation of enjoying the chronicles of a coquette will be disappointed. Miss Veronica Sandays plays a sympathetic part in the downfall of a Cabinet Minister. She has another and more enduring friendship with an indifferent novelist, who becomes a successful dramatist; but the Right Hon. Alfred Firminger, who has won with astonishing rapidity a foremost place in the political world, is the chief figure in the story. He confides to the heroine an ugly incident in his past before asking her to share his future. As a youth, before he inherited his uncle's wealth, he was convicted of embezzlement and sent to prison. This revelation, which at first causes her to look upon him disdainfully, eventually deepens her admiration for the force of character that enabled him so successfully to conquer the evil tendencies of his youthful days, and her interest in him becomes more intimate when he is faced by exposure in his constituency. 'The Friendships of Veronica,' like all Mr. Cobb's books, is very readable, but, like the majority of novels that deal with political life, not very convincing. Upon Mr. Cobb's right honourable creation the limelight beats rather fiercely. Were he less of a theatrical being, did he possess even the vitality of some of the minor characters in the novel, we should desire to know what became of him after he was driven into private life. That might have made a more interesting story.

The Missing Elizabeth. By Adeline Sergeant. (Chatto & Windus.)

THOSE who have appreciated the late Miss Sergeant's numerous novels will find plenty to interest them in this sensational story. 'The Missing Elizabeth' was written with a lavish hand. Elizabeth is the daughter of a convict, who, on coming out of prison, where he has suffered the torments of the innocent for seven years, can find no trace of her. He fights a duel in a plantation with the man who was instrumental in sending him to gaol, and the result is his early disappearance from the story. His youthful stepbrother, who witnesses the deadly encounter, is kidnapped by gipsies, and begins a successful career as an artist by displaying his talents on the pavement. The search for the missing girl is taken up by this gifted young man, who eventually is helped to discover her by seeing the penitent survivor of the combat in the plantation flog himself on the scene of his crime. These are but a few of the sensational incidents that follow in quick succession in these pages. The plot, though very complicated, is worked out with no little skill, but its relation to life is extremely remote. 'The Missing Elizabeth,' though not inferior to most of Miss Sergeant's books, is far below the level of 'The Story of a Penitent Soul,' in which her powers as a writer, always more striking in narrative than in characterization, found their best expression.

Demetrio Pianelli. By Emilio de Marchi. Translated by Margaret Newett. (Dent & Co.)

WE do not know how far the picture of modern Italian life drawn by modern Italian novelists is to be trusted; but if it is anything like the reality, we can only say that the reality must be uncommonly dismal. Of course, in all civilized countries the existence of the subordinate-official class must be somewhat flat, unenlivened by the more refined pleasures, physical or intellectual. Still, as Dickens and a score of others have shown, it has both its romantic and its humorous aspects, if one knows where to look for them. But the Italian novel of middle-class life is surpassed only by the Russian in its faculty for leaving the reader with an impression of unrelieved dreariness. 'Demetrio Pianelli' is no exception to the rule. We can imagine that in the original, where the prolixity and verbiage in which the modern Italian novelist delights would be accepted as part of the "local colour," it might pass for a fairly powerful story; at any rate, it is not an unfavourable specimen of its class. It is, on the whole, and in spite of a constant recognition of adulterous possibilities, free from the *cochonnerie* which disfigures—or, as some would doubtless say, embellishes—a good deal of contemporary Italian fiction; just as, though it starts with a suicide and ends with a murder, it avoids that gloating over physical brutality which is a mark of the "realistic" school. Nor again does it, after the fashion of that school, affect to treat religion as a negligible influence in human life. Yet, as we have said, it leaves somehow an impression of hopeless dreariness. There is not a person in the whole book whom we feel that we should care to meet again. Demetrio himself, with all his self-sacrifice, even chivalry of a kind, does his good deeds in a joyless, hopeless kind of way. Everybody in the story, except the quite bad people, can weep freely, and no one seems to have a laugh in stock. The translation is wooden. Italian idioms and phrases are rendered literally, without any attempt to replace them by appropriate English equivalents.

Napoleon's Love Story. By Waclaw Gasiorowski. Translated by the Count de Soissons. (Duckworth & Co.)

M. DE SOISSONS, the translator of this romance of Napoleon at Warsaw, tells us that the author is a Napoleonic enthusiast. So much may be gathered from the clear and vivid presentment of the fate of the virtuous and patriotic Polish lady whose sorrows and betrayal at the hands of her ideal seem to evoke no contempt in the narrator. To us it seems one of the meanest acts of one of the world's great men. Poor Mary Walewska died for her enthusiasm; and in so doing only accentuated in her person the suffering entailed by the tyrant on the mass of her deluded countrymen. The date is, of course, that of Bonaparte's presence in Warsaw in 1807, when the revolutionary cloak had been abandoned, and he was beginning to assimilate the pose of universal Cæsar. The author, a well-known member of the school of Sienkiewicz, has given us a graphic study of Polish society a century ago. And the story, though suffering, to an English taste, from rather too copious dialogue, has many dramatic and some tragic passages, while the characters, especially that of the vain old courtier Walewski, are clearly cut. The translation is well done, but for a certain spasmodic method of conversation and a few slips of idiom.

LOCAL HISTORY.

The Town of Pickering. By Gordon Home. (Dent & Co.)—The little town of Pickering has long been waiting for an historian. Its situation on the rising ground of the northern side of the fair vale of Pickering is attractive, whilst the grouping of its weather-beaten red-roofed limestone houses round the spire-crowned great grey church, with the battered ruins of its ancient castle in the background, gives it an exceptionally picturesque appearance.

The history of this town presents almost a virgin field to the competent and painstaking writer. The church—in fabric, monuments, and general details—has a most diversified story to tell. The old and once highly important castle, on a height to the north of the town, played an important part in the history of the north of England for several centuries; our earlier kings frequently tarried at Pickering, and it was the residence or occasional home of a variety of persons of some genuine distinction—there is much variety yet left in the domestic and street architecture of the place—whilst it formed the centre of about the most interesting and romantic royal forest district of all England. There is something peculiarly fascinating about the story of Pickering Lythe from the earliest days of historic record down to the close of the seventeenth century. In the glades of this forest the wild boar abounded, and its flesh was so much appreciated by King John that he sent his huntsmen from the south of England to bring back the salted meat, carrying, too, the boars' heads in casks of wine ready for Christmas festivities.

Several of our kings loved to tarry at Pickering to take the graceful little roedeer that found shelter near the town, capturing them, after an unsportsmanlike fashion, in nets. The Lythe, or forest, ran for many miles over the moorlands where the red deer abounded, whilst Blandsby Park formed the chief shelter for the more delicate fallow deer. Mr. Turton has filled four volumes of the North Riding Record Society with transcripts and abstracts of some of the records of this stretch of forest with Pickering as its centre, and there is at least as much more to be gleaned from records not yet brought to light. Mr. Turton's volumes had a very limited circulation and are almost unknown, and yet this would-be historian of Pickering dismisses the whole subject of the forest in some twenty pages.

In this, and almost every other particular, the author of this book deeply disappoints expectations. The letterpress is, in the main, culled from a variety of ordinary printed sources, and nowhere is there any trace of record searching or genuine topographical inquiry. Mr. Home had a splendid subject, but he does not appear to have had the ability, certainly not the patience, to bring matters to a successful issue. He has already earned some well-merited repute as an illustrator in black-and-white, and the various line pictures of this book are its most attractive feature. It is a pity that Mr. Home was not content to do the illustrations and find some other pen to write the real history of the town and forest. As it is, instead of finding himself overwhelmed with original and interesting material, as would have been the case with a genuine topographical writer, he has apparently had difficulty in filling up some three hundred small pages of exceptionally large type, and had to go far and wide among the villages for many miles round to obtain jottings to complete the book. One of the places thus spoilt, which had virtually no connexion with Pickering, is Lastingham, so redolent of memories of St. Cedd and early Christianity. If he was to write of this, Mr. Home might as well have consulted Mr. Wall's excellent little book, and thus escaped inaccuracies.

We had noted various errors, particularly in ecclesiology, but the chief sins are those of omission, and the book is mainly to be regretted because it will, with its attractive appearance, stand in the way of the subsequent execution of any thorough history of the town. One example may, however, be given as to Mr. Home's confusion of ideas when he ventures into the realm of church-lore. In his account of Kirby Moorside, a small town some seven or eight miles to the west of Pickering, with which place it is quite unconnected, Mr. Home mentions a parvise over the church porch, and conjectures that "the chamber would have been used by the monk who served from Newburgh Priory when he had occasion to stay the night." Newburgh was a priory of Austin canons, and never had a monk about the place. But apart from that, does Mr. Home really imagine that the spiritual provision made for the town of Kirby Moorside in mediæval days was a canon of Newburgh, tramping backwards and forwards ten or twelve miles from his priory? Kirby Moorside had its duly instituted vicar, presented by the Prior of Newburgh. Had the vicar of the fifteenth century found a canon of Newburgh sleeping in his parvise, he would have been just as amazed as would a twentieth-century vicar if he found a son or a servant of Lord Faversham (the present patron) taking his night's rest in the same place.

Memorials of Old Herefordshire. Edited by the Rev. Compton Reade. (Bemrose & Sons.)—This volume is the fifth of the handsome, well-illustrated books issued by Messrs. Bemrose as "Memorials" of different counties. Like its predecessors, it is a good book of its kind. There is not, however, any proof of original research on the part of the contributors, and most of the themes selected are well worn. The article on Herefordshire monasteries might have yielded much fresh information had unedited chartularies been consulted. The merits and triumphs of virtuous living, if too frequently extolled in the cases of individuals of the past or the present, are apt to pall upon the reader. It is much to be wished that the editor had had the courage to eschew all reference to the "Man of Ross" in these pages. The quiet and unostentatious good that John Kyrle did to his town and neighbourhood is undoubted; but it was probably no greater than was being done by several score of local benefactors about the same period. The accidental circumstance of Pope having chosen to eulogize him in the third of his 'Moral Epistles,' on second-hand information, has perpetuated his memory. The essay on Kyrle in this volume might have well been omitted, for it contains no new points. We admire, however, the courage of this writer on Herefordshire worthies in acknowledging that Kyrle did not commend himself to all his neighbours. Hearne's diary is cited, wherein he writes, under April, 1734, that Mr. Gibson, rector of Abbey Dore, had called on him and said that

"he knew Mr. Kirle very well.....that he did a great deal of good, but that 'twas all out of vanity and ostentation, being the vainest man living, and that he always hated his relations and would never look upon nor do anything for them, tho' many were very poor."

Somersetshire Parishes: a Handbook of Historical Reference to all Places in the County. By Arthur L. Humphreys. Part. I. (187, Piccadilly.)—*Suffolk Records and MSS.* By W. A. Copinger. Vol. III. (Sotheran & Co.)—'Somersetshire Parishes' is the first part of a book which will, when completed, prove useful, up to a certain point, to all interested in any part of the great shire of Somerset. It is to be finished in eight parts, and this part extends from Abbas Combe to Binegar. The references are fairly catholic, being drawn from a great variety of printed sources, standard and otherwise, as well as from some of the chief calendars and indexes at the Public Record Office, and the Harleian MSS. of the British Museum. The scale on which the work is done will be appreciated when it is mentioned that forty-four quarto pages are devoted in this part to the city of Bath. Nevertheless the work is by no means so thorough as it might be. There are some extraordinary omissions in the authorities from which the references are taken. The *Proceedings* of the Somersetshire Archæological and Natural History Society—one of the best and oldest associations of that character—are ignored; and yet use is made of the much less valuable *Notes and Queries for Somerset and Dorset.* Why, too, is Green's recently issued 'Bibliotheca' of the county overlooked? There is also a note of capriciousness about the use of general literature outside the county. For instance, Eton and Harrow school lists are cited, but not the much more important lists of Oxford and Cambridge graduates. Again, some of those authorities abundantly cited are not brought up to date. The first fifty volumes of the *Archæologia* are used. But why are the last eight ignored? Probably because the first fifty have one common index. As, however, each of these last eight volumes is well indexed, it would only be the work of an hour or two to take out the Somerset references. As it is, the completeness of the collection, through this omission, is damaged. For instance, there are important statements relative to the early history of the manor and vill of Axbridge in vol. li. of the *Archæologia*, issued as long ago as 1888, but Mr. Humphreys has made no use of them. Why, too, does he ignore the whole of the many series of *Notes and Queries?* If any one who has this first part of Mr. Humphreys's book by him will merely look up the numerous and valuable references to Bath in *Notes and Queries*, he will at once realize how much the pages on that city have lost.

From another point of view there are also imperfections in this work. Thus Allerford, an important hamlet half-way between Porlock and Selworthy, appears in the alphabetical list of places in capital letters. But there is no entry after the name, and no cross-reference. If Mr. Humphreys could find nothing about Allerford—and there was plenty if he had known where to look for it—why print the name? We hope it is not too late for Mr. Humphreys to make many and material improvements in the subsequent parts.

Possibly the unhappy incompleteness of Mr. Humphreys's work on Somersetshire records would not be so manifest if it were not that it suffers by comparison with the similar undertaking by Mr. Copinger for the county of Suffolk. The first two volumes of the latter work have been already noticed in these columns, and the third has now been published. The four hundred pages of this issue include the entries from G to K. In Mr. Copinger's work it is difficult to discover flaws, though even in this case it is possible to detect certain omissions. The references to the *Archæologia* are brought down to 1902, whilst those to *Notes and Queries* extend from 1849 to 1903.

Gubbio, Past and Present. By Laura McCracken. (Nutt.)—This volume, consisting of 300 pages, amply fulfils the intentions of the author to make a little guide-book to Gubbio, as it launches deep into the history and antiquity of a city older than Rome, and *caput Italiæ* when the Eternal City was non-existent. The dedicatory epistle to Monsignore Dolci, bishop of this Umbrian city, justifies the production of such a work in English. Is this the same ecclesiastic who twenty years ago laboured in vain to re-establish the manufacture of majolica where Maestro Giorgio 400 years before practised his unrivalled mastery of the iridescent lustrous ware which made Gubbio famous and has become a lost art since his time? One solitary example of his handicraft remains in the city where the renowned potter passed his life, and it is still exhibited among the relics in Gubbio as a rarity, although our own museums, and especially the Wallace Collection, possess numerous specimens. Those interested in the internecine strife of Guelf and Ghibelline will find Miss McCracken's book full of the details of Gubbio's share in it. What must strike the reader most is that these contests of rival parties never interfered long with the prosperity of the mediæval Italian cities. Gubbio reached its greatest power and prosperity during the early years of the turbulent fourteenth century, when its two splendid palaces, dei Consoli and del Pretorio, were built by Gattapone, as were its aqueduct and reservoir. Its population then reached 50,000, mainly owing to its extensive wool trade. Oderisi, *c.* 1270 ("l'onor d'Agobbio," as Dante wrote in his 'Purgatorio'), was succeeded by Nelli, *c.* 1403, and many others skilled in the fine arts and painting. The citizens were always pre-eminently of a warlike nature, and at Lepanto the victorious commander, wondering at the prevalence of their number among his soldiers and mariners, asked if this Gubbio was indeed a city of like size to Milan or Naples.

XUM

Signor Alessandro Piceller of Perugia says in his recent brochure on Gubbio that ancient Rome applied to it for instruction in its methods of coining the earliest money (*æs*) known in Italy, and illustrates the fact by specimens of coins engraved with suns, crescent moons, and stars, emblems of the ancient astral religion of the makers. In Miss McCracken's volume we find only a casual mention at p. 10 of this original money. Nor does she refer to the dispatch of Roman soothsayers to acquire the folk-songs or hymns of the Attidiati brotherhood, whose title to fame is recorded everlastingly on the bronze Eugubine tables. She dwells at great length on the Festa dei Ceri, annually observed on the 15th of May in honour of St. Ubaldo, the patron saint and bishop, who died in A.D. 1160, adored by his fellow-countrymen.

Situated at the foot of Monte Ingino, Gubbio, as Miss McCracken states, now "lies dormant," yet long before the Christian era its early inhabitants boldly defied their Etruscan foes from the shelter of their mountain rocks, not too difficult for us moderns to climb up the zigzag, giddy paths to-day. Traces, and a temple, of a distinct race prior to the Etruscan have lately been found close by; but no Etruscan coins, relics, or images have been discovered in or near Gubbio, their absence showing that neither commerce nor religious practices assimilated the ancient Umbrians and Etruscans. Miss McCracken scarcely dwells enough on this essential fact in her historical investigation respecting Gubbio.

Dante in exile looms large in Gubbio, and was hospitably received there. The author speaks of the friendly rivalry among the old nobility concerning the right to entertain strangers, and of the curious custom to decide the appeal by haphazard according to which ring, fixed on a pillar, the stranger selected to fasten his horse to, each ring appertaining to a different family of note. Fashions alter; our own experience of Gubbio was in the cholera year 1884, when a band of self-appointed guardians kept watch at the gates in order to prevent infection entering the walls of the city through Fossato. Fumigation and a lazzaretto were insisted on, but the syndic, a *deus ex machina*, relieved us from our unpleasant dilemma incontinently, and our stay in Gubbio, begun in tribulation, ended in general satisfaction.

The antiquary Signor Piceller tells us that he is the possessor of the identical shield or *targa* which once distinguished the house where Bossone Raffaelli received Dante as a guest. The *targa* bears the initials B.R., and the motto on a stone ribbon, "Fa bene lassa dire," is supported by two cherubs, and an anchor with triple flukes hangs suspended in the centre. It is curious to note that one native of Gubbio, Count Gabrielli, was the chief instigator of Dante's exile from Florence, whilst another, Bossone Raffaelli, an ardent Ghibelline, offered him welcome and a safe asylum in his own dwelling there.

The Palazzo dei Consoli, built in 1332-46, has the Guelfic form of square battlements; and the Palazzo del Pretorio, in 1349, that of the Ghibellines, swallow-tailed, thus displaying the rapid variations of party supremacy in politics and war.

Of the Eugubine tables we forbear to enter into discussion; discovered in the Umbro-Roman theatre in 1444, they have been a constant linguistic puzzle ever since. Miss McCracken stands by the Frenchman Bréal, who wrote in 1875, but opinions differ exceedingly. So we also pass by the exciting and full particulars of the Festa dei Ceri and its quasi-carnival throng, which Miss McCracken saw in all its glory.

Alas for what Gubbio has failed to value! La Corte, the palace of the noble Dukes of Urbino—noblest of them all Federico, who ornamented its walls with the insignia of the Order of the Garter, granted to him by our Henry VII.—is now a heap of ruins, and its precious contents are dispersed to the four winds, after serving the degenerate townsmen in its decay as a silk manufactory.

SHORT STORIES.

A Mainsail Haul. By John Masefield. (Elkin Mathews.)—This slim, green-bound volume contains a dozen short tales, most of which have appeared in *The Manchester Guardian*. All of them are fantastic, and the author explains that the best of them were told him by an old sailor named Wallace Blair, who taught seamanship aboard the Conway. There are some good yarns among them, told with a certain literary grace, and with a fine sense of detachment from the realities of modern shore-going life. Much is made of sundry venerable superstitions, belief in which has now become extremely rare among sea-going folk. One or two of the stories are more modern in tone, and consist of brief, impressionistic sketches of knock-about life in Western America. The atmosphere of the whole book is exotic and somewhat precious, but it has artistry, and in parts is entertaining.

At Close Range. By F. Hopkinson Smith. (Heinemann.)—By his title Mr. Hopkinson Smith wishes to indicate that he inspects life at close quarters. Indeed, he tells us so in his preface. But a perusal of these tales does not reveal any deeper scrutiny of human nature than is common to most writers of fiction. They are interesting sketches of American life, selected with the aim of disclosing a heart of goodness in all things. They deal with "drummers," with chorus girls, with railways. They are not unduly sentimental, and there is not too much story in any of them. But they somehow carry the reader along. Mr. Hopkinson Smith has the right knack, although exception must be taken to his literary style. We gather from the first sketch that the author is a lecturer. At least the hero of that narrative relates his adventures on a snowy night *en route* to lecture before the Cleveland Academy for Young Ladies. It has the air of truth, of being a transcript from fact. And one wonders if the lecturer makes use in his lectures of the literary style exhibited here:—

"Supper was announced by a tight-laced blonde in white muslin, all hips and shoulders, throwing open the dining-room and mounting guard at the entrance, her face illumined by that knock-a-chip-off-my-shoulder expression common to her class."

LIFE AND SPORT IN INDIA.

In 1903 Mr. Bradley-Birt, of the Indian Civil Service, wrote an excellent book in which the Division or Commissionership of Chota Nagpore and its tribes, with their peculiar and primitive customs, are described. It was favourably reviewed in this journal (No. 3952, July 25th, 1903), and was well received generally; indeed, as the work of a comparatively young man it was remarkable for accurate observation and picturesque description. This has been followed in about eighteen months by *The Story of an Indian Upland* (Smith, Elder & Co.), a similar account, likely to please the general reader, of the district known as the Santál Parganas and its inhabitants. It was written, we are told, "for the most part in camp among the Santals on the borders of the Santal Parganas," and it may at once be said to possess much of the charm which distinguished the author's former book. Indeed, in places it repeats too closely what he had previously written. To some extent this is, perhaps, unavoidable, because of the overlapping of races in the districts described; it would, however, in such a case have been better, we think, to extract or quote exactly what had been written, saying whence it was taken, than slightly to rearrange and repeat what has already been published. Thus pp. 118 to 123 of 'Chota Nagpore,' in which the Santál legend of the origin of Creation is told, correspond closely with pp. 134 *sq.* of the later book; and in other parts the similarity of description is so great as to destroy freshness to readers of both books. Apart from this the present book deserves praise and throws light on a district of India obscure and little known, though encircled by railways.

In it are included the Rajmahal hills, which reach a height of about 2,000 ft., for the most part covered with jungle, which by its density protects its inhabitants the Paharias, and a considerable variety of big and small game. Also there is the Dáman i-koh, or skirt of the hills, a sort of Government estate marked off by a ring of pillars 300 miles in extent, a fertile land long deserted till the Santáls came and cultivated, "transforming it from a mass of tangled jungle into a smiling stretch of fertile fields and prosperous homesteads." Lastly, there is a flat strip of good land, some 170 miles long, following the loop line of the East Indian Railway, occupied and cultivated chiefly by Hindus, who have pressed in the wake of the Santáls up to the boundary pillars, and even within them. The author considers Hinduism to be the absorbing force of the future so far as the aborigines of Bengal are concerned, and he is probably right, though amongst Paharias and Santáls Christian missionaries have had some success. For the Hindu trader had no difficulty in outwitting and plundering the Santál, who, when in need, applied to the money-lender, and by him was ruined—reduced to the condition of a slave on land which he had recovered from the jungle and cultivated. Our law unfortunately supported the greater villains:—

"The bonds executed by the ignorant ryots were held good by the courts, and civil suits were decreed in the Mahajan's [money-lender's] favour. 'In consideration of having received twenty-five rupees,' ran the bond, 'I undertake to work out at any time I may be called upon to do so this debt with interest at 50 per cent.' It bore the signature of the ryot, the mere scratch of an arrow-head, but duly attested by witnesses. It was more than probable that the unhappy ryot knew nothing of the contents of the bond he was signing, but once his mark was affixed the courts held him bound by its terms.....Look where he might, the Santal could find no escape from the oppressor."

Relief, partial only, was provided when the earthwork of the East Indian Railway was in progress, for the Santál is a great digger, and his women and children took part by carrying the excavated earth, and thus added to his wages. But this employment interfered with such bonds as the preceding, and the Mahájan at once applied the screw, from which there was no escape; consequently, after long endurance what is known as the Santál rebellion of 1855-6 broke out. The rioters merely desired vengeance on the Hindus, but naturally came into conflict with the Government of India, which had remained blind to what was going on under its eyes. Through this evil, however, good came; laws and rules were relaxed, and, the non-regulation system having been introduced with marked success, fairly prosperous times opened for the Santál. He now emigrates to the tea plantations of Assam, and has great scope for labour in the coalfields of Girideh, Jherria, and Raniganj. Yet with all this he is unchanged and no whit higher in the scale of civilization. Old customs are preserved, and the ancient way of life is followed. What these are the reader of this excellent book will learn. It is singularly free from misprints, whilst the type and illustrations are all that need be wished. There is an index.

Capt. A. I. R. Glasfurd, under the title of *Rifle and Romance in the Indian Jungle* (Lane), has written as sound and readable a book of its class as we have seen for many a day. The country described is, for the most part, that occupied by the hills and forests of Central India and the neighbourhood of certain cantonments of the old Hyderabad contingent. The game is being sadly diminished, less, perhaps, by its worst enemy, the advance of cultivation, than by a demand for horns and hides, accompanied by a supply of weapons and ammunition to native shikaris. Moreover, Capt. Glasfurd's book does not deal with large parties organized at considerable cost for big-game shooting, but is the record of a solitary shikari, who works on a smaller scale with slender attendance. "Its aim," we are told,

"is rather to present an old though still engrossing subject in what is perhaps a novel manner; to carry the reader into more direct contact with the surroundings of the Indian sportsman and naturalist, and, while avoiding as much as possible the recital of personal experience, with its stereotyped accompaniments, to lead him into the jungle, with all its fascinating variety of scene and season, hill and plain, when in spirit he may make acquaintance or renew an intimacy with its shy denizens and their habits."

In this endeavour, assisted by illustrations, photographic and other, by the author, some of which have great merit, he fully succeeds, having not only the faculty of observation, but also the power of recording graphically. The stories vary; some are faithful descriptions of what happened, others are idealized, whilst a few are imaginary, all well told. They were written during a residence in India of some fourteen years, and have in part appeared in print in that country.

Many of the shots obtained were got by sitting up at night in a tree, or in a hole dug in the ground and protected; the former over a kill, or the treacherous hospitality of a bait, the latter usually in the neighbourhood of a pool frequented by the animals as a drinking-place. Neither is a form of sport to which we are partial, but they are occasionally the only practicable methods of ridding a village of some serious pest—tigers or panthers which take toll of the flocks and herds, or pigs and deer which seriously damage the scanty crops. These methods have a certain charm in what one sees and learns in the stillness of night; but such knowledge is often dearly bought. Mosquitoes and malaria have to be endured; frequent disappointment results; thus at the likely moment one hears a soft step nearing the kill, when, instead of a fine tiger, a miserable jackal appears, or, worse than all, perhaps, wearied with watching, one falls asleep and wakens to find that the game has come and gone.

But the author does not confine himself to this method of killing game; he takes his readers after antelope, and has many sensible remarks to make on their pursuit; and after Chital (*Cervus axis*), a beautiful deer-spotted like our fallow deer, but with round, not palmated antlers.

The chapter called 'Round the Camp Fire' is probably the most valuable in the book; for in it comparisons of the present with the past—the good old days—and conjectures as to the disappearance of game are made, and they are well worthy of consideration by those responsible for protective legislation. The native shikaris, financed by a middleman who sells skins and horns to collectors, for the most part globetrotters, are the worst offenders, for they kill irrespective of size, sex, or season. The profits of the trade are remarkable, since we find:—

"Native shikari's price for above head Rs. 6
Ishnaag's [the middleman's] price ... „ 100
Co-operative Society's price... ... ... „ 250."

Next to these shikaris the wild dogs are perhaps the most destructive. They are said to have increased in numbers greatly of recent years, and to have become much bolder. The reason is not satisfactorily explained, nor is a remedy proposed beyond raising the Government reward for their destruction. If a fashion were to set in for the use of their red skins the nuisance would soon be abated. There are some remarks worth attention on the guile of natives, who for one reason or another find their profit in defeating the sportsman's plans. There is more of that than is imagined, and the worst offender may be apparently the most zealous for success. He may, for example, be a favourite of the chief officer of the district, a keen sportsman apt to resent blank days, and be deputed to accompany another party to show sport. If he thinks it of more importance that his master should get the sport, it is remarkable how little will be seen under his conduct by that other party. An amusing series of letters illustrative of the art will be found in the appendix. There are also some remarks on changes in weapons used for big game, and the author's conclusions seem reasonable:—

"For ponderous game the medium-bore cordite rifle comes in first favourite. For dangerous soft-skinned game, at close ranges, the ball and shot gun of the Paradox type, not smaller than 12-bore, if used with a solid bullet of pure soft lead. For long sporting-range shooting at harmless game, on hill or plain, the ·303, as giving rather better killing power than the smaller bores."

The book generally, though occasionally a little slack in its phrasing, may be commended to young sportsmen as a guide, and to old as recalling pleasant reminiscences.

OUR LIBRARY TABLE.

MR. ALEXANDER ULAR, who is well known for his writings upon Russia in French, publishes through Mr. Heinemann his *Russia from Within*, a somewhat wild book. Like many of those who are writing on Russia in the present day, our author seems to have guessed rather than worked at his Russian history. He regards, for example, the Russian nobility as of Mongol ancestry, regardless of the fact that of all the various sources from which the nobility of Russia are sprung, Mongol origin is about the least important. In all those parts of the Russian empire which were formerly subject to Polish, Teutonic, Swedish, Turkish, or Circassian princes (including in "Circassian," Georgians, Mingrelians, &c.) there is a nobility. In Great Russia proper it can hardly be said to exist except for immigrants or for descendants of the very German nobility of Catherine. The non-Turkish Tartars of Russia have given to the Court a few great names; but it is only necessary to read the lists of those entitled to take part in the nobility elections of the various Governments of Russia to see how small an element the Mongol is. So, too, of Mr. Ular's general remark to the effect that position is appraised in Russia "only by length of pedigree." If the words had been used of Germany or Austria, there might have been some truth in them; but it is only necessary to look at the social position acquired by the favourites of the various emperors, as contrasted with their immediate origin, to see how untrue is the ascription of this aristocratic principle to Russian society. Neither do we agree with our author in thinking that the present ruling family of Russia forms "a dynasty of fools." Alexander I. was no fool. Neither was his very different son, Nicholas I. We dissent from almost every word in the biographies of these two sovereigns which Mr. Ular gives. When we come to Alexander II. we differ from our author less than will the public, who hold illusions on the subject of that monarch; but we hardly think it justifiable to accuse Alexander III. of "erotomania." The wildness which we have ascribed to our author may be illustrated by his confident statement that the absence of thirty-six mountain-guns was the cause of "irreparable defeat on the Yalu." Another example is the account given of the conduct of the Grand Duke Cyril while in the water after the sinking of the Petropavlovsk:—

"He bellowed without intermission: 'It is I, the Grand Duke! it is I, the Grand Duke!' Numbers of disabled men were clinging to the boats. 'Knock them over the head,' he ordered; 'knock them over the head. I am the Grand Duke. Beat them off, I say.' And this was done."

Through a considerable part of the book we find strange confusion in the author's mind as to the exact meaning of Ruthenia; and his statement that the Kazaki of Little Russia are "not to be confounded with the 'Cossacks,' tribes of Mongolian extraction who furnish a savage cavalry," is an example of an extraordinary delusion in the author's mind. By any reader of Russian history it is thoroughly understood that a Cossack is a Russian subject who holds of the Crown by military tenure. Those of the Don Steppe are of Russian race, with a slight mixture of Turkish. Those of the Caucasian line are of mixed race—in no case Mongol. Those of the Ural line are in part Mongol, as are the Siberian Cossacks, though the latter are mainly Russian. But in no case have Cossacks anything to do with "tribe"; except, indeed, in the case of the small number of the Kalmuk Cossacks who are settled in the Government of Astrakan, thousands of miles from their original home. By far the most numerous body of Cossacks (and they are infinitely more in number than all the others put together) are the "Cossacks of the Don." There is nothing Mongol about them, as a glance at their types will show any traveller. Their music is the best of that of any of the Russian peoples, and is essentially and exclusively Slav, though, as we have said, they present a slight admixture of Turkish blood.

MR. CATHCART WASON, M.P., has published, through Mr. Francis Griffiths, a little book, *East Africa and Uganda*, with a preface by Sir Harry Johnston. The author is in agreement on some points with Sir Charles Eliot, whose resignation he regrets, and was opposed to the Zionist settlement, which is now given up. The small volume is not artistically put together, but contains a great deal of information upon Uganda and some excellent new photographs, so that it should certainly be read by all who have any thought of visiting or of settling in Uganda. As Mr. Cathcart Wason does not approve of the recent Foreign Office administration of the country, his account of the natural advantages of the plateau portion may be looked upon as independent. All the official reports that we have as yet received have been from Foreign Office sources. The considerable experience of Mr. Cathcart Wason in New Zealand adds to his authority in writing on the prospects offered by the healthy country on the tableland to British settlers. Sir Harry Johnston's preface is, of course, excellent.

IN *The Problem of the Immigrant* (Chapman & Hall) Mr. Whelpley has provided a useful work of reference in the collection of laws relating to the immigration of aliens, and (where existing) to the departure of the native population, at present in force in Europe and America. Unfortunately this valuable information is prefixed by some rather ragged rhetoric concerning the alien in England. At the beginning a vision is offered of a river of low-grade life pouring from "the little-known regions of Northern, Eastern, and Southern Europe" into the civilized regions of the West; and the general suggestion, so far at least as England is concerned, is of an immediate

overwhelming of the native-born by hordes of wild and unpleasant barbarians. "Human dregs," danger of disease and "serious plagues," "the insanitary alien," the "competitive alien," are the epithets freely scattered through the volume. "The effect of this upon British population," says Mr. Whelpley, warmly,

"is almost indescribable. Charitable institutions, prisons, and hospitals are crowded with aliens, and some of the trades are so burdened with this low grade of labour that the British workman is driven out."

The author repeats the astonishing statement that of over 200,000 aliens who arrive annually in the United Kingdom "considerably over half are *en route* to other countries," and hence that the number who remain permanently in any one year "probably approximates 75,000." The fact is, as has been repeatedly demonstrated, that less than one-tenth of the latter number would be nearer the truth. It is indeed doubtful if in England the alien population is increasing at all. Outside the limited area of East London the percentage of foreign-born is incredibly small; the whole country shows a smaller percentage of aliens than any of the nations of Western Europe. There is no evidence of any trade from which the British workman has been driven out by the foreigner; nor is it in any degree possible to co-ordinate emigration with immigration, and show (as Mr. Whelpley shows) the indigent Englishman driven from his home into foreign lands by the pressure of the Polish Jew. He states that in the past fifty years nine million natives of the United Kingdom have emigrated to foreign lands, mostly outside British colonies. If this reduction of an overcrowded population is regarded as necessary or desirable,

"little consolation can be derived from the facts in the case, for it can almost be said that as soon as a native-born left the country an alien landed to fill his place."

Such frantic statements as these are a serious disfigurement in a book professing claims to accuracy.

Compatriots' Club Lectures. First Series. (Macmillan & Co.)—No clear indication is given in this volume of the meaning of "compatriotism," its exact distinction from "patriotism," or the function of the "Compatriots' Club." The collection of essays is issued as a kind of official manifesto of the group who form the intellectual centre of the new Tariff Reform movement. Here are papers by the two English economic historians who have identified themselves with Mr. Chamberlain's propagandism: Prof. Ashley appealing against the famous manifesto of the Professors against Protection, Dr. Cunningham discussing in somewhat desultory fashion the relation of Tariff Reform and political morality. Mr. H. W. Wilson, Sir Vincent Caillard, Sir John Cockburn, and Mr. J. W. Hills deal with various branches of Imperial defence and colonial preference. Mr. H. A. Gwynne contributes a paper upon rather different lines, but perhaps, on the whole, the most interesting and suggestive in the volume, upon 'The Proper Distribution of the Population of the Empire,' emphasizing "the piteous appeal of the colonies for men, women, and children," on the one hand, on the other an overcrowded Britain, with emigration, "I am almost inclined to say," as "the panacea for all evils." Since Oglethorpe's establishment of the labour colony of Georgia in the early eighteenth century, emigration has been preached—both in England and Ireland—as the remedy for social diseases; and all experience has shown that no such facile pill is at all possible. Mr. Gwynne urges the central Government deliberately to take up on a large scale the work of deportation of the poor from the crowded cities of England. He deprecates especially a "cheery optimism" with regard to South Africa, holding that, without "an influx of settlers on the land, within fifty years there will be a semi-independent United States of South Africa." Mr. Garvin, who has contributed, perhaps, more than any other living man to the intellectual equipment of the Tariff Reform movement, leads off with the republication of his essay upon 'The Principles of Constructive Economics as applied to the Maintenance of Empire,' which first appeared in *The National Review*. It remains perhaps the ablest statement of the position yet published. With the rightness or wrongness of the general political outlook and changes advocated we have here no concern. It is sufficient to say that in this volume the case is presented by its ablest adherents, on a level far removed from the polemic of the market-place. No better text-book could be accepted both by friends and opponents as a starting-place for discussion.

Model Factories and Villages. By Budgett Meakin. (Fisher Unwin.) — Mr. Meakin's object in this interesting presentation of the efforts towards "ideal conditions of labour and housing" is frankly propagandist. He wishes to show that those few firms who have deliberately accepted responsibility for the welfare of those they employ have "made it pay," the experiments here sketched being "the actual experience of money-making men." The firms selected are scattered through England and America, with a few continental examples. The method of amelioration varies from the elementary provision of air and light, baths, places for decent meals and recreation, to the beautifying of the interior of factories with flowers and pictures, the provision of gardens, holiday excursions, and model villages. A generic difference is discernible between our methods and those of the United States. Briefly, it may be asserted that while in England the improved conditions of life are mainly developed by employers with an individual interest and a sense of personal responsibility for their workpeople—a rather old-fashioned conception of duty altogether independent of dividends—in America those firms who have adopted the new conditions of industry have done so apart from all sentiment; often as joint-stock companies with no individual control. Here it is a belated survival of the old aristocratic idea, the "captains of industry" concerned in the welfare of "regiments of labour." The highest developments have, therefore, been reached in such firms as those of Messrs. Cadbury, or the Rowntrees at York, known outside their works as interested in philanthropic enterprise. No philanthropy, but shrewd business instinct animates the National Cash Register Company of Dayton, Ohio, or the Heinz Pickle Company at Pittsburg, or the National Food Company at Niagara. Return for expenditure is sought not only in the improved work of the actual employees, but also in a gigantic system of advertisement which such amelioration brings through all the social and religious interests of the country. With an engaging candour the firms in question distribute a vast literature explaining to all men the excellence of their aims: cheap excursions are run from all parts of the neighbourhood; visitors, from "parties of schoolboys and girls to bishops in convention," are heartily welcomed; a special staff is told off to entertain the guests, who invariably at the end make speeches extolling the noble work of some one's drug factory or some one else's pickles. Mr. Meakin has provided an agreeable account of these methods of improvement, and secured full illustration by photographs of the various devices employed. The tone of the book is strongly in favour of the "model" factory and village, with close sympathy between employer and employed; strongly against the trades unions and "labour unions" of America, who, in his opinion, stir up a mischievous discontent amongst the "model" workmen, and endeavour to break up this holy alliance. Whether the workman, however, is doing better in separating from the general movement for the improvement of his class in order to secure for himself personal comfort and pleasure is a question not satisfactorily answered in this or similar volumes.

The Cattle Raid of Cualnge (Tain Bo Cuailgne). Translated by L. Winifred Faraday, M.A. (Nutt.) — *Eriu.* Vol. I. Part II. Supplement. By John Strachan and J. G. O'Keefe. (Nutt.) The 'Tain Bo Cuailgne' is the most famous of ancient Irish stories. The oldest copy extant is that in 'Leabhar na h-Uidhri,' a manuscript written about 1100, and now in the Royal Irish Academy. The next oldest copy is in the 'Book of Leinster,' a manuscript of the middle of the twelfth century. A third copy is in the 'Leabhar Buidhe Leacain,' a manuscript of the fourteenth century. These three texts have considerable differences, and are all derived from earlier manuscripts no longer existing. Miss Faraday, a pupil of Prof. Strachan, is of opinion that

"a version of the 'Tain' goes back to the early eighth or seventh century, and is preserved under the ['Leabhar Buidhe Leacain'] text; an opinion based on linguistic evidence, but coinciding with the tradition which ascribes the 'recovery of the "Tain"' to Senchan Torpeist, a bard of the later seventh century."

The tale begins with a description of a great assembly of warriors on the undulating grass lands round Cruachan, in Roscommon. Ailill, King of Conacht, and Medhbh his queen, had sent heralds to summon distant tribes, and the arrival of these tribes is related. They all wore the mantle, so long a characteristic of Irish dress. The first company had speckled mantles, the next grey, the third purple. Under their mantles, like the kern of much later centuries, they wore long shirts, and all had long hair variously arranged. Their arms were spears and shields. They were accompanied by seers and soothsayers, who would not let the host start upon its campaign till the right day came. All this scene and the march of the host over the country have a poetic force in the simple Irish, which the translator has failed to give in her English version, which is dry, and reminds a reader of the translations of Virgil made by schoolboys, who seem to imagine that a word for a word is all that is due to an ancient poet.

Every student of Irish literature has looked into the 'Tain.' Windisch has studied it for thirty years; S. H. O'Grady has set it forth in an outline which shows how carefully he has perused the text; Zimmer has analyzed it; O'Curry translated a small part of it. It was beyond the powers attainable in her period of study for Miss Faraday to produce a translation which offers a true representation of the original. That her mind was not sufficiently saturated with the text is the reason of the main defects of her work, and these are so serious that it is not necessary to discuss minor errors and misconceptions. Her time has not been thrown away as regards her own improvement in Irish, but in the actual book little profit accrues to the reading public.

The Irish text, begun in the second part of vol. i. of *Eriu* by Prof. Strachan and Mr. J. G. O'Keefe, is a work which will be of use to every student of Irish literature, and which will in the end do much to increase the knowledge of this most interesting ancient tale. They have begun by printing without

comment the precise text of the copies of the 'Tain' in 'Leabhar na h-Uidhri' and in the 'Leabhar Buidhe Leacain.'

The Metaphysics of Nature. By Carveth Read. (Black.)—In the prevalent ambiguity of philosophical terms it is useless either to expect enlightenment from a title or to quarrel with a writer for his choice. It will therefore be sufficient to explain that by metaphysics Prof. Read means the "study of the validity and adequacy of knowledge and belief" (*i.e.*, ontology and epistemology), and that the addition "of Nature" is intended to rule out ideals, the matter of ethics, politics, religion, and art. Within these limits he claims that his work is conciliatory and constructive. It is to be feared, however, that he will not escape the too common verdict that his criticism is more convincing than his construction. Signs are not wanting that he approaches his subject as a man of science rather than a philosopher, that is, in a spirit of vindication rather than unbiassed inquiry. For though his principal positive results are ontological, he makes no secret of the fact that he regards ontology with distaste, and returns with relief to the "comfortable daylight," the "great conjuring entertainment" of the phenomenal world. His fierce onslaught on the notion of the interaction of mind and matter, as "the greatest absurdity that speculation has adopted from popular delusion," appears to derive its bitterness from the fact that it threatens to put a spoke in the wheel of that "comprehensive and systematic explanation of Nature" which the author has so much at heart. For "whatever is peculiar," he announces in his final refutation of the idea, "can neither explain anything nor be explained, and has no place in philosophy," though he acknowledges, ten pages on, that what is ultimate is unique. He claims it, in fact, as a merit in his own ontological hypothesis, that it does not make the slightest difference to any scientific proposition. What, then, is this meritorious hypothesis? Absolute unconditional reality is conscious being, of which we can predicate succession, change, coexistence, and order or uniformity, because these are found both in our consciousness and in phenomena, which are representative or manifestations of transcendent reality. Consciousness is thus a factor of all reality, as its activity, but it is not all reality. The rest, which is responsible for the idea of "substance" in the object, is transcendent. As to sensations and volitions (the forms of so-called interaction of mind and body), the former "imply changes in being so far as it is manifest in other bodies, transmitted to being so far as it is manifest in that body in whose consciousness the sensations occur," the latter "imply changes in being so far as it is manifest in the organism of the subject that wills, transmitted to being so far as it is manifest in some other body or bodies and their movements." The word "transmission" necessitates the hesitating admission of "perhaps something [in the real] equivalent to that which we know in phenomena as causation." As a hypothesis most of this is irreproachable, because it cannot be tested; as a theory it stands or falls with the fundamental proposition that "all being is conscious," of which the evidence given is far from sufficient. As to the relations of mind and body, the explanation does not seem to cover the case of a mind seeming to move its own body. For it appears that my consciousness is the activity of that portion of being of which my body is the manifestation; and yet it appears elsewhere that my body, since it consists of conscious atoms, should have another consciousness or consciousnesses of its own. What is the relation of these several consciousnesses?

We cannot omit a protest against such expressions as "verbile," "vestigial," "enfoldment" (for "that which enfolds"), "invidious" (for "enviable"), and "algedonic" (for nothing apparently relevant). A book on philosophy sins sufficiently against language without gratuitous solecism.

Macaulay's History of England, in a neat, handy, and well-printed edition, which offers large type and fine paper, has been reissued by Messrs. Chatto & Windus in five volumes. These are bound to be widely bought, and we hope that the brilliance of Macaulay will induce many of his countrymen to equip themselves with a knowledge of their national history which they sadly lack. Later, they may see reason to modify some of Macaulay's conclusions, but the attractions of his style for the ordinary man are supreme. It is good news that Mr. Justin McCarthy, who contributes a modest introduction to this reprint, will supply in the same form as a continuation of it his volumes on 'Queen Anne,' 'The Four Georges and William the Fourth,' and 'A History of our Own Times.' Mr. McCarthy can claim with justice that he has made his narrative "interesting and attractive to the ordinary reader"—indeed, we doubt if in this respect Macaulay's mantle could have fallen on a more apt follower, and we shall welcome the entire series as a most valuable means of inculcating knowledge without popular distortions of fact.

Clues to Dickens's Edwin Drood, by J. Cuming Walters (Manchester, Heywood; London, Chapman & Hall), should be of great interest to all Dickensians, for the author has handled the mysteries of the unfinished story with exceptional skill. R. A. Proctor, the best known of previous investigators, is fairly put out of court by quotation and deduction from the text, and no one, as we think, can now believe that Edwin Drood eluded the machinations of his uncle, and turned up again disguised as Datchery. Drood was murdered, as Forster has explained in his 'Life of Dickens,' and recognition of the crime was secured by means of the ring destined for Rosa, which he had about his person, though his uncle thought that he had been stripped of all his jewellery when quicklime was applied to his corpse. This Mr. Walters makes clear, adding corroboration which the present reviewer has never needed. The difficult question remains, Who was Datchery? It would not be fair to reveal Mr. Walters's answer, which is wonderfully ingenious and admirably supported by inference from the text. His conclusions, in fact, form by far the best solution yet offered, and will not be easily upset. All answers to this riddle offer some difficulties (why not, since Dickens, we know, prided himself on his skill in concealing the traces of the plot?), and reluctant as one is at first to accept Mr. Walters's startling disclosure, one finds it on reflection highly probable. On a few minor points, where, indeed, there is little to be learnt from the text, we differ from our author. But we must repeat our conviction that in these hundred pages or so he has found the clue, the main secret which had baffled all previous investigators, and so has secured permanent association with one of the immortals.

VOLS. II. AND III. have appeared of Hill Burton's *History of Scotland* in Messrs. Blackwood's new and cheap edition.

WE have on our table *Evidence in Brief*, by V. D. Knowles (E. Wilson),—*Mathematical and Physical Papers*, by the late Sir George Gabriel Stokes, Bart., Vol. V. (Cambridge, University Press),—*Pascual Lopez*, by Doña Emilia Pardo-Bazán, edited by Prof. W. I. Knapp (Ginn), — *The Preservation of Antiquities: a Handbook for Curators*, by Dr. F. Rathgen (Cambridge, University Press),—*Le Malade Imaginaire*, by Molière, edited by E. W. Olmsted (Ginn), — *Blackie's Model Readers*, Books I. and II. (Blackie),—*Steps to Literature*, Books I.-VI. (Arnold),—*Selections from Spenser*, edited by G. B. Sellon (Blackie), —*The Americas, Reader V. C.*, by L. W. Lyde (Black),—*Round the World: The British Isles*, by C. W. Crook and others (Jack),—*Round the World: Africa*, by C. W. Bailey (Jack),—*The New Science of Causation*, by H. C. Hillier (Walter Scott),—*Bacon v. Shakspere*, edited by E. Reed (Boston, U.S., Coburn Publishing Company),—*Library of Congress, A.L.A. Catalog, 1904*, by Melvil Dewey (Washington, U.S., Government Printing Office),—*Der ungebetene Gast, and other Plays*, by E. S. Buchheim (Oxford, Clarendon Press),—*Man's Responsibility*, by T. G. Carson (Putnams),—*School Teaching and School Reform*, by Sir Oliver Lodge (Williams & Norgate),—*The Rational Almanac*, by M. B. Cotsworth (York, the Author),—*Problems of a Scottish Provincial Town*, by J. H. Whitehouse (G. Allen), —*Carlyle's Oliver Cromwell* (Hutchinson),—*Ourselves*, by C. M. Mason (Kegan Paul),—*The Locomotion Problem*, by C. Bright (P. S. King), — *Modern Carriages*, by Sir Walter Gilbey (Vinton),—*The Collector's Annual, 1904*, compiled by G. E. East (Stock),—*Archæology and False Antiquities*, by R. Munro (Methuen), —*Baby: its Treatment and Care*, by Mrs. R. A. Smith (Drane),—*Engineers' Turning*, by J. Horner (Lockwood), — *The Shipbuilding Industry*, by D. Pollock (Methuen),—*A Bunch of Shamrocks*, by C. A. W. Erck (Digby & Long), — *Vicar Denior*, by L. Meyrick (Skeffington),—*Valiant and True*, by J. Spillmann (Sands),—*Letters to a Débutante*, by Lady Jephson (E. Nash),—and *A Bookful of Girls*, by A. Fuller (Putnam).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Child and Religion (The), by Various Authors, edited by T. Stephens, cr. 8vo, 6/
Gasquet (Abbot), Henry the Third and the Church, 12/ net.
Job, translated from the Restored Text by E. J. Dillon, 5/
O'Riordan (M.), Catholicity and Progress in Ireland, 8vo, 6/ net.

MR. JOHN HAY.

THE late Mr. John Hay first achieved popularity as an author by the publication of the 'Pike County Ballads.' These were humorous verses, written in the dialect of the South-Western States, and they were eagerly read from one end of America to the other. Certainly they were clever, and, with the exception of certain verses written by Bret Harte, they were the earliest American dialect verses of any consequence, but they by no means represented Mr. Hay at his best. To think of him only as the author of the 'Pike County Ballads' is to do him a grave injustice; but it is unfortunately true that where one American has read 'Castilian Days,' at least a hundred have read the ballads, and upon them form their estimate of Mr. Hay as an author.

It is in the charming volume of Spanish reminiscences entitled 'Castilian Days' that Mr. Hay fully reveals himself to the reader who is capable of recognizing him. The book is the work of a man of culture and of delicate poetic sensibilities. Mr. Hay felt as well as saw Spain. The history, the romance, the poetry of Spain were constantly present with him, and he breathed their spirit into his book. 'Castilian Days' was beyond doubt Mr. Hay's best contribution to literature. It was literature in the true sense, and more than that, it was a true manifestation of the author. To know and comprehend 'Castilian Days' was to understand John Hay, and to love him.

Mr. Hay's serious verses were all of them creditable, and some of them were thoroughly admirable, but they have been overshadowed by the 'Pike County Ballads,' and are little known. Precisely what share Mr. Hay had in writing, in collaboration with Major Nicolay, the 'Life of Lincoln' it is impossible to say. Nevertheless, the style of the book is throughout the style of Mr. Hay. That the book will always retain its place as the standard life of Lincoln there can be no reason to doubt. It is a monument of patient labour, and its essential accuracy has never been called in question.

For nearly thirty-five years Mr. Hay was a regular or an occasional leader-writer on the New York *Tribune*. Not one in ten thousand of the readers of *The Tribune* ever identified Mr. Hay's articles, but they had a large share in earning for *The Tribune* the reputation, which it enjoyed for so many years, of being the best-written daily paper in America. Mr. Hay was clear in thought and lucid in style, and his articles were, as a rule, forcible and convincing. He had a keen sense of humour, but he seldom allowed it to appear in his journalistic work. Mr. Hay was highly valued by Mr. Whitelaw Reid, the editor of *The Tribune*, and it was to Mr. Hay that the direction and control of the paper were entrusted during Mr. Reid's absence from America as ambassador to France. Earnestness, fairness, and courtesy were always to be found in Mr. Hay's leading articles. He would have made an ideal contributor to Thackeray's ideal newspaper, which was to be written by gentlemen for gentlemen.

Mr. Hay's reputation as a man of letters and a journalist will probably be eclipsed by the reputation which he deservedly made as a statesman. But he is an author of whom Americans should be proud, for as he represented in public life the best traditions of politics, so in authorship he represented the best traditions of literature and journalism.

W. L. ALDEN.

NOTES FROM CAMBRIDGE.

If I was so soon to be done for,
I wonder what I was begun for.

THE baby's epitaph (which, by the way, I quote from memory) is a fitting one for the past term. As the Lent term of 1905 was the longest on record, so was the Easter term the shortest. A fortnight after they came up some men found themselves at the beginning of a Tripos. Of course, this state of things was due to the vagaries of Easter. In ancient days people wrangled over the time at which the Paschal feast should be kept; but now the world seems to have settled down in apathy to submit to the disturbing influences of the moon. The short term has revealed one of the absurdities of the Cambridge system since the alterations made in the time of examination in 1882. A man can actually keep eight terms and one fortnight before going in for his final examination for the B.A. degree. Naturally, remedies have been suggested, and I give the most radical of all. It has been proposed to begin the academical year in January instead of October, and to place the examinations for honours late in the October term. In this way every candidate for a Tripos would have the benefit of an extra Long Vacation before he went in for it; and the advantage of a quiet period of study would be secured for him as of yore. I believe that this proposal would be for the benefit of student and teacher alike.

For, short as the past term has been, it has been no season of ease, and several of us have finished it in a state of collapse, having done the work of ten hard weeks in the space of six, and entertained countless visitors into the bargain. A few brave strong men have ended up by enduring the fatigues of a college ball, from which some friends of mine have had the courage to run away.

Those who thought they had heard the last of the Greek question were disappointed. First came a letter to *The Times* from Prof. Ridgeway suggesting co-operation with Oxford and an entrance examination. Now Prof. Ridgeway is the *bête noire* of the so-called Liberal party, owing to his dislike of temporary expedients and his preference for real reforms, and it is not likely that his suggestions will meet with much approval from it. No one was surprised when his name was omitted from the additions to the Studies Syndicate, which, like Charles II., is an unconscionable time in dying, but, unlike the Merry Monarch, has not sufficient sense of humour to apologize for it. The grace giving this Syndicate another lease of life was carried by a majority of ten or twelve in the following circumstances. The science world was excited by a proposal to protect the new museums by rails, despite the fact that some preferred posts and chains. It was a question whether infant Cambridge should perish by being swung off a chain or be impaled on spikes. I remember voting on the subject, but with no clear idea which course was right. At any rate, the Senate house was full of F.R.S. in *esse* or in *posse*, and these "posters" and "railers" remained to support the Syndicate.

Another Syndicate won an unexpected triumph. I have previously alluded to the controversy as to the election of some Professors of Divinity. Not long ago the vacancy for the Lady Margaret Professorship was filled by one of those "musical chair" arrangements in which the occupants of the Divinity chairs delight. This called forth vigorous opposition, and, as a remedy, a proposal was made which would have given the professoriate even more influence in filling the places of their colleagues than formerly. This was rejected, and a fresh scheme was proposed. No one cared much for it; but the Divinity Professors put forward a "fly-sheet" stating their objection to it, and it was promptly sanctioned by the Senate. A vacancy in one of the chairs is due now that the see of Ely is filled, and though the professors as a body are scarcely at a premium, all Cambridge rejoices that the choice is from their number. Dr. Chase's good service to the University is recognized, and the connexion between Cambridge and Ely will be made closer, to the benefit of both. All

our sacred professors are safe men, and not one of them but could live at Lambeth without imperilling the safety of Father Thames.

Every one deplored the departure of Lord and Lady Alwyne Compton from Ely, and a goodly company assembled both at Peterhouse and Jesus, of which colleges the Bishop of Ely is visitor, to bid them farewell. It is to be feared that such prelates as the present occupant of the see will be increasingly rare in the Church of England.

The election of Dr. M. R. James as Provost of King's is a cause of more satisfaction than surprise. His admission to the sacred company of "Heads" will certainly raise that respectable body in public estimation. It is, unfortunately, rare that a college thinks primarily of intellectual distinction in selecting its Master, and King's is to be congratulated in placing one of the most learned men it has yet produced in the Provost's Lodge. Dr. James, however, wears his great erudition so lightly that his friends are apt to dwell more upon his personal charm than his intellectual endowments. The contrast between the practical merits of the new Head of Eton and the mental endowments of the new Provost of the sister foundation offers food for thought. *Floreant ambo.*

The athletic contests in the Easter Vacation seem to show that they manage things better at Oxford. The collapse of the boat was undoubted, and the reason was made evident in the May races. It is true that Third Trinity rowed head; but Caius went down three places (a place for each "blue" in the boat), and Jesus, Christ's, and Corpus all went up under Mr. S. Fairbairn's tuition. He is blamed for spoiling the harmony of the boat club by teaching a new style of rowing; but events seem to justify his methods.

The Tripos lists came out as usual, and the success of Trinity, alike in classics and mathematics, was remarkable. Every one regrets the death of the learned Father Denifle on his way to receive an honorary degree from the University. The term closed with the conferring of this distinction upon Lord Cromer, whose acceptance of it was an honour to Cambridge.

J.

THE EGYPT EXPLORATION FUND'S EXHIBITION.

THE principal objects disinterred during last season by the Fund's excavators have this year been divided into two parts, the more important of which is now on exhibition at the library of the Society of Biblical Archæology in Great Russell Street. Here are shown the results of the labours of Dr. Naville and Mr. H. R. Hall on the temple of Mentu-hotep III., discovered by them last year at Deir el-Bahari. The hawk-name of this king turns out to be Neb-hapet-ra (steersman, or "lord of the paddle" of Ra) instead of Neb-kheru-ra, as was last year thought, and his tomb took the unusual shape of a pyramid surrounded by colonnades, outside of which again were the tombs of the priestesses of Hathor, who were *ex officio* members of the royal harem. In these tombs were sarcophagi with beautiful carvings in relief, the finest of which has been retained by the Cairo Museum. An excellent coloured reproduction of it by Madame Naville is here shown in its stead, and many fragments of the other sarcophagi are also included, one with the portrait of its owner—a lady named Kemsit—who turns out to have been a negress. The beauty of the work on these, and the other reliefs from the shrines of the priestesses and the colonnades of the main temple, is astonishing, and must set at rest all doubts as to the high civilization of Egypt in the eleventh dynasty, before the struggle for national existence and the admixture of Semitic blood had corrupted the taste of its artists. Especially may be mentioned some fragments of portraits of the king and his wife Aashait, which show the detail of the "white crown" of Egypt, made of painted basket-work with bands of gold, with such accuracy that a model could be constructed from it. Well worth noticing, too, are three black granite statues of Usertsen III., showing this famous twelfth-dynasty king as a young, an elderly, and an old man. The *clou* of the smaller objects is probably the alabaster head of a Hathor cow made under the eighteenth dynasty, which at one time had lapis-lazuli eyes and silver horns; and a funerary stele of Userhat, priest of Amen-hotep III. and Tut-ankh-amen, is notable as having preserved, in the portrait of the dead kings, the peculiar type of face and figure introduced by the famous heretic Khuenaten. A word of praise may be spared for the catalogue, which is really informing and well written.

The other exhibition of the Fund is held at University College, Gower Street. Most conspicuous in it is the model of the temple of Hathor at Sarabit el-Khadm, in Sinai, already well known to us by the photographs taken by Lepsius in 1845, and the careful surveys of the Royal Engineers published by the late Dr. Birch. Any one who will take the trouble to compare this "restoration" with the recent plan of M. Bénédite, reproduced in Maspero's 'Histoire Ancienne de l'Orient' (t. i. p. 474), will see how much this model owes to the imagination of its constructors; while Mr. Campbell Thompson's article in *Man*, referred to in last week's 'Anthropological Notes,' should convince them that the temple, instead of being either the "oldest" or the "only" Semitic temple preserved to us, is not Semitic at all. The claims to the effect just quoted made by Prof. Petrie in his recent letters to *The Times*, and repeated with some qualification in the catalogue of the exhibition, may perhaps be excused in view of the extreme paucity of result from his late unlucky expedition to Sinai. On the other hand, a fragment here shown of a tablet of Sa-nekht or Hen-nekht, the third-dynasty king whose tomb and skeleton were discovered by Mr. Garstang a few years ago at Bêt Khallâf, is interesting. So are the Nawami or beehive tombs — "no one has ever excavated these tombs before," says the label—also from Sinai; while a quantity of objects from Roman tombs, sent by Dr. Grenfell and Dr. Hunt from Oxyrhynchus, a collection of worked flints from Thebes by Mr. Montagu Porch, and some copies of sculptures at Saqqarah, all help to make out the exhibition. It will remain open, as will that first noticed, till the end of this month.

THE LONDON LIBRARY CATALOGUE SUPPLEMENT.

THE second Supplement to the great Catalogue of the London Library, just issued, is a proof that the Librarian, Dr. Hagberg Wright, is determined to keep the subscribers to that wonderful institution well informed as to the annual additions to its shelves. These additions include not only current books, but also works long since out of print, and not easily procurable except at the British Museum. The new Supplement covers the period from November 1st, 1903, to December 30th, 1904, and the books acquired during these fourteen months occupy 197 double-column pages, as against the 173 pages occupied by the first Supplement (noticed in *The Athenæum* of June 11th, 1904), which included the books added from November, 1901, to November 1st, 1903. The usefulness of the London Library to all interested in intellectual matters becomes more and more pronounced every year, and no one is better alive to its manifold requirements than the Librarian himself.

This new Supplement is an especially competent piece of bibliographical work, and perhaps its most valuable feature is the detail in which the contents of the one hundred and nineteen volumes of the 'Imperatorskoe Russkoe Istoricheskoe Obschchestvo,' 1867-1904, are set out. They occupy nearly ten columns, and the manner in which the various works are entered renders the series as comprehensible to an Englishman as to a Russian. Many of these volumes, it should be added, have no title-page, and many others have no list of contents, so that the only way to obtain a full catalogue was to go carefully through every volume, and this is obviously what Dr. Hagberg Wright has done. To the student of Russian history of every kind this list will prove of the greatest value. Unfortunately the set wants vols. iii., xlv., and lix.; but perhaps these may be acquired in due course.

In a similar manner the contents of the reissue of Arber's 'English Garner,' 1903-4; the 'Archivio Storico Italiano,' 1842-1904; Bottari's 'Carmina Illustrium Poetarum Italorum,' 1719-26; Gruterus, 'Delitiæ Poetarum Italorum,' 1608; and the twenty volumes of Inchbald's 'British Theatre,' are fully set out, so that the student in a hurry—and most of us are in a hurry nowadays—can see at a moment's glance which particular volume he wants. Each family dealt with by Litta, 'Celebri Famiglie Italiane,' 1819-58, is indicated, although it is curious that one with such a record as that of the Spinola is not treated either by Litta or by his continuators.

It is difficult to pick any holes in a catalogue compiled with such exhaustive care; but there are two or three points which suggest themselves in going over some of the various entries. We think, for instance, that the classification of some of the authors might be improved; these are based apparently upon the British Museum Catalogue, and probably served well for that purpose. But in other respects Dr. Hagberg Wright has shown himself no slavish imitator of the general principles adopted in carrying out that great scheme. It is a fact that John Forster was a "barrister of the Inner Temple," but it would be much more enlightening to those who use the London Library Catalogue to describe him as the biographer of Charles Dickens. He certainly is not now known as a barrister. Again, we think it would save time if the real name of every writer who publishes new books under a pseudonym were added to each entry. The name of Anatole France, for instance, is described in the Supplement as *ps.* As his real name, Anatole François Thibault, is neither fully nor accurately given in the great Catalogue of the London Library (where he is said to be "A. Thibaut"), it might have been mentioned correctly in the Supplement. On the whole, however, there will not be much to complain about if the standard of the succeeding Supplements is kept up to the level of those already issued.

'WILLOBIE HIS AVISA.'

I AM acquainted with Dr. Creighton's opinions on this point, but they have not convinced me, and he is singularly unfortunate in this new *proof* he has brought forward in *The Athenæum* of July 1st. The author of the 'Metamorphosis of Ajax' desired a jury of men who had built great houses and were given to much hospitality. He would have preferred noblemen, but was granted ten knights and two gentlemen freeholders. Of the noblemen it was said: "Suppose you could get three or fower to appeare, one at Petworth, another harde by there at Coudrey," &c. Dr. Creighton says: "The old viscount at Cowdray was the first Viscount Montague, the grandfather of Lord Southampton, who is 'the young lord' of the above"; and imagines Harington uses of him the word

"patrysare (take after his father)" and "Avisare (take after his grandfather)," which latter newly coined word, being printed with a capital *A*, he assumes to be a pun on the word "Avisa," and "declared to be a good word if *he* (Southampton) would mark it." Surely Dr. Creighton knows that the son and heir of the first Viscount Montague, who died in 1592, was not a Wriothesley, but a Browne, and that the second Viscount Montague (or his heir) could alone be spoken of in the phrase "patrysare" or "avisare." The first viscount had received a king and a queen in his dwelling, but it was *his* father, Sir Anthony Browne, who made his dwellings what they were. The young Earl of Southampton never built anything at Cowdray, never dispensed hospitality there, and, after the death of his maternal grandfather in 1592, had little association with his mother's old home. This simple fact, of course, does not prove that he did not write the 'Avisa,' but it shows the value of the arguments Dr. Creighton brings forward as proofs.

CHARLOTTE C. STOPES.

I NOTICE in your last issue that Mr. Creighton, in support of his contention that Lord Southampton wrote 'Willobie his Avisa,' quotes the following lines from Sir John Harington's 'Apologie' for his 'Metamorphosis of Ajax,' 1596 :—

"For suppose you could get three or fower [noblemen] to appeare: one at Petworth, another harde by there at Coudrey (where in the old Viscount's time Jupiter hospitales is saide to haue dwelt), and the young Lorde I heare dooth patrysare, or rather I shoulde saye Auisare (and that is a goode worde, if hee will marke it). Say also an other dwelt at Raglande in Monmouthshire," &c.

Mr. Creighton then says :—

"The old viscount at Cowdray was the first Viscount Montague, the grandfather of Lord Southampton, who is 'the young lord' of the above."

He is correct in stating that the old viscount was the first Viscount Montague, but he is mistaken in thinking that Lord Southampton was the "young lord," as on the death of the first viscount, his grandson Anthony Maria Browne, the second Viscount Montague, succeeded him; and the original Book of Household Rules, written and signed by him at Cowdray in 1595 (which is now in my possession), testifies to the truth of Harrington's statement that Jupiter Hospitales dwelt at Cowdray in the time of the "young lord" also.

E. LIONEL REYNOLDS.

THE HISTORICAL MANUSCRIPTS COMMISSION.

THE MEDLEY PAPERS.

AMONGST the large number of semi-official papers which are now preserved in private custody those relating to naval and military affairs are as a rule inferior in interest to the documents that concern the departments of the principal Secretaries of State. An exception to this rule has recently been witnessed in the case of the important military records of the British headquarters staff in North America during the revolutionary war, published in the last Report of the Commission. A further exception is provided by the Report now before us, which preserves some highly instructive naval correspondence of a kind not adequately represented in the official series. Vice-Admiral Henry Medley, whose semi-official papers as commander-in-chief in the Mediterranean between the years 1744 and 1747 are in the possession of Lady Du Cane, may be regarded as a typical naval officer of the period. His purely official correspondence appears to have been preserved amongst the Admiralty Records in the conventional form of dispatches, and the orders and instructions which he received from the Admiralty Board are duly entered in the official letter-books. So far as these are concerned the present Report gives us little or nothing of original value. At the same time some notice of these secondary sources was required in order to make the context of the more miscellaneous papers intelligible. These consist of enclosures, intelligence, and intercepted letters, of which no originals or copies have been preserved in the official series.

Amongst the official correspondence which is printed in this Report, but also to be found in the Admiralty Records, are Capt. Medley's instructions, dated February, 1723, for cruising on the Guinea coast to protect the trade against pirates. These instructions expressly forbid private trading, and the prohibition is significant. This dangerous service was well calculated to harden a young commander; but it also afforded opportunities for private profit. For example, we learn from the Admiralty Records that Capt. Medley's predecessor on this service, having failed to procure the conviction of a number of pirates, refused to discharge them and carried them with him for trial in England. On the way home he called at Jamaica, where he sold the survivors of fifty negro slaves whom he had also embarked at Cape Coast Castle. The voyage was one of untold horrors, for the prisoners or the slaves proved to be infected with a "new disease," which may possibly have been "beriberi." In the end, the enfeebled negroes sold badly, whilst the prisoners were acquitted, and the blood-money was thus lost. But, in order to recoup himself, this officer had the effrontery to propose that the victualling of the negroes should be charged in the ship's books, on the ground that he had shipped them to assist in manning his vessel. After a careful investigation the claim was disallowed by the Admiralty, with some pointed remarks upon the character of the transaction. There is no ground for any suggestion that Capt. Medley imitated these discreditable practices, and, indeed, we have very little information about him here for another twenty years. Then the correspondence relating to his Mediterranean command presents us with several interesting notices of naval procedure. The professional antagonism displayed by British commanders in connexion with the distribution of prize-money was doubtless, as the editor points out, detrimental to the public service; but, as an academic question, the point at issue between Admiral Medley and his predecessor in the Mediterranean command is not devoid of interest. The most remarkable portion of these papers is, however, that consisting of purely external correspondence in the shape of the archives of a French commander captured by Medley's squadron. In addition to service papers, dispatches, and intelligence, these contain many interesting newsletters descriptive of French politics and society. The Chevalier to whom they were addressed was a Knight of Malta and a typical French officer of the courtier type, whose career has been traced with consummate skill by the learned editor of this Report. The story of the Chevalier's private life and naval adventures forms an instructive counterpart to the portrait of his English contemporary as it is drawn in these pages. Each appears to have taken full advantage of his opportunities for acquiring private wealth; but the fortune of war did not favour both alike. Medley, the rough sea-dog and self-made leader, died at his post in the plague-stricken waters of the Mediterranean, leaving a handsome fortune to be squabbled over by his mistress and distant heirs. The Chevalier, *protégé* of an all-powerful royal favourite, an accomplished *roué*, who had lost his credit as well as his personal papers in European seas, died a few years later in his pestilential government of the French West Indies. So deeply was the latter involved in certain pecuniary transactions that it was whispered his very death was a deception, to enable him to escape his creditors and end his days in luxurious privacy as a smugglers' "husband."

The Commissioners have been fortunate in obtaining the assistance of Prof. Laughton for the preparation of this Report, which is noticeable for the minute research and profound scholarship displayed in the editorial apparatus.

SHAKSPEARE'S BIRTHPLACE.

MUCH literary interest attaches to the recent appeal at Warwick Quarter Sessions of the Trustees of Shakspeare's Birthplace against the refusal of the Assessment Committee of Stratford-on-Avon to exempt the Trust property from the local rates. It was proved in court that the Registrar of Friendly Societies had, in accordance with the statutory powers vested in him by the Scientific Societies Act of 1843, granted the Trustees a certificate of exemption from the local rates. But, mainly on the ground that the commemoration of Shakspeare in the manner prescribed by the Shakspeare Birthday Trust Act of 1891 was not exclusively "a purpose of literature," the Bench held that the Assessment Committee was right in ignoring the certificate of exemption, which was legally inapplicable to societies other than those "exclusively" devoted to literary purposes. At the request of Mr. Hugo Young, K.C., the counsel for the Trustees, Mr. Dugdale, the Chairman of the Warwick Bench, offered to state a case for a superior court. But Mr. Sidney Lee, the Chairman of the Executive Committee of the Trust, announced at the ordinary monthly meeting on Wednesday that the Trustees did not propose to carry the litigation further. On the legal questions at issue we have no comment to make. But we believe that the literary public in all parts of the world will share the regret expressed by the Chairman and other members of the Trust that the Assessment Committee of the Union of Stratford should have refused the Trustees any relief from local burdens in regard to property which belongs to the nation, was in effect purchased for the town of Stratford at the nation's expense, and confers obvious material benefits on the townspeople. The Trust buildings are supported, moreover, not by the ratepayers of Stratford, who are by the generosity of the Trustees admitted free, but by visitors from outside, who alone pay for admission and supply the Trust with its income. It is, therefore, the visitors to the town, and not the ratepayers, who defray the rates on the Trust buildings. The Trustees paid last year over 112*l.* in rates and taxes out of an income very slightly exceeding 1,600*l.* It appears from the evidence that the revenues of the Trust enable the Trustees to keep their fabrics and gardens in order, but the income is insufficient for the other purposes which are enumerated in the Trust Act, and are equally obligatory upon the Trustees. They are bound by their Act "to enlarge and improve their collections," and to acquire, if opportunity arise, other houses or land of Shakspearean interest. Clause vi. of the Trust Act recognizes that the visitors' fees need supplementing by donations and "subscriptions (annual or otherwise)" if the purposes of the Act are to be fully carried out. The Chairman has made some endeavour to obtain an increase of income from those sources which are authorized by the Act, but have of late years run dry, and we hope that his efforts will prove successful. Under his guidance the Trust is making arrangements for rendering its books and manuscript collections freely accessible, under due precautions for their safe keeping, to all accredited students. Mr. Lee was subjected at the recent hearing at Warwick to a searching cross-examination on nearly every branch of the Trust's administration, and we are glad that the Court, though it decided the legal points

involved in the case against the Trustees, put on record its judgment that all the institutions of the Trust were at the present time "most admirably managed to the advantage of the nation and of Stratford itself."

THE CANTERBURY AND YORK SOCIETY.

YOUR review of the first issue of this episcopal register society will meet with the approval of not a few disappointed subscribers. The reviewer was not, however, nearly severe enough as to the English abstracts at the heads of the Latin entries. They are probably superfluous, and had better be omitted in future instalments. But if they are to be done, the work should be put into the hands of at least an average Latin scholar; as it is these abstracts are often senseless and misleading. For instance, on p. 30 occurs "the second Latin Council." "Latin" is a blunder for Lateran; and *secundum* does not mean "the second," but "according to." Unfortunately, a long-standing engagement prevents my attendance at the general meeting on July 12th, when the subscribers ought to insist on knowing who did the abstracts. Whoever he is, he ought to have nothing further to do with the management or editing of these invaluable records. An admirable project is running a good chance of beng ruined. I cannot help wondering what record scholars such as Dr. Gasquet and Prebendary Hingeston-Randolph, who are members of the "Interim Committee," think of the first instalment.

A SUBSCRIBER.

SALE.

MESSRS. SOTHEBY, WILKINSON & HODGE included in their sale of valuable books and manuscripts on June 29th and next two days the following: Alpine Journal, 22 vols., 1864-1903, 21*l.* Burton's Arabian Nights, 16 vols., 1885-8, 25*l.* 5*s.* A Collection of First Editions of Charles Dickens's Works, and Books and Engravings relating to him (110 lots), 245*l.* 10*s.* Charles Lever's Novels, complete set, first editions, 52 vols., 1839-72, 100*l.* Marryat's Novels, first editions, 32 vols., 1829-72, 62*l.* Lilford's British Birds, 1885-97, 42*l.* Audubon's Birds of America, 7 vols., 1840-44, 36*l.* 10*s.* Gould's Trochilidæ, 1866-87, 60*l.* Shakspeare, Second Folio, 1632, 96*l.* Charles Kean's Acting Shakspearean Plays, presentation copies (14), 32*l.* Scott's Waverley, first edition, 3 vols., original boards, uncut, 1814, 150*l.*; Guy Mannering, first edition, 3 vols., original boards, uncut, 1815, 26*l.*; Tales of My Landlord, first series, first edition, 4 vols., original boards, uncut, 1816, 15*l.* 5*s.* Ackermann's Microcosm of London, 3 vols., 1811, 25*l.* 10*s.* Pyne's Royal Residences, 3 vols., 1819, 17*l.* 15*s.* Smith's British Mezzotint Portraits, illustrated, 4 vols., 1884, 21*l.* Ackermann's Select Views of London, by J. B. Papworth, 1816, 15*l.* 10*s.* Valturius, De Re Militari, Verona, 1472, 52*l.* Breviarium ad Usum Cathalunensium, MS. on vellum, 44 miniatures, Sæc. XIV., 63*l.* Byron's Poems on Various Occasions, original green boards, uncut, 1807, 71*l.* Franklin's Cato Major, Philadelphia, 1744, 54*l.* Bonaventura, Meditatione sopra la Passione, absque nota (fifteenth century), 45*l.* FitzGerald's Omar Khayyam, first edition, 1859, 40*l.* Horæ ad Usum Sarum, English MS., fifteenth century, illuminated, 150*l.* Horæ, French MS. with miniatures, fifteenth century, 130*l.* Edmondson's Baronagium Genealogicum, emblazoned by G. Allan, of Darlington, and extra-illustrated, 1764-84, 48*l.* Volume containing a Portrait of Lady Hamilton, after Romney, and Autograph Letters of the same and others, 120*l.* Horæ, MS. on vellum, 14 miniatures, fifteenth century, 101*l.* Ben Jonson's Latin Bible, 1599, 54*l.* Shelley's Queen Mab, first edition, boards uncut, with MS. notes said to be in Shelley's hand, 1813, 50*l.* Thackeray MSS. and Sketches, 163*l.*

Literary Gossip.

MR. FISHER UNWIN will publish in the autumn a volume by Lord Coleridge, K.C., entitled 'The Coleridges of Ottery S. Mary.' It describes the careers of various members of the family, from John Coleridge, the father of Samuel Taylor Coleridge, to Sir John Taylor Coleridge, the father of the Lord Chief Justice. The book contains letters from Southey, Wordsworth, and S. T. Coleridge, and will be illustrated with reproductions of many unpublished portraits.

UNDER the title of 'The Poor and the Land' Messrs. Longman will shortly publish in book form, at a popular price, the report on the Salvation Army colonies in America and at Hadleigh in Essex, recently made by Mr. Rider Haggard to the Colonial Office in his capacity of Commissioner. Mr. Haggard has added an introduction dealing with the question generally and arguments against certain points in his scheme. The book will be illustrated with photographs taken by Miss Angela Rider Haggard, who acted as her father's private secretary throughout his journey.

MR. SWINBURNE'S novel, 'Love's Cross-Currents,' is to be published next Wednesday. Our paragraph announcing it on the 24th ult. has been the cause of many speculations and inquiries as to its nature. These will be fully answered by the opening words of a dedicatory epistle to Mr. Theodore Watts-Dunton, in which is discussed the epistolary method of prose fiction as practised by Richardson, Scott, Balzac, and Laclos:—

"As it has pleased you to disinter this buried bantling of your friend's literary youth, and to find it worth resurrection, I must inscribe it to you as the person responsible for its revival. Were it not that a friend's judgment may always seem liable to be coloured by the unconscious influence of friendship, I should be reassured as to its deserts by the approval of a master from whose verdict on a stranger's attempt in the creative art of fiction there could be no reasonable appeal—and who, I feel bound to acknowledge with gratitude and satisfaction, has honoured it by the sponsorial suggestion of a new and a happier name."

It was written many years ago, and was printed anonymously, under the name of 'A Year's Letters,' in a weekly periodical called *The Tatler*, long since dead, edited by the well-known novelist Mr. E. Francillon. The novel, although it has undergone no fundamental changes either in story or in characterization since its first appearance, has been revised by the author.

A NEW work on notable Lake residents, by Frederick Sessions, is to be published immediately by Mr. Elliot Stock, under the title 'Literary Celebrities of the Lake District.' The chapters deal with the personality and surroundings of Ruskin, De Quincey, Linton, Southey, Prof. Wilson, Charles Lloyd, Harriet Martineau, and other writers, and will furnish much fresh information gleaned from the district. The work will contain many illustrations, some of which have not been published before.

IN the July *Scottish Historical Review* Mr. Lang edits Queen Mary's 'Estat' or pension list of 1573; Mr. Crabb Watt, K.C., treats of Dunnottar; Prof. Sanford Terry describes the Jacobite battle of Glenshiel; M. Étienne Dupont deals with the early Bruces and their chateau of Brix in Normandy; and Lieut.-Col. H. W. Lumsden checks errors about the scene between the ireful Andrew Melville and "God's silly vassal," James VI. Other subjects are 'The Queen's Maries,' 'Dunvegan Charter-Chest,' 'Solway Moss and Oliver Sinclair,' and 'St. Ninian in North-Eastern Scotland.' Mr. W. R. Scott describes the establishment of a wool-card manufactory at Leith in 1663. Sir Archibald Lawrie's challenges of certain Scone and Swinton charters encounter spirited rejoinders.

CANON SCOTT HOLLAND has collected a number of his 'Personal Studies' of famous men and women, which Messrs. Gardner, Darton & Co. will publish very shortly. The studies include appreciations of most of the leaders of the Oxford Movement, the Pre-Raphaelites, and other groups of the same period.

A GEORGE CRABBE celebration will take place, September 16th to 18th, in the poet's birthplace, Aldeburgh. A local committee has been formed, of which Mr. Charles Ganz is honorary secretary. The details of the programme are not yet settled.

A CORRESPONDENT writes:—

"Many people will rejoice in the revived interest which London is showing in her literary men by putting up tablets and naming streets in memory of them. But surely it was a mistake to call a street in the vicinity of Westminster Abbey 'Dean Farrar Street.' The inevitable suggestion will be that Farrar was Dean of Westminster. Thus we prepare false history for the antiquaries of the future."

THE list of King's birthday honours was announced after we went to press last week. It is pleasing to find that the names of Richard Claverhouse Jebb, Lawrence Alma Tadema, George Meredith, and Holman Hunt have been added to the Order of Merit. But otherwise the list must be a great disappointment to those who think that intellect has some part in the making of a people, and therefore some right to public recognition. It is true that authors and artists who respect themselves and their vocation may well say with Goldsmith that "Honours to a man in my situation are like ruffles to a man who is in want of a shirt," but surely it would be wise to give an increasingly illiterate and sheepish public a hint or two that commerce, politics, and retired generals are not the only vitalizing forces in this country. The order of knighthood has been so extended that one is inclined to forget the days when it was confined to men of real distinction, and honoured by a Reynolds or a Newton. No reform is, we suppose, to be expected. But it is to be hoped that seats of learning in view of such lists as that before us will make no concessions to popular prejudice, but confine the honours they are able to give to those who deserve them. Names proposed for such distinction are subjected, we know, to severe scrutiny. Are we to suppose that similar care has been exercised in the case of the list just published?

LAURENCE HUTTON'S 'Talks in a Library' contains an interesting passage on the late Col. Hay's popular 'Pike County Ballads':

"Mr. John Hay once told me that while listening to a somewhat dull sermon from a preacher with whose views and doctrines he was not altogether in sympathy, it suddenly occurred to him, *apropos* of something he had heard in the discourse, that, after all, perhaps

Saving a little child, and bringing him to his own,
Is a derned sight better business than loafing 'round the Throne.

And out of this fragment of cloth was cut the 'Little Breeches' which are not soon to wear out! In the same way, he added that some sentence in a long, impromptu prayer gave him the impression that, may be, in the end,

Christ ain't going to be too hard
On a man that died for men.

And on this pedestal was erected the statue of the famous 'Jim Bludso,' of the steamer Prairie Bell, who gave his own life to save the lives of the passengers entrusted to his charge."

We know that 'Maud' was built up on a single quatrain; and Mr. Hutton suggests that Mr. Kipling's 'Recessional' was based upon the three words "Lest we forget," which had impressed the author years before, and had been preserved in an old note-book.

SOME years ago *The Daily Chronicle* had, we think, a review in French of a French translation of Stevenson's 'Prince Otto.' In *The Morning Leader* on Monday last several items of Paris correspondence appeared in the original newspaper French. The idea is commending itself to teachers of French in the metropolis, who find examples of the living language a valuable supplement to the orthodox reading-books. We should be glad to suppose that French was studied or understood as well over here as English is on the Continent.

THE Hon. Henry J. Coke has revised his volume of reminiscences entitled 'Tracks of a Rolling Stone,' which we noticed favourably in our issue of May 27th, and a second edition, with some new anecdotes, will be published by Messrs. Smith, Elder & Co. a few days hence.

THE exceptional Caxton (1483) and Tyndale's 'Pentateuch,' to which we have already referred, fetched at Messrs. Christie's sale on Wednesday last 1,350*l.* and 940*l.* respectively, the purchaser in each case being Mr. Quaritch.

THE Library of Trinity College, Dublin, will be closed for a fortnight from Monday, July 10th.

Lloyd's Weekly News was on Sunday last published with four additional pages. We congratulate Mr. Thomas Catling, the editor, on the enlargement, accomplished by the aid of the double octuple perfecting presses, seven of which finish ready for delivery 336,000 copies an hour. Among the new features are pages occupied by process pictures and the life of General Booth, compiled, with his aid, by Mr. T. F. G. Coates.

A NEW trouble would seem to be in store for the librarians of national libraries—the conservation of the manuscripts of contemporary authors. Zola may be said to have set the fashion in bequeathing the MSS. of most of his books to the Bibliothèque Nationale, and now that institution has received from the widow and son of the late Gustave Toudouze the MSS. of his romances, which number some thirty-five.

THE correspondent of an Anglo-Indian journal suggests that the tercentenary of the death of Akbar, the greatest of the Mogul emperors of India, should be celebrated with some *éclat* during the approaching visit of the Prince and Princess of Wales to India. The anniversary falls on October 15th, and we should not be surprised if official support were given to the proposal.

MR. HAMLIN GARLAND writes from West Salem, Wis.:—

"I write to thank you for your generous notice of my book, 'The Tyranny of the Dark,' and to correct a misapprehension. I have no 'contempt for what is respectfully called psychical research'; on the contrary, I honor those who have gone at these puzzling questions seriously and with method in face of adverse criticism, and the moral to my book (so far as a novel may have a moral) is quite the opposite of your interpretation. I had the hope that it might in some slight way help to forward in this country the organization of a society as worthy of confidence as the English Society for Psychical Research. Life is not as commonplace as it sometimes seems to us, and the way in which 'a common mystery is explained by dragging in a greater mystery' may be read in the 'solid content' of my tale, which is, however, quite unambitious of solving any mystery whatsoever."

THERE is a good deal of excitement in several Paris public libraries on the subject of enforced retirements. Following upon M. Léopold Delisle's resignation at the Bibliothèque Nationale comes the announcement that M. Ruelle is to be "retired" from the Bibliothèque Ste. Geneviève, and M. Franklin from the Bibliothèque Mazarine. These two posts would naturally be filled by those second in command, M. Mortet at the first place and M. Armand d'Artois at the second; but M. Gaston Schéfer, "auteur dramatique joué une fois au Français," has, it is said, been nominated to the chief librarianship of Ste. Geneviève, and M. Paul Bonnefon to that at the Mazarine. Whether these two appointments will be ratified remains to be seen; if they are, they will be under suspicion of political jobbery. "Il vaut mieux," says *L'Éclair*, "pour les candidates, avoir été six mois chez un ministre que vingt ans dans les archives."

AMONG the grants distributed by the Prussian Akademie der Wissenschaften is one of 5,000 marks to Prof. von Wilamowitz-Möllendorff, to enable him to carry on his collection of Greek inscriptions; 2,300 to Prof. Engler for the continuation of his work 'Das Pflanzenreich'; 1,000 to Prof. Ludwig, who is engaged in studying the Holothuria of the Mediterranean; and 4,000 to Dr. Blanckenhorn, to enable him to study the geological formation of the valleys of the Jordan and the Nile. Among the remaining grants was one of 1,000 marks to Prof. Wernicke (whose death we recorded last week) to pay for the publication of the fourth volume of his photographic map of the brain.

THE death in his seventy-third year is announced from Homburg of Dr. Max Hirsch, well known for his efforts to improve the social condition of the German workpeople. He established the Deutsche Gewerkvereine on the model of the English trade unions, and both in the Reichstag and the Prussian Parliament supported the interests of the people. He was the author of a number of books on social questions, and also published a book of travels.

THE death is announced at Kirkcaldy of the Rev. Norman L. Walker, D.D., for forty-two years minister of Dysart Free Church. He was editor of Messrs. Nelson's *Family Treasury* and *The Free Church Monthly*, which trebled its circulation under his literary management. He also published lives of Thomas Chalmers and Robert Buchanan, 'Chapters from the History of the Free Church of Scotland,' and several religious works.

THE annual Blue-book known as 'Moral and Material Progress of India,' for 1903–4, which has just appeared, contains the usual account of literature in each of the Presidencies, to which we have sometimes made reference. The influence of Shakspeare is shown by partial translations into various Indian tongues, and by works based upon his plays.

THE Report of (Mr. Ritchie's) Income Tax Committee (3*d.*) is a Parliamentary Paper of interest to publishers and authors, inasmuch as it deals with their share in the income from copyrights. We note also the publication of the following Parliamentary Papers: Report on Manuscripts in the Welsh Language: Vol. II. Part II. Panton and Cwrtmawr (8*d.*); The Annual Report of the Deputy-Keeper of the Public Records (1*d.*); and The Annual Report of the Accountant for Scotland to the Scotch Education Department (6*d.*).

SCIENCE

APPLICATIONS OF CHEMISTRY.

Bio-Chemistry of Muscle and Nerve. Ten Lectures delivered by W. D. Halliburton. (Murray.)—This volume, containing ten lectures given by Prof. Halliburton in London, and a second time, as the first Herter Lecturer, in New York, is published under the authority of the London University. The pages are so crowded with the hard facts of a very complex subject that it can hardly be imagined that the author delivered the lectures in detail as they now appear; that would have been too great a tax of memory and patience to levy from any audience. The value of the lectures consisted, no doubt, in the experimental demonstrations given at the time, while the numerous "scissors-and-paste" additions make the book a very welcome and really useful guide for the reading of students.

Prof. Halliburton has followed the excellent plan of dealing only, or at least chiefly, with the subjects in which he himself has made or inspired research. The gain which results from this provides a valid excuse for a selection and distribution of matter which is in itself unreasonable. To the lectures on muscle chemistry barely more than a third of the book is given. This is accounted for by the fact that the author is content to deal chiefly with his own work in the analysis of muscle proteids, as it has been revised by Von Fürth and others. One page is considered enough for the very important and extensive claims which might be set up for the chemical problems of contraction, rigor, and fatigue. Under one or other of these heads lies all our present knowledge of the physiology of muscle—its true bio-chemistry in distinction from a chemistry of dead residues; and though we may admit with the author that our knowledge in these directions is "unsatisfactory," it is surely at once more satisfactory and, up to the present, more useful than our knowledge of the proteid separation products of muscle and their relation to vital phenomena. A brief

notice is included of some of the later results obtained in the chemistry of the connective tissues, particularly those due to Miss Tebb. A wider interest might have been given to this section, had space allowed, by reference to invertebrate tissues.

The rest of the work is devoted to the nervous structures. Here the treatment throughout is more adequate. The questions of metabolism and fatigue are allowed to inspire and direct the chemist's inquiry, and with noticeable gain. Among the most useful sections of the book will be found, we think, those given to the disintegration of the nerve-sheath and its constituents, and to the interesting and fruitful applications of their study. The author here gives an admirable account of his researches with Prof. Mott. We may be permitted to think that the paragraphs on narcosis and sleep should have been either less detailed in treatment or more complete; where room is found for Wright's observations upon nerve-cells after anæsthesia it is odd to find, for instance, no reference to Meyer's work on narcosis and other allied inquiries. But all these chapters will serve well to give students not only a brief directory of experimental results, but an outlook as well over the main tendencies of these in the directions either of utility or of further advance in pure knowledge. Higher praise than this could hardly be awarded; for the growth of modern physiology, especially upon its chemical side, has reached a point in the accumulation of new facts at which, until relief comes by the dawn of some great simplification, it is almost impossible to bring a real illumination to the old areas and districts of the subject in a few lectures.

We are inclined to congratulate Prof. Halliburton upon the new word he seems to have invented when he speaks of "the slimsiest foundations."

Practical Methods of Electro-chemistry. By F. Mollwo Perkin. (Longmans.)—It is somewhat curious that so little attention should have been paid hitherto to the practical side of electro-chemistry. On the theoretical side the subject had reached an advanced stage almost before the other branches of chemistry had been born: the laws which Faraday enunciated in 1853 still represent the greater part of our knowledge with regard to electrolytic separations, and the terms which he proposed are still in universal use. Perhaps investigators were afraid of finding only a scanty gleaning in fields which their great master had reaped. When interest was again roused by Arrhenius's suggestion that in electrolytic phenomena was to be found the clue to the whole of the mysterious phenomena of solution, the researches which were set on foot dealt only with general principles, and particular applications were neglected.

But recently attention has been drawn to the details of electro-chemical processes by the successful application of them to the commercial preparation of chemical products. Aluminium, pure copper for electrical work, calcium carbide for the manufacture of acetylene, are instances of substances that could only be obtained at prohibitive prices before the electric current was used in their separation; and in the production of many others electrolysis is successfully competing with the older processes.

Meanwhile the purely scientific aspect of the subject has not passed unnoticed. Prof. Perkin in the work before us mentions some hundred preparations and separations by the electric current, nearly all of which have been devised within the last fifteen years. Many of the analyses which he describes are still performed more expeditiously and more accurately by the older chemical methods, but the use of electricity has a great attraction in its simplicity and freedom from the "messiness" that was formerly almost inseparable from analysis.

Prof. Perkin's book is sure to be in great request, for it is the first text-book of the kind suitable for English students; but its merits would probably entitle it to first place among any number of competitors. The author truly remarks that

"the average student seems to think that all that is necessary is to mix his solutions in a more or less accurate manner, and then to switch on the current—the electricity will do the rest,"

and then proceeds to set him right by the most detailed instructions. Indeed, we are inclined to think that in some cases too many details are given; there is a danger that the student will lose the robustness of knowledge that comes from many failures; but that is certainly a fault on the right side.

In three parts ordinary separations, analyses, and preparations are successively treated. The pages are not mere cooking recipes, but contain brief, though lucid accounts of the theory of the methods adopted, from which the least inquiring student cannot fail to obtain much information. We do not pretend to have tried all the processes given, but those with which we are acquainted are, apart from a few obvious misprints, admirably described. A full bibliography is supplied, which will prove of service to many who have passed the stage for which the book is professedly intended.

An appendix contains tables of electrical and chemical data, as well as tables of five-figure logarithms. In the former we regret to notice several mistakes of a particularly dangerous character, as tending to confuse further the minds of students on a subject concerning which their ideas are seldom clear. Thus we find "electro-chemical equivalent in coulombs per mg. per sec."—the last two words should be omitted—or "1 horse-power is 75 kilogrammeters," where the same two words should have been added; we even find "1 kilowatt=1,000 watt-hours," where common sense might have prevented error. With regard to the logarithms, we regret to notice that a teacher of the author's experience deems it necessary to explain the most elementary principles of their use to students who are doing work in advanced chemistry.

The book is well got up, with clear print and figures. Notwithstanding the errors we have just pointed out, we heartily recommend the volume for use in every chemical laboratory.

THE TRANSFORMATIONS OF MATTER.

I.

SOME twenty years ago the suggestion that matter can be destroyed could be discussed on metaphysical grounds only. The indestructibility of matter, complemented by its sister doctrine of the conservation of energy, formed one of the pillars upon which the whole system of physics appeared to rest, and Herbert Spencer—whose acquaintance with physics was by no means his strong point—declared in his 'First Principles' that if we could suppose matter to be destructible, both science and philosophy would be impossible. Recent discoveries have, however, changed all that, and both the indestructibility of matter and the conservation of energy find themselves exposed to a frontal attack which it seems impossible that they can long resist. But before the source and nature of this attack can be detailed it will be necessary to go over once more a few of the facts recently acquired by science.

The first discovery which altered our opinion of the nature of matter was that of electrolytic dissociation, which goes back to the time of Faraday. If an electric current be passed through the solution of a chemical compound, such as, for instance, chloride of potassium, the potassium is delivered at one of the poles, and the chlorine at the other. But, as the solution shows no trace of free chlorine or free potassium anywhere except at the two poles themselves, it is necessary to assume the existence of wandering bodies called Ions, consisting of electric charges carrying particles of chlorine or potassium as a bird carries a seed, until they deliver up their burdens and become neutralized and absorbed in the pole of opposite sign to themselves. As the chlorine and potassium thus supposed to be carried by the ions show none of the characteristics of the chlorine and potassium known to chemistry, it has since become plain that we here have to do with matter in a different state from any formerly known. Then came Sir William Crookes's discovery, lately described in these columns (see *The Athenæum*, No. 4048), that gases under similar conditions could be split into particles many times smaller than the chemical atom, and consisting in great part of electricity only. Then followed Prof. Röntgen's revelation that these electric corpuscles, when suddenly stopped in their career, set up vibrations in the ether capable of penetrating most known substances; then, the discovery of M. and Madame Curie and their associates that there were metals which spontaneously emitted light and heat, together with the Alpha and Beta rays, corresponding to positive and negative electricity respectively, and the Gamma, which seemed to be nothing but the Röntgen or X rays of slightly differing intensity. Next followed the announcement by Sir William Ramsay that the Curies' radium emitted besides these rays a quasi-material emanation having all the characteristics of a gas, which changed itself, when kept in a tube, first into the rare gas helium, and then into particles of positive and negative electricity. The researches of the Hon. R. J. Strutt, of Prof. J. J. Thomson, of M. Blondlot, and, above all, of M. Gustave Le Bon, have shown that the emission of rays, and even of some sort of an emanation, is probably a common attribute of all known bodies. And all this time there was germinating in the minds of physicists the pregnant theory of Maxwell that light was an electro-magnetic phenomenon, consisting of vibrations in the ether not distantly resembling those gigantic waves which Hertz had shown to be set up by oscillatory electric discharges.

Now it is plain that these discoveries, while overthrowing our best-settled conceptions of matter and energy, yet raise a great many more puzzles than they solve. While atoms are shown to be no longer atoms, and energy is produced apparently from nowhere without the previous expenditure of work, electricity, at one time thought to be merely a form of energy, now appears as a component, and perhaps the sole component, of matter. Yet till now no one could say what electricity was, and every new discovery seemed to make its behaviour more and more mysterious. It seemed to have mass, and one of the most popular theories of English electricians was that all mass was (see *The Athenæum* last referred to) electro-magnetic in its origin. It behaved in most cases like a liquid, yet a liquid some of whose particles attracted while others repelled each other seemed inconceivable; and it was proved to be entirely exempt from the laws of gravitation which govern the behaviour of all other liquids. Nor did any of the new discoveries quite square with the hitherto observed laws of electrical phenomena. It has always been said that a gas cannot act as a conductor of electricity, yet the fact that the atmosphere becomes a conductor under the influence of the electrons emitted by radium proves the best test of its presence. Again, Sir William Ramsay's emanation, which eventually becomes positive and negative electricity, will remain for years on the surface of metals such as bismuth, and will then resist the efforts of liquids like concentrated sulphuric acid to remove it. Moreover, many of these effects can be imitated by reactions in which the so-called radio-active metals have nothing to do. An electric discharge of high tension and

frequency, such as Mr. Tesla showed us how to produce, will discharge an electroscope as readily as radium. So will the rays emitted by a sheet of clean metal on which the ultra-violet rays of the sun or of an electric light fall. So will the gases emitted by the flame of a burning candle or a piece of red-hot metal; and so will the formation of acetylene by the decomposition of carbide of calcium or the dissolution of sodium amalgam in water. And above all is the crowning mystery of the evolution of helium from the radium emanation and its transformation into electricity. How can a gas consisting, like other gases, of atoms of known weight, come into existence from a metallic salt into whose composition this gas does not enter? And how can a gas disappear leaving nothing behind it but a substance which presents hardly any of the properties of matter? Plainly a synthesis which can afford a reasonable explanation of these incoherent and apparently contradictory facts is required if physical science is to be saved from chaos.

Such a synthesis has now been furnished by M. Gustave Le Bon, whose just-published book on 'L'Évolution de la Matière' (Paris, Flammarion) is a republication and amplification of the separate studies and articles which have appeared over his signature during the last eight years. His theory is that matter, instead of being, as it appears to us, the most stable and reposeful of all natural things, is, in fact, never at rest, but is always changing from one form to another. Once, he says, the world was a nebula, consisting apparently entirely of ether. From causes which we cannot even guess at, this ether became condensed into the atoms as known to modern chemistry, the energy thus stored up being that which is liberated when the atom is dissociated or split up as in the now familiar case of radium. But this process of dissociation, instead of being rare and occasional, is always going on with all substances, and always with the same result, which is the production of an emanation like that already made evident by Sir William Ramsay, Prof. Rutherford, and others in the case of radium and thorium. This emanation, though not itself electrified, transforms itself into what he calls the ionic fluid, which in turn gives rise first to positive and negative ions, or almost infinitely small masses of matter combined with charges of positive and negative electricity, and then to detached electrons or corpuscles of negative electricity only, having no material support. These negative electrons, in which alone, according to him, the inertia varies with the speed at which they travel, are the cause of those Hertzian waves which are emitted whenever a discharge takes place from an electrified point, and only differ from waves of light in their far greater wave-length. Finally, the same negative electrons give rise when stopped to the Röntgen rays, which are one of the last stages by which matter sinks back into the ether from which it originally came. For this is the end towards which all material things are tending. Whether they are reborn we cannot tell, until we know something of the cause which first gave them birth, but that matter is every day taking one step the more on the road to death M. Le Bon has no doubt whatever. From matter to emanation, from emanation to electricity, from electricity to ether, are the stages of transformation which he has as yet succeeded, in his opinion, in identifying. Yet he warns us that these are probably only a few of those through which matter finally has to pass. Already he thinks he can detect a difference between the rays emitted by metals when exposed to different parts of the solar spectrum. Nor are all the negative electrons exactly alike. Their unequal deviation in a powerful magnetic field shows, according to him, that they are composed of divers elements, which, he suggests, may be arranged on the sun-and-planet system which other observers have ascribed to the atom. And at the other end of the scale there are probably many intermediate stages, of which we, as yet, have no knowledge. All the chemical elements are probably formed, as Prout thought, from one element, and crystals may be the intermediary form between "brute" and living matter. The theory that electrons are, in fact, centres of vortical strain in the ether he looks on with favour, but as we do not know how these vortices came first to be formed, it does not advance us much.

Further discussion of M. Le Bon's theory must be left for another article; but it may be said that full details of the experiments by which he seeks to prove it are given in his book, while the care and pains which he has bestowed upon his researches during many years make it impossible that it should be lightly regarded. As he has never, we believe, formed part of the teaching staff of any lycée or university, his first papers upon what he called 'La Lumière Noire,' which were contemporary with, if not precedent to, the similar discovery of Röntgen, seem not to have received so much attention as they deserved from the official hierarchy of French science. But from some letters recently published, we gather that this period of official neglect is nearly over, and if the views now put forward by him emerge triumphant from the controversies that they will doubtless arouse, we fancy that his researches will be considered as important for the twentieth century as those of Darwin were for the nineteenth.

SOCIETIES.

GEOLOGICAL.—*June* 21.—Dr. J. E. Marr, President, in the chair.—The following communications were read:—'The Relations of the Eocene and Cretaceous Rocks in the Esna-Aswan Reach of the Nile Valley,' by Mr. H. J. Llewellyn Beadnell,—'A Contribution to the Study of the Glacial (Dwyka) Conglomerate in the Transvaal,' by Mr. E. T. Mellor,—'On New Oolitic Strata in Oxfordshire,' by Mr. E. A. Walford,—and 'The Causes of Variegation in Keuper Marl and in other Calcareous Rocks,' by Dr. G. Tattersall Moody.—The next meeting of the Society will be held on Wednesday, November 8th.

SOCIETY OF ANTIQUARIES.—*June* 22.—Lord Avebury, President, in the chair.—Mr. W. H. St. John Hope communicated a report on the excavations on the site of the Romano-British town at Silchester, Hants, in 1904. The discoveries included the plans of several houses and blocks of buildings, but the most important work was the completion of the uncovering of the baths, which were laid open in 1903. The courtyard of approach had now been explored, together with a large latrine on the north-east. Interesting evidence had also been found of changes necessitated by the laying out of the streets subsequent to the first erection of the baths, a portico with an open colonnade having been destroyed to make way for a mere archway set in a wall. This wall intruded upon and followed a line different from that of the portico, and had been supported west of the baths on wooden piling, owing to the road there traversing soft, marshy ground.—Mr. W. Ransom exhibited a number of Romano-British objects in iron found at Sandy, Beds; also a finely sculptured Mithraic inscribed tablet and two white marble figures reputed to have been found in London.

June 29.—Lord Avebury, President, in the chair.—A paper was read by Mr. Clement Reid on 'The Island of Ictis,' of which the following is an abstract. The accounts given by classical writers of the trade with Britain for tin seem at first sight irreconcilable, and it has been thought to be impossible to make the description of Ictis given by Diodorus Siculus agree with the geography of the Isle of Wight, the Vectis of later authors. It seems, however, that Timæus (fl. 350-326 B.C.), Diodorus Siculus, perhaps following Posidonius (about 90 B.C.), and Cæsar are all speaking of the same route and trade emporium, which lay in the Isle of Wight. In the days of Timæus tin was brought in small boats a six days' coasting voyage, apparently from Devon, and was landed in Mictis (the Isle of Wight). Diodorus mentions Ictis as an island connected at low tide with Britain, so that the tin was carried across in waggons. In his and later days the route had changed to an overland one, reaching the coast near Lymington—hence also Cæsar's statement that the tin came from the interior. These accounts are all reconcilable, if we take Ictis to be the Isle of Wight; but they cannot refer to St. Michael's Mount, which 1,900 years ago was an isolated rock in a swampy wood. A study of the geology and physical geography explains the clear description given by Diodorus. Hampshire shows cliffs of soft material, rapidly wasting under the attacks of the sea. The rate of loss of the coast west of the Isle of Wight is a known quantity, averaging about three feet in a year. At one place only, close to Yarmouth, has there been a continuous rocky ledge, such as would resist the waves for any length of time. If a strip restoring the loss of land during 1,900 years is added to the map, it is found that the Solent was then a narrow channel, across which from shore to shore stretched a ledge of Bembridge limestone from Yarmouth to near Lymington. This ledge formed the half-tide causeway, passable by waggons, described by Diodorus, but perhaps destroyed soon after he wrote. At no other point could the Solent have been passable, for on each side of this ledge the water must have deepened rapidly, and the bottom was soft sand and mud.—Mr. Reginald Smith read a paper on the evolution of Late-Keltic pins of the Hand type, well known in Scotland and Ireland. Omitting earlier stages, he began with the ring-headed pin of bronze, as found in Berkshire with Bronze Age relics, and on the site of a pile-dwelling in the Thames with brooches of a type dating, on the Continent, from the fourth or third century B.C. Just below the head was a sharp bend in the stem to prevent slipping, and the next stage is marked by examples with the head and bent stem in different planes, the pin not lying flat as before, but resembling a modern scarf-pin with the head projecting. Such are known from Caithness, Forfar, Midlothian, and Argyle, and are made of bronze or iron rods resembling wire. Bronze-casting produced a type with a broader ring at the head, ornamented with transverse lines, like the horns of an animal, and belonging to the first or second century of our era: examples come from Beds, co. Derry, and Caithness, and a mould for the same from the Orkneys. An Irish specimen seems to link these with the more massive Hand-type, which at first has the lower part of the ring-head plain and the upper part composed of pellets: the latter gradually fall into a straight line, and the lower part of the ring-head becomes a solid semicircle, sometimes ornamented with the trumpet-pattern or other Keltic motives in enamel. A landmark is provided by the hoard of Norrie's Law, which is said to have included a coin of the late sixth century. The last stage of the development is characterized by a solid circular head, with engraved ornament that may be assigned to the eighth or ninth century. The later types are confined to the north of England, Scotland, and Ireland, and show the effect of the Roman occupation of Southern Britain, where Late-Keltic art first flourished.—Mr. Worthington G. Smith submitted drawings of two early gravestones lately found near Dunstable.—The ordinary meetings of the Society were then adjourned to Thursday, November 30th.

ROYAL INSTITUTION.—*July* 3.—Sir James Crichton-Browne, Treasurer and V.P., in the chair.—Baroness Gray was elected a Member.—The thanks of the Members were returned to Sir Andrew Noble for his donation of 100*l.* to the Fund for the Promotion of Experimental Research at Low Temperatures; and to Mr. Rollo Appleyard for his gift of a portrait of the late Prof. J. D. Everett.

HELLENIC.—*June* 27.—*Annual Meeting.*—Sir Richard C. Jebb, President, in the chair.—The Hon. Secretary, Mr. George Macmillan, having read the Annual Report on behalf of the Council, Sir Richard Jebb in moving its adoption gave a brief survey of the progress of Hellenic study during the past year. Having noticed the excavations conducted by the Greek Archæological Society on the mainland at Oropus, Sunium, and Epidaurus, he described the Belgian excavations at Carthæa, in Ceos, the birthplace of Simonides. The French excavations at Delos were proceeding, and much of the *débris* obscuring this most interesting sacred spot had been cleared away; and finds of early pottery, hitherto lacking on this site, had recently been made. Dr. Herzog's investigations at Cos had thrown much light on the arrangement of Greek shrines of healing; and among the numerous inscriptions recovered were several of interest in other directions. The Danish excavations at Lindos had furnished inscriptions valuable for the history of art. On the Asiatic coast Mr. Hogarth had been conducting a successful excavation on behalf of the British Museum, and the Austrian excavations on the same site were still in progress. Dr. Theodor Wiegand's important work

at Miletus was then described. The sacred precinct of Apollo was found to contain no temple, but an elaborate system of altars. The lists of eponymous officials would furnish valuable historical data. In the province of Greek literature and palæography the commentary of Didymus on Demosthenes and the Oxyrhynchus fragment of Pindar deserved special notice.—The adoption of the Report was seconded by Mr. D. Bikelas, who expressed the sympathy of Greek archæologists with the efforts made in England on behalf of Hellenic studies.

CHALLENGER.—*June* 28.—Dr. R. N. Wolfenden in the chair.—Dr. H. R. Mill exhibited the new Chart of the World recommended by the International Geographical Congress, and published at the cost of the Prince of Monaco. From 72° N. to 72° S. are sixteen sheets on Mercator's projection; each Polar chart of four sheets is on a circular projection. The submarine contours and soundings are in metres, symbols indicating the bottom deposits. The land is blank, the contours of the ocean coloured in deepening shades of blue. Meridians (reckoned from Greenwich) and parallels are ruled for each degree.—Dr. W. T. Calman exhibited the two Antarctic Decapoda brought back by the Discovery, *Crangon antarcticus* and *Chorismus antarcticus*, and explained their bearing on the question of "bipolarity."—The Secretary showed a chart reproduced in line process from one of the Society's Blank Charts in order to illustrate the method of preparation.—On behalf of Messrs. E. W. L. Holt and W. M. Tattersall, Dr. Calman read a preliminary note on the Antarctic Schizopoda captured by the Discovery. The collection contained several new species of Euphausiidæ and Mysidæ, and the authors were able to show that *Euphausia superba* (Dana), Sars, *E. murrayi*, Sars, *E. australis*, Hodgson, *E. glacialis*, Hodgson, and *E. antarctica*, Sars, are all referable to a single species.—The Secretary read a note on the probable time required by the larva of an epibenthic animal to cross the Atlantic, and made some remarks on the desirability of revising the nomenclature of oceanic currents on an international basis.—Messrs. J. J. Lister and A. E. Shipley were elected ordinary Fellows; Profs. Karl Brandt, Carl Chun, and Max Weber were elected Honorary Fellows.

BRITISH NUMISMATIC.—*June* 28.—Mr. P. Carlyon-Britton, President, in the chair.—The President announced that the King of Spain had graciously received a deputation from the Society presenting an address to his Majesty as one of its Royal members.—His Excellency M. Gaston Carlin, the Swiss Minister, was elected an Honorary Member; and Messrs. S. H. Chapman, H. E. Eisenberg, G. F. Ruck, and H. Steers ordinary Members.—The President contributed a remarkable paper upon 'The Saxon, Norman, and Plantagenet Coinage of Wales.' Hitherto it has always been accepted as a numismatic maxim that the sovereign princes of Wales never issued any coinage of their own, but were content to circulate the money of the neighbouring kingdom. Considerable interest was therefore aroused when Mr. Carlyon-Britton, in the course of his paper, announced that he had discovered a silver penny of Howel the Good, A.D. 915–48, struck at Chester, reading on the obverse + HOWEL REX C (with a line of contraction through the last letter), and on the reverse the name of the Chester moneyer GILLYS. He submitted the coin to the meeting, and held the view that, as it was identical in type with the coinage of Eadmund, it was probably issued by Howel shortly before his death, although Malmesbury tells us that in 925 Eadweard the elder, whose coins are also very similar to it, subdued the city of Chester, which, in confederacy with the Britons, was then in rebellion. Coming to Norman and Plantagenet times, the writer produced and explained additional varieties of the silver pennies issued from the mint at Rhuddlan, which hitherto had been believed to be the only place of coinage in Wales prior to the seventeenth century. But he had a further surprise for the meeting when he exhibited three coins of the reign of Henry I. struck at Pembroke. They are silver pennies of Hawkins type 262, which, according to Mr. Andrew, represents the years 1128-31, and in addition to the name of the mint the coins bear that of the moneyer GILLOPATRIC, who is mentioned in the Pipe Roll for the year 1129-30 as then coining at that town. Mr. Carlyon-Britton was thus able to explain an entry in the Roll which had puzzled the author of 'A Numismatic History of the Reign of Henry I,' for no mint at Pembroke was even suspected at the time he wrote.—A full discussion followed, in which the views of the writer were unanimously accepted by the many members present.—Exhibitions of general numismatic interest were made by Messrs. A. H. Baldwin, P. J. D. Baldwin, P. Carlyon-Britton, L. A. Lawrence, and W. J. Webster.

Science Gossip.

THE University of Oxford has conferred the honorary degree of D.Sc. upon Prof. G. H. Darwin, F.R.S., Plumian Professor of Astronomy at Cambridge. Prof. Darwin, it will be remembered, is to be the President of the British Association for the Advancement of Science at its meeting in South Africa this year.

M. PIERRE CURIE won an easy victory at the Paris Académie des Sciences on Monday last, and his election to that institution is a matter of general satisfaction. For several years M. Curie has been an earnest student of scientific subjects, his first important discovery being in connexion with the "phénomènes dits de piézo-électricité." His discoveries in connexion with radium are of too recent a date to call for special notice. He shared with M. Becquerel the Nobel prize of 1903. Curiously enough, M. Curie was on two occasions an unsuccessful candidate for a post at the Faculté des Sciences.

THE death is announced from Brussels of Élisée Reclus, the eminent geographer, who was born at Sainte-Foy-la-Grande (Gironde) on March 15th, 1830. He was the son of a Protestant pastor, and at a very early age manifested strong Republican opinions. After the *coup d'état* of December 2nd he was exiled, and lived for some time in this country, and afterwards in the United States. He returned to France in 1857, and contributed some sensational articles to the *Revue des Deux-Mondes*. He published a number of books, including a 'Guide du Voyageur à Londres et aux Environs,' 1859; 'Voyage à la Sierra Nevada de Sainte Marthe,' 1861; and 'La Terre, Description des Phénomènes du Globe,' 2 vols., 1867–8. But the great work of his life, upon which he had been engaged since 1875, was the 'Nouvelle Géographie Universelle, la Terre et les Hommes,' only just finished at the time of his death; nineteen volumes of it have appeared, and all have been translated into English. The death of his brother Élie Reclus, the distinguished philosopher, was announced in *The Athenæum* of February 20th, 1904.

AT the meeting of the Society for Psychical Research on Thursday week last a paper was read by the Rev. A. T. Fryer, of Cardiff, on 'Psychological Aspects of the Welsh Revival.' An account was given of its rise in 1904, first at New Quay and subsequently in a more developed form at Loughor. Then followed a brief biography of the chief apostle of the movement. Medical evidence was quoted to show that there had been no increase of lunacy in connexion with the Revival. Hallucinations of various kinds had occurred, those which had attracted most attention being the lights seen round the coast of Tremadoc Bay. While many of the cases of these quoted in the newspapers were probably ordinary lights misinterpreted, there were others in which it seemed clear that the lights were either hallucinatory or due to some physical cause not yet discovered. The lecturer urged that geologists and other scientific men should make a careful investigation of the neighbourhood with a view to discovering if any physical conditions had caused these appearances.

THE Second Part of the Report of the Fishery Board for Scotland has been issued. It consists of a Report on Salmon Fisheries, and the price is 1*s.* 6*d.*

THE Paris Académie des Sciences Morales et Politiques on Saturday last announced the manner in which the Prix Jules Audéoud of the value of 12,000 fr. is awarded this year. The object of this prize is to

"recompenser des ouvrages imprimés, publiés depuis quatre ans, et des institutions, des établissements publics ou privés tendant à l'amélioration du sort des classes ouvrières ou au soulagement des pauvres."

Nine gold medals, each of the value of about 1,000 fr., have this year been awarded to various persons and companies, one of which is taken by Dr. Renou for his book 'Les Maladies Populaires,' and another by M. Louis Rivière for his treatise 'La Terre et l'Atelier, Jardins Ouvriers.' The Académie des Inscriptions et Belles-Lettres has awarded (on the foundation Bordin) a prize of 2,000 fr. to M. Glotz, professor at the Lycée Louis-le-Grand, for his essay on 'La Solidarité de la Famille dans le Droit Criminel en Grèce.'

FOUR new variable stars are announced: one in the constellation Gemini, by Herr A. Tass, of the Astrophysical Observatory at O-Gyalla, and three (two in Draco and one in Cygnus) by Madame Ceraski, examining photographic plates taken by M. Blajko at Moscow. The last of these will be reckoned as var. 76, 1905, Cygni; its mean magnitude is above the ninth, from which it appears to change about half a magnitude on either side; the two in Draco are when faintest below the twelfth magnitude, but the second (var. 75, 1905, Draconis) has this year risen to about nine and a half.

FINE ARTS

THE CHURCH HISTORY EXHIBITION AT ST. ALBANS.

(Second Notice.)

THIS exhibition is so embarrassing in its completeness and variety that it is difficult to choose the most salient points for notice.

In a somewhat awkward corner of the lobby to the great hall is a fine set of ground plans of English monasteries, coloured according to the respective dates of the remains, which are the work of Mr. W. H. St. John Hope and Mr. Harold Brakspear. We believe that these gentlemen have an important work in contemplation on this subject. As they are all on a uniform scale of 24 feet to an inch, these plans are admirably suited for comparison. The eleven examples form a comprehensive set of English religious houses. Those of the great Cistercian Order are Waverley Abbey, the first of the order founded in England; Fountains Abbey, a noteworthy instance of a Cistercian plan on an extensive scale; Kirkstall Abbey, a complete twelfth-century plan, which has undergone but little subsequent alteration; Furness Abbey, which originally belonged to the abbey of Savigny, in the diocese of Avranches, and did not become Cistercian until 1148; and Hayles Abbey church, Gloucestershire, the plan of which has been recently recovered by excavation. Its interesting apsidal termination with radiating chapels was added early in Edward II.'s reign to enshrine the famous relic known as the Holy Blood of Hayles. Benedictine plans are represented by the cathedral priory of Rochester, with an abnormal arrangement of the cloister on the south of the choir, instead of on one side of the nave, and by the vast building of the noble church of Glastonbury Abbey. Castleacre Priory supplies a fairly complete plan of a Cluniac monastery. Mount Grace Priory, one of the nine English Charterhouses, fully illustrates the peculiar arrangements of the very strict order of the Carthusians; each inmate led a solitary life in a diminutive two-storied house with garden attached, the houses being arranged round a cloister. Lacock Abbey, Wilts, affords an almost complete example of the claustral buildings of Austin nuns or canonesses; it was converted into a dwelling-house soon after the dissolution of the monasteries. But the most interesting of all these plans, recovered by recent excavation, is that of Watton Priory, of the English order of

St. Gilbert of Sempringham. The plan shows the arrangements necessary for a double community of nuns and canons with a common church; the nuns' cloister lay on the north side of the church, and that of the canons a considerable distance further north, with a long passage communicating with the church.

Seals are not made a speciality of this exhibition, but below these plans is a case of facsimile casts of a large number from the muniment-room of Magdalen College, Oxford; they include seals of seventy archbishops and bishops, seventeen of diocesan officials and courts, and ninety of monasteries and chapters. No other college in the kingdom has anything like so large a number of original sealed charters and grants, the reason being that the evidences of the several small religious houses suppressed in the fifteenth century in favour of Bishop Waynflete's collegiate scheme were transferred *en bloc* to the new foundation, and have remained there in jealous custody ever since.

On the staircase and lobby walls, and on screens in the ante-room, are large collections of engravings of ecclesiastics and a few good oil paintings. Among the latter are a contemporary portrait of Laud, lent by the Rev. L. Hughes, and some good portraits sent by Lord Kenyon, including one of Dean Nowell.

The most interesting display in the ante-room is the collection of musical instruments formerly used in churches, which are lent by the Rev. F. W. Galpin. There are three types of the small portable organs which were used in church services from the fourteenth to the seventeenth century. The smallest of these, called the Portative, is often represented in pictures of St. Cecilia, and not infrequently carved on church corbels; it was slung by a strap over the shoulder, and played with one hand by the organist in processions or otherwise. The Positive organ here shown has four stops, and is *circa* 1600; this was a larger instrument, and was placed on a stand during use, but it could be moved about when required, in distinction to the much larger stationary one, usually described as "a pair of organs" from the double bellows. The Regal was another form of the Positive organ, but furnished with reeds; the interesting specimen here shown, *circa* 1620, is constructed in the shape of a large book, into which the key-board and pipes can be packed away, while the covers form the bellows. With regard to the second class of these portable organs, they were often borrowed by smaller churches for particular local festivals. The catalogue gives an apt quotation from the 'Winchester College Annals': "For 2 ssh staves for carrying the colledge organ to Clere, 8*d*."

Among the instruments is a cornet dated 1518. Cornets used often to be employed to support the treble voices of the choir. The catalogue mentions that payments for this purpose are to be met with in the account-books of Westminster and Trinity College, Cambridge. In Evelyn's 'Diary' (1662) regret is expressed that "now no more is heard the cornet which gave life to the organ," and in playing which the English were so skilful. Mr. Galpin describes it as blown in the same way as the modern brass instrument of that name, but having otherwise nothing in common with it. In the register of Ashbourne Church, Derbyshire, from 1702 to 1739, are numerous interpolations, including a long description of the opening of the great organ in 1710: "Mr. Rathbone of Nottingham played the Organ, and Mr. Henry Valentine, who made the Organ, stood by him with a Trumpet." Was not this trumpet probably the old cornet? A flute with one key, by Potter, of London; a clarinet with six keys, by Gerrock, of London; a violin signed L. Hill, Newington Causeway; and a bass viol of English make, all *circa* 1800, belonged to the church band of Hatfield Broad Oak, Essex. Other church band instruments exhibited are a hautboy with three keys, by Milhouse, of London; a bassoon with four keys, by Stanesby, of London, 1747; that quaint-looking instrument, a serpent, with four keys; and a bass horn, with three keys, by Key, of London. The last of these was used for many years in the parish church of Oaksey, Wilts. There is another hautboy, exhibited by Canon Gibbs, which used to be played in Aldenham Church. Three pitchpipes are also shown, pertaining respectively to the churches of Aldbury, Langton, and Chelmsford.

A large case in the ante-room holds a good selection of Psalters with musical notes, and of autograph MS. anthems by distinguished church composers, lent by Dr. W. H. Cummings. Here is 'The Booke of Common Praier noted by John Merbecke,' printed by Richard Grafton in 1550. A magnificently bound great folio volume contains anthems composed by Handel for the Duke of Chandos; it is in the handwriting of Handel's copyist, Smith. An anthem composed for the funeral of George II. by Dr. Boyce, and another for the coronation of Queen Victoria by Thomas Attwood, are in the handwriting of the respective composers. "Sing unto the Lord," an anthem by A. Sullivan, composed when he was a chorister in the Chapel Royal, is another autograph.

Another case in the same room has a large and interesting collection of metrical psalm-books and hymn-books (formed by the Rev. Dr. Julian, the distinguished hymnologist), beginning with Sternhold and Hopkins in 1576, and concluding with a trial volume of 'Hymns Ancient and Modern,' issued in 1859. The catalogue notes to this collection form an interesting chronological record of the gradual adoption of hymn-singing, at first strenuously resisted, in the services of the reformed Church of England.

In this room, too, is a collection, contributed by the Rev. Dr. Cox, of old carol-sheets and other sacred songs, most quaintly illustrated, which used to be sold by the chapmen; their date is about the last quarter of the eighteenth century.

The Earl of Crawford's invaluable collection of rare royal proclamations on matters pertaining to the Church, supplemented by a few from other sources, is of much historical interest. Among them is a proclamation of 1550, forbidding the eating of flesh in Lent and on other prohibited days. It complains bitterly that "fishe dayes," as regulated by an Act of 2 Edward VI., were being daily infringed, neglected, and broken "by divers and many wilful, arrogant, and disobedient persons." A proclamation of James I., dated March 5th, 1603, maintains the Prayer Book, as the result of a conference, notwithstanding "the mightie and vehement informations" against it, for they had been "supported with so weak and slender proofs." Another proclamation, of October 24th of the same year, administers a further snub in the matter of the Prayer Book to those reformers "whose heat tendeth rather to combustion than reformation, and whose zeale goeth so fast before their discretion." A third proclamation on the same subject, of July 16th, 1604, gave the Puritan ministers time to conform until the end of the following November, when they must submit and obey, or else resign and go. The eating of flesh in Lent and on other fish days, as well as the killing and dressing of it, was again forbidden, in stern terms, by a royal proclamation of 1630.

An Oxford proclamation of Charles I., dated November 13th, 1645, commanding the use of the Prayer Book according to law, notwithstanding "the pretended Ordinances for the New Directory," is contributed by Canon Gibbs. The resolves of the Commons concerning such ministers as should pray or preach against the Government, or who in preaching or praying should make mention of "Charles Stuart or James Stuart, sons to the late king," are set forth on a broadside dated July 10th, 1649.

With the Restoration came another proclamation as to Lent and fish days, on four sheets; it is dated 1660, and is a somewhat revised version of the 1630 proclamation. On July 14th, 1662, a proclamation was issued, to be published in every market town, as to "the better ordring of those who repair to the Court for their Cure of the Disease called the King's Evil." It set forth that the sovereigns of England have for many ages had the happiness to cure such sufferers "by their Sacred Touch and Invocation of the Name of God"; that Charles II. had had as good success therein as any of his predecessors; and that it was henceforth ordered that none should come to be touched, save between All Saints' and the week before Christmas, and in the month before Easter. On December 5th, 1662, a proclamation was issued from Whitehall for the reprinting, publishing, and using of a book entitled 'God and the King'; all schoolmasters were ordered to buy this book, first set forth in the days of James I., and teach it to their scholars, either in English or Latin according to their capacities. No booksellers were to ask more than "sixpence of lawful money of England" for the book, "as they tender our pleasure, and will answer the contrary at their uttermost peril."

A proclamation of James II., here exhibited, dated June 29th, 1688, orders prayers in the Prayer Book for the Prince of Wales, born on June 10th, and afterwards known to fame as "the Old Pretender"; and side by side with it hangs a proclamation of only six months later, ordering the names of William and Mary to be substituted for King James in the same book.

Those who take delight in church plate of every variety, church embroidery, or the other details of church ornaments and goods, will find here the largest variety of the best examples, on both sides of the Reformation, that has hitherto been gathered anywhere or at any time under a single roof. We are glad to hear that the daily attendance is surprisingly good, and that all the evening lectures given in connexion with the show have been crowded.

CONGRESS OF ARCHÆOLOGICAL SOCIETIES.

THE Sixteenth Congress of the forty-one societies in union with the Society of Antiquaries was held at Burlington House on the 5th inst., and was numerously attended by delegates of the various constituent bodies. Lord Avebury being unavoidably absent, the chair was taken by Lord Balcarres.

After the usual business Mr. Chalkley Gould presented an interesting report from the Earthworks Committee, showing the considerable progress that had been made in the work of scheduling and describing these monuments. Copies were also presented of the appendix on the subject of 'Moated Enclosures.' This has just been issued to the societies.

The Dean of Wells had written to the Society of Antiquaries, calling attention to a recent article in *The Quarterly Review* on our national monuments. He asked that some steps should be taken towards scheduling these with a view to their preservation. The letter had been referred to the Congress as a suitable subject for their consideration. Mr. Willis-Bund, in reviewing the means of doing this, spoke of the difficulty that as Chairman of the Worcestershire County Council he had found at the present time in getting their consent to even the most moderate outlay. He advocated the necessity first of scheduling the monuments, and stated his opinion that, in connexion with this matter, it was most important that the Government should be asked to fill up the vacant post of Inspector of Ancient Monuments, vacant by the death of General Pitt-Rivers. He thought that the solution of the other difficulties that

seemed most practicable lay in grants in aid by Government, added to the contributions of local bodies. The Board of Education had in view the formation of school museums to supply object-lessons, but in his opinion the money would be far more advantageously spent in the preservation of national monuments, which might be taken to supply the very best of object-lessons, than in a miscellaneous collection that was likely in practice to be of the most unsatisfactory character.

Several members spoke of their experience in various parts of the kingdom, from which it appeared that some of the county councils had been generous in this particular. Lord Balcarres expressed his opinion that although progress might be slow, there was reason to think that in time the public would be awake to the importance of their monuments.

Mr. Laver (Essex) proposed, and Lord Hawkesbury seconded, "That the Government be asked to proceed at once to the appointment of an Inspector of Ancient Monuments," and this was carried unanimously.

Lord Hawkesbury drew attention to the proposal to mutilate considerably the monument in Westminster Abbey to Capt. James Cornwell, who, after losing both legs at the siege of Toulon in 1743, remained on deck in command until the close of the engagement. This was, he stated, the first monument directly erected by Parliament. The object was to make room for a memorial of the late Lord Salisbury; but the meeting entirely agreed with his view that the removal or mutilation of a monument erected by the nation was to be deprecated as the worst of precedents.

The Rev. H. A. Lipscombe drew attention to the retention by the trustees of the Saffron Walden Museum of brasses that had been proved to come from Sawbridgeworth Church. These the authorities there were anxious to replace. Instances were given of brasses that had been so restored, Mr. Hope stating that the Fitzwilliam Museum at Cambridge had set a good example in this way.

It appearing that there was no chance of the Bill for the Custody of Local Records being proceeded with this Session, it was decided to refer it to the sub-committee, to which Dr. Phillimore was added in place of the late Mr. Blashill.

Mr. J. H. Round introduced the subject of Court Rolls, and stated that Sir Alfred Scott-Gatty, Garter King-of-Arms, and Mr. Burke, Somerset Herald, who were both present, would be willing to serve on a committee to prepare a report as to what steps could be taken for their scheduling and preservation. Mr. Oswald Barron also spoke of the great importance of these records, and drew attention to the little-known fact that the Public Record Office were authorized by statute to receive and provide for their safe custody. It was agreed that Mr. Round, Garter King-of-Arms, Somerset Herald, Mr. Brady, and Mr. Oswald Barron be appointed a committee to deal with the subject, with power to add to their number.

Mr. Laver (Chairman of the Essex Archæological Society) drew attention to the proposal to withdraw from Essex ten parishes, which would be added to the county of Herts for administrative purposes. In a former case two parishes had been so withdrawn and added to Cambridgeshire, and in spite of all assurances were now included in that county in all maps. Mr. Willis-Bund drew attention to the fact that the main difficulty arose from the District Councils Act of 1904, which provided that where a union was in more than one county there must be separate district councils. If this clause were altered, there would be no difficulty in allowing county boundaries to remain as they are.

After some verbal alterations suggested by Sir Edward Brabrook, Mr. Laver moved and Mr. Andrews, on behalf of the East Herts Archæological Society, seconded a resolution asking the Prime Minister to have the difficulties of administration removed by some amendment of the Local Government Act rather than by alteration of the ancient and established boundaries of counties. This was unanimously agreed to.

ARCHÆOLOGICAL NOTES.

THE squabble between the Egypt Exploration Fund and Prof. Petrie, as exemplified by the recent correspondence in *The Times*, can in itself concern no one but themselves, and one is prepared to hear that there have been faults on both sides. Yet the competition for subscriptions to which it has led seems likely to be disastrous to English exploration in Egypt. Prof. Petrie, indeed, put the matter in a nutshell when he said in his first lecture last term that those who wished the excavations at Deir el-Bahari to continue should subscribe to the Fund, but those who wanted him to continue his work, to the Egyptian Research Account. The proposed School of Archæology, into which this idea has since developed, is hardly likely to be a long-lived institution, for Prof. Petrie—to do him justice—has never pretended to much acquaintance with the Egyptian language. As, too, his historical theories have hardly commanded general assent, it seems likely that the main object of the school is to provide him with funds wherewith to excavate. Unfortunately, Prof. Petrie has never ceased to complain that since he abandoned Abydos, inferior sites only have been allotted to him, and Pithom, a site thoroughly worked over more than twenty years ago by Dr. Naville, is the only field which he has yet suggested as likely to occupy his energies in the near future. But, in the mean time, he remains the only English-speaking Egyptologist who, by his real gifts of eloquence and easy writing, is at all likely to arouse any enthusiasm in the cause of Egyptian excavation, and the consequence of the present quarrel will, therefore, probably be that he will succeed in drawing away for ever many subscribers from the Fund, without being able to keep them for more than one or two seasons to the Research Account.

In these circumstances the position of those gentlemen whose names appear upon the direction of both bodies seems inconsistent. Mr. Somers Clarke, Mr. W. E. Crum, Prof. Ernest Gardner, Prof. Macalister, Mr. Towry Whyte, and Sir Charles Wilson are, or at any rate were at the beginning of this year, on the committee of the Egypt Exploration Fund, and we have not yet heard that they have taken any steps to sever their connexion with it. But all these names appear on the general committee of "the Egyptian Research Account and British School of Archæology in Egypt" in its prospectus, which bears no signature, but states, among other things, that

"the means of support for his [Prof. Petrie's] studies in Egypt during the last few years having lately been diverted to other work, the continuance of his researches will now depend entirely upon the contributions to the Research Account."

From the Fund's published accounts it would seem that the only work, other than Prof. Petrie's excavations, to which the Fund's resources have been lately applied has been the digging at Deir el-Bahari, which is, as we learn from the letter of the Fund's president and treasurer to *The Times*, to be continued during the ensuing season. It would seem, therefore, incumbent on the gentlemen enumerated above either to resign their position on one or other of the competing committees, or to explain what they mean by the use of the term "diverted." Do they wish us to believe that the work at Deir el-Bahari has been carried on without their consent?

In the last published number of the *Annales du Service des Antiquités* M. Maspero recants the opinion formerly expressed by him, and enshrined in his 'Histoire Ancienne de l'Orient,' that the animal sacred to Set, which so often appears as his emblem, was the jerboa. The long-eared, pointed face and slender neck usually associated with the god of evil remain yet to be identified. Neither the oryx, the okapi, nor the ass, which have been suggested, seems to present all the characteristics of this typically evil-looking beast. On *à priori* grounds one would probably decide for the last named, were it not for the excessively convex nose, so "Roman" in shape as to suggest the tapir or some other pachyderm with which it is represented on the magic ivories.

Mr. Hogarth, Mrs. Lorimer, and Mr. Edgar give in the current number of *The Journal of Hellenic Studies* the results of a visit paid to Naucratis in 1903. Mr. Hogarth vindicates the accuracy of Herodotus and Strabo in asserting, contrary to the opinion put forward by Prof. Petrie, that the town lay actually on the bank of the Nile, and not, as its former excavator claimed, on a canal derived from it. He also impugns Prof. Petrie's theory that some catastrophe overtook the town in the sixth century B.C., and considers that he put the date of its extinction too early. As for the Great Temenos described in much detail by his predecessor, he denies that it ever existed, and says that Prof. Petrie was here deceived by relying upon the statements of "local Arabs" rather than on systematic digging. With regard to the last-named mistake, however, he says that it was "at the time and under the circumstances" almost inevitable.

Mr. Edgar's contribution to the same article brings to light a curious theory concerning the coarsely modelled figurines found in great numbers on this site, and hitherto identified with the Eleusinian Baubo. Mr. Edgar now thinks that they were one more instance of the extraordinary care taken by the Egyptians to provide the dead with all that they could by any possibility require in the next world, and that from their constant occurrence as burial-furniture, they were intended to act as the dead man's wives. As he says, it was a less barbarous form of piety than killing his widow; but one would be glad to have more evidence before accepting this view. They are certainly not always found in tombs or with mummies, and the existence of some sort of phallic worship among the Greek settlers at Naucratis is vouched for otherwise.

Doubts are thrown by several writers in *The Scientific American* on the supposed discovery of a Mycenæan temple at Nippur, quoted some weeks ago in these notes (*The Athenæum*, No. 4047) from the same journal. The better opinion now seems to be that the temple in question was founded in Hellenistic or even in Parthian times.

M. Paul Foucart's 'Culte de Dionysos en Attique' is a careful study on a subject which this scholar has made his own. He, of course, finds many parallels between the rites of Osiris in Egypt and those of Dionysus in Attica, particularly in those rustic festivals, including the Phallophoria—or, as he calls it, the Phallagogia—which he associates directly with the posthumous birth of the child Horus. M. My, who reviews the paper in the *Revue Critique*, does not find M. Foucart's arguments entirely convincing when he comes to the urban Dionysia, and says, with some justice, that in his quotations from Aristophanes M. Foucart commits the offence of quoting the passages that help to sustain his theory and ignoring the rest. Yet, when all is said, the many likenesses between the worship of Osiris and that of Dionysus remain too numerous to be accidental, and M. Foucart's main position in the matter seems to be intact. One cannot help thinking,

however, that the key to its complete establishment should be looked for in the Alexandrian cult of Serapis and Isis rather than in our very few relics of the Eleusinian worship, the secret of which was probably a good deal better kept.

LETTERS FROM THE LATE G. F. WATTS, R.A.

Lemnerslease, Guildford, Surrey, July 4th, 1905.

DURING the last years of my husband's life it was with real regret that he found himself and his art apparently becoming a somewhat popular subject with authors, to whom, as I am sure they would allow, he very reluctantly granted the permission that was asked, simply because the manner of the request made it very difficult for any one of his nature to refuse. Several books of varying lengths were thus published during his lifetime, and permission was given by him some years ago for a more considerable work upon his art, which has not yet appeared; though, indeed, could he have believed himself free to choose, he would have decided then and for the future that by his pictures and sculpture only his mind should be expressed. Remembering this, it is not without much hesitation and reluctance that I have come to the conclusion that it is right for me to make the attempt to give my husband's life of thought, as far as possible in his own words. From his own notes, from letters in my possession, as well as from those already kindly lent to me by friends and by strangers, I hope, without making any claim to literary experience or ability, to reveal from within the personality which drew forth the deep love and veneration of so many intimate friends. Further, I should like to add that since my husband's death no permission has been asked, or granted by me or my co-executor, for any publication of his letters, and I have not placed those in my possession in the hands of any biographer. I am anxious to say this, as some misapprehension seems to have gained ground on this point. I shall be very grateful if you can give me space in your columns for this letter. I want to appeal to any one possessing letters, or even short notes, from my husband, and make known to them how invaluable these would be should they find it possible to lend them to me. Needless to say, all notes and letters thus entrusted to me will be most carefully kept and returned. MARY S. WATTS.

ENGLISH EMBROIDERY.

Chipping Campden, Glos., June 27th, 1905.

UNDER this headline I find in *The Athenæum* of the 17th inst. mention made of the Campden examples.

I believe it is mainly due to the care of the present vicar, Mr. Carrington, that they are fittingly provided for. The cope is now being exhibited at St. Albans, and has been much damaged by time and careless treatment. The altar frontal, in two or three pieces, is now on exhibit at the Burlington Fine-Arts Club, and in better condition. Both are insured against risks below their intrinsic value, merely for safety in removal.

Strangely enough, neither of them is alluded to in the Campden church books or registers, and nothing is known of their history. In this they are unlike the Pienza and Ascoli copes, which are known to be gifts of the Popes Pius II. and Nicholas IV. I am sorry to see the lukewarm interest taken in these local treasures, and expect before long to hear that they have shared the fate of the Campden town silver maces, and gone nobody knows for certain whither! WILLIAM MERCER.

SALES.

AT Messrs. Christie's on Saturday, the 1st inst., the following were sold:—Drawings: T. S. Cooper, Cattle by a River, Evening, 68*l.*; Summer, Cows and Sheep on the Bank of a River, Evening, 77*l.*; Winter, a Peasant driving a Flock of Sheep, 63*l.* D. Cox, Powis Castle, 535*l.*; Lower End of Llyndinas, North Wales, 110*l.* Birket Foster, Venice, 50*l.*; Gibraltar, 81*l.*; Naples, 78*l.*; The Pigsty, 78*l.* Sir J. Gilbert, Sir Andrew Aguecheek writes a Challenge, 115*l.* S. Prout, Albert Dürer's Well at Nuremberg, 210*l.* F. W. Topham, At the Well, 157*l.* J. W. Whittaker and F. W. Topham, Returning from Market, 168*l.* J. Holland, Greenwich, 73*l.* Pictures: J. Linnell, The Return of Ulysses, 262*l.*; Driving the Flock, 1,029*l.* Erskine Nicol, An Irish Merry-making, 168*l.* A. W. Hunt, Rents and Scars in the Coniston Fells, 136*l.* B. W. Leader, A River Scene, with a man towing a punt, 157*l.*; On the River Llugwy below Capel Curig, 168*l.* H. Fantin-Latour, Flowers in a Glass Bottle, 157*l.* T. S. Cooper, Cattle and Sheep, near a shed, 168*l.* Heywood Hardy, Forgiven, 294*l.*; The Toast, 199*l.*; Love's Barrier, 199*l.* W. Shayer, sen., Wayside Gossip, 110*l.*

The same firm sold on the 4th inst. the following engravings. After Morland: Inside of a Country Ale-house, by W. Ward, 44*l.* After Reynolds: Anne, Duchess of Cumberland, by J. Watson, 32*l.*; Master Braddyl, by J. Grozer, 32*l.*; Lady Elizabeth Compton, by V. Green, 99*l.*; Lady Bampfylde, by T. Watson, 56*l.*; Lady Elizabeth Foster, by Bartolozzi, 49*l.* After Taunay: La Tambourine, by Descourtis, 26*l.* After Lawrence: Lady Acland and her Children, by S. Cousins, 47*l.*; Master Lambton, by the same, 157*l.*; Countess Gower and Daughter, by the same, 31*l.* After Greuze: La Voluptueuse, by C. Turner, 39*l.* After Opie: The School, and A Winter's Tale, by V. Green, 53*l.* After Romney: Miss Frances Woodley, by J. Walker, 63*l.* After A. Kauffman: Lady Rushout and Daughter, by T. Burke, 26*l.* After Nasmyth: Robert Burns, by W. Walker, 37*l.* After Hoppner: Lady Mildmay, by W. Say, 33*l.*

The Collection Gallotti, to which reference was made in *The Athenæum* of June 24th, was dispersed by M. Paul Chevallier at the Hôtel Drouot on Wednesday week, a total of 112,925 francs being realized by 151 lots. The so-called Opie, Portraits of Gainsborough and his Son-in-law Fisher, brought 4,510fr. Sir M. A. Shee, Portrait of a Young Woman, 5,500fr. English School, Portrait of a Young Woman, possibly by Hoppner, 8,100fr. Van Dyck, Portrait of a Gentleman, inscribed "ætatis 32, anno 1627," 6,500fr. I. van Ravenstein, Portrait of a Girl, three-quarter figure in black velvet dress with broad lace collar and lace ruffs, signed and dated 1632, 25,100fr.

On the following day the Collection d'Hautpoul, also sold by M. P. Chevallier, realized 248,729 francs, there being 75 lots. The principal items were: F. Drouais, Portrait of a Young Woman, half-figure, signed and dated "Drouais le fils, 1760," 41,000fr. Fragonard, Le Contrat, engraved by Blot, and purchased of M. Jules Duclos in April, 1856, by the Comte d'Hautpoul, and exhibited in 1874 at the Exposition des Alsaciens-Lorrains, 29,500fr. Greuze, Bust of a Young Girl, 11,000fr. Lancret, Les Plaisirs Champêtres, 40,000fr.

Fine-Art Gossip.

AT the Baillie Gallery to-day opens an exhibition 'In and Around Cape Town,' water-colours by G. S. Smithard, water-colours and etchings by Miss Ada Galton, and water-colours by the Misses Culverwell.

THE pictures of the late Frederick Reilly are on view to-day at his studio, 11, Holland Park Road. They are being shown for the first time in England, though he was well known for his work in Paris.

MESSRS. HENRY GRAVES & Co. invite us to a private view next Monday of landscape paintings by Mr. Yokoyama-Taikan and Mr. Hishida-Shuinso, members of the Bijitsuin, a school of art founded in 1897 as a protest against the Government art school, which has, it is claimed, imposed Western methods on Japan, to the detriment of national tradition.

THE Guild of Handicraft have open till next Saturday at their gallery in Dering Yard, 67A, New Bond Street, an exhibition of hand-woven silks and brocades by Mr. Edmund Hunter, and English pottery by Mr. Howson Taylor.

IN our article last week on art patronage at Bradford we spoke of Mr. Clausen as A.R.A., but regret to find that we omitted, through inadvertence, to credit Mr. J. W. North with similar letters, representing an honour which he has held, of course, for a much longer time than Mr. Clausen.

THE death, on June 27th at Monnaie (Indre et Loire), is announced of the caricaturist Jules Jean Antoine Baric, known as "Le Daumier des Paysans." Baric was born in 1830, and obtained an appointment in the Paris Post Office. He contributed many caricatures to newspapers and periodicals under the name of "Cravb," but his first success was achieved in 1854, when he contributed his series of "Paysans" to the *Journal Amusant*. He remained at the Hôtel des Postes until 1888, when he retired to Touraine, living among his models ("se promenant en sabots parmi eux)." He accomplished an enormous amount of work during the last fifty years, and issued, in addition to about a dozen theatrical pieces, a large number of collections of his works.

M. ZIEM, the well-known artist, has presented an interesting collection of about eighty of his works — pictures, water-colours, and sketches—to the Municipal Council of Paris, and this will be disposed in a special room at the Petit Palais. It is expected that this room will be opened to the public at the same time as two others which are nearly ready: the Salle Dalou, and the room which is to be devoted to the work produced at the Sèvres manufactory. The opening ceremony will be of an official character.

THE Annual Report of the Deputy Master of the Mint (1*s.* 8*d*) is a Parliamentary Paper of some interest not easy to classify, but courtesy makes us place it under the Fine Arts. The new Great Seals are of singularly diverse order of merit. The two which represent the King mounted are not bad for English seals, but one which shows him seated is somewhat in the nature of caricature.

THE excavations by the Scottish Society of Antiquaries at Newstead, near Melrose, have disclosed a Roman camp of fourteen acres, with traces of baths, ditches, ramparts, and the foundations of five barrack-like buildings 200 ft. in length. The buildings are separated from each other by roads about 29 ft. wide, having footpaths on one side. A sixth building, 190 ft. by 35 ft., is of better masonry. Behind the building is another, which may have been a storehouse. The usual rough pottery has been found, with Samian ware, and a circular brooch of pale blue enamel, with six round spots of red enamel. The coins include those of Nero, Domitian, Hadrian, Antoninus Pius, and Trajan. Other relics are a bronze stilus, iron spikes, spear-head, and a section of water-pipe. The more important finds have been sent to Edinburgh Antiquarian Museum. The camp is much larger than any of those examined by the Antiquaries on the Antonine Wall. The excavation is proceeding under the direction of Mr. James Curle, of Melrose, with Mr. Mackie as master of works. Only about three and a half acres of the station have yet been examined. The making of the North British Railway here in 1846 cut through an old series of burial pits, evidently Roman. The older local histories call the site of the camp Red Abbeystead, no doubt from the red sandstone turned up in the fields, but there is no proof whatever of any ecclesiastical building having stood here. General Roy, in his survey of the Borders, indicates Newstead as a probable site of Trimontium; Alexander Jeffrey, in his 'Roxburghshire,' follows Roy, while Dr. John Alexander Smith, who contributed three papers to the *Proceedings* of the Society of Antiquaries on Newstead station (1850-51), is of the same opinion.

MUSIC

THE WEEK.

COVENT GARDEN.—*Don Giovanni.*

MOZART'S 'Don Giovanni' still forms part of the repertory of Covent Garden, but with the exception of the performance last year under Dr. Richter, it is generally given late in the season, just out of respect, as it were, to the composer, who before the advent of Wagner was held by the public in higher favour than he is at present. So great, however, are the musical beauties and dramatic power of 'Don Giovanni' that it still gives the highest enjoyment to all who can listen to it with ears properly attuned. And much could be done to help the public thus to receive it. The opera was originally played in two acts, and now it is dragged out to four; while in addition two arias are sung which were added by Mozart for the Vienna performance: the "Dalla sua pace" for the tenor Morella, who was not equal to the "Il mio tesoro," and "Mi tradi" for Cavalieri, who wished for an aria in which she could shine as a vocalist. One or other of the tenor songs ought to be omitted, but on Saturday Signor Caruso was the tenor, and the audience would possibly have resented such omission; a strong, but we are glad to say vain, attempt was made to encore the second. The "Mi tradi" is unnecessary to the dramatic action.

As regards Saturday's performance, Mlle. Destinn's impersonation of Donna Anna was strong both vocally and histrionically, while Miss Agnes Nicholls sang extremely well. The latter seemed, indeed, inclined to consider her *rôle* too much from a purely vocal point of view; her stage experience as yet is probably small. Mlle. Donalda was a fairly good Zerlina. Signor Caruso, apparently, did not play the part of Don Ottavio with much zest. In the two songs mentioned above he took high notes at the close. The second may be excused, but scarcely the first. Singers in Mozart's day were, no doubt, allowed a certain amount of liberty in dealing with a composer's text, but not to introduce anything contrary to the spirit of the words; in "Il mio tesoro" Mozart's low notes are singularly appropriate to the text. Signor Scotti sang well, but his "Don" was not sufficiently dignified, neither was M. Journet, that excellent artist, quite lively enough as Leporello. M. Messager conducted.

WALDORF.—*Benefit Performance.*

A PERFORMANCE was given here on Wednesday evening for the benefit of Italian charitable institutions in London. To judge, however, from the audience, the funds, we fear, will not be substantially increased thereby. The bill included portions of four operas by Italian composers: Cilèa's 'Adriana Lecouvreur,' Donizetti's 'Elisir d'Amore' and 'Don Pasquale,' and Verdi's 'Rigoletto.' The performances were excellent, and aroused great enthusiasm. Signor Pini-Corsi was in excellent form, and as the quack doctor in 'Elisir d'Amore' and the old man in 'Don Pasquale' he was very funny. Signor Bonci's singing of "Una furtiva lagrima" and the "Donna mobile" created quite a furore.

Musical Gossip.

AN excellent performance of Thomas Campion's Maske of the 'Golden Tree' was given in the theatre of the Guildhall School of Music last Thursday week. This Maske, presented in 1614 at Whitehall "At the Marriage of the Earle of Somerset: And the right noble the Lady Frances Howard," was printed shortly afterwards, and the volume, which served as a guide, contains full description of the scenery and dresses, also four songs: two composed by Campion, one by Nicholas Laniere, and one by Coperario. The music for the choral numbers and dances cannot be traced, but for the performance in question instrumental music by composers of the early seventeenth century was selected, while the rest of the vocal music, imitating the style of the period, was composed by the musical director, Mr. A. H. P. Prendergast. The performers, with a few exceptions, were students of the Guildhall School. There was an orchestra of strings and oboe, Miss Nellie Chaplin presiding at the harpsichord. Revivals of this kind are instructive. We find a refreshing directness, simplicity, and soul in Elizabethan music which form a striking and not unwelcome contrast to the elaborate and, at times, dry music of the present day.

THE programme of the Patron's Fund concert at Queen's Hall contained works of promise rather than of actual achievement, and of these three may be mentioned. The first was a suite by Mr. Haydn Wood consisting of an Andante, a set of Variations on an original theme, and a Polonaise. The Variations are good; Nos. 3 and 4 particularly so. The variation form, however, is calculated to display a composer's skill rather than his individuality. Mr. G. von Hoht's 'Mystic Trumpeter' shows imagination, also ambition; the composer as yet is too much influenced by Wagner and Strauss. Mr. Harry Farjeon's 'Hans Andersen' Suite is a bright, clever composition, though more or less conventional. More than sixty compositions were sent in, and with music widely differing in form and character, the process of selection can have been no easy matter.

MISS E. L. ROBINSON announces five concerts to be given in the autumn by the Joachim Quartet at the Bechstein Hall. The dates are as follows: evenings, November 20th, 22nd, and 24th; and afternoons, November 21st and 23rd. The programmes will be devoted to Beethoven, the whole of whose string quartets will be performed.

AT the sale by Messrs. Sotheby of the library of the late T. W. Taphouse, John Case's 'The Praise of Musicke,' printed at Oxenford by Joseph Barnes, 1586, realized 5*l.*; Dieupart's 'Six Suittes de Clavessin,' 5*l.* 5*s.*; the original edition of William Bathe's 'Briefe Introduction to the Skill of Song,' printed by Thomas Este, 11*l.*; T. Morley's 'Canzonets; or, Little Short Songs to Three Voyces' (1606), brought 21*l.* 10*s.*; while 'Parthenia; or, the Mayden-head of the First Musick that ever was Printed for the Virginals,' fetched the high sum of 47*l.*

TWO stage performances of Wagner's 'Parsifal' were given by the Wagner Society at Amsterdam on June 20th and 22nd, under the direction of Dr. Henri Viotta. Wagner did not like the idea of his Bühnenweihfestspiel forming part of an ordinary opera-house repertory, so that these Amsterdam private performances, given by a society which bears the master's name, and which for many years has worked zealously in his cause, ought scarcely to have provoked the ire of Bayreuth and its champions. A brief account in the *Allgemeine Musik-Zeitung* of June 30th speaks in highest terms of the rendering of the work both as regards music and staging. The cast of these first performances in Europe outside Bayreuth deserves mention: Forchhammer (Parsifal), Breitenfeld (Amfortas), Blass (Gurnemanz), Kromer (Klingsor), Holm (Titurel), and Frau Litvinne (Kundry).

A WATCH which belonged to Handel became at his death the property of the merchant George Amyand, one of the executors named in the composer's will. It afterwards passed into the hands of William Snoxell, an amateur member of the Sacred Harmonic Society and one of the donors to the library of that Society, and at his death in 1879 the watch was bought by Henrietta M. Mackenzie, also a member of the Sacred Harmonic. This lady has been induced to part with it, and Dr. W. H. Cummings, who already possesses several interesting Handel relics, is now the owner of it.

PERFORMANCES NEXT WEEK.

SUN.	Sunday League Concert, 7, Queen's Hall.
MON.	Mr. Charles Phillips's Concert, 3, Bechstein Hall.
—	Royal Opera, Covent Garden.
TUES.	Mlle. Bauermeister's Farewell Matinée, 3, Covent Garden.
—	Mr Jan Mulder's Concert, 8.30, Salle Erard.
—	Royal Opera, Covent Garden.
WED.	Royal Opera, Covent Garden.
THURS.	Royal Opera, Covent Garden.
FRI.	Students' Performance, 8, Guildhall School of Music.
—	Royal Opera, Covent Garden.
SAT.	Royal Opera, Covent Garden.

DRAMA

Dramatic Gossip.

A VERSION of 'Eleanor,' by Mrs. Humphry Ward, revised and in part rewritten by the author, was given at the Court Theatre on the afternoons of June 29th and 30th, with Mrs. Beerbohm Tree as Eleanor Burgoyne, Miss Lilian Braithwaite as Lucy Foster, Miss Madge McIntosh as Alice Manisty, Mr. Basil Gill as Edward Manisty, and Mr. J. D. Beveridge as Father Benecke. Since it was first seen at the same house on October 30th, 1902, with a cast almost entirely different, it has undergone much change and little improvement. Cases in which a revised version has been accorded a success denied the original are all but unknown on the stage.

'THE CORRECT THING' is the title of a one-act play by Mr. Alfred Sutro, produced at Drury Lane on the afternoon of June 29th. The correct thing is what is not done by D'Arcy Galbraith when, in view of his forthcoming marriage, he seeks to provide for the future of Kitty Bellamy, his mistress. A not too agreeable study of modern existence was well acted by Mr. Norman McKinnel and Miss Darragh.

AN abridged rendering of 'The Comedy of Errors' is being given in competent fashion by the Benson Company at the Adelphi. 'Aylmer's Secret,' a rather gruesome fantasy by Mr. Stephen Phillips in the line of 'Frankenstein,' is also performed. The secret in question is that of life, which Aylmer finds himself able to inflict upon a creature of his own composition. Needless to say the result is disastrous. Mr. Benson plays the chemist and Miss Mabel Moore his daughter, with whom "the being" falls in love. The "being" himself is played by Mr. Henry Ainley.

'AMOSIS' is the title of an anonymous and gloomy fantasy in French which was given at the St. James's on Monday afternoon. Its scene is an Egyptian tomb, and the characters were supported by Madame Georgette Leblanc-Maeterlinck, Miss Dorothy Grimston, and M. Paul Berton.

THE season of Madame Bernhardt at the Coronet terminates this evening, and with it the French summer invasion concludes. On Monday the actress gave Phèdre in unsurpassed fashion, and on Wednesday appeared in 'L'Aiglon.' 'Pelléas et Mélisande' has also been given.

BEFORE quitting Terry's Theatre Madame Réjane appeared as Cyprienne des Prunelles in 'Divorçons.' Of this character she gave a grievously extravagant and quite inartistic performance, being supported in so doing by a company that has shown itself capable of better things. Her performance showed the unflattering estimate she had formed of English playgoers. As the actress is credited with the intention of establishing a permanent home of French comedy at the Royalty, it is to be hoped that she will find cause to change her views as to the imbecility of the English playgoer, the justness of which we are not at present prepared to dispute.

'WHAT THE BUTLER SAW,' by Judge Parry and Mr. Frederick Mouillot, which has been given at Southampton under the title of 'The Absence of Mrs. Barrington,' will be produced in London early next month.

MR. GEORGE ALEXANDER has entrusted to Mr. Melvill, the translator of 'The Man of the Moment,' the task of preparing an adaptation of 'La Bourse ou la Vie,' a comedy of M. Alfred Capus produced at the Gymnase on December 4th, 1900.

'MAINLY CONCERNING JO' is the title of the new play of Mr. Clyde Fitch in which Miss Maxine Elliott will reappear in England next spring. It will be first seen in September at the Criterion Theatre, New York.

AT the last moment the production at the Criterion of 'The Axis' and 'Where the Crows Gathered,' promised for Saturday, the 1st inst., was postponed until Wednesday in the present week.

MR. WEEDON GROSSMITH will have a short season at the Comedy Theatre, whereat in the course of next month he will produce 'The Duffer,' a piece of his own, presenting the tribulations of a modern painter.

TERRY'S THEATRE is now closed, and will, before reopening in the autumn, undergo some structural alteration, which includes the provision of more adequate dressing-rooms.

JOINT management of a West-End theatre is to be undertaken by Miss Lena Ashwell and Mr. William Greet. Among the pieces secured are works by Miss Clotilde Graves and Mr. C. M. S. McLellan.

MR. FREDERICK HARRISON will, as actor-manager, open the Haymarket on September 6th with 'On the Love Path,' a three-act comedy by Mr. McLellan. His company will include Miss Ellis Jeffreys, Miss Jessie Bateman, and Messrs. Eric Lewis, Sydney Valentine (stage manager), Arthur Williams, A. E. Matthews, and Kenneth Douglas.

THE second season of the Mermaid Repertory Theatre will begin under Mr. Philip Carr at the St. George's Hall on September 11th. In what is called the complete cycle of the historical plays of Shakspeare, which opens on October 16th with 'King John,' the three parts of 'King Henry VI.' will be compressed into two.

A PROPOS of the announcement that the Mermaid Society are about to give a performance of Peele's graceful comedy 'The Arraignment of Paris' during the University Extension meeting at Oxford in August, Messrs. J. M. Dent & Co. announce that they will include the play in their "Temple Dramatists" series. They expect to have the volume ready in about a fortnight.

THE French stage has lost one of its prominent artists in M. Paulin Louis Boisselot, who was buried at Père-Lachaise on Sunday last. M. Boisselot, who was born in Paris on March 20th, 1829, never, perhaps, reached the very first rank, but he was an excellent comedian, and devoted the most scrupulous care to his parts. He started at the Folies-Dramatiques in 1849, and had been on the stage for fifty-five years, having acted at the Gymnase, at the Vaudeville, at the Renaissance, and elsewhere. He was also author of some comedies and vaudevilles.

MISCELLANEA

THE EDITIO PRINCEPS OF THE 'QUÆSTIO DE AQUA ET TERRA.'

Fiveways, Burnham, Bucks, June 29th, 1905.

IN *The Athenæum* for October 16th, 1897, I gave a list of five copies of the exceedingly rare *editio princeps* of the treatise 'De Aqua et Terra' attributed to Dante. On November 13th following a note appeared from Mr. T. W. Koch, stating that a sixth copy was in the Fiske Collection in the Cornell University Library. Prof. G. Boffito, of Florence, now announces his discovery of yet another copy in the Vatican Library (Fondo Barberini). Italy can now boast of five copies, England of one, and America of one. (See my 'Dante Dictionary,' *s.v.* 'Quæstio de Aqua et Terra.')

PAGET TOYNBEE.

LITERATURE

Five Years in a Persian Town. By Napier Malcolm. (Murray.)

THIS is a most interesting description of Yezd, "in the very centre of Central Persia," where the author was for some time engaged in missionary work, and enjoyed unusual opportunities of mixing with all sorts and conditions of people. The experience of such a stay, as he says apologetically, is not a traveller's experience, but what of that? His results are far more valuable and instructive than any passing impression could possibly be, and the sympathetic picture of Yezd scenery, life, and manners which he has drawn with minute and vivid accuracy is as memorable as it is rare. Take, for example, the following passage from his account of the sandy desert amidst which the solitary town is situated:—

"Of course there are oases; but what is called an oasis is not really very different in character from the desert that surrounds it. It is the same desert artificially cultivated. In the plains the water is brought from a distance, and when it is applied the ground consents to nourish exactly those seeds that have been sown. There are hardly any weeds, no turf, no tangle, no hedges, and no waste green. Every blade in the artificial wheat-field is an isolated unit that may be pulled up without disturbing its neighbour. Even in the fresher-looking gardens, enclosed and concealed by high mud walls, there is the same meagre, bedded-out appearance on every side. In spite of the possibility of three artificial harvests in the year, one sees at a glance that the very roots will inevitably be annihilated when the water is cut off, and of course this happens pretty frequently. There are no wild trees at all, and those that are reared are very small, and scanty in leafage.....In the hills and round their bases there is a trifle more plant life, but there is no strong contrast to the barrenness below. Only high up in the creases of the mountain sides, right above the cultivations and villages, there are the narrowest strips of turf on either side of the snow torrents. Here one may find small ferns nestling under the boulders, and quantities of soft flowers, or an occasional wild barberry bush. Away from the actual bed of the mountain streams one is again in desert of a kind, though here, too, the scattered dry shrubs will be found alternating with more succulent varieties of plants, and the landscape is by no means entirely bare."

We have no space to follow Mr. Malcolm in his striking description of the town, which seems to be built almost entirely of mud, or in his acute remarks concerning the influence of its architecture and scenery upon the minds of its inhabitants; but we cannot refrain from quoting two sentences which speak volumes as to the flimsiness of the ordinary Yezd house:—

"The wood of the doors and windows is covered with a yellowish brown paint, and warps very badly, as it is used in an unseasoned state. Our cat could generally get in through a bolted door."

The chapter on the character of the people of Yezd shows the author at his best, and will serve to correct many false or superficial opinions prevalent in this country regarding not the Persians alone, but also Oriental races in general—opinions which are based on inability to recognize the fact that what is different from, and even diametrically opposed to, our principles may be good and praiseworthy according to another and perhaps a not inferior standard. Mr. Malcolm allows that

"the Yezdi's faults are numerous, glaring, and interesting. His virtues are not only fewer, but there is much less to be said about them. In the concrete man these virtues show fairly prominently, the vices have their peculiar humour, and the whole is not unlovable."

Such a verdict will not surprise any one who has read 'Hajji Baba,' a book in which the lighter side of the Persian character is admirably portrayed. It is, however, a common error to suppose that this charm and versatility have no background of sterner and nobler qualities. The Persian, as Mr. Malcolm reminds us, is capable of intense devotion to a cause for which he really cares (witness the thousands of Bābī martyrs who died under horrible tortures rather than deny their faith), and of strong affection for those whom he loves. Nor does he lack courage to fight, though patriotism in our sense of the word is unknown to him. As for his military training:—

"He is, I believe, collected by a sort of conscription from certain localities. When collected he is taught about as much of the ordinary elements of drill as is considered necessary in England for the national schoolboy. He is also assigned a wage of a *toman* (about two florins) a month, which, if punctually paid, would be insufficient to cover anything but the barest food expenses. This mistake is, however, generally remedied by his superior officers, who usually intercept so much of his wages that he is bound to look for other means of support. In this he is not discouraged. If he has a little ready cash he usually sets up as a money-lender, his official position and possession of a bayonet assisting him to collect his debts. Otherwise he steals shoes, or takes up some other similar form of employment which does not demand an extensive capital; sometimes he even makes shoes. Once a year he is supposed to be supplied with a uniform, but, though the uniforms are probably not worth more than a few shillings, they are very seldom regularly supplied. He is, however, free to add to his uniform as well as to his pay, and at certain times of the year there is very little left of the original outfit except an old cap with a metal badge, and possibly a belt. When on sentry duty he amuses himself by planting a small garden, four inches by two, in front of his station, and he keeps a heap of rose-heads to press into the hands of passers-by on the chance of extracting odd halfpence."

Among the mental and other characteristics of the Yezdīs which the author discusses, what he terms their "systematized inconsistency" appears to have chiefly impressed him — their habit, that is, of balancing good actions with bad, and *vice versâ*, which is closely connected with the Mohammedan idea that almost every sin may be cancelled by a meritorious act of equal value. At the same time, one may well doubt whether this tendency is mainly religious in its origin. It seems rather to be a natural result of the refined scepticism which constitutes the Persian philosophy of life. Since truth cannot be known, it would be rash to do only what is right: something must be staked "on the assumption that it is more advantageous to do wrong." This sounds exquisitely Gilbertian, but it is scarcely an exaggeration of the way they look at things in Persia.

Mr. Malcolm admits frankly that his book is written "from the missionary point of view," which too often begins in prejudice, and ends with distortion. We do not suggest that he is intentionally unjust to Islam, but he undoubtedly sees it through controversial spectacles; and while much of his criticism hits the mark, we are left with a clear conviction that he has failed to take the true measure of Mohammed, or to understand the secret of the power which Islam exercises over the faithful, and of the marvellous vitality which it is showing in every part of the world to-day. Although the author believes that he has stated nothing about Mohammed which is not a matter of common knowledge, his account is actually founded upon the discredited theory started by Sprenger that Mohammed put himself at the head of "the Hanīf movement."

Subsequent investigators have demonstrated that there never was any such movement, "half religious and half political." The Hanīfs were certain individuals groping, each in his own way, towards a purer religion than that which then prevailed in the Arabian Peninsula—men of solitary and ascetic life who belonged to no party, and thought only of reforming themselves. Possibly Mohammed was inspired by their example: he was unquestionably acquainted with some of them. Whatever political aims he cherished at a later period, all the evidence we have shows that he entered on his preaching as a sincere religious enthusiast. No one can read the early Sūras of the Koran without perceiving unmistakable signs of deep and genuine agitation. It is unnecessary to pursue this

subject further. We cannot expect a Christian missionary to confess that Islam is good in its degree. He may be excused for saying and believing that Islam is radically bad, and that Christianity is not only the highest, but also the sole and exclusive manifestation of religious truth.

We regret that we must leave unnoticed the chapters in which the author describes his missionary work. These are full of interest even to the lay reader, and in a less original book would have deserved special recognition. As has been indicated, however, the real value of 'Five Years in a Persian Town' lies in the sympathetic study of native character and modes of thought. In this respect Mr. Malcolm will not easily be surpassed, combining, as he does, keen insight and a curious subtlety of imagination with an incisive style relieved by delightful touches of dry humour. The volume, it should be added, contains several photographs and coloured prints from drawings by a Persian artist.

Ideals and Realities in Russian Literature. By Prince Kropotkin. (Duckworth & Co.)

PRINCE KROPOTKIN has limited the subject of his lectures to Russian literature in the nineteenth century, and by so doing has been able to get rid of a considerable portion of his subject which can only be considered to have an antiquarian interest. The early Russian chroniclers are valuable as furnishing materials for history, but have no literary significance. Lomonosov, Derzhavin, and Kheraskov are interesting as links in national development, but for the modern Russian possess no more importance than the modern Englishman attaches to some of his own rhetorical writers of the eighteenth century.

The lectures are fittingly introduced by a preliminary sketch of what Russia had done before the nineteenth century, and the book begins with the citation of Turgueniev's eulogium of his native language, which may be styled strong, clear, and harmonious. No feeble-minded people could have evolved such an idiom. Of the early writers, Novikov and Radistchev, the two liberals, naturally most enlist the admiration of the Prince. Due tribute is given to the splendid style of Karamzin (1766–1826), who did so much for Russian prose, and seemed to evoke, as by the wand of an enchanter, the past history of Russia. Whether people agree or not with the opinions of a writer who confessed to an admiration for Ivan the Terrible, it cannot be denied that he wrote history in a fascinating manner. The Russians felt the glamour of his style, and with the enthusiasm for his book there rose an interest in the old poetry which had been orally preserved among the peasants, but had been neglected by the educated classes. A few specimens had appeared in the collection of Kirsha Danilov. Prince Kropotkin devotes several pages to a discussion of the old Russian *bilini*, as they are called, and mentions the various opinions which have been held about their origin, notably that of Stasov, who is still living.

In the eighteenth century satire had been introduced in the polished verses of Kantemir, and genuine comedy had been written by Von-Vizin, a thorough Russian in spite of his German name. Zhukovski improved the style of Russian verse, and by his translations furnished the Russians with models of composition, especially lyrical. The real poet was to come in the person of Pushkin (1799–1837). He enjoyed immense popularity. In a posthumous work on Pushkin extracts are given from a letter of the time, telling how the serfs even, male and female, recited his lines. Kropotkin praises his lyric power, but reserves all the force of his encomium for 'Eugene Oniègin,' which has so long enjoyed boundless popularity among his countrymen. This clever tale in verse embodies many dramatic scenes in which the characteristics of Russian life are described with consummate power. Lermontov is also eulogized by the Prince. The scenery of the Caucasus, which has stimulated the imagination of many Russian writers, is fully described by Lermontov, who had Scotch blood in his veins. The 'Demon' and 'Mtsiri' (a Georgian word signifying "novice") are two charming poems. There may be something to remind us of Byron in these Oriental stories, but the rich colouring is all the poet's own. Russia has had no poet equal to Lermontov since his death in 1841. In his second lecture Prince Kropotkin finds space for many of the minor Russian poets. Various styles of composition began to be imitated by the Russians with more or less success. The influence of Walter Scott induced them to attempt the historical novel, as in the works of Lazhechnikov and Zagoskin, but the real creators of Russian literature were Pushkin, Lermontov, and Gogol. Prince Kropotkin remarks with great truth on the long isolation of Russian literature from the rest of Europe, even though three such brilliant authors had appeared. But perhaps Gogol was altogether too intensely Russian to be appreciated out of his own country, and even to the present day, when the immense reputation of Tolstoy and Turgueniev has broken the barrier, he is little read by foreigners. Ample justice is done to him by Prince Kropotkin, who appreciates both the rich humour of 'Dead Souls' and the pictures of Cossack life in 'Taras Bulba.'

The chapter on Turgueniev and Tolstoy is full of vigorous criticism. These authors are so well known in England that little can be added to their high reputation. But Prince Kropotkin gives just praise to the charming 'Sketches' of Turgueniev, which contain subtle delineation of character and faithful and vigorous presentations of scenery. The beauty of his female characters is an abiding feature of Turgueniev's novels. His mind was like his personal configuration—a mixture of tender, half-feminine sentiments with forceful and compelling manhood. Prince Kropotkin's review of Tolstoy is complete, and due attention is paid to his religious and social views, which have made him appear a beacon to the rest of Europe. The less prominent novelists occupy the fifth chapter, though perhaps some critics would assign a higher place to Dostoievski than Prince Kropotkin gives him, and the 'Oblómov' of Goncharov is a strikingly clever novel. Nekrasov, Koltsov, and other poets are discussed at some length. Justice is done to the vigorous realism of the first of these writers, who may with truth be called a kind of Russian Crabbe. The English author has not been without his influence upon the Russian. Druzhinin, one of the best Russian critics, devoted a book to him, giving large extracts from his poems—perhaps Crabbe is best in extracts, as Edward FitzGerald found. The opposition of Nekrasov to the falsely idyllic and bucolic pictures of rustic life is a genuine Russian sentiment, and this probably explains why we find translations into that language from Hood and Ebenezer Elliott. It is owing to this intense realism that many have denied to Nekrasov the title of poet. The matter is well argued by Prince Kropotkin. The position of Koltsov, the man of the people, writing the verse of the people, is almost unique.

The chapter on the drama gives a succinct sketch of what has been done in Russia in this domain of literature. Prince Kropotkin does not forget to praise Von-Vizin and Ozerov, and later in the nineteenth century we have the fine trilogy of Alexis Tolstoy dealing with the reigns of Ivan the Terrible, Boris, Godunov, and others. Something is said of the clever *bourgeois* comedies of Ostrovski. Under folk-novelists and the realistic school are included Pomialovski, Zlatovratski, Gleb Uspenski, Tchekhov, Maxim Gorki, and others. A glowing eulogy of the powerful writings of Tchekhov, recently lost to us, cannot fail to enlist the reader's entire sympathies. Prince Kropotkin, with considerable reason, regards him as the greatest of modern Russian novelists. Merezhkovski, now living, is a writer of genius, and his works are in course of translation into English. As regards Boborykin, he has great fertility, but like G. P. R. James he seems to have wasted over many works talents which would better have been concentrated upon a few. The tendency of the modern novel in Russia is traced with considerable eloquence; it deals with the proletariat and is Socialistic.

The work of Prince Kropotkin is very comprehensive in view of its scope. He even finds space to say something about the Malo-Russian poets of the Ukraine, the chief of whom was the famous Shevchenko. A short time ago a monument was erected at Poltava to the memory of Kotliarevski, the first writer in Malo-Russian of any celebrity, whose travesty of the 'Æneid' is very popular in South Russia.

We wish to give a hearty welcome to this volume of lectures, which in reality supplies a want in our literature. A few years ago a similar work was published by M. Waliszewski in English, but on the whole it was disappointing. We know not whether it was owing to the Polish nationality of the author, but never was a more complete instance of what has been called "damning with faint praise." From such lukewarm encomiums no one suffered more than Pushkin, who was invariably belittled in the book. The Russian poet has also suffered in this country from a

very prosaic and tasteless version of his 'Eugene Oniègin.' Due compensation is made by Prince Kropotkin, who writes about Pushkin with all the enthusiasm of a genuine Russian. Besides the work of M. Waliszewski, we have had little more than a few sketchy and isolated criticisms. No one has given us a genuine "platform" of Russian literature, except it be the 'Russian Anthology' of Prof. Leo Wiener, of America, alluded to with just praise by Prince Kropotkin. Wiener has brought together a mass of valuable bibliographical and biographical notices of Russian authors. Perhaps he does not shine so much in the "higher criticism," but his book is very useful. He endeavours to make the English-speaking reader realize the Russian authors by translated extracts. These are adequate in the novels, but the poetical specimens, especially in the first volume, supply only pale, water-coloured versions by Bowring and others; but the Professor is not to blame—in many instances no others are available. The English of Prince Kropotkin's book is fairly good, although occasionally stiff and unidiomatic. His translations of the titles of Russian works — sometimes it is a difficult task to express exactly their meaning — are nearly always excellent, and we like his 'Lay of Igor's Raid' better than the translations given by some others who, like him, have delivered lectures in America, *e.g.*, Prince Volkonski's 'Word about Igor's Fights.' These last lectures were published both in English and Russian, and are not without merit. Prince Kropotkin is so accurate, and his knowledge of the ethnology of the Russian Empire is so complete, as we know by his collaboration with Reclus, that we are surprised at his erroneous statement that the Georgian language belongs to the Indo-European family. The only languages akin to it are Suani, Lazi, and Mingrelian, and it has no connexion with Aryan philology, as has been shown by the learned labours of many scholars from Brosset to Erckert.

Records of the Borough of Leicester. Edited by Mary Bateson. Vol. III. (Cambridge, University Press.)

THE third volume of the important municipal records of Leicester fully sustains the interest and value attaching to its two predecessors. This section covers the period between 1509 and 1603. It should be remembered that the older and wider-based government of the town had been superseded in 1489 by the creation, by Act of Parliament, of a close corporation. This self-electing oligarchy sufficed, as the instrument of municipal government, for exactly a century; but in 1589 a new governing charter was obtained. In that year the mayor, the twenty-four brethren, and the forty-eight comburgesses of Henry VII.'s creation were declared by charter to be a body corporate, with the name of the "Mayor and Burgesses of the town of Leicester." The old term *brethren* was changed to that of aldermen, whilst the word *comburgesses*, as applied to the second chamber, dropped its first syllable. But the chief change secured in 1589 was something more than a mere alteration in nomenclature, for, by the charter of incorporation, the power of accepting the transfer of land and holding leases for the community was obtained. With the charter, too, was coupled a grant of Crown and Duchy lands in fee-farm. "Thus," as Miss Bateson remarks,

> "the houses and bits of land, which the burgesses of Leicester in former generations had bequeathed to the Leicester hospitals, gilds, and chantries, for their souls' ransom, came after many days to yield their rents to the borough treasury, and in this there was a measure of rough justice."

The charter of 1589 failed, however, to give entire satisfaction. Ten years later a new one was obtained, by which a fuller measure of powers was secured. The title was again changed, assuming in 1599 the more usual shape of the "Mayor, Bailiffs, and Burgesses of the Borough of Leicester." This charter secured to the twenty-four aldermen the right of electing a recorder, a steward, two bailiffs, a town clerk, and sergeants-at-mace. The coroners and justices of the peace continued to be elected under the charter of Edward IV. The right to use a common seal was granted by the 1599 charter, a right that had been somewhat strangely overlooked in the first charter of incorporation. The town was empowered to issue licences for retail trade, and to forbid unlicensed retail trade except at fair times; to enforce by-laws on the subject of malt-kilns, probably as a preventive against fire risks; and to establish tolls for the wool-market, which were to be used for the relief of the poor. But the change secured by the 1599 charter which probably gave the greatest satisfaction to the inhabitants of Leicester was the bringing under municipal control of the exempt jurisdictions of the Bishop's Fee, of the parishes of St. Mary and St. Leonard, and of the Newark.

The chief sources from which the entries of the present volume, covering upwards of five hundred pages, are culled are the Hall Books containing the Council minutes, the Town Book of Acts, three volumes of Hall Papers, the Chamberlains' Accounts (which are perfect from 1555–6 downwards), and the Locked Book, containing copies of a mass of conveyances. Miss Bateson has clearly made her verbatim selections from this great store of material with considerable discrimination, whilst her general summary, in an introduction of over sixty pages, is excellent of its kind. All the salient points are aptly laid hold of, and their general bearing on municipal history well summarized. The consequence is that this volume is of great importance to the student of town life in the sixteenth century.

The official dress of the Twenty-four and the Forty-eight came under discussion in 1555. The charter of John of Gaunt had promised robes of his livery to the two town bailiffs, as recorded in the second volume of these records, but no other reference to official dress has been found until 1555, when some "newfanglenes" was proposed which called forth the conservatism of both the Lord Chancellor and the Chancellor of the Duchy, who called upon the mayor and his brethren to keep to the old customs. Nevertheless, six weeks after the receipt of these letters an act for wearing of scarlet by the mayor, under the heavy penalty of 5*l.* for transgression, appears on the records. The special occasions for the mayor's scarlet were afterwards defined as Christmas, New Year's Day, Twelfth Day, Easter, Whitsun Day, fair days, the Queen's Majesty's Day, and to meet the judges of assize. When the town was preparing for Elizabeth's visit in 1575, it was ordered that the mayor and all former mayors or aldermen should wear scarlet, the Twenty-four new black gowns of comely fashion, and the Forty-eight coats of black cloth guarded with velvet. Both companies were to ride, but only the Twenty-four were to have footmen and horse-trappings. In 1561-2 a member of the Twenty-four was fined 1*s.* for "comyng into the hall wyth whyt hoose and without a gowne." Towards the close of the century both companies were expected to wear gowns at all their sessions, and also at assizes and fairs.

The town watchmen had to do duty only during the summer months, namely, from Ascension Eve to Michaelmas. The waits were provided with a livery of orange or tawny, and wore cinquefoil badges on their arms, some of which are to be seen in the well-arranged borough museum. They were paid at first by the fees they obtained when acting as musicians at private houses, but at a later period they had wages from the council. As to their instruments, the bass and treble viols are mentioned in a minute of November, 1601.

Sixpence paid for shoeing of "y° post-horse," in the Chamberlains' accounts of 1541-2, is the first entry that points to the borough maintenance of post-horses for royal service. In 1551 the duty of finding four such post-horses was farmed out for the year at 6*l.* 13*s.* 4*d.* In 1570 the number of horses was raised from four to six. The demands made on the town were great, as Miss Bateson points out, both in connexion with the northern rebellion and the movements of Mary, Queen of Scots.

This volume affords full details of the long-sustained struggle for the exclusion of the glovers and fellmongers of certain neighbouring market-towns from trading in Leicester. Other trading by-laws are of much interest to students of economic legislation as illustrative of local municipal strivings :—

> "It seems to have been found difficult to discover one guiding principle which should avoid both the Scylla of excessive and the Charybdis of insufficient supply. In one year the risks of 'foreign' competition had to be met, in the next 'foreign' supplies might be found to run short.....We have spoken of the attempts in good years to exclude 'foreign victual.' There were decisions in bad years to admit it, subject to careful legislation."

Notwithstanding the recurring practical proofs of the futility of their changing by-laws on trade, in a vain endeavour to benefit their town at the expense of their neighbours, the borough authorities of Leicester continued to make and repeal and re-enact their ridiculous little interferences with the free course of trade in almost every year of the sixteenth century. Now it was gloves and leather, and then it was bread; at another time they protected

candles and tallow, and, again, even honey came within their restricting powers.

Other subjects, such as the town finance, poor relief, markets, municipal ovens, weights and measures, sanitation, Sunday observance, and amusements, are fully illustrated in these records, and adequately discussed in the introduction. The licensing system and strenuous attempts at temperance legislation were constantly before the local authorities throughout the century. There is much to be learnt from these attempts, both successful and unsuccessful, to secure sobriety of life.

In a volume such as this, dealing with a mass of records on a great variety of subjects, it is almost impossible to avoid some slips, but we confess to a feeling of surprise at a foot-note of Miss Bateson's on p. 211. On a Sunday in November, 1584, when the mayor was at church, "in the sermond tyme of morninge prayer," a dispatch was brought him, ordering horses to be provided for certain who were "travellinge on the Queene Majesties affayres towards Wingfeild." A note states that this was "Sir Ralph Sadler's house, where Mary, Queen of Scots, was kept confined." The celebrated Derbyshire manor house of South Wingfield was owned by the Earl of Shrewsbury; Sadler was merely there for a brief period at the time when he was made the captive queen's custodian. A few other slips that we have noticed—such as "charities" for *chantries*—are mere oversights in proof-reading.

Japan in the Beginning of the Twentieth Century. Compiled by the [Imperial Japanese] Department of Agriculture and Commerce. (Murray.)

DESPITE a considerable number of misprints which greatly disfigure the volume, this is an interesting and valuable account of the industrial progress of Japan since she abandoned the policy of exclusion. At the outset tea and silk were almost the only exports; they still constitute the most valuable items in the list. A few figures, reduced to approximate sterling amounts, will indicate the great recent advance. In 1868 the tea exported—then, as now, almost wholly to America—was valued at 360,000*l.*, in 1878 at 429,000*l.*, in 1888 at 612,000*l.*, in 1898 at 821,000*l.*, and in 1902 at a million and a half. For raw silk in 1868 the figures are 625,000*l.*; in 1888, 2,800,000*l.*; in 1902, 7,700,000*l.* The silk goes almost wholly to the United States and France. In the former country the silk trade scarcely existed for many years after the opening of Japan; now it is a flourishing industry, while in our own country it has greatly dwindled. Of *noshi* and waste the export increased from 26,700*l.* in 1890 to nearly 700,000*l.* in 1902, and silk goods from 334,000*l.* in 1890 to over three millions in 1902. Cotton yarns exported in 1890 were valued at 230*l.*, in 1902 at nearly two millions; cotton piece goods in 1890 at 18,000*l.*, and in 1902 at nearly 700,000*l.* Copper has risen from nearly 11,000*l.* in 1870 to over a million in 1902. Other exports are seaweed, rice, camphor, lacquer, mats, porcelain, coal, straw plaits, and umbrellas. Of matches not far short of a million's worth was exported in 1902, and other articles to proportionate amounts. The above figures and others in the volume show that Japan has made her principal progress since 1890, and also that it is in produce and not in manufactured goods that that progress has been made so far as exports are concerned. The total value of the exports in 1902 is given as close upon twenty-six millions sterling, against twenty-seven millions of imports. Hence Japan subsists entirely upon her own resources and activities, and, as she has no foreign investments, that portion of her capital which is not accounted for in the above figures must be employed in home industries, of the amount and value of which no statistics are supplied.

The position of agriculture in the national polity is not regarded as altogether satisfactory. Agriculture in Japan is almost wholly tillage; there is hardly any stock-farming. The total value of the produce is estimated at a hundred and two millions, nearly half of which is represented by rice. Cereals (including millets and buckwheat), beans, &c., amount to about thirty millions; cocoons, &c., to about ten millions; other farm products, including live stock and dead meat, to about six millions. Cured tea is put down as just under a million. In 1902 there were nearly thirteen hundred thousand cattle, principally for tillage and manure, and fifteen hundred thousand horses in Japan, showing that a good deal of animal food must now be consumed by the population. In the tenure of land there is nothing peculiar, except that the domain of a peer cannot be alienated or encumbered in any way. The farming population constitutes a little over 60 per cent. of the whole population, and the number of farming households is a little less than 60 per cent. of the whole number of households. These figures accord with an estimate (1901) of the farming population as twenty-three millions distributed over 4,800,000 households, each said to contain on an average 5·8 persons, of whom something under 2·5 (which seems a very high estimate) "may be regarded as of an age capable of doing effective work." But, according to the investigations made in 1887, out of ten parts of the produce of rice land the tenant farmer gets only four; of the produce of upland fields (cereals, &c.) he gets rather more.

"In extreme cases the share of the harvest that falls to the lot of tenant farmers barely suffices to pay the cost of the manure applied to the fields."

The above will give some notion of the character of the work, which extends to more than eight hundred pages, and treats not merely of agriculture and commerce, but of education, communications, finance, and administration as well, dealt with after a somewhat perfunctory fashion. A concluding chapter describes the Japanese colony of Formosa, which is excellently administered, and appears to pay its way and afford a needed outlet for the rapidly increasing population of Japan. That rapid increase is not easy to explain. We believe it to be due mainly to the cessation of famines, owing to the enormously increased cheapness of transport—under the Bakufu, a distance of a hundred miles might almost double the cost of rice—to hygienic measures taken in the event of epidemics and rigorously applied, to the greater domesticity of the *samurai* class, and to the better food and housing of all classes under an equitable administration that, whatever be its defects, does most earnestly strive to better the conditions of life generally.

Since 1902 the rate of progress in wealth has considerably increased, and owing to this increase, as well as to the simple and frugal habits of the Japanese people—it is not too much to say that a yen (2*s.*) in Japan goes as far as 10*s.* in England at the very least—it will be quite possible for the country, at once submissive and ardent, to carry on the present war for an indefinite time.

Apollon ou Dionysos: Étude Critique sur Frédéric Nietzsche et l'Utilitarianisme Impérialiste. Par Ernest Seillière. (Paris, Plon-Nourrit et Cie.)

M. SEILLIÈRE is in the difficult position of one who seeks to interpret a thinker who must at least be styled abnormal, since we are forbidden to say "mad":—

"La 'folie'! N'est-ce pas d'ailleurs un bien gros mot pour caractériser les originalités de Nietzsche? L'épithète de 'dégénéré supérieur' qu'il a la consolation de partager avec presque tous les hommes de génie, au regard de la psychologie moderne, lui convient bien davantage."

Our author brings all a Frenchman's fineness of perception to bear on his task. It is as though some clever doctor of the Salpétrière were expounding the history of a case. The slightest oscillations of the ill-balanced mind are duly observed. The gleam of sanity is noted, being carefully distinguished from its double, the false lucidity of hysteria. The most casual expression becomes a symptom. Now the patient verges on rapturous incoherency—glossolalia. Now he is at the mercy of some persistent image—the hallucination of dancing, or of soaring like a bird. And the wonderful French language never fails to do justice to the subtlety of the psychological analysis, though necessarily it is a scientific rather than a literary French that has to do duty. Meanwhile, a Teutonic erudition is displayed in respect to the bibliography of the subject. The net result is a book a little heavy to read, perhaps, yet absorbing, and all the more creditable to have produced, because it is not easy to have dealings with insanity, more especially the insanity of genius, and to remain oneself "spectateur de sang froid."

Apollo and Dionysus stand for the two widely separate foci round which the mazy speculations of Nietzsche never cease to move. Apollo is the Dorian god whose votaries discipline themselves that they may conquer. Dionysus hails from the East, home of the orgiastic tendency with its two moments — mystic tenderness and frantic, all-devastating fury. Nietzsche in his lucid intervals—so thinks M. Seillière—is for Apollo. But the Dionysiac fit soon

grips its victim again, and is consequently the more characteristic:—

"Incapacité civique, tel est donc le jugement qui s'impose à tout esprit de sang-froid devant l'œuvre nietzschéenne. D'intermittents ou fulgurants éclairs de pénétration et de vérité ne sauraient effacer le caractère dissolvant et malsain de ses suggestions sociales."

Of "Apollinism" we are offered little that is definite and firm of outline, although our author is seemingly prepared to accept it from (the sane) Nietzsche as a satisfactory system of politics and ethics. The fact is that nothing can be more confusing than to try to think in Nietzsche's highly arbitrary terms. M. Seillière has to confess that the enthusiasm of the young professor of Greek philology for all things Hellenic—and, he might have added, the ignorance of anthropology which is still so marked a trait of classical scholarship—made him regard as specifically and exclusively Greek a political organization and a moral tendency that are common to all nascent civilization of the militaristic order. M. Seillière, therefore, on his own account attempts to found the conception of "Apollinism" on a broader historical induction by showing how the immobile "morality of the clan" is, in favourable circumstances, succeeded by a "morality of contract." The latter first arises, he thinks, amongst those bands of volunteers who, as frequently happens amongst existing savages, organize themselves for a raid or hunting expedition. Theirs is not so much a new discipline as the old semi-instinctive discipline of clan-life made conscious. In time the keener perception of the nature and value of discipline reacts on the tribe as a whole, and it voluntarily subjects itself to a social drill of the Spartan type, the reward thereof being successful brigandage. Such, in effect, M. Seillière further appears to think is and ought to be the ideal of the modern nation. China represents clan-morality, with respect and filial sentiment for its watchwords. "Apollinism," on the other hand, that is imperialism, inspires the Western peoples—and their admirer, Japan. The counterpart of such an imperialism in the sphere of private morals is, we are told, a stoicism. It is a corollary of the ideal of a strict social drill that the individual should be sovereign over himself, and his pride—an echo of the collective pride of his nation—enables him to achieve this end.

And how much of all this is to be found in Nietzsche? On M. Seillière's own showing, very little. As might be expected, it is precisely the most paradoxical aspects of "Apollinism" that the "superior degenerate" emphasizes. "It has been asserted that the Greeks died of slavery. It is certain that we are dying of its absence." "Our odious liberals want to have war voted by parliament, decided by the egotist masses who resist it to their utmost. .....The sole remedy for a patriotism sapped by the love of money is *la guerre et encore la guerre*, whose bow, Apollo's weapon, twangs in terrible, yet musical, fashion." A complication occurs in the shape of another piece of absurd terminology. "Apollinism" has to be distinguished not merely from the "Dionysiac," but likewise from the "Socratic" ethic. Socrates (save the mark!) stands for the view that "all men are equal"; and the "dignity of labour" has likewise to be attributed to him. His, in short, is "a morality for slaves." M. Seillière makes no protest. He even alludes to 'Gorgias' 488 D, apparently by way of confirmation. One begins to wonder whether the lucid intervals were quite so lucid as he supposes. When we turn to the "Dionysiac" aspect of Nietzsche's fantasy we are prepared to find

"les deux éléments invariables du dionysisme nietzschéen: l'aspect mystique, attendri, fraternel, presque chrétien parfois de la crise orgiaque, d'une part; son côté bruyant, agité, dévastateur, épileptique d'autre part."

M. Seillière's actual treatment, however, fails to give prominence to the former element, and we are left with the impression that the "satyr" or the "superman"—for they come to much the same thing—is an altogether sinister creation of a diseased mind. At no time is Nietzsche a Darwinian. With him it is never a struggle for life, but always for power. The love of power, however, may take strange forms, extending from the cruelty practised on others (whereof pity is a refined form) to "l'autocruauté de fakirs exaltés." The crowning development of this line of thought—if it can be called thought—is reached in the notion of a fury that has got beyond all consideration of an end, even of power. The "blond beast of prey" simply runs amuck.

"La cruauté dépourvue de tout motif utilitaire, la cruauté exercée avec prédilection sur l'objet aimé, la cruauté comme fête et comme volupté est proprement ce que nous nommons en français le Sadisme."

Whatever trace of "Apollinism," of genuine sane admiration for the timocratic type of state and soul, may lurk behind some of Nietzsche's vapourings about war and the like, there must always remain a doubt in any given case whether we are not merely listening to a poor neuropath's dream of happiness as the aimless discharge of intolerable nervous tension, joined perhaps to the impotent man's barren desire to be doing for very doing's sake.

M. Seillière's book ought to do good. It is written in no unkindly spirit, and, whilst it does full justice to the harmlessness of Nietzsche's private life, is so far favourable even to his doctrines that it seeks to extract and conserve every jot and tittle of sane thought to be found therein. At the same time, it makes clear with laborious thoroughness to the vast multitude of Nietzsche's worshippers that the object of their cult was, from a medical and psychological point of view, of a wavering mental equilibrium. Some, doubtless, will hold that this makes no difference. There has been lately a recrudescence of the primitive belief that to be mad is to be possessed of God; nay, even certain psychologists have shown themselves not disinclined to make capital of the notion. Still, most people will be unable to resist the logic of M. Seillière's relentless diagnosis, and, forced by him to view the most typical of Nietzsche's disjointed extravagances not as oracles, but as the marks of crisis, will experience a natural recoil from the spectacle of the diseased and infra-human.

NEW NOVELS.

Two Moods of a Man. By Horace G. Hutchinson. (Smith, Elder & Co.)

IT is with exemplary and judicial dispassionateness that Mr. Hutchinson analyzes and depicts his man with two moods. That is the duty of the novelist—not to take sides, to set forth in honesty, nothing extenuating. But it is hardly the duty of a narrator who is himself involved in the story, and one rather feels that George Hood's friend, who tells us all about him, was a little too flabby. For frankly, Hood was a mean sort of creature, and stands so revealed. The reader can feel no sympathy for a man who deliberately marries a beautiful girl by gipsy law, and, loving her, as deliberately deserts her and her child to marry an American heiress. Yet it is obvious that Mr. Hutchinson wants us to sympathize all round. To speak candidly, human nature is not broad enough for that; we must perforce even stop short of Mr. Hutchinson's melancholy doubt "To judge them is perhaps to judge through them the Creator, which is hardly within the duty of the creature." But apart from this non-committal tone of the narrative, the novel deserves nothing but praise. Gracia, the gipsy, leaves on one the impression of her beauty, and the American heiress is a thoroughly sensible and good woman. Hood, despite Mr. Hutchinson's statement that he is a "man of flesh, not the stuffed man of a bad novel," does not wholly convince us, and we are left a little dazed by the attempt to explain him and his philosophy. The narrator only made his acquaintance because he returned a pair of squeaking boots to his bootmaker. Well, that is probably like life; it is perhaps too evidently intended to be. But here and elsewhere there is something out of harmony with life—at least, with life as visualized in art.

The Image in the Sand. By E. F. Benson. (Heinemann.)

ONCE Mr. Henry James wrote a short story of two children and two ghosts, which was very thrilling. Mr. Benson has written a story of a forlorn beauty loved by two men, and hated by one ghost, who has been set free to haunt and hurt the living by the rash action of one of these two men, who breaks the amulet which has for many years kept laid the evil spirit of Set-nekht, the Egyptian. But we are not thrilled. The story is carefully conceived and well written, and with excellent restraint Mr. Benson leads us up to the waiting circle of psychical inquirers, but does no more. Only twice do his readers see and hear anything absolute of "It," and this reticence should do much to redeem his book from failure. Yet, none the less, it must be written down a comparative failure at that which it set out to do. Mr. Benson wanted to "make our flesh creep," and he has not. But he has drawn one admirable character in Mrs. Desmond, a lady who, as an act of faith in a kindly Providence, beds out plumbago and begonias and verbenas in mid-February.

XUM

The Little Neighbour. By Mary Deane. (Murray.)

THE heroine provided by Miss Deane in this story is an out-of-the-way sort of person. The word "heroine" as applied to her is rather a misnomer, as the girl is by no means built on heroic lines. Still, since she ends by committing herself to "a watery grave," she has a claim perhaps to the title. Slight creature as she is, she becomes a cause of anxiety and worry, if not of deep and abiding sorrow, to those around her. She remains to the reader a somewhat uncomfortable enigma, whose mental processes have not been sufficiently cleared up. Her position as the last member of an old and not very reputable family ("cut" by the county, or nearly "cut") is peculiar. Her loneliness, poverty, and especially propinquity, bring her to the notice of the extremely good-natured man who buys the Sanfrey property from her scoundrelly father. After playing a base trick or two on the too confiding purchaser, the father quietly deserts his daughter. One gathers incidentally that he does not levant without having formed a plan advantageous for the daughter, but detrimental to the buyer. How far Miss Sanfrey is in the plot does not quite appear. A tumble-down cottage in the grounds has been reserved for the Little Neighbour's use. It gives her, as it were, the freedom of the place, which she does not hesitate to make use of at her own not altogether sweet will. The new proprietor is too kind to fetter her movements, though her presence is an annoyance to him and more than an annoyance to the young couple who have kindly (in their modern way) "adopted" him for his good, and their own. The new squire has more pity on Miss Sanfrey and her lonely situation and fragile physique than on himself. In time public opinion and the Little Neighbour are too strong for him, and he marries her. She is a wayward, not to say weird, little creature, full of whims and oddities, but without soul or mind to work upon. The story is well written.

The Honour of Henri de Valois. By David M. Beddoe. (Dent & Co.)

THIS book has not, as the casual observer might be apt to infer from its title, anything to say about the disastrous period of history during which the last bearer of the name, as we imagined, occupied the French throne. In passing we may, perhaps, question, from a literary point of view, the taste which gives a well-known historical name to a hero of fiction. We shall be having next, we presume, 'The Candour of Elizabeth Tudor,' 'The Virtue of Charles Stewart,' and such-like. However, setting this aside, and passing over for the present the technical faults which seem to indicate that Mr. Beddoe has a good deal to learn before he becomes a successful writer of novels, we can but congratulate him on his selection of a setting for his tale. The struggles between Mahomed—or, as we used to call him, Mehemet—Ali, the great Viceroy of Egypt, and his suzerain at Constantinople, are probably as little known to the average reader as any episodes in the history of the last hundred years. This story is largely concerned with the earlier of Mehemet's great strokes for independent sovereignty—the campaign of 1832, when his army drove the Turks before it over Syria and half Asia Minor. The chief personages are members of the strange group of foreign adventurers who officered his forces—French, English, Irish, Italians. The author, who appears to have lived in Egypt, has evidently studied the history of the time with some care. He has been less precise about his details. Rifles, we take it, were not in frequent use, either in the Turkish or in the Egyptian army, at the period of the story, still less breech-loaders. "Sapristi" was never an Italian expletive. People do not, and never did, say, "Thou hast as little reason for your faith," or "you seemeth." The perpetual use of "M'sieu" (plural, "Monsieurs") is not necessary as an indication that the speaker is supposed to be talking French. An Albanian and a Greek are not the same thing. It is, we believe, usual for a renegade to adopt a Mussulman name, and not to retain that of his baptism. The locution "He was a good man, was Jones," is not pleasing; and when some form of it is, as here, adopted in every chapter, it becomes irritating. If, however, the reader can get over these and other literary blemishes, and is not obstinately prejudiced in favour of elaborate construction or subtle delineation of character, he will find the present work sufficiently engrossing as a tale of adventure. A glossary, by no means superfluous as regards the Arabic terms with which the book is copiously sprinkled, has thoughtfully been provided.

The Walking Delegate. By Leroy Scott. (Heinemann.)

IN 'The Walking Delegate' Mr. Leroy Scott has essayed to write a truthful history of a workman who tried to stand against overbearing capital, and single-handed to fight a "union" man of overbearing manner, of brow-beating (even murderous) repute and stupendous venality. And he succeeded, through something that looked desperately like failure. Buck Foley, the "walking delegate" of the title, arouses in the reader something very like respect for his thoroughgoing rascality and indomitable pluck; but for Tom Keating—married to a shrewish slattern, and allowed by fate just one tantalizing glimpse of the kind of woman who should have been his mate—the feeling one has is of affection, deprecating but sincere. The man is a fool, for he plays with a noted cardsharper for high stakes, to speak metaphorically; but he is a splendid fool, and in the end he sees one of his heart's desires accomplished, and his enemy under his feet. The characterization of the story is gripping, and the dialogue is better than the curate's famous egg. The style is picturesque without being purple.

Don Tarquinio. By Fr. Rolfe. (Chatto & Windus.)

THE tortured style and unnatural wording affected by the author are less irksome to the reader in a work professedly archaistic than elsewhere. This book professes to give the autobiography of a youth in the days of Alexander VI., and preserves the atmosphere of Renaissance Rome fairly well. The reader will compare it with some real book of the time, like the 'Memoirs of Benvenuto Cellini,' and judge how far the writer has made good use of his opportunities. The descriptions are too minute for our fancy, but Cesare Borgia, characteristically introduced in order to show the nonchalant ease with which he can commit a murder on the spur of the moment, is lifelike and effective. There are one or two unpleasant passages, but the way in which the non-moral atmosphere of the world of Machiavelli is reproduced is really striking.

Tom Gerrard. By Louis Becke. (Fisher Unwin.)

THIS is probably the twentieth book of Mr. Becke's that has appeared during the past decade. Regarding this author and his work from the literary standpoint, one may perhaps say that he has been heavily handicapped by possessions usually considered desirable: fluency, industry, a fertile imagination, and a rich store of material. Had he been less plenteously endowed in these directions, Mr. Becke might well have developed real ability as a writer, and learnt the literary virtues of omission and restraint. As it is, the reader who seeks literary distinction in what he reads must prepare for disappointment when he opens one of this author's books. Having granted that purely literary merit is absent from such works as 'Tom Gerrard,' one may admit, appreciate, and even enjoy the slap-dash excitement offered. The characters are stereotyped, to be recognized without thought: brave, hearty, good fellows of boyish simplicity; out-and-out scoundrels who would stick a knife between your shoulders as soon as look at you; passionate gentry who love not wisely but too well; winsome maidens who are ready to be sisters to most men, since they can marry no more than one among their innumerable suitors; vinegary spinsters; and buxom, kindly matrons—one knows them all, and in a friendly way. But if his people are stereotyped, the incidents of Mr. Becke's tale are numerous, and mostly picturesque. He has, for the moment, forsaken his Pacific islands, and chosen Queensland as the background for Tom Gerrard's adventurous romance.

The Whisperer. By Mrs. Coulson Kernahan. (White & Co.)

LARGELY dominated by the personalities of two of the most detestable scoundrels ever conceived, the story under consideration, with its appropriately lugubrious setting of half-ruined mansion, crumbling cliffs, and intersected caves, is not at all comfortable reading. The feeling of nausea engendered by even transitory acquaintance with Phineas Barkhold, a "vulgar drunken beast," a septuagenarian "monster," possessed of not the slightest shred of decency, and his nephew Annington Idris, who "meditates on diabolical plans," and becomes "quite cheerful," is but slightly

mitigated by the sweet passivity and restrained devotion of Mrs. Barkhold and George Danton. Having made the initial mistake of selling herself—for her young brother's sake—to the elder villain, Azelma Marchmont bravely attempts to do her duty by him—a task rendered harder by the presence under the same roof, in the position of librarian, of George Danton, her girlhood's love. With the manœuvres of "the whisperer," Annington Idris, his attempts to ruin these two, and their ultimate triumph, the story mainly concerns itself.

For the White Christ: a Story of the Days of Charlemagne. By Robert Ames Bennet. (Putnam's Sons.)

MR. BENNET has in this novel kept pretty closely to the usual recipe for compounding a romance of mediæval chivalry. A hero of the Crichton type, "all perfect, finished to the finger-nail," an unsophisticated damsel of rather colourless charm, a rival maiden of marvellous beauty and most unscrupulous machinations, and an imposing historical figure — Charlemagne in the present case — are the main ingredients; there is a sprinkling of vikings, knights, and priests; and the ordinary appurtenances, which include a steed of surpassing swiftness and a sword of surpassing sharpness, are not wanting. The author has taken pains over his work, and should content readers who enjoy that kind of fare. Plenty of exciting incident is supplied, and there is also a vein of historical interest, for though actual events are treated with considerable freedom, yet the main features of the age are tolerably well indicated. The delineation of character is conventional, but that does not greatly signify except in the case of Charlemagne himself, who does not impress us as lifelike. A defect, exceedingly common in romances of this class, is the tendency to force the heroic note too insistently; we should feel it a relief if the speech of the characters were a little more like that of ordinary life, and if their achievements were not on so gigantic a scale. Otherwise, the book, though not a notable example of Wardour Street workmanship, is prettily enough designed and executed.

SPANISH LITERATURE.

Spanish Reformers of Two Centuries from 1520. Described by Edward Boehmer. Vol. III. (Strassburg, Trübner.)—It is a pleasant surprise to receive this latest instalment of the work, originally planned by Benjamin Wiffen, upon which Dr. Boehmer has been engaged since 1868. In these days of hasty production it is curious to note that Dr. Boehmer's first volume was issued in 1874, the second in 1883, and that the third is now published after an interval of more than twenty years; but this long delay is justified by the result. A comparison of these essays with those on the same reformers in Menendez y Pelayo's excellent 'Historia de los Heterodoxos Españoles' reveals many minute corrections and many supplementary facts which testify to the writer's scrupulous method and indefatigable perseverance. Dr. Boehmer's knowledge of his subject is unrivalled; his capacity for taking pains is exceptional even among German scholars, and if his English is not always idiomatic, it is clear and often vigorous. It is not his fault that the personages to whom he now introduces us are less interesting and picturesque than those with whom he dealt in the first two volumes. There is no figure to compare in literary accomplishment with Juan de Valdés, or with his twin-brother Alfonso, part-author of the 'Diálogo de Mercurio y Caron'; there is none so attractive as Melanchthon's friend Francisco de Enzinas; none so tragic and pathetic as Juan Diaz, whose murder at Neuburg is one of the most poignant incidents in the history of religious warfare. Even Dr. Boehmer's diligence has discovered nothing that throws light on the obscure personality of Melchor Roman, and it appears that Pero Galés published nothing, though his learning is proved by the fact that Casaubon consulted him deferentially. We have, however, much new and useful information with regard to Antonio del Corro and Cipriano de Valera, both of whom resided for many years in England. Following up his previous demonstration that "Reginaldus Gonsalvius, Montanus," is simply a pseudonym under which several writers collaborated to attack the Inquisition, and that the attribution of the 'Sumario de Indulgencias' to Perez de Pineda is purely conjectural, Dr. Boehmer rejects the common opinion that Corro's 'Lettre envoyee à la Maiesté dv Roy des Espaignes' was published in Latin as well as in French. Later writers have mechanically copied Wood, who misinterpreted a passage in the preface to the 'Articuli Fidei Orthodoxæ' at the end of Corro's 'Dialogus Theologicus'; no Latin version is known, and Dr. Boehmer is persuaded that none was ever printed. Corro's cleverest performance has escaped most of his biographers. In 1588 he issued a treatise entitled 'De Sacræ Scripturæ Auctoritate,' purporting to be printed at Seville and to be written "per R. P. Dominicum Lopez, Societatis Jesu." The treatise was really by Socinus, and "Dominicus Lopez" was as much a myth as "Reginaldus Gonsalvius, Montanus"; yet Corro's trick was so successful that it imposed on the Jesuits themselves, and till 1872 the imaginary Lopez was included in Backer's 'Bibliothèque des Écrivains de la Compagnie de Jésus.' Valera's numerous debts to his predecessors are carefully traced. His 'Tratado' on the authority of the Pope is based on Barnes and Bale; his address to the prisoners in Barbary derives from the 'Epistola Consolatoria' of Perez de Pineda; and the Spanish Bible which circulates under his name is little more than a revised edition of the translation published by Casiodoro de Reina in 1569. On the other hand, the anonymous 'Aviso' on the jubilee is an original work probably written by Valera in English. These are but a few examples of the valuable contributions to exact knowledge made by Dr. Boehmer in a book that may be warmly recommended to all who are interested in Spanish matters.

Señor Perez Galdós writes in a style so simple and direct that one of his 'Episodios Nacionales' naturally suggests itself as a suitable text for beginners, but Mr. F. A. Kirkpatrick's choice of *Trafalgar* (Cambridge, University Press) is not altogether happy. Almost any other volume in the series would be better suited to the purpose; for, though the subject of the tale appeals to English readers, Marcial's boisterous slang and the numerous technical terms in the narrative passages are decided disadvantages. These expressions are meaningless to most students, difficult to translate, and perhaps scarcely worth learning. However, Mr. Kirkpatrick has done his part very well; his short introduction is to the point, and his copious notes are generally satisfactory. "Emperor of Hurly-burly" is not, we suggest, a good rendering of "Emperador de Trapisonda"; *trapisonda* certainly means hurly-burly, but it is also the Spanish for Trebizond, and Gabriel's phrase no doubt recalls an ironical allusion to Amadis of Greece in the first chapter of 'Don Quixote.' Since even so correct a writer as Ruiz de Alarcon trips over *recién* in 'Mudarse por Mejorarse,' a note on the use of this word for *recientemente* (p. 44) seems desirable. The confusion between *desde* and *dende* (p. 27) is so frequent and dates so far back—it occurs in Hurtado de Mendoza—that it should be discussed at length; and an account of the dispute between the *leistas* and *loistas* would not be amiss on p. 261. The question of Spanish accents is complicated, and Mr. Kirkpatrick is not to be blamed for reproducing (as closely as English printers will allow) the text as he finds it in the original—accented, more or less, according to the rules laid down by the Spanish Academy in 1884. It is as well, however, to remember that the Academy does not carry out its own system logically: if we accept the ruling which annuls, so far as graphic accents are concerned, the old distinction between verbs and all other parts of speech, it follows that there should be no accent on the final vowel of such words as *fui* (p. 1), *fue* (p. 2), *dio* (p. 43), and *vio* (p. 134). Apart from these small details, Mr. Kirkpatrick's editing is a very creditable piece of work.

In a prefatory note to *The Three-cornered Hat* (Nutt) Lady Goodenough ranks Pedro Antonio de Alarcon among the best Spanish writers of the nineteenth century. This gives an exaggerated idea of his qualities; it is enough to say that 'El Sombrero de tres Picos' represents his agreeable talent at its best, and that the book has been widely read since it first appeared in the *Revista Europea* thirty years ago. Alarcon is to some extent a disciple of Fernan Caballero, and he follows her example in utilizing traditional tales and folk-songs. 'El Sombrero de tres Picos' is, in fact, a bowdlerized prose version of a very popular ballad, usually printed under the title of 'El Molinero de Arcos.' Out of this odd material Alarcon has skilfully contrived a variant on the conventional picaresque novel, humanizing the picaroon element and brightening the atmosphere with flashes of his own sunny humour. The present version is correct and readable. An anonymous translation of the Spanish story, published by Vizetelly in 1886, attracted less notice than it deserved. Possibly Lady Goodenough may be more fortunate; still there is no denying that the original begins to have an old-fashioned air.

AMERICAN LITERATURE.

The Americans. By Hugo Münsterberg (Williams & Norgate.)

History of Andrew Jackson. By Augustus C. Buell. 2 vols. (Bickers & Son.)

A Diary from Dixie. By Mary Boykin Chesnut. (Heinemann.)

BACON, in a famous passage, compared the judgment of foreign nations to that of posterity. In both cases we look for a certain detachment and freedom from prejudice which compensate for the imperfect knowledge of the foreigner or the next generation. No one, perhaps, can perfectly comprehend the life of a particular country or age unless he has moved in the midst of its activities; but then his judgment is very apt to be clouded by partiality, or even by what is called the anti-patriotic bias, or blinded by self-regarding influences. For a really subtle and comprehensive study of the characteristics of a race, then, we should be inclined to postulate as author a man of good sense and some scientific training who had taken up his abode in a land which was

XUM

originally strange to him, but in which he had lived long enough to get at the root of the matter and to understand the mental attitude, the point of view, of the native. The best foreign correspondents of the newspapers come as near as is, perhaps, possible to this definition. The luminous and interesting study of the American nation which Prof. Münsterberg published some time ago in German, and which has now been excellently translated by Dr. Edwin B. Holt, is an admirable specimen of the work which can thus be done. Prof. Münsterberg is a German by birth, who has long been domiciled in the United States, and occupies the Chair of Psychology at Harvard University. He thus possesses the characteristics which we have seen to be eminently desirable in the author of a book which undertakes to explain a people, and his work deserves to find an honourable place in all libraries as a supplement to the more solid volumes of Mr. Bryce. The German edition of the book is already recognized as one of the leading authorities on the subject, and it was well worthy of presentation in an English dress—the task of cutting which the author, with perhaps hyper-sensitiveness, has delegated to a colleague, though he was competent to perform it himself.

Prof. Münsterberg thinks highly of the American people. He frankly poses as an optimist, being content to look beyond the frailties which float on the surface to the great fundamental characteristics on which the future of the United States is based:—

"The purpose of finding the deeper impulses in American life necessarily demands a certain ignoring of the shortcomings of the hour. If we aim to work out and to make clear the essentials of the American mission in the world, we cannot take the attitude of the reformer, whose attention belongs, first of all, to the blunders and frailties of the hour: they are to us less important by-products. The grumbler in public life sees in such a view of the American, of course, merely a fancy picture of an imaginary creature; he is not aware that every portrayal involves abstraction, and that a study in Americanism means, indeed, a study of the Americans as the best of them are, and as the others should wish to be."

No doubt this may recall to some readers the innocent aspiration of the irrepressible Pinkerton, who held that the great duty of all Americans was "to build up the type." "We're all committed to that," he would cry; "we're all under bond to fulfil the American type! London, the hope of the world is there. If we fail, like these old feudal monarchies, what is left?" It is a laudable ambition for a great nation to set before itself, and Prof. Münsterberg's book is most interesting as displaying the lines upon which it is being carried out. He speaks enthusiastically of the type, although he is alive to the many derogations from its demands which are at times inevitable in a lusty and growing nation compact of so many and so diverse elements as the American. His book will repay careful reading, and those who have mastered its solid pages may boast a real advance in knowledge of the complex and curious American national character.

A typical American of the old school is painted at full length in the late Mr. Buell's biography of Andrew Jackson, which is dedicated to Mr. Roosevelt, as "the embodiment in our times of the Jacksonian spirit." This grim old fighter was an earlier apostle of that doctrine of the strenuous life which the present President preaches in and out of season. It is true that Jackson had to deal with a much less complex task than that which nowadays confronts the occupant of the White House. He lives in history as a fighter pure and simple; as Franklin said of Paul Jones, he was "more kinds of a fighting-man" than most who are recorded in American history. His political career is uninteresting in comparison with his military achievements. The greatest of these, of course, was the battle of New Orleans, of which Mr. Buell gives the fullest and most elaborate description which we have seen. It is of special interest at a moment when we are so keenly alive to the importance of good shooting. New Orleans was not so much a battle as a massacre. The picked British troops who were opposed to the volunteer levies of Jackson were at least their equals in courage, and greatly their superiors in discipline and in that habit of going forward in the face of danger which wins battles between equally armed combatants. But they had no chance whatever against the weapons of precision which they were required to face. The American troops were largely composed of hunters and backwoodsmen who approached that ideal of marksmanship which Cooper has painted in the character of Natty Bumppo. The smooth-bore musket of the British forces, efficient as it had proved in the Napoleonic wars, when it was opposed by a similar arm, was a mere pop-gun against the small-bore rifle of Kentucky and Tennessee. Mr. Buell collates several eye-witnesses' accounts of the attack on the American position, which all agree in their testimony to the awful effect of the American rifle, which was then first used against veteran troops. Once the American line blazed into fire, the assaulting columns began to melt away—not because they quailed from the storm, but because, as the casualty lists prove, they were swept out of existence. The Forty-fourth Foot

"was literally swept from the face of the earth. In the wreck and confusion that ensued within five minutes the regiment seemed to vanish from sight—except the half of it that lay stricken on the ground! Every mounted officer was down at the first fire."

Even those Americans who had already seen the rifle in action on a smaller scale were awestruck at this first revelation of what it could do in the hands of a line of two thousand highly trained marksmen. On the side held by the "backwoods rabble," of whom the British officers had been as contemptuous as in recent years they were of the Boer farmers, not a single man of the Peninsular troops got within ninety yards of the entrenchments, although the American fire was only opened at a little over double that distance. And yet, with this terrible lesson on the records of the War Office, it was still nearly half a century before it was seriously attempted to arm our infantry as a whole with the rifle which had clearly marked its mastery over the older smooth-bore weapons. The War Office is always the same.

Mrs. Chesnut's 'Diary from Dixie' is a very readable description of the American Civil War, from the point of view of a Southern woman. Her husband took an active part in the Confederate cause; but it is for the picture of social life in the South under the stress of an unsuccessful struggle that this lively and fascinating book will be chiefly read. It has been well edited by Miss Martin and Miss Avary, and is a worthy companion to those memoirs of Mrs. Clay which we lately praised.

OUR LIBRARY TABLE.

THE Marquis de Ruvigny lately published a volume entitled 'The Blood Royal of Great Britain,' of which we were able to speak well. He now gives us, through Messrs. T. C. & E. C. Jack, *The Plantagenet Roll of the Blood Royal, being a Complete Table of all the Descendants now Living of Edward III., King of England*. Of course, the most-logical nobility is that most thought of in Germany, which consists in the nobility of all the immediate ancestors in every line. The less-logical nobility, which is that of our peerage and of our great landed families, is that which follows for as long a period as possible the descent in the male line, or, failing this, the descent through heiresses assimilated to the male line in cases of its failure. The sentiment, however, which attaches importance to descent, which in any case must have much historical interest, from some great hero, provable and undoubted, though through lines which have no nobiliary or heraldic importance, persists in the public mind. The mere descent through such vague lines from kings is of little value. No one knows this better than the Marquis de Ruvigny himself, who, in his preface, calls attention to the fact that many of the descendants of the Plantagenet kings are, and have been for centuries, in every way undistinguished. In the present volume the family most largely represented is the respectable American family to which one of the well-known generals of the Civil War belonged, the Virginian Meades. Among those included in this book are many who trace their descent from the most illustrious Whigs of English history, such as the leading statesmen of the Long Parliament and of the Commonwealth; and it is an amusing criticism on such volumes that in the account of the descent of the children of the third Earl of Buckinghamshire there is, of course, no allusion to John Hampden; and all the Hobart-Hampdens appear in the Marquis de Ruvigny's present catalogue on account of their tortuous descent from Plantagenets, instead of being included in a roll of honour for the connexions of which they are most of them probably more proud.

The Coming of Parliament. By L. Cecil Jane. "The Story of the Nations." (Fisher Unwin.)—Whether there is room in our modern historical literature for a very concise narrative of the chief events of English history between the accession of Edward III. and the Restoration is, perhaps, merely a matter of idle speculation. We have failed to find in the latest issue of this well-known series any general connexion with the subject of parliamentary government or the least pretension to originality of thought or vigour of delineation; whilst research is wanting.

At the same time Mr. Jane's book must be regarded as a skilful specimen of condensation. It is well printed, and enriched with numerous and well-chosen illustrations, executed in an admirable manner. Indeed, the book is well worth buying on this account alone, even by those who, having read the recent controversial literature on the subject of the conspirators in "Gunpowder Treason and Plot," were already aware that these worthies,

"led by Guy Fawkes, a Spaniard of good birth..... hired a cellar under the House of Lords, and filled it with gunpowder and fuel, with the intention of blowing up the king and Parliament"—

a piece of information which gives a fair idea of the historical value of this contribution to the history of Parliament.

Prisons, Police, and Punishment. By Edward Carpenter. (Fifield.)—Mr. Carpenter in his impeachment of the English prison system will find many allies who have little sympathy with his ultimate ideals of social reform. The Report of the Commissioners of 1903-4 shows a certain sense of dissatisfaction with the results of present methods; and that dissatisfaction has been uttered in more determined impeachment by a large number of those who have possessed intimate acquaintance with their working. "In some respects," Mr. Carpenter contends, "even Russian and Siberian prisons are more humanely conducted than ours." He rightly emphasizes the first evidence of failure in recidivism: "Of every hundred who go to prison a first time, thirty return again; of

every hundred who have been to prison five times, seventy-nine return again." As there is nothing to be said for the English system from a restorative point of view, if it can also be shown to fail as a deterrent the case becomes urgent for reform. Mr. Carpenter can show even Siberia converting the convict gradually into the free citizen, and America alive with experiment in reformatory methods. His contentions against specific prison evils—the brutalizing effects of solitary confinement, the silence, the separation from the ameliorative and healing forces of the world—are mingled with a general impeachment of society, and the whole method by which we decide that this man shall be penalized and that man praised. He refers the existence of crime for the most part to the existence of poverty; and his discussion of the specific question of punishment passes into a demand for the restoration of the land to the people, adequate treatment of the problem of the unemployed, and the reorganization of the whole industrial system into something more intelligible and humane. A special chapter deals with 'Prison Reform,' in which Mr. Carpenter returns from this vaster outlook to the consideration of definite and immediate possibilities of advance, demanding (as means of redemption) associated labour, the cultivation of the land, the adoption of indeterminate sentences, abolition of capital punishment, and the establishment of a court of criminal appeal. Finally, the author passes to a plea for that "non-Governmental society" which he has made familiar by former works in prose and poetry. It is a wide outlook, prophesying a society built on some other basis than the fear which "first and foremost" animates the life of society to-day. Mr. Carpenter writes throughout with that mixture of common sense and a high idealistic appeal which gives his work a peculiar distinction. He challenges ancient things with the new insight and freshness of a child, and, as Stevenson said of Thoreau, often leaves the grown-up citizens thus addressed sadly in want of an answer.

On Translating Homer, by Matthew Arnold (Murray), has been newly edited by Dr. W. H. D. Rouse, who adds an interesting introduction and a few notes. The version of F. W. Newman which formed Arnold's text is long since dead, but Arnold's book is, we hope and believe, a classic in its way, full of the delicate taste and insight which were pre-eminently his, and an admirable example of that charming style which enables the author to get the best of it, even when he is in the wrong. Dr. Rouse satisfactorily indicates the limits of Arnold's criticism, and rightly calls attention to the merits of Longinus, who is outside the range of reading of many accomplished scholars, and even of the majority of accomplished critics. More than twenty years ago we said that the English hexameter would not do, and we see no reason now to alter our opinion. The sing-song element is almost inevitable, and the metre has been increasingly associated with humour, satire, and sentiment which are distinctly unhomeric, if not trivial. Whether a revival of the lost sense of strict English quantity, which Tennyson regretted, is possible may be doubted, but, till it comes, the English reader of taste, who has a right, Dr. Rouse points out, to estimate the value of a translation as well as a classical scholar, often does not know, or feel the desire to know, what quantities are except the most obvious. He sees no outrage in pronouncing the word "seventeen" as a dactyl, as Longfellow uses it. Why should he, if he has no training in the classical metres in which a wrong quantity is a definite fault? This deafness to the music of speech is very well exhibited by Dr. Rouse, who has no difficulty in putting various translators in the pillory for their metrical oddities.

The simplicity of Homer is remarkable; "simplesse," as Arnold calls affected simplicity of a literary kind, is a very different thing, and a popular thing nowadays. It seems to us that every day increases the difficulty of translating Homer, because every day words are acquiring a history and association which, slight or non-existent as they may be to the Philistine, present to the lover of English, who alone should translate a poet, colour of an unsuitable kind as substitutes for the Homeric language. Dr. Rouse has some acute remarks on the "stock epithet," which is now a great difficulty. Occasionally equivalents in effect can be found, as when one renders *μερόπων ανθρώπων* by "mortal men," though, of course, the meaning of *μερόπων* is not preserved. One scholar, not mentioned here, has actually rendered it "confabulant," and F. W. Newman talks of "voice-dividing mortals"! In the notes Dr. Rouse makes Tennyson speak of "barbarous hexameters, barbarous pentameters." We presume that he means to quote the line "Barbarous experiment, barbarous hexameters." There is an interesting note on modern Greek, which

> "has adopted a structure more like other modern languages than like ancient Greek; but it has been artificially corrupted, in the language of the newspapers and the parliament, by literal translations of French idioms, and by an artificial attempt, made since the War of Independence, to go back to ancient Greek, by reviving ancient words, inflexions, and constructions. This attempt has completely spoilt the language of the press, which is now a ridiculous jargon; but the popular language is vigorous and pleasing, and has a character of its own."

The book is one of high interest, and we hope that somebody more sanguine as to the future of English metre than ourselves may take up some of the points it offers for discussion at length. On stress and accent, for instance, Arnold needs supplementing.

What is Philosophy? By Edmond Holmes. (Lane.)—"I am not an adept at philosophy," perorates Mr. Holmes. "I am not even a serious student of it. I belong to no school. I can pronounce no shibboleth." In a preface this might pass for an apology. As a final flourish it smacks of spiritual pride. "The outsider," says an earlier passage, "need not be initiated into the mysteries of philosophy in order to see that disorder and anarchy are its leading characteristics." So to the man in the street the roar of the London dinner-party is not unlike the noise of feeding-time at the Zoological Gardens. Mr. Holmes, then, is requested not to shoot at the professional philosopher. He is doing his best. Besides, we must own to the suspicion that Mr. Holmes is by no means the "plain man" he fondly supposes himself to be. Has he not at one time or another "read philosophy" like the rest of us? Certainly his literary good taste enables him to steer wide of the more hackneyed "shibboleths," though "the subliminal self" comes near to being one. But has he managed to keep outside the influences of every "school"? Is it a mere coincidence that his chief conclusion, namely, "that the function of philosophy is to interpret and justify to man's reason the unconquerable optimism of his heart," should bear a strong generic resemblance to the view but the other day advanced by Prof. Stewart in his work on 'The Myths of Plato'? Mr. Holmes is working, "subconsciously" in the main, no doubt, to the same ends and by the same methods as a leading group of contemporary thinkers. Such thinkers will highly appreciate his brilliant, if impressionistic evaluation of philosophy. Nay, a clear head and a clean touch are sure beforehand of a welcome from philosophers of whatever party. Only let Mr. Holmes drop the half-ironical attitude of the "mere spectator." Philosophy is not mere "anarchy," but it is hard fighting all the same, and volunteers are in request, if only they will take their coats off.

Atti del Congresso Internazionale di Scienze Storiche (Roma, 1-9 Aprile, 1903).—Vol. II. *Storia Antica e Filologia Classica.* (Rome, Loescher.)—Among the various inconvenient ways in which minor contributions to knowledge are now published (or interred), probably the most inconvenient is the publication of proceedings of congresses. Scholars rarely give their best work to these miscellaneous assortments; and whatever is given, is buried under a mass of uncongenial scraps of alien character, thus compelling the student who requires some special article on his own subject to acquire at the same time a great quantity of printed matter for which he has no use. The Historical Congress at Rome, in its proper function as a means of bringing scholars of all countries into personal relations one with another, was a highly successful and enjoyable gathering; but the volumes of its *Proceedings* (twelve in all are promised) are very indigestible. The present instalment contains forty-one papers, averaging nine pages each. It is impossible in a small space, and would be unprofitable in any space, to review them all, or even to enumerate them. Each, probably, is of interest to some specialist; but the selection which any individual may make can only reflect his personal taste. Prof. Ramorino gives a brief account at second hand, with four reduced facsimiles, of the MS. of Tacitus's 'Agricola' and 'Germania' recently discovered at Jesi; but information as to its character is still very jealously guarded by its owner. Prof. Vitelli describes the collection of Greek papyri at Florence, of which he has just begun the publication, and makes a proposal for an international association for the production of a Corpus of Greek literary papyri. Dr. D. B. Monro argues briefly that the Homeric dialect was the "vulgare illustre"—the dialect of culture and literature—of primitive Greece. Prof. A. Mancini publishes a hitherto unknown transcript of ten columns of a Herculaneum papyrus (No. 1042), inferior as a whole to the published text, but preserving a few words which had disappeared before the official facsimiles were made. The longest articles are those by Prof. Zuretti on foreign politics in the Old Attic Comedy, and by Prof. B. Modestov on the present position of the Etruscan question; but most of the contributions are mere notes of three or four pages on points of minor interest. English scholarship is represented by Dr. Monro, Prof. Mahaffy, and Prof. R. S. Conway.

Tragic Stories from Russia. Done into English by W. F. Harvey. (Nutt.)—It has become very much the fashion of late to prefix to books dealing with Russia, and published in England, the words "forbidden in Russia." But though this statement adds piquancy to publication, it does not necessarily argue better literary work. On the present occasion we have some disconnected articles translated from a Swedish version of the Russian original. Some of these papers are by Gorki, Tolstoy, and Nemirovitch-Dantchenko, whose names are well known and generally promise something good. Tolstoy's letter to the Swedish peace party is trenchant, and reminds us of some of the excellent things by him which Mr. Aylmer Maude collected in his 'Essays and Letters' two years ago. It is droll to think that some of the articles included in that book could not pass the German censorship. The Kaiser does not care to have his military proclivities criticized, and in this respect resembles his Russian brother. We like least of all the article on Sophia Perovskaya. We do not know whether she is to be styled *l'ange*

XUM

de l'assassinat, as Lamartine called Charlotte Corday, but the writer seems to forget the lamentable crime she committed in his praise of an enthusiast, and one who was instigated by a man, as so many of these women-fanatics are. Her complicity in the murder of the unfortunate Alexander II. is recorded with perfect sang-froid. It is very difficult to sympathize with the writer of this sketch. Moreover, it is a threadbare story to which nothing new is added.

American Schools: their Administration and Supervision. By William Estabrook Chancellor. (Heath & Co.)—The main object of this work is to afford an insight into the administration of the elementary schools of the United States, and to discuss, more or less incidentally, the educational values of different subjects of instruction, or the methods of teaching them. Mr. Chancellor, in fact, takes us into the board-room of the school authority, and into the private office of the superintendent, and bids us see and hear what we can. The whole system of public elementary instruction in America differs so widely from that which obtains with us, that it is difficult to institute a serviceable comparison between the two, or even to note practices which might be advantageously adapted to our use; the reader, however, will gather that the difficulties in the way of educational progress in the States are of the same kind, and often as great, as those that exist in England, although in some American districts the general interest taken in elementary school work is greater.

In the typical community of ten thousand people the school system consists of Board of Education, Superintendent, High School, Elementary Schools, and this seems to be the essential framework of the system in more populous areas. Subordinate to the superintendent are "the principals of the schools and the supervisors of special subjects, such as music, art, and manual training." Mr. Chancellor describes at considerable length the duties of superintendents and supervisors and the relations between them. The official hierarchy in the American school system cannot be correlated with anything in connexion with Whitehall; principals whether of elementary or high schools correspond with head masters, but superintendents and supervisors are the characteristic features of the American system, and differ widely from any English officials; they have far more direct influence than H.M. inspectors, and within the region of their own boards appear to have greater executive power than our Board of Education itself. The superintendent dominates the whole system:—

"For a principal to oppose the policy of the school superintendent is unfortunate for both;..... but for a supervisor to oppose the policy of the superintendent is a kind of school treason, and is essentially unforgivable."

The work of a superintendent is largely administrative; that of the supervisor didactic, and he has to teach and train teachers, as well as insist on efficient teaching in class. Mr. Chancellor groups all the studies of the public school curriculum under three heads—"the outgoing studies, the modern studies, and the incoming studies"; and "the great principle for the school superintendent, and for the board of education, is to maintain the good while making place for the better and removing the worst." The difficulty in practice is very considerable, for we find the list of studies in a modern city school system includes no fewer than sixty-two subjects. The difficulty is lightened by the recognition of "elective studies," but the arrangement of time tables and organization of class work must in most cases be a singularly perplexing operation.

Mr. Chancellor has much to say concerning the "salary, tenure, and certificate" of those working in education, and advocates with some warmth an increase in the amount expended by the States in support of teachers, schools, and colleges of all grades, and in this respect the New World imitates the niggardliness of the Old, for it pays "for alcohol and tobacco annually per capita $29, for all forms of education $3.50." But salary and tenure presuppose appointment, and the author gives a rather amusing chapter of advice about "getting the office," explains how electing boards can most judiciously be approached, and even discusses the advisability of sending candidates' photographs to board members. Mr. Chancellor's style throughout the volume is direct and practical, and will no doubt ensure him more readers in America than in this country, partly because the work will be less useful here than there, partly because his composition is inelegant, if not occasionally ungrammatical.

WE have received a pleasing reprint in *The Diary of an Old Soul, and Translations of other Spiritual Verse*, by George Mac Donald (Fifield). The volume, which was originally published in 1897 under the title of 'Rampolli,' contains a number of translations, chiefly from the German, followed by the long original poem which has now given its name to the reprint. The translations, though happy in parts, are never really successful; but the 'Diary,' a finely personal piece of writing and full of genuine feeling, justly ranks high among the author's poetical achievements. There should be many readers ready to welcome it in this cheap and attractive form.

Septem Psalmorum Pœnitentialium Versio Elegiaca, facta a Ricardo J. Walker, Editio Altera, sold by Samuel Bewsher, of St. Paul's School, is worthy of high praise. The translator, who prints his Latin opposite the original Hebrew, has the ease and grace which make such work delightful. It is equal to that of any modern composer that we have seen. The last lines of the 'Dedicatory Epistle' run:—

Hoc modo ne quæras, cur tentem scribere versus:
Id, versus qui non scripsit, amice, roget.

The sentiment, which we applaud, could not have been put more neatly.

THE Shakespeare Head Press, of Stratford-on-Avon, have sent us a limited edition on hand-made paper of *Shakespeare's Sonnets*, one of which, with an ornament in the old-fashioned style above and below it, occupies each page. It is a neat and well-printed edition. Mr. A. H. Bullen prints a sensible note at the end, dealing with a few points of text and the merits of modern commentators. There are a good many pleasing issues of the Sonnets, which lend themselves to leisurely reproduction in a small book, but this will hold its own with any of them.

AMONG recent sixpenny reprints are Seton Merriman's *The Velvet Glove* and Mr. Harland's *The Lady Paramount*, both of which Messrs. Newnes send us in reasonable print and with good illustrations to boot. These editions are certainly remarkably cheap.—We are very glad to see Anstey's amusing fantasia *The Time Bargain* (formerly called 'Tourmalin's Time Cheques') also available at sixpence (Arrowsmith).

WE have on our table *My Garden in the City of Gardens* (Lane),—*The Rockcliffes*, by H. A. Darlington (Jarrold),—*The Garden of Memories, and other Poems*, by M. Greenwood (Drane),—*Verses*, by Violet Jacob (Heinemann),—*Songs Unset* (F. V. White),—*Dreamland*, by Eleanor Esher (Humphreys),—*The Letters and other Remains of Dionysius of Alexandria*, edited by C. L. Feltoe (Cambridge, University Press),—*English Apologetic Theology*, by the Rev. F. W. Macran (Hodder & Stoughton),—*Devotional Life in the Nineteenth Century*, by the Rev. C. Bodington (S.P.C.K.),—*Bright and Brief Talks to Men*, by F. W. Atkin (Allenson),—*John Knox*, by E. Miller (Melrose),—*Some Post-Reformation Saints*, by the late Canon Overton (S.P.C.K.),—*Pentecostal Instructions*, by the Rev. R. W. Barber (Mowbray),—*The Pre-Exilic Prophets*, by Rev. W. Fairweather (Dent),—*A Layman's Life in the Days of the Tractarian Movement, in Memoriam Arthur Acland Troyte*, by his Son (Parker),—*Nouveaux Essais de Philologie Française*, by A. Thomas (Paris, Bouillon),—*Islenzk-Ensk Ordabok*, by G. T. Zoëga (Reykjavik, Kristjansson),—*Storia della Critica Romantica in Italia*, by G. A. Borgese (Naples, 'La Critica'),—and *La Filosofia di Schopenhauer*, by G. Melli (Florence, Seeber). Among New Editions we have *Cherubini*, by E. Bellasis (Birmingham, Cornish),—*Poems*, by J. B. Selkirk (Edinburgh, Clark),—*Korea and her Neighbours*, by Mrs. Bishop (Murray),—*Kingsley's The Water-Babies* (Routledge),—*The Hope of Immortality: an Essay*, by Right Rev. J. E. C. Welldon, D.D. (Seeley),—*Ireland in the New Century*, by Sir Horace Plunkett (Murray),—and *The Encyclopedia of Missions*, by Rev. H. O. Dwight and others (Funk & Wagnalls).

CROMWELL AND IRISH PRISONERS.

23, Leeson Park, Dublin, June 30th, 1905.

THE following letters which have reached me from Barbados cast interesting light on the question of the shipment of Irish prisoners to that island :—

Marine Hotel, Barbados, June 17th, 1905.

DEAR SIR,—I am in receipt of your letter, 20th ult., enclosing cutting from the London *Athenæum* dealing with a subject which is naturally of interest to us here.

I at once referred the matter to Mr. C. P. Clarke, a member of our local legislature and a leading barrister, who is a diligent student and fond of historical research, and I enclose his reply, which I regret does not better supply the information you are seeking. J. CHALLENOR LYNCH.

Bridgetown, June 15th, 1905.

DEAR LYNCH,—In compliance with the request contained in your letter of the 5th inst. I have searched the Minutes of Council for the period indicated, but can find no evidence as to the particular shipment of servants in 1658 which is referred to in *The Athenæum*.

On the other hand, there is abundant evidence that there were Irish servants in Barbados at that time, and that Irish people, whether servants or freemen, were regarded with great suspicion and treated very harshly. Of course in those days servants were treated little better than slaves, and what Poyer has recorded as a rising of the African slaves in 1649 was in reality a conspiracy of the European servants.

The following is an abstract of such entries as I have found germane to the matter in hand :—

Dec. 6th, 1654. — Three Irishmen — Plunkett, Carthy, and O'Mehegan—who came over free with one Mr. Barrow, were ordered by the Governor and Council to put themselves into employment with a freeholder of the English nation, and to bring their masters on the following Monday to give security for their good behaviour during their stay in the island.

Nov. 6th, 1655. — The Governor and Council, having received information that several Irish servants and negroes were out in rebellion in the "Thicketts" and thereabouts, ordered that some companies of militia should be raised for the purpose of arresting them, and should have power to kill them in case of resistance.

Nov. 22nd, 1655.—The Legislature passed an Act to restrain the wandering of servants, and to suppress the insolencies of the Scotch and Irish servants.

Jan. 15th, 1656.—It was proved against Cornelius Bryan, an Irishman, that he had said, as he was eating meat in a tray, that if there was as much English blood in the tray as there was meat, he would eat it: ordered to receive 20 lashes on the bare back, to be laid on by the common hangman in front of the "cage" at the Indian Bridge Town.

Also, by reason of great suspicion that Cornelius Bryan, an Irishman, the Piper, had been raising a mutiny to the disturbance of the peace and quiet of the Island, it was ordered that he should give security for good behaviour and to leave the Island in one month.

Daniel Hallsee, an Irishman, for slandering justice and scandalizing the inhabitants of the Island, was ordered to stand in the pillory for two hours.

Sept. 1st, 1657.—Two Irish servants, for behaving rebelliously towards their master and mistress, were ordered to receive 31 lashes each, to be soundly laid on the bare back by the common hangman, and to be afterwards kept in the common gaol at the pleasure of their master.

Sept. 22nd, 1657.—The Governor, in view of the considerable number of Irish, freemen and servants, within this Island, and the danger of the Irish and others of the Romish religion possessing arms at time of war with Spain, ordered that all of the Irish nation and all persons known or reputed to be Recusants should be disarmed. Proclamation by the Governor that whereas several of the Irish nation, freemen and women, having no fixed abode, wandered about stealing, &c., and tried to persuade servants of the said nation into the same idle courses, and divers freemen and servants had been threatening and insolent in behaviour, and some were forth in rebellion and refused to come in, it was ordered that a servant coming to a plantation except on his master's business should have reasonable correction, and be returned by constable to his master; and a free man or woman without work or settled abode should be taken before a J.P. and whipped and put to serve for a year on some plantation.

In 1667, when William, Lord Willoughby, arrived as Governor, he reported to the king that he found 2,000 Irish on the Island.

The two following extracts relate to Irish priests :

Jan. 2nd, 1655.—Col. Yeamans (of the militia) was ordered by the Governor and Council to examine and return an account of three Irish Priests lately landed at "Spike's Bay."

May 21st, 1656.—Four Irish Priests — Richard Shelton, James Tuite, Robert Eagan, and Redmond Moore—were ordered to report the place of their abode at the Secretary's office within 3 days; and were allowed 15 days to depart from the Island to any place outside the dominions of the Commonwealth of England.

I remain yours faithfully,
C. P. CLARKE.

P.S.—I believe that the late Mr. John Kellman used to regard himself as descended from one of the Irish sent here after the storming of Drogheda.

I have some reason to hope that I may shortly be in a position to publish further information on this subject.

WILLIAM F. DENNEHY.

Mount Verdon House, Cork, June 27th, 1905.

WITH regard to the question which gave rise to the correspondence on the above subject, namely, the existence in the West Indies of negroes whose language shows traces of an Irish element, I have received—through the kindness of Mr. C. Cremen, Cork Harbour Commissioners' Office — the following information, which, though not perhaps absolutely conclusive, yet is most interesting. Mr. Cremen writes: "There is an old saying among our Cork sailors of the old sailing-vessel days, 'In Montserrat, where the blacks speak Irish.'" He goes on to speak of the great trade in old days between Cork and the West Indies, of his personal knowledge of many of the sailors, and of the fact that all those he knew are now dead. He continues :—

"None, indeed, of those I knew intimately were ever in Montserrat save *one*, John Donovan, lately in charge of Parnell Bridge (Cork), who died about eighteen months ago. He was a native of Ring, near Clonakilty, and spoke Irish very fluently. He frequently told me that in the year 1852, when mate of the brig Kaloolah, he went ashore on the island of Montserrat, which was then out of the usual track of shipping. He said he was much surprised to hear the negroes actually talking Irish among themselves, and that he joined in the conversation.....One phrase he stated to have been used by one of these negroes was very interesting from your point of view. He said the blacks were much astonished when he spoke to them, and one of them asked him (I write the Gaelic phonetically)."

Mr. Cremen here gives five Irish sentences, but did not send me the translation; if I get it in time I shall forward it. However, the sailor told the negro he came from Cork, and the black answered, "She sin Corcaig na g'cuan," *i.e.*, "That is Cork of the Harbours." Mr. Cremen continues :—

"This last remark of the negro was peculiar. 'Cork of the Harbours' is an old description long obsolete, and to be met with only in old poems and writings of about the time of Cromwell, so that he must have (had) the idioms and expressions of the earlier half of the seventeenth century very purely."

Now, with regard to Mr. Cremen's statements, it ought to be quite easy to find out in Montserrat whether the negroes really do or did speak some sort of Irish. Then, if they do, the question arises, How did Irish get there? Mr. Cremen suggests through fugitives from Barbados. Montserrat and Nevis both had English settlers before Cromwell's time ('Ency. Brit.').

Of course it may have come in by the emigration of Irish labourers to the West Indian estates of Irish or English merchants. I have never heard, however, of such emigration.

W. F. BUTLER.

Vienna, I. Parkring, 4, June 25th, 1905.

I NOTICE with satisfaction that Mr. Dennehy is beginning to "see grave difficulties in the way of accepting the theory that there was any wholesale exportation of Irish slaves to Barbados." I have hope that he will before long see that "transportation" to Barbados was not identical with "selling into slavery," and that there was a distinction and a difference between "slaves" and "servants." In this connexion I would point out that Cromwell, in his well-known letter to Speaker Lenthall (Carlyle's 'Cromwell,' vol. ii. p. 152, ed. 1871), does not corroborate Mr. Dennehy's original statement that the survivors of the sack of Drogheda were "shipped to the West Indies *to be sold as slaves*," which (apart from the wrong quotation) was the only point I objected to (cf. Gardiner, 'Commonwealth,' i. 135, Library ed., and 'Memoirs of Verney Family,' ii. 344).

Mr. Dennehy now quotes Cardinal Moran to the effect that "six thousand boys and women were sold as slaves from Ireland to the undertakers of the American islands," giving as his authority Petty's 'Political Anatomy of Ireland,' p. 187. Would Mr. Dennehy give us Petty's exact words and the edition of his 'Political Anatomy' where they are to be found? I possess what I believe to be the first edition (1691), but I cannot find that Petty said anything of the sort. I suspect his Eminence has been quoting from Lingard at second hand. If so, I will make Mr. Dennehy a present of Bruodinus and the anonymous correspondent. ROBERT DUNLOP.

'THE CHURCH IN MADRAS.'

Madras, June 12th, 1905.

THERE appeared in *The Athenæum* of February 25th last an able and erudite review of the Rev. Frank Penny's book 'The Church in Madras.' The learned reviewer, however, falls into an error by accusing Daniel Havart of one. Having vainly waited for a champion to come forward and clear the reputation of Havart for accuracy, I beg to be allowed, even at this eleventh hour, to become his apologist.

Your reviewer, quoting from the 'Op- en Ondergang van Cormandel,' mentions the "little church, very neat, and prettily built of wood," which Havart saw at Madras. The reviewer then correctly describes St. Mary's Church, Fort St. George, as "built entirely of masonry with a bomb-proof roof." He is unable to reconcile the two conflicting descriptions, and rashly concludes that Havart was wrong. There is another and a correct solution of the difficulty, namely, that Havart's "little church" was not St. Mary's. What Havart saw was the

chapel in the Inner Fort, which served not only as a place of worship until St. Mary's was completed, but also as a court of justice. In the Government Consultation of March 18th, 1677/8, it was resolved :—

"That the Governour and his Councell do sitt in the Chappell in the ffort upon every Wednesday and Saturday to judge all Causes."

In 1680 there were three places of worship within the walls of the White Town, viz., the chapel in the Inner Fort; the Portuguese church of St. Andrew, built in 1675; and the English church of St. Mary, which was completed in 1680. St. Andrew's and St. Mary's were outside the Inner Fort, north and south of it respectively.

That the chapel was the structure seen by Havart is clear from the following quotation from that writer :—

"Having passed the Mount, one arrives at the town of Madraspatam which is very strongly built like a castle in the European style, and furnished with four bastions. *Inside, there is a little fort*, also with four bastions, built of ironstone, but without a moat. Within this dwells the English Governor and certain English of note. The remaining English (for they possess the whole town) live outside, or in the city. The castle is called St. George."

Then follow the words quoted by your reviewer : "*Inside the small fort* is a little church." Read with the context, this conclusively shows that Havart's church was in the Inner Fort—that is, it was the chapel.

H. D. LOVE.

'WILLOBIE HIS AVISA.'

July 10th, 1905.

Two correspondents have taken my historical tuition in hand in a manner magistral, or I should rather say magistrissal. I am sent back to a dame's school, having read my 'Little Arthur' to little purpose. Mr. E. Lionel Reynolds takes me to the very rudiments of knowledge when he informs me that Lord Southampton did not succeed his maternal grandfather, Sir Anthony Browne, in the title of Montague and lordship of Cowdray ; the successor to Cowdray in 1592, as he says truly, was the old Viscount's grandson in the male line, Anthony Maria Browne, second Viscount, and first cousin of Southampton. He was an obscure peer ; and, as Lord Beaconsfield has said, there is no one so obscure as an obscure peer. So obscure is he in history that even the researchful Mrs. Stopes has been unable to distinguish him from his father—Anthony, the son of Anthony, who was never Viscount. Harington's Rabelaisian readers would have known as little of these later Brownes as Mrs. Stopes knows of them now, and would have seen no point in the *patrissare* and *Avisare* as applied to them.

Harington, in the passage cited by me, is running over three or four great houses where his fun about Ajax would be appreciated. He mentions Petworth and Raglan in a word, but at Cowdray he makes a digression with a purpose, going back to the grandfather of the then possessor for the sake of bringing in his joke of *Avisare*, "to take after one's grandfather." In order to lead up to it, he has to drag in (but only to dismiss) an old Latin verb *patrissare*, "to take after one's father," which Terence had used once and Plautus twice. Sir John can "go one better" than the ancients with his *Avisare*, which, as he says, is "a good word"—so good, indeed, that it, or something like it, might be adopted into the scientific language of heredity. But in the particular context it was a good word if "the young lord" will mark it. He brings in his young lord at the convenient cue of Cowdray, meaning, as I think, Lord Southampton, who was born there, and spent much of his minority there with his grandfather, so that he would have been associated with that famous house in the minds of Harington and his readers quite as much as with his own house of Tichfield. Of course the strict syntax brings out Mr. Reynolds's view, but reduces the digression to a laboured commonplace.

C. CREIGHTON.

Manchester, July 10th, 1905.

As Dr. Creighton's interesting quotation, with its apparent play on the word "Avisare," has been shown by your two correspondents to have no reference to the Earl of Southampton, it cannot "clinch" the question of the authorship of 'Willobie his Avisa.'

Dr. Creighton has brought no evidence worthy of the name that Southampton was a poet, and I showed in *The Athenæum* of September 24th last that the citation from Florio, on which he largely relied, was incorrectly and unfairly quoted.

Dr. Creighton's other discoveries in reference to a family of the name of Yate, who had concealed some priests for Southampton's mother, and of an Avis Yate who, forty years afterwards, kept an inn at Basingstoke, have little or no bearing on the question of the authorship of the poem.

In my introduction to the new edition of 'Willobie,' reviewed in *The Athenæum* of April 22nd last, I gave reasons for thinking it likely that Shakspeare and Southampton visited the neighbourhood of Mere and West Knoyle, where Henry Willobie lived. It is very likely that Southampton "financed" the poem, which had an unusually artistic and specially engraved title-page. It is possible that Shakspeare and Southampton saw the poem before publication and added touches to it.

It is quite probable that the figure of the "Noble man" in the poem may have been drawn from Southampton, for it agrees with the character of this rich and reckless young earl to offer 1,000*l.* to an innkeeper's daughter.

CHAS. HUGHES.

THE EGYPT EXPLORATION FUND.

July 10th, 1905.

MAY I correct some misapprehensions which are, I fear, likely to arise from your 'Archæological Notes' of July 8th, and also explain the position of those whose names appear both on the Committee of the Egypt Exploration Fund and the proposed Committee of the Research Account ?

The circumstances that have led to the reorganization are as follows :—Owing to the fact that the Egypt Exploration Fund has engagements on hand which exceed its resources, the Committee has found it impracticable to observe the terms of the contract under which Prof. Petrie was working for the Fund. A friendly conference was accordingly held, and the contract was suspended by mutual consent until such time as it should be possible to revive it. Prof. Petrie not unnaturally turned to an increase and reorganization of the Research Account to support his work in the meantime, and invited certain persons to form a committee for this purpose. As soon as this proposal was formulated, it was brought before the Exploration Fund Committee, and that body agreed that it was most desirable that some of its members should serve also on the Committee of the Research Account. There is, therefore, in the opinion of the Exploration Fund Committee, no inconsistency in the position of those whose names appear on the direction of both bodies. The relations of the two are, so far, upon perfectly amicable lines, and my object, and doubtless that of others who are in the same position as myself, is to preserve friendly relations between the two, to avoid any friction or overlapping, and ultimately, when the present temporary difficulties are over, to enable the Exploration Fund Committee and Prof. Petrie to renew their arrangement.

There does not seem any reason to fear, as the writer of 'Archæological Notes' suggests, that the Egyptian Research Account becoming in name, as well as in fact, a School of Archæology should prevent its being a long-lived institution. It has been working for many years, and a dozen former students are in various positions in archæology at present. The long continuance of this work, the largely increased spread of interest in its extension, and its more public position are the best guarantee that there is no ground for pessimism as to its future. It has always worked harmoniously with the Egypt Exploration Fund in the past, and I trust that it will continue to do so.

ERNEST A. GARDNER.

THE CANTERBURY AND YORK SOCIETY.

Chancery Lane, W.C., July 11th, 1905.

YOUR anonymous correspondent "A Subscriber" might as well have signed his name since he was willing to court the publicity of the annual meeting, and then your readers could have judged if he were a competent critic. "A Subscriber" has doubtless already learned from the Report just issued that I am responsible for the English abstracts. The obvious error of writing "Latin" for "Lateran," which long ago has been noted, is very inadequate evidence on which to base his inference that I am not an "average Latin scholar," while his attempt to give force to his letter by his personal reference to two well-known students is impertinent. May I take this opportunity of thanking many correspondents who have shown an interest in the work of printing these early records and have aided by their valued suggestions ?

W. P. W. PHILLIMORE.

SALES.

MESSRS. SOTHEBY, WILKINSON & HODGE sold on the 6th and 7th inst. a further portion of the library of Mr. E. J. Stanley, M.P., amongst which were the following : Boccaccio, Decameron, fine plates by Gravelot, &c., 5 vols., morocco by Padeloup, 1757, 85*l.* Cervantes, Don Quixotte, &c., 14 vols., Madame de Pompadour's copy, 1738-54, 48*l.* Abrégé de Géométrie, manuscript, morocco, with arms of the Grand Dauphin, Sæc. XVIII., 20*l.* Apollon et les Muses, ten coloured plates, arms of Napoleon I., 1806, 23*l.* 10*s.* Basan, Recueil d'Estampes des Tableaux du Duc de Choiseul, proofs, Paris, 1771 ; Cabinet de Poullain, proofs, 1781, 42*l.* Homeri Ilias et Odysseæ, Elzevir Edition, 2 vols., 1655-6, finely bound for Longepierre, 21*l.* 10*s.* Alken's National Sports, 1821, 54*l.* Arundel Society's Prints (50), 23*l.* Blaeu, Atlas, 9 vols., old morocco, Amst., 1662-8, 25*l.* Mémoires pour servir à l'Histoire de Louis le Grand, 10 vols., old French morocco, Madame de Pompadour's copy, 1697-1703, 52*l.* Dugdale's Monasticon, 8 vols., large paper, 1817-30, 28*l.* Kinnaird Collection, coloured plates, 1809, 26*l.* Juvenal and Persius, 1664, morocco, with Longepierre's device, 20*l.* 10*s.* Ovidius, 3 vols., Lugd. Bat., 1662, Count Hoym's copy, in old French morocco, 45*l.* Percy Society publications, 32 vols., 20*l.* 10*s.* Pindar, H. Stephani, Marguerite de Valois binding, 1586, 87*l.* Racine, Œuvres, 3 vols., Paris, 1767, Marie Antoinette's copy, 91*l.* Metastasio, Opere, 12 vols., 1780-2, old morocco, Marie Antoinette's copy, 165*l.* Portraits des Députés à l'Assemblée Nationale, 4 vols., 25*l.* Larrey, Histoire d'Angleterre, &c., 4 vols., old morocco, Madame de Pompadour's copy, 1707-13, 33*l.* Sacre de Louis XV., finely bound, 1723, 31*l.* Catalogue des Livres de Madame Sophie (fille de Louis XV.), with her arms, original MS., 1778, 42*l.*

The same auctioneers sold in their sale of the 12th inst. the Fourth Quarto edition of Shakspeare's Tragedy of King Richard III., of which only four copies are known, printed by T. Creede, 1605, and slightly imperfect, for 1,750*l.*

Literary Gossip.

MR. MURRAY'S new list of announcements includes 'The Memoirs of General Sir Henry Dermot Daly,' by Major H. Daly; 'The Battle of Wavre and Grouchy's Retreat,' by Mr. W. Hyde Kelly; and 'The Letters of Richard and Clare Ford (1830–99),' by Mr. R. E. Prothero, which should prove of exceptional interest. Mr. Lionel Phillips is also sure of wide notice for his promised book on 'Transvaal Problems.' 'Mrs. Montagu: her Friends and Correspondents,' with a memoir by her descendant, Mrs. Climenson, should afford interesting insight into a time when great ladies were distinguished for their natural endowments as well as their rank.

A NEW annual is also promised by Mr. Murray, 'The British Trade Year-Book,' edited by Mr. J. H. Schooling, the well-known authority on statistics. The first issue will exhibit the course of trade, British and international, for the twenty-five years 1880–1904.

THE Clarendon Press are publishing immediately, in four volumes, 'The Works of Lucian,' complete with a few exceptions, translated by Mr. H. W. Fowler and Mr. F. G. Fowler. The rendering is for the general reader, who has not had a good one put before him for a long time.

IN *Chambers's Journal* for August there is a paper by Mr. Lewis Melville on 'The Works of Charles Reade.' In 'Haunted Woodhouselee,' an article on the home of the Tytlers, the writer gives its antiquarian and literary associations, and mentions the discovery by Mr. C. E. S. Chambers of a manuscript journal by one of the old lairds, giving impressions of Edinburgh and its neighbourhood when Prince Charles Edward was in occupation. An article on 'Rome in Picture and Story' deals mainly with the modern associations of the Eternal City, and gives a list of books on the subject.

A LONG article by Mr. W. Roberts, with several facsimiles, on 'Shakespeare's Autograph' will appear in the same issue. It will deal chronologically with all the various autographs which have any sort of claim to rank as genuine, but no account is taken of the transparent forgeries of Ireland and others.

A HISTORY of Studham, lying partly in Bedfordshire and partly in Hertfordshire, is about to be published by the Rev. J. E. Brown under the title 'Studham: the Story of a Secluded Parish,' through Mr. Elliot Stock. The work gives an account of the parish from the time of the Norman Conquest, and has many curious and interesting illustrations interspersed through its pages.

ON Monday last died, at the age of eighty-six, Capt. Montagu Burrows, who, after a vigorous career in the navy, went to Oxford, and finally became Chichele Professor of History. Born in 1819, he did not matriculate at Magdalen Hall (now represented by Hertford College) till 1853. He got a first-class in 1856 in classics, and in 1857 in law and modern history. He was elected professor in 1862, and Fellow of All Souls in 1870. He wrote several books: the lives of three admirals, 'Wiclif's Place in History,' 'Oxford University during the Commonwealth' (Camden Society), 'Memoir of W. Grocyn' (Oxford Historical Society), two or three volumes of constitutional history, a memoir of the Brocas family, a history of the Cinque Ports, and other volumes, many of which were successful enough to be printed more than once. When he was in the navy he was employed in several important operations, so that he ranks as one of the few people who have both made and written history. His genial personality was well known at Oxford, where he resided till the end, though since 1900 he had left the duties of his professorship to Mr. Oman. He had survived most of the men of his time at Oxford, but his contemporary in the Regius Chair of History, Mr. Goldwin Smith, still lives, and wields a trenchant pen, though he has long left England.

WE regret to announce the death also of Sir William Muir, K.C.S.I., D.C.L., ex-Principal of the University of Edinburgh, in his eighty-sixth year. Sir William, who was the son of William Muir, of Glasgow, was educated at Kilmarnock Academy, the Universities of Edinburgh and Glasgow, and at Haileybury, preparatory to entering the Bengal Civil Service in 1837. He was Secretary to the Governor of the North-West Provinces during the Mutiny, and in 1864 joined Lord Lawrence as Member of the Legislative Council and Secretary for Foreign Affairs to the Government of India. After thirty-nine years' service he retired, having been Lieutenant-Governor of the North-West Provinces and Chancellor of the Indian Exchequer. For several years after his return he was a member of the Indian Council of London. He resigned this position when appointed Principal of Edinburgh University in 1885, a position he held till 1902. In connexion with the University of Edinburgh, it has been remarked that there is no province, intellectual, athletic, social, or religious, upon which he has not left his mark, and he was a warm friend of the students. An eminent Arabic scholar, Sir William Muir published a 'Life of Mahomet,' 'The Caliphate,' 'Mameluke Dynasty,' 'The Coran, its Composition and Teaching, and the Testimony it bears to the Holy Scriptures,' 'Extracts from the Coran,' 'The Early Caliphate and Rise of Islam,' 'The Mohammedan Controversy,' and 'Records of the Intelligence Department of the North-West Provinces during the Indian Mutiny.'

MR. BUDGETT MEAKIN writes:—

"I should not like it to be inferred from your appreciative review of my 'Model Factories and Villages' that I was in any way opposed to trades unions, whether in America or elsewhere. Personally, I believe that they are rich in possibilities, and might under wise guidance do even more good than they have done, with less mistakes. It is their development on right lines that I advocate, in the promotion and guarantee of efficiency in the worker, so that they may be able to secure the highest possible return for labour under the best conditions. He is no true friend who fails to warn them of the evil of curbing the efficient or stirring up strife where mutual co-operation would produce so much better results. There is no reason why any worker should not join in the general movement for improving his or her class. May I also remove the impression conveyed by your reviewer that the Heinz Pickle Company of Pittsburg is actuated by a desire to advertise through its 'welfare work'? What I have seen and known of the heads of that business has assured me that this is as little the case as with the English firms you have mentioned."

AMONG the Nelson relics sold at Messrs. Sotheby's on Saturday last was a letter, dated October 24th, which Collingwood wrote to the English Minister at Lisbon, concerning the battle of Trafalgar, and announcing Nelson's death. Three dispatches were written on October 22nd, 24th, and 26th to the Admiralty, but these were delayed in transmission, owing to bad weather, and finally reached England on November 5th, all three being carried by the schooner Pickle. These three dispatches are preserved in the British Museum, and censure of that institution for neglecting the chance of buying the letter recently offered is consequently misdirected.

COL. H. D. LOVE, Principal of the College of Engineering at Madras, is preparing selections from the records relating to the early history of Madras. It is proposed to make an application to the French Government for the purpose of ascertaining if any old plans of Fort St. George, or of the towns of Madras and St. Thomé in the seventeenth and eighteenth centuries, still exist among its archives.

THE annual meeting and exhibition of the Ex Libris Society will be held on Wednesday next at the Westminster Palace Hotel.

MRS. LUCY CRUMP is making a collection of the letters of her father Dr. Birkbeck Hill, and, as she wishes to make it as representative as possible, asks for the loan of correspondence likely to interest the public, which will be duly returned without delay. Her address is 1, The Wilderness, Holly Hill, Hampstead, N.W.

THE Political Economy Club (founded in 1821 under the auspices of David Ricardo) proposes to print a volume which will record and describe as far as possible the proceedings of the club from its commencement, with accounts of the political economists and others who have from time to time been members of it. The committee are anxious to obtain any information bearing on this subject which may be in the hands of representatives of former members of the club, whether in the form of diaries or notes kept by such members, or of short biographical notices, portraits, &c.; and they would, therefore, be greatly obliged if any one who can help them would communicate with the Hon. Secretary, Mr. Bernard Mallet, 38, Rutland Gate, S.W.

THE Institut de France has awarded Dr. G. A. Grierson the Prix Volney for the Linguistic Survey of India, and for his recent work on 'The Languages of India.' Almost simultaneously, the Société Asiatique elected him Membre Associé Étranger, and a few months ago the American Oriental Society elected him an Honorary Member. This recognition by foreigners of work done by an Englishman, or rather Irishman, is gratifying.

THE new edition of 'A Short Day's Work,' the book by Monica Peveril Turnbull which Mr. Murray has in hand, will

include seven essays, mostly dealing with literary subjects, as well as the poetry, the promise of which added to the pathos of her early death through a lamp accident.

EMERITUS PROFESSOR FRANZ OVERBECK, whose death took place recently at Basle, was one of the first German theologians to urge the importance of employing scientific methods in the study of the New Testament and the Fathers, and of dealing with them from the purely historical point of view. He was born at St. Petersburg in 1837, studied in Germany, and eventually settled in Basle, where he was Professor of Theology for over a quarter of a century. He opposed the views of Prof. Harnack and his pupils, whose method seemed to him unscientific; and the isolated position into which his views forced him, embittered his later years. He was the intimate friend of Nietzsche, and he left instructions that Nietzsche's letters to him were not to be published for some years. Among his most important writings are: 'Über die Anfänge der patristischen Literatur,' 'Studien zur Geschichte der alten Kirche,' 'Zur Geschichte des Kanons,' 'Über die Christlichkeit der heutigen Theologie,' &c.

THE Italians are anxious to have their "Immortals," like their neighbours the French, and a committee has been formed at Milan with this end in view. It is proposed to base the Academy on the lines of that in Paris, but members will be elected by means of national plebiscites. There will be three sections—literature, science, and art.

THE veteran journalist Carlo Landriani, whose death in his eightieth year is announced from Milan, was the chief editor of the *Perseveranza*. He was thoroughly acquainted with the social and political conditions of his country, and his sterling honesty won for him the respect of even his opponents.

M. REGNIER has been appointed general secretary of the Institute of France. He is a grandson of one of the members, and was for some years Secrétaire-Rédacteur of the Académie des Sciences Morales et Politiques. The election was almost unanimous, M. Regnier obtaining 90 votes out of 94.

THE Parliamentary Papers of the week include a List of Pensions granted during the year ended March 31st last, and payable under the provisions of the Civil List Act, 1901 (½*d.*); and a Report on Manuscripts in the Welsh Language—Vol. I., Part 3, Peniarth (8*d.*).

SCIENCE

The Face of the Earth (*Das Antlitz der Erde*). By Eduard Suess. Translated by Hertha B. C. Sollas, under the Direction of W. J. Sollas. Vol. I. Four Maps, two Full-Page Plates, and Forty-Eight other Illustrations. (Oxford, Clarendon Press.)

PROF. EDUARD SUESS is the direct successor of an illustrious line of geologist-geographers, represented by such names as Alexander von Humboldt, Leopold von Buch, Élie de Beaumont, and the elder Dana. His great work 'Das Antlitz der Erde,' now translated into English, is an attempt to interpret the shaping of the salient physical features of our planet. He has applied the evolutionary method to the study of these in their existing form, holding, as he says in the concluding chapter of the present volume, that

"as we cannot form a judgment as to the existing condition of a state unless we know how it has been brought about, so we are just as little able to arrive at a true view concerning that fragment of the earth's crust on which the state is situated without a knowledge of the events through which it has passed, and of the process by which it has been built up. In human affairs, as in the physical world, the present is only a transverse section; we cannot see the future which lies beyond, but we may gain instruction from the past. Thus the history of the earth is of fundamental importance in the description of the earth"

When Suess began the application of this method to the description of the face of the earth as it presents itself to us to-day, the chief lines of mountains and rivers had already been traced on maps of the interiors of the continents, and the general characteristics of their structure were beginning to be known. There were, however, many serious lacunæ still unfilled when the first two volumes of his great work appeared in 1885 and 1888. Several years—years fruitful in investigation and discovery—elapsed before the publication of the third volume, in which these are filled in. This circumstance undoubtedly makes the work unsatisfactory if regarded as a systematic treatise, for in many cases the conclusions of the earlier chapters are revised and supplemented by those of the later ones. The accumulation of new material, moreover, frequently makes it necessary to the argument to introduce long parenthetical summaries of recent and little-known papers. Fortunately, the author pauses here and there to sum up, in a few luminous paragraphs, the general conclusions of a long and detailed discussion. The three volumes, taken together, illustrate the gradual modification of his ideas, and permit the reader to trace the evolution of his more and more generalized conceptions.

No book of this scope exists in English, and the Oxford University Press is to be congratulated on having made Suess's great treatise, which has already been translated into French, accessible to the English reader. It is impossible, we think, that the work could have been better done than it has been by the collaboration of Prof. Sollas with his daughter Dr. Hertha Sollas. The English version faithfully follows the original, and supplies adequate renderings of the German technical terms, which almost invariably prove a stumbling-block to the translator who has had only a literary training.

The first volume, the only one as yet issued in English, is divided into two parts. The first consists of five chapters, in which are discussed the movements of the outer crust of the earth, diluvial, seismic, dislocatory, and volcanic. In the second part the mountain systems of the world are examined in very varying detail, but sufficiently to bring out the main trend lines. At the time, twenty years ago, when this volume was written, the possibility was recognized, says the author in a preface specially written for the English edition, of deducing

"from the uniform strike of the folds of a mountain chain a mean general direction, or trend line; such trend lines were seen to be seldom straight, but as a rule arcs, or curves, often violently bent curves of accommodation; the trend lines of Central Europe were observed to possess a certain regular arrangement, and to be traceable in part as far as Asia. It was further recognized that the ocean, from the mouth of the Ganges to Alaska and Cape Horn, is bordered by folded chains, so that a Pacific and Atlantic type may be distinguished; that the Mediterranean is not part of the Atlantic Ocean, but the remains of a sea which once crossed the existing continent of Asia, and has since been enlarged by subsidence; that at various times, as, for instance, during the middle and upper Cretaceous period, an extension of the seas occurred, much too general and too equable to be explained by the subsidence of continental land, and so on."

Suess's conception of the growth of the continents may be abstracted from his last chapter. The great island continent of the Old World is a heterogeneous mass, composed of two elements. One comprises the lofty tablelands of South and Central Africa, Madagascar, and the Indian Peninsula, which have not been covered by the sea since the end of the Carboniferous period, and the bordering tablelands of the Sahara, Syria, and Arabia, which were submerged during Cretaceous, and, in part, in Tertiary time, but which show no foldings later than Palæozoic. This is Indo-Africa. To the north lies Eurasia, the southern border of which advances in a series of great folds towards Indo-Africa, perhaps overthrusts to the south against this tableland. A marked line of separation runs south of the Atlas, across the Mediterranean south of Crete and Cyprus, by the south of Persia, the base of the Himálaya, thence by the Bay of Bengal west of the Andaman Islands, to the south of Java. The recently folded mountain system which rises to the north of this depression may suitably be called the Mid-World mountains. To the north of these rise in Europe the Russian tabular platform, and the block highlands, or horsts, of Central and North-West Europe. In the middle of Eurasia there was formerly a vast ocean, and the withdrawal of its waters has led to the formation of a number of inland seas, *e.g.*, the Caspian, with the remains of ancient fauna. The collapse of the Ægean and the Pontus is an episode in the history of the formation of the Mediterranean.

The two other units discussed in the volume are South America,

"a shield as it were, girdled on three sides by mountain ramparts; broken off without perceptible trend lines on the east and north-east, and with open virgation of the branches of the mountains to the south-east between Cape Horn and Cabo Corrientes";

and North America, where folding

"appears to be everywhere directed to the west, with a few exceptions caused perhaps by ocal overthrusting or to the subsidence at the outer border of the Rocky Mountains; this westerly movement began in extremely ancient times, and manifests itself from the Atlantic coast to the Pacific, from the Appalachians to the Sierra Nevada and the coast chains. Towards the north, however, a very extensive 'plate' without folding appears, which stretches nearly to the Arctic archipelago."

This northern "plate" and much of Eurasia and Australia are left to later volumes for discussion.

Even if some of the author's conclusions cannot be accepted in the light of more recent data, his great scheme is true in its main outlines, and will be an essential guide to all who continue his investigations. The translators might occasionally have added a brief foot-note, calling attention to Suess's subsequent modifications, or more recent data. The English edition is illustrated by the maps and sketches of the German edition; we are sorry it was not found possible to include the additional ones which appear in the French edition. These, however, are minor matters. All students of geology and geography will welcome this version of a masterly volume.

Studies in Logic. By A. Wolf, Lecturer in Philosophy at the University of London. (Cambridge, University Press.)—The real thesis of Mr. Wolf's little volume is much narrower than its title would lead one to expect. The author, it is true, discusses a variety of logical and metaphysical questions; but all these discussions are meant to bear upon one central problem—that Gordian knot of logic called "the Existential Import of Propositions." Not all of our readers—probably not even the majority—know what this problem is. We will therefore briefly explain it. There are four abstract propositions which are continually turning up in syllogistic reasoning—namely, "All (or every) x is y," "No x is y," "Some x is y," "Some x is not y." The following are concrete examples: "Every *man* is *mortal*," "No *man* is *infallible*," "Some *critic* (one at least) is *just*," "Some *book* (one at least) is not *silly*." The words in italics in the concrete propositions replace the symbols x and y in the abstract propositions. The problem to be solved appears very simple at first, and to the non-logician it may even seem puerile. Taking any of the four x-and-y abstract propositions, we are required to find an answer to each of these two questions: Does the proposition necessarily imply that the class (or individual) x exists? Does it necessarily imply that the class y exists? On correct answers to these seemingly trivial questions may depend the life or death of whole systems of philosophy.

"It is only since recent times," says Mr. Wolf, "that the Existential Import of Predication has received special attention. Its germs, however, may be traced already in Plato and Aristotle." This last statement we think rather fanciful. The recognition of germs is difficult, even in the physical world, and with the aid of a microscope; in the abstract world of ideas the difficulty is tenfold greater. We are therefore inclined to think that the "germs" which Mr. Wolf has found in Aristotle and Plato are imaginary. The true origin of the problem is to be found in the logical convention introduced, for the first time, we believe, by De Morgan, under the name of "The Universe of Discourse," a doctrine "which," so Mr. Wolf rather scornfully asserts, "has of late become a kind of magic incantation whereby life may be infused into fictions." This quotation gives the key-note of the author's whole argument. Further on he writes:—

"We hear of things existing in some universe of discourse, even if they do not exist in the universe of reality. Thus, for instance, we are told that centaurs, the gods of the Greeks, the Muses, &c., do not exist in the world of reality, but that they do exist in the universe of mythology, of fiction, &c., as the case may be.....There is but one universe of reality, and what does not exist in it exists nowhere else. That something may exist in some universe of discourse, even if it does not exist in the universe of reality, is an extravagant conception, and does not really mean what it seems to mean."

Now, without prejudice to Mr. Wolf's final conclusions, which we shall give presently, we have no hesitation in saying that the preceding dicta are founded on a demonstrably false assumption. The implied assumption is that every word in an argument must necessarily have one fixed unalterable meaning apart from all consideration of context. Mr. Wolf forgets that words are mere human conventions, mere symbols, like the a, b, x, y of the algebraist, which we may arrange in any way we please, on the sole condition that the arrangement conveys our intended meaning. The arrangement, the *complete statement* or *proposition*, is the real unit of reasoning. Provided we understand *that*, the *words* of which it is composed matter little. Can Mr. Wolf seriously assert that he does not understand, or that any ordinary educated person would misapprehend, the real meaning of any one who employed the statement to which he objects, namely, that "Centaurs exist in the universe of mythology, though they do not exist in the world of reality"? And if he is not prepared to assert this, was it really necessary to devote so many pages to the analysis of mere verbal subtleties whose relevance to the question at issue it is not always easy to detect? But here fairness demands that we should quote the author's own views upon the point. Here they are:—

"The question as to what is relevant, what irrelevant to such an inquiry, is one on which there may naturally be some difference of opinion. To the present writer it seemed expedient to examine all such topics as the history of the problem has shown to be relevant, so that, without overburdening the essay with uninteresting historical details and numerous criticisms of individual thinkers, it may nevertheless contain, as far as practicable, all the material necessary for dealing with the leading views on the subject."

Now, Mr. Wolf's essay unquestionably proves him to be intimately acquainted with the writings of the leading logicians of the past, and he knows something, though far less, of the published researches of his contemporaries. Were this work, therefore, avowedly a simple critical *history* of the evolution of an interesting logical problem, we should have little fault to find with it. The author's criticisms are always interesting, often forcible, and sometimes original. Where readers will find the work faulty, not to say irritating, is in the way in which the essential threads of his solution of the Existential Problem are inextricably interwoven with his criticisms of the views of other writers, and on questions which have no apparent bearing on the real problem. They have to search through the author's discussions on various technical terms, such as "*suppositio materialis*," "*subjective intension*," "*hypostasis of ideas*," "*objectivity*," &c., with an occasional mention of "*Existential Import*," just to lure them on, before they can obtain a clear view of his promised solution. And when they have reached this solution at last, they are again irritated at the discovery that they might have been led to the same conclusions in a fraction of the time and by a path much shorter and clearer, if more modern and therefore less picturesque. This defect of unnecessary length will appear the greater if we compare Mr. Wolf's essay in this volume of 161 pages with Mr. MacColl's essay of eight pages on the same problem in the January number of *Mind*. Mr. Wolf's final conclusions are five in number. As they occupy two pages, we can quote only the essential points, which are as follows:—

(1) "The expressions Being, Existence and Reality, should be employed only in the strict sense of actual existence in the world of reality."

(2) "Existential implication cannot be permanently associated with any of the four propositional forms of Common Logic (A, E, I, O), though it can, to some extent, be permanently associated with certain classes of judgments based on other than formal *fundamenta divisionis*."

(3) "There is no reason why Formal Logic should not adopt explicitly the view of existential non-implication, which (unlike the view advocated by Dr. Venn and Dr. Keynes, and in spite of their objections) would leave all the commonly accepted doctrines and inferences of traditional Logic absolutely unaffected."

Mr. MacColl's solution of the Existential Problem in *Mind*, to which we referred just now, is an application of a general principle given in the last paragraph of an article contributed by him to *The Athenæum* of April 9th, 1904. His conclusions are contained in the following quotation:—

"Firstly, when any symbol A denotes an *individual*; then, any intelligible statement ϕ(A), containing the symbol A, implies that the individual represented by A has a *symbolic* existence; but whether the statement ϕ(A) implies that the individual represented by A has a *real* existence depends upon the context. Secondly, when any symbol A denotes a *class*; then, any intelligible statement ϕ(A), containing the symbol A, implies that the whole class A has a *symbolic* existence; but whether the statement ϕ(A) implies that the class A is *wholly real*, or *wholly unreal*, or *partly real and partly unreal*, depends upon the context."

We thus see that Mr. MacColl would cut the Gordian knot by according *symbolic* existence, or existence in the "universe of discourse," to everything, real or unreal, mentioned in the argument or discourse, on the ground that to that universe it *must* belong for the sole and sufficient reason that it has received a name, or has been represented by a symbol. This convention gets rid of all the perplexing paradoxes of other theories at a stroke; as, for example, the paradox advanced by the Boolian logicians (Venn, Keynes, and others) that the two statements "All x is y" and "No x is y" are not necessarily incompatible, as the two combined are equivalent to the perfectly consistent statement that x does not exist in our "universe of discourse." But, according to Mr. MacColl's convention, this last statement is self-contradictory, as everything mentioned in our argument *must* (for the simple reason that it is so mentioned) belong to our "universe of discourse." Thus, the very fact which the Boolians advance as proof of the *compatibility* of the two statements given above, he accepts as proof of their *incompatibility*.

In comparing the solutions of the two writers, we find that while the one would remove all difficulties by giving the utmost elasticity to the meaning of the word *exist*, the other seeks to attain the same end by restricting this word to unquestioned realities. Of the two conventions—for they are nothing more, the one being no more an absolute logical necessity of language than the other—we prefer the more elastic to the more restricted, because of its greater simplicity and generality.

Mr. Wolf writes throughout as if he knew of no symbolic logic except the Boolian, including its modern developments by Venn and others. To show the limitations of this logic, he gives the following problem:—

"Given (1) that some things that people fear are ghosts, (2) that all ghosts are disembodied spirits, (3) that no disembodied spirits exist; required the inference to which these statements point."

Mr. Wolf draws correctly the inference that "some things that people fear do not exist," and he justly points out that, on the Boolian principle, the three premises would be mutually inconsistent, so that no trustworthy inference could be drawn from them. Expressing the premises in Dr. Venn's notation, he shows conclusively that, on the Boolian principle, the third and second premises combined imply a statement ($xy=0$), which contradicts the first premise, expressed symbolically by ($xy>0$). But if Mr. Wolf will read the articles on 'Symbolic Logic' which have recently appeared in *The Athenæum*, and especially those in Nos. 3958 and 3989, he will find that a symbolic logic exists, far simpler than the Boolian and incomparably more

powerful, to which his criticism does not apply. According to this logic, the elementary *unit* of all reasoning is the *complete statement*. The symbol $(\alpha : \beta)$ asserts that the statement α implies the statement β, while the symbol $(\alpha = \beta)$ is an abbreviation for the compound statement $(\alpha : \beta)(\beta : \alpha)$. An acute accent marks *denial*, so that α' is the denial of α, and $(\alpha : \beta)'$ is the denial of $(\alpha : \beta)$. This is the essential principle of the logic in a nutshell, just as it was given to the world by Mr. MacColl some twenty-eight years ago. Applying it to Mr. Wolf's problem, we proceed as follows :—

Speaking of any entity (real or unreal) taken at random in our "universe of discourse," let f denote the statement "it is *feared*"; let g denote "it is a *ghost*"; let d denote "it is a *disembodied* spirit"; and let e denote "it *exists*" (not merely symbolically, but really). We have for our data the three-factor statement

$$(f : g')'\,(g : d)\,(d : e')$$

and Mr. Wolf's conclusion is $(f : e)'$, which asserts that the statement that a thing is *feared* does not necessarily imply that it really *exists*. To verify his argument, which we will denote by ϕ, we get

$$\begin{aligned}\phi &= (f : g')'\,(g : d)\,(d : e') : (f : e)' \\ &= (g : d)\,(d : e')\,(f : e) : (f : g'), \text{ by transposition} \\ &= (g : d)\,(d : e')\,(e' : f') : (g : f')\end{aligned}$$

which is a formal certainty; for it is clear that if g implies d, and d implies e', and e' implies f', then g implies f'.

Mr. Wolf's criticism of Dr. Venn's convention that $(xy > 0)$ shall mean "Some x is y," is undoubtedly cogent; but his own proposal, that we should revert to the old Boolian symbol $\overset{0}{()}$ and express "Some x is y" by $\overset{0}{()}\, x = \overset{0}{()}\, y$), is simply a proposal to put the clock back more than a quarter of a century, and is no less objectionable. "Some x is y" is simply the denial of "No x is y," and *vice versâ*, so that if any symbol, say ϕ, be used to denote the one, the other will be expressed by ϕ'. In his solution of his problem Mr. Wolf, following the Boolian convention, recognizes only three elementary classes, x, y, z, corresponding respectively to our statements f, g, d; while we, adopting Mr. MacColl's convention, take also into account the class e_1, e_2, e_3, &c., of *real* existences, which, with the class o_1, o_2, o_3, &c., of non-existences or unrealities, make up the whole symbolic universe s_1, s_2, s_3, &c.

The chief impression left on our mind after reading Mr. Wolf's 'Studies in Logic' is that the author, like some other able logicians of the day, has been the victim of the crushing tyranny of university examinations; and that this essay is a vigorous and not wholly unsuccessful attempt to recover his independence of thought. If examiners allowed students more latitude in the choice of symbolic methods, and were less exacting as to extent and quantity of purely historic matter, there would be fewer Rip Van Winkles among teachers and professors.

BOTANICAL LITERATURE.

Experiments with Plants. By W. J. V. Osterhout, Ph.D. (Macmillan & Co.)—But for the insertion of the word "plants" the title of this book might excite the ire of the anti-vivisectionists. As plants are living organisms, the objections to their being made the subjects of experiment are, except in degree, as valid as in the case of animals. From this point of view it may be of interest to cite what Prof. L. H. Bailey says in the preface to the present volume :—

"The introduction of laboratory work has been the great contribution of natural science to pedagogy. The laboratory sets the pupil at work with a personal and concrete problem; it developes the creative and active faculties rather than the receptive; it asks the pupil what he has found out, rather than what he remembers. The school is now reaching out to the larger problems of the environment, and to the affairs of men, for it is to touch life at every point."

This passage reminds one of the question, "Was haben Sie gefunden?" which was daily addressed to each student working in the laboratory of a famous German botanist. It furnishes also the key-note to the present volume. The student is to dispense as far as possible with his text-book, he is not to be be-lectured by his professor. He is not only to see for himself, but also, as far as possible, "to find out" for himself the "reason why." There is no doubt as to the value of such training; but, to avoid futile attempts, some little assistance on the part of the teacher is required in the first instance. In the book before us that assistance is furnished by the very numerous illustrations which indicate to the beginner what he is to look for. We have known students, without some aid of this kind, waste time in profitless fumbling, and at the end of the allotted period know no more about the object before them than they did at the beginning. Having gained some idea of the conformation, say, of a seed, the student is set to work to find out what a seed does, and how and under what conditions the work is accomplished. To effect this, various simple, well-devised experiments are indicated. Roots, stems, leaves, flowers, are treated in the same manner. A separate chapter shows the way in which plants are influenced by their surroundings; another is devoted to their decay by the agency of bacteria; still another to the "making new kinds of plants," in which attention is called to the work of hybridizers like Luther Burbank, and experimenters like Hugo de Vries, whose theory of mutation is explained, and of whom it is said :—

"His discoveries demonstrate conclusively that evolution can be studied experimentally in a manner hitherto unsuspected, and furthermore raise the important question whether we can control evolution, and so produce species at will. Some experiments already made in this direction are very encouraging, and open up a promising field of research."

The subjects of morphology and classification, intimately associated though they are with what has gone before, are not included, and, to this extent, the book is incomplete; but on the whole we may commend it as one of the very best of its class, and in some respects in advance of any similar book known to us. An excellent index adds to its value. Though written primarily for the students of the University of California, it is equally well adapted for English-speaking students in whatever quarter of the globe they may happen to be.

Manual of the Trees of North America, exclusive of Mexico. By C. S. Sargent. (Houghton, Mifflin & Co.)—The fourteen volumes of the 'Silva of North America,' with their hundreds of plates, their elaborate descriptions and full bibliographical details, constitute a work universally acknowledged to be of first-rate importance. It is clear, however, that such a book is not one to the possession of which many can aspire. It may be consulted in reference libraries, but to meet the requirements of the average student something more concise and more within the means of the generality of readers is needed. This requisite the book before us is admirably devised to fulfil. It contains condensed descriptions of the trees native to North America, with maps and 640 small illustrations. The distribution of the several trees throughout the States is sketched with the precision and firmness which characterize Prof. Sargent's work, but we miss any general sketch of the character of the tree-vegetation as a whole and of its relation to that of other countries such as Asa Gray was wont to give. Such a sketch would not have added much to the bulk of the volume, but it would have greatly enhanced its interest. In his arrangement of the orders Prof. Sargent has followed the plan proposed by Engler and Prantl, which is gradually superseding the older methods of classification. As only trees are included, there are, of necessity, some gaps in the sequence and the association of orders is sometimes startling, as, for instance, the juxtaposition of the planes (Platanaceæ) with the Rosaceæ. Of course, Prof. Sargent is not responsible for this, as he has only "followed copy," but, for all that, the arrangement is puzzling to the student. Analytical keys to the several families, as well as to the species of each genus, are provided. These are useful to the experienced observer as reminders, but to the beginner, who is not able to estimate them at their true value, they are full of pitfalls. They are necessarily largely based on the comparative size and substance of parts—characters which vary sometimes very greatly even on the same tree. The nomenclature adopted is the same as in the 'Silva,' and it, too, is sometimes startling. But as this remark mainly applies to those accustomed to other methods and not to the coming generation, the innovations, if we may so call them, are not, perhaps, of serious consequence. In any case their merits or demerits cannot be discussed here. Neither can we enter into any discussion as to the validity of the new species proposed by Prof. Sargent. We can only express our compassion for the unhappy student who has to differentiate between no fewer than one hundred and thirty-two species of Cratægus. It must be added that the work is confined to trees, and that shrubs, as a rule, are omitted. A glossary and a full index increase the value of a book which is indispensable to all students of American trees.

Organography of Plants. By Dr. K. Goebel. Authorized English Edition by Isaac Bayley Balfour.—Part I. *General Organography (1900)*; Part II. *Special Organography (1905)*. (Oxford, Clarendon Press.)—After an interval of between four and five years, we are in a position to announce the completion of the English version of this important treatise. It deserves, and will receive, a hearty welcome from our botanists. The first part contains a general sketch of morphology and organography, and of the conditions influencing them. In the second and larger instalment the details relating to the bryophytes, pteridophytes, and spermophytes are discussed at great length. The thallophytes are passed over with incidental mention only. The book is so crowded with facts that anything like an adequate review of the whole would be impossible in the space at our disposal. The account of the bryophytes (mosses and liverworts) is particularly full and elaborate, forming the best survey of these interesting plants that has yet appeared. As to the nomenclature of these plants, Prof. Goebel says—as he might say of most groups—that it is at present in great confusion, and in respect to it explains further :—

"I adopt a conservative attitude, and regard as a nuisance the practice of changing plant-names which have long been in use and.....purely on the ground of a shadowy priority."

The complete and well-arranged table of contents and the copious index will be of the utmost service to students. Bibliographical references are given in the notes, but it would have been an additional convenience if they had been all inserted in the index. The relations of structure to function and the adaptations to external conditions receive much attention at the hands of the author. The facts of development are by no means ignored, though hypothetical phylogeny receives but scanty treatment.

The translation is so well done that the book is easy to read, an advantage that cannot always be claimed for English renderings of German books. In the first part Prof. Balfour adopted the spelling "spermaphyte" as applied to seed-plants. He now writes "spermophytes" as being more correct; but we think that "spermato-

phyte" would be even more in accordance with classical usage. The use of the words "dicotylous" and "monocotylous" for dicotyledonous and monocotyledonous seems hardly to be an improvement. But these are very tiny flies in a pot of most excellent ointment. The illustrations are very numerous; many are original, and afford a welcome change from the familiar figures which have been put before us so often. The reader will have gathered that this is a most important addition to the series of translations issued from the Clarendon Press. On the principle that gratitude is a sense of favours to come, we plead for the early issue of a similar translation of Eichler's 'Blüthen Diagramme.'

The Book of the Lily. By William Goldring. (Lane.)—One great advantage accrues from the hobbies and caprices of flower-lovers, the increased knowledge of plants and their peculiarities which extended cultivation enables us to obtain. Compare, for instance, the present knowledge of the great family of orchids with that of half, or even a quarter of a century ago. It is not only those who are "fond of flowers" as decorative objects who gain, but especially botanists, physiologists, and practical cultivators — and the gain is permanent. The fashion may change. Some other flower may hit the public taste; the quaint forms and brilliant colour of the orchids may cease to attract, and some other family of plants may take their place in popular estimation. No matter; a vast body of facts relating to morphology, physiology, and geographical distribution has been secured, and these facts are available for the support or for the refutation of speculations as to origin, development, genealogy, variation, mutation, or any similar questions relating to the philosophy of plant life.

'The Book of the Lily' now before us makes little or no direct pretension to enter into abstract science, but indirectly it will have a beneficial effect, even from this point of view. Regarded as objects of beauty, lilies have probably a larger body of admirers even than orchids. They are more easily grown. They are, if we may so say, more homely, simpler and less intricate in form, and equally beautiful in colour. Be this as it may, it is certain that lilies have greatly advanced in popular favour of late years. Perhaps the publication of Elwes's splendid monograph may have had something to do with this. But that monograph is for the few. Mr. Goldring's little book appeals to the many. It is written for those who delight in flowers and who love their gardens rather than for the connoisseur; but the information given is so generally accurate and so interesting that we venture to think that many who turn to its pages for the sake of recreation only will be led on insensibly to become students, and thus enjoy a more enduring sense of satisfaction. After a summary of the geography and history of the genus, Mr. Goldring proceeds to give a brief account of the several species and varieties, based on the labours of Mr. J. G. Baker. Then follow technical details relating to the cultivation of the different species. In this part of the book the personal experience of the author serves him in such good stead that the amateur may with every confidence follow his directions. To show that the writer is "up to date," we may mention that one short chapter is devoted to the

"retardation of the flowering period of lilies by placing them in refrigerators. By forcing, on the one hand, and by arresting growth on the other, it is possible to have lilies all the year round."

There is no index, but an alphabetical list of the species at the end of the book goes far to supply this want.

THE TRANSFORMATIONS OF MATTER.

II.

IN last week's *Athenæum* we gave the main outlines of M. Le Bon's masterly speculation that all matter is slowly dissociating, and that what we call electricity is the intermediate state through which it passes on its way back to the ether whence it came. In support of this he gives in the appendix to the book before quoted a series of experiments which he has chosen as easy to repeat without expensive or very delicate apparatus. But he warns us that his deductions are drawn not exclusively from these, but from a long series of researches extending over a space of more than eight years, the details of which must be looked for in his published papers, of which he appends a list. It may also be said that since his first articles on 'La Lumière Noire' in 1896 many experiments have been made and facts noted by French, English, and German physicists which can be used in support of his conclusions. He complains, indeed, that in many cases both his experiments and his conclusions have been employed by others without due acknowledgment. This is not unlikely, but we do not propose to discuss here the always thorny question of priority, and prefer instead to talk of such experiments as seem to bear out M. Le Bon's conclusions, without confining ourselves to those actually recorded by him.

To take the transformations of matter in the order given in last week's article, the production of a quasi-material emanation from radium was first announced by Sir William Ramsay. This emanation, which he would call *ex-radio*, comports itself like a heavy gas, which can be condensed and volatilized, transported from one vessel to another, and which gives at one stage of its existence the characteristic spectrum of helium. But it does not long remain in this condition. Prof. Rutherford has shown, and it has been independently verified by Prof. McClelland, that it originally bears no electric charge; but it is abundantly evident that it is the main, if not the sole source of the electrical phenomena exhibited by the radio-active metals. Its volume gradually shrinks until (in about three weeks in the case of radium) it disappears almost entirely, a very small part, perhaps, remaining embedded in the glass of the containing tube. Such a quasi-material emanation, or, as he calls it, "émission pesante," was shown a year ago by M. Blondlot to be emitted by copper, zinc, lead, and some other substances; and similar conclusions have since been arrived at by the Hon. R. J. Strutt and Prof. J. J. Thomson; while Sir William Ramsay, Prof. Rutherford, and Mr. Soddy have shown that it is produced by the radio-active metals other than radium. This quasi-material emanation leaves behind it, as has been said, a quantity of positive and negative ions, which M. Le Bon claims make up his "ionic fluid." The charged sub-atoms or particles of matter, which English physicists recognize under the name of ions, can, says M. Le Bon, be made to circulate through a metallic tube or worm connected to earth, which no ordinary electricity would do, and he shows by an experiment quoted from Prof. de Heen (of Liége) how this fluid reveals itself in the traces left by an "ionizing" gas flame on a plate of resin. It is not impossible also that the experiment known as Lullin's, in which the hole caused by the passage of an electric spark through a sheet of cardboard is shown to be nearer the negative than the positive pole if the discharge take place in air, but exactly midway if *in vacuo*, can be similarly explained. The successive formation or development of the Alpha or positive particles, of the Beta or negative electrons, and finally of the Gamma rays, which they consider equivalent to the X rays of Röntgen, has been abundantly verified by Prof. Rutherford and Mr. Soddy.

We come to M. Le Bon's discovery that Hertzian waves are emitted when a discharge takes place from a point negatively charged. This appears to have been discovered by him accidentally when experimenting on the effect of ultra-violet rays produced otherwise than by the sun in causing a strip of perfectly clean metal to discharge an electroscope. He found that in spite of the quartz box in which the spark-gap on which he relied for the production of ultra-violet rays was enclosed, some disturbing influence was present, and he succeeded by means of a coherer tube and a relay in causing it to ring a bell. He also describes an experiment by which the Hertzian waves thus formed can be made to light up a Giessler tube, and in the absence of any countervailing explanation, these experiments seem to be conclusive. Finally may be mentioned an experiment which the present writer has successfully repeated, and which he has not seen recorded elsewhere. A plate of glass, mica, or ebonite is held horizontally a few centimetres above the upper terminal of a Tesla transformer made active by a 12-inch induction coil. The plate is not pierced, and, indeed, the discharge may be so regulated that no spark passes. Yet if the room be darkened, a fan or inverted cone of what looks like faintly luminous dust will be seen to rise from the terminal, and to pass unchecked through the plate without losing its conformation or its consistency. Dielectrics such as glass are impervious to ordinary electric discharges, and, according to M. Le Bon, this luminous dust is the mass of electrons or atoms of negative electricity into which the intense discharge has reduced the molecules of the gases of the air. Although most of them recombine into ions by seizing upon particles of matter with which to ally themselves, some small part must be supposed to return to the parent ether in the form of light-waves. It is not easy to see what equally plausible explanation of the phenomenon can be offered.

It was not to be supposed that these generalizations, wide reaching as they are, would pass entirely without challenge, and criticisms of separate parts of them have not been lacking. To some of these M. Le Bon replies in the present volume in more or less effective fashion. Thus Mr. Norman Campbell, of the Cavendish Laboratory at Cambridge, attacked, in *The Philosophical Magazine* for April last, M. Le Bon's conclusions from his experiments upon the radiation accompanying chemical changes, and sought to show that the rays were in all such cases due to the heat which accompanies the reaction. To this M. Le Bon replies that the part played by heat in the affair is, in his view, limited to the expulsion of the emanation which, as we have seen, is the immediate cause of the radio-activity, and that in many of his experiments, such as the luminosity caused by the hydratation of sulphate of quinine, a lowering and not a raising of the temperature accompanies the phenomenon. More serious is the objection of M. Henri Poincaré here given, that, while M. Le Bon apparently accepts the theory of Helmholtz and Lord Kelvin that, when the primæval nebula condensed to form our sun, its potential energy was transformed into heat, now being dissipated by radiation, he now contends—together, it may be noticed, with Prof. Rutherford, Mr. Soddy, and other modern physicists—that the union of the corpuscles or sub-atoms shut up within the atom a large quantity of potential energy which is transformed into heat when the atom is disintegrated. Hence, says M. Poincaré, the progression from nebula to sun is exothermic, that from sub-atoms to atoms endothermic; but all endothermic combinations are known to be extremely unstable, yet the chemical atoms have hitherto proved themselves to be at least as stable as the sun. To this M. Le Bon can only reply that the law as to the instability of endothermic combinations is only

invariable in the case of ordinary chemical reactions, in which the combination takes place between the molecules of the elements; but it does not follow that it holds good for the combinations of sub-atoms, with which, for aught we know, matters may be exactly the reverse. In the alternative he pleads that the stability of the atom is more apparent than real, since, on his theory, it is constantly dissociating.

There remain the consequences of the general acceptance of M. Le Bon's theory, which might, to use the hackneyed phrase, bring about a revolution in science. Yet the revolution may not be so thorough nor so sudden as at first sight appears likely. The doctrine of the conservation of mass has been already impaired by the theory lately mentioned in *The Athenæum* (No. 4048) that inertia, "the measure of mass," is entirely an electromagnetic phenomenon. The sister doctrine of the conservation of energy is, indeed, attacked for the first time by M. Le Bon's generalizations. But, as M. Le Bon himself points out, though attacked, it is not overthrown, because it may still be professed with a clear conscience by those who believe that the atom, in dissociating, does but give back to the universe the energy stored within it during the condensation of the parent nebula. In more concrete matters, the most important result of the acceptance would probably be the setting of men's minds to work for a means of tapping the enormous stores of inter-atomic energy—a search which, if successful, would revolutionize all economic conditions by placing a virtually unlimited source of power within the reach of every one. Such a search would haveits dangers, for M. Le Bon points out that the sudden and complete dissociation of a gramme of radium would probably reduce the laboratory and all buildings surrounding it to a heap of dust. Yet it is unlikely that in this matter we shall approach truth swiftly. In showing—as it will seem to many he has done—that electricity is the intermediate stage between matter and ether, M. Le Bon has enabled us to take an enormous step in advance. But nature does not proceed by leaps and bounds, and he finds himself obliged to remind us that the electron or negative corpuscle may turn out to be constructed on a sun-and-planet system as complicated as that of the atom. As to the means of dissociation, he sees reason to think that most of these unstable combinations have, so to speak, a weak spot, and that it is only on touching these that another step in the return to the ether is possible. Hence it is probable that in between the few changes of form we have noticed, there are thousands upon thousands of transformations through which matter has to pass; and thus, when, or if, M. Le Bon's theory is accepted, there will still be a good deal left for us to discover.

SOCIETIES.

MICROSCOPICAL.—*June* 21.—Mr. G. C. Karop, V.P., in the chair.—Three old microscopes were presented to the Society's collection by Mr. C. L. Curties. One, "a pocket and botanical and universal microscope," by W. & S. Jones, was a miniature instrument, and was a development of one figured and described by Adams in his 'Essays of the Microscope,' 1787. Another was a form of Wilson's screw-barrel microscope, probably made by Adams about 1746. The third was a modification of Ellis's aquatic microscope, and bore the name of Shuttleworth.—A noteworthy donation to the library was the concluding part of Dr. Braithwaite's 'British Moss Flora,' the publication of which extended over twenty-five years.—Dr. Lazarus-Barlow exhibited and described a new form of warm stage (devised by him) that could be heated by oil or gas. The regulation depended upon the expansion and contraction of a fixed volume of air, acting through a manometer upon a delicately balanced lever, at one end of which a silver rod was carried in a horizontal position. The flame was applied to one end of the silver rod, while the other end, which was bent downwards, dipped into a paraffin bath attached to the side of the stage. As the temperature of the stage increased the contained air expanded, and, acting on the manometer, caused the lever to raise the silver rod and withdraw the bent portion partially from the paraffin bath.—Mr. Cecil R. C. Lyster also exhibited an improved form of warm stage heated by electricity. He said that most of those made on this principle were heated by means of resistance coils, but he found it impossible to maintain an equable temperature in that way from the ordinary house current, on account of variations of intensity. He had found that by using cryptol as a resistance a perfectly even temperature could be maintained. The amount of current consumed was extremely small, not exceeding 150 milamperes.—Mr. C. L. Curties exhibited an arrangement for obtaining dark ground illumination with high powers, which had been suggested to him by a contrivance made by Leitz for attaining this object. He showed *Pleurosigma angulatum* on a dark ground under a 1/12-inch oil immersion objective, and he thought the structure was resolved in a satisfactory way.—Mr. Rheinberg said that images obtained by the use of a black stop over the objective were not very trustworthy, as objectionable diffraction effects were introduced by stopping out the central beam. This applied specially to structure anywhere near the limit of resolution of the objective. With *angulatum* the dots were seen fairly well under these conditions, owing to the peculiar disposition of the spectra, but with other diatoms the results would be more at variance with the correct image.—Mr. Curties agreed with Mr. Rheinberg's remarks. He could only resolve *P. angulatum* and *P. formosum* in this way; he was unable to resolve smaller diatoms, except so far as the coarse structure was concerned.—Mr. Rheinberg called attention to an experiment showing that the appearance of a grating could be produced in the field of the microscope without there being anything on the stage. The lines seen were achromatic interference bands produced with the help of two of Thorp's gratings of equal pitch placed behind the objective.—Mr. Rousselet called attention to a living specimen of *Plumatella punctata* (Hancock) sent by Mr. Hood, of Dundee. The rare freshwater polyzoon has apparently not been recorded in England since its discovery by Hancock in 1850. It differs from other species of Plumatella mainly in having a soft transparent ectocyst.—A communication by Mr. E. M. Nelson on the tubercle bacillus was taken as read.—Mr. A. E. Conrady gave a *résumé* of his second paper on 'Theories of Microscopic Vision.' In his earlier paper he dealt with the formation of the image of a simple plane grating, showing that it could be fully accounted for on the basis of Abbe's theory. In the present paper he considered more complicated structures, such as dot and cross-line patterns.—The proceedings were concluded with an exhibition of fine lantern-slides lent by Mr. A. Flatters. Among them were a series of the *Anopheles maculipennis*, a series from Haeckel's 'Kunstformen der Natur,' corals from Kent's work on the Great Barrier Reef, Actinozoa, Hydrozoa, &c.

PHYSICAL.—*June* 30.—Dr. R. T. Glazebrook, Past-President, in the chair.—A paper on 'The Comparison of Electric Fields by means of an Oscillating Electric Needle' was read by Mr. D. Owen.—Prof. R. W. Wood read papers on 'The Magneto-Optics of Sodium Vapour and the Rotatory Dispersion Formula' and 'The Fluorescence of Sodium Vapour.'

Science Gossip.

'NOTEWORTHY FAMILIES (SCIENCE),' by Dr. Francis Galton and Mr. E. S. Galton, promised by Mr. Murray, forms vol. i. of the publications of the Eugenics Record Office of the University of London. Dr. Galton, who may be said to have founded the new science, is himself a happy example of its working, since he comes of the Darwin stock, which has done so much for science.

MR. MURRAY will also publish 'The Book of the Rothamsted Experiments,' by Mr. A. D. Hall, who may be expected to write a popular account which does no injury to the scientific side of the subject. Mr. Hall has had ample experience of scientific farming, and is the author of a masterly book on 'The Soil.'

MR. UNWIN has arranged to publish a volume by Mr. Edward Irving, entitled 'How to Know the Starry Heavens.' It is not so much a text-book as a popular account of the teachings of astronomy, designed to lead readers to further study. It will be illustrated with coloured plates, photographs, and diagrams.

A BOOK will shortly be published by Messrs. Blackwood giving the natural history notes, and an account of the strange pets, of the author, Mr. Richard Bell, of Crurie. Mr. Bell has long been well known as a keen Dumfriesshire naturalist, and was a friend of Frank Buckland.

WE notice the announcement of the death, on the 10th inst., of Sir Peter Nicol Russell, who a few years ago founded the School of Engineering in connexion with Sydney University, having given 100,000*l.* for that purpose. Sir Peter, who was born at Kirkcaldy, Fifeshire, July 4th, 1816, accompanied his parents to Hobart Town, Tasmania, in 1832, and went to Sydney in 1838, where he established large iron-founding and engineering works. He was intimate with William Wentworth, Sir Charles Nicholson, Robert Lowe (afterwards Lord Sherbrooke), Dr. Dunmore Lang, Sir George Gipps, the Macarthurs, Cowpers, Morts, Coopers, Windeyers, Sir Henry Parkes, and many other less-known men who built up the Australian Commonwealth. Sir Peter had resided in London since 1865.

WE regret to notice the death also, on the 29th ult., of Mr. Walter Ernest Besley, F.R.A.S., of the Chase, Clapham Common. He had been for some years past director of the section of meteors and auroræ of the British Astronomical Association, and, until his health began to fail, a diligent observer of those phenomena.

MR. T. J. COBDEN-SANDERSON writes:—

"In the note on the death of Élisée Reclus which appeared in the 'Science Gossip' column of your last issue the writer would appear to have confused the work begun by M. Reclus in 1875 and finished in 19 vols. in 1894—'La Nouvelle Géographie Universelle'—and the work begun on the completion of the former, and only now in course of publication—'L'Homme à travers les Contrées et les Ages,' or, briefly, 'L'Homme.' This work, to the composition of which M. Reclus devoted the last ten years of his life, is thus alluded to and described by the author in his preface: 'Il y a quelques années, après avoir écrit les dernières lignes d'un long ouvrage, "La Nouvelle Géographie Universelle," j'exprimais le vœu de pouvoir un jour étudier l'Homme dans la succession des âges comme je l'avais observé dans les diverses contrées du globe et d'établir les conclusions sociologiques auxquelles j'avais été conduit. Je dressai le plan d'un nouveau livre où seraient exposées les conditions du sol, du climat, de toute l'ambiance dans lesquelles les événements de l'histoire se sont accomplis, où se montrerait l'accord des Hommes et de la Terre, où tous les agissements des peuples s'expliqueraient, de cause à effet, par leur harmonie avec l'évolution de la planète.' It was M. Reclus's wish that an English translation should be published in England, and at his request I have invited some of the most important publishers, including a University Press, to undertake the task—but in vain. It is only 'La Nouvelle Géographie Universelle' which has been translated. The last work of the great author has yet to find in England both translator and publisher."

A NEW small planet was photographically discovered by Prof. Max Wolf at the Königstuhl Observatory, Heidelberg, on the night of the 28th ult.

IN *Circular* No. 99 of the Harvard College Observatory, Prof. E. C. Pickering gives a discussion of the observations of the variable star called RS Ophiuchi since the year 1888, and states that the observations of the spectrum and of the light-curves show that this object should rather be classed with the *Novæ* than with the variable stars: a fact which was first suspected by Mrs. Fleming in 1899, whilst examining a photograph of a spectrum taken on July 14th, 1894. Miss Cannon noticed a remarkable increase in the light of the star which took place in 1898; at the end of June its brightness exceeded the eighth magnitude. In 1900 it attained the magnitude 9·3 in April, but diminished to 10·0 in September, since which time the changes have been slight. *Circular* No. 100 discusses the variable stars in the

clusters Messier 3 and Messier 5. In the ratio of the number of variables found to the whole number of stars examined, these clusters are the most remarkable yet discovered, the proportion being one to seven in the first and one to eleven in the second. Prof. Bailey is continuing his examination at Arequipa of the variable stars in the cluster ω Centauri.

FINE ARTS

The Royal Academy of Arts: a Complete Dictionary of Contributors and their Work from its Foundation in 1769 to 1904. By Algernon Graves. Vol. I. (H. Graves and Bell & Sons.)

MR. GRAVES has accomplished a task for which we cannot be too grateful; and his work will at once take high rank in every reference library, public and private. The surprise is that no one has hitherto attempted what obviously wanted doing. In compiling a dictionary of artists the inclusion or otherwise of a name is always subject to the caprice of an editor, who is often unconsciously biased. Even if such an editor is a profound student of a subject so vast as English art, he has to confine himself to certain, if ill-defined limits; and so it comes to pass that the new edition of Bryan has its serious shortcomings, its omissions and its inadequacies; many of the names omitted from that work are of men who were more or less distinguished in their day, who did excellent work according to their lights, and whose memory, therefore, deserves at least some amount of recognition. The survival of the fittest is perhaps a good theory generally, but many of the neglected atoms were at one time serious forces. Mr. Graves has had no prejudices in compiling his book, no pet name to drag into the light of to-day—no axe to grind, in fact. The most obscure get the same degree of attention as the most eminent. Lawrence is not ranked above the forger Wainewright, nor Reynolds above the smallest fry of 1904. Mr. Graves's impartiality is, indeed, refeshing, and in turning over the pages of this handsomely produced book we feel more and more incensed against some unknown person or persons for not having carried out the idea long ago.

But is the scheme of the book the best that could have been adopted? For all general reference, and for most other purposes, there can be no doubt that the alphabetical arrangement according to artists' names is the best. But it does not—unfortunately or fortunately, according as one has or has not a complete set of the R.A. catalogues—dispense with the necessity of these catalogues. When the work is completed we shall be able to see at a glance what pictures each exhibitor had at the Academy from 1769 to 1904; but how are we to know who were exhibiting during any particular year? This can only be discovered by going to the fountain-head—the catalogues themselves. There are sets in the British Museum and at South Kensington, but probably in no other public library in London; a complete series rarely occurs in the market, and when it does it always realizes far more than the average student feels justified in paying. The best and most perfect scheme for such a work as Mr. Graves's would perhaps have been a complete chronological reprint of the catalogues, with an elaborate index at the end. But we think that Mr. Graves's alarming industry would have shrunk from such a gigantic undertaking. Even as it is, it seems to us that an unexpected task stares him in the face, and that is an index to the portraits named in his work. This would probably form a volume by itself. We have been impressed with this necessity in turning over the pages of the first volume, and in looking through some of the earlier issues of the R.A. catalogues. If, for instance, one wanted to compile a complete list of all the portraits painted, or at all events exhibited, of the famous Mrs. Siddons or the now almost forgotten Mrs. Dickons, how would it be possible to obtain this information from Mr. Graves's book? Some of them have been engraved, and in most cases the artists' names are stated on the engravings, but many others of importance and interest have not been so perpetuated. Throughout the country there are thousands of portraits of men and women, of which the names of the artists are unknown, or remembered only in an uncertain kind of way. An index such as we have suggested would in very many cases settle doubts on this score. This particularly applies to portraits painted during the first thirty years or so of the nineteenth century. A Lawrence, or a Hoppner, or a Beechey bears its own impress of the artist's individuality, but how is one to know, if the owner does not, that, for instance, "T. Wheeler, Esq., F.L.S.," was painted by H. P. Briggs, and exhibited at the R.A. in 1820, or that Miss M. A. E. Thackeray was painted by G. F. Joseph and exhibited in the same year?

Unfortunately the index which we have in mind could not very well be limited to portraits. Every specialist would insist upon the claims of his own particular branch. Sir Walter Gilbey would contend that every animal portrait should be indexed, so that under Mazeppa we should have reference to a horse "the property of an officer in the Guards," exhibited by R. B. Davis at the Academy of 1820, and scores of other equally unexciting entries would have to be recorded. Some one else would urge the claims of topographical views, and these alone would occupy a considerable amount of space; then there would be sea-pieces, Biblical subjects, scenes inspired by passages in mythological history, and so forth. We should be sorry if all these suggestions disturbed Mr. Graves's peace of mind, but his book is so good that we should like to see it as perfect as possible, and we willingly, without any sort of envy, resign to him the task of carrying out the suggestions here set forth.

The importance of one feature of Mr. Graves's book cannot be overestimated, and that is the success which has attended his efforts to identify the anonymous portraits. Until 1798, or nearly thirty years after the institution of the annual exhibition, it was not deemed etiquette to publish in the catalogue the names of those whose portraits were exhibited, and, with very few exceptions, these were simply and baldly entered as portraits of a lady, a gentleman, a nobleman, a lady of quality, an artist, or some such designation. The rule grew to be an absurdity, for during the eighties of that century the newspapers began to give the lists of names with the catalogue numbers; that raucous critic Anthony Pasquin (John Williams) in his annual notices of the exhibition also published the names. The practice, therefore, was dropped, and in the catalogue of 1798 there was no longer any mystery as to whom this or that number represented. A "portrait of a lady" and a "portrait of a gentleman" frequently occur after this date, but there were probably good reasons for the anonymity. Mr. Graves has copied all the printed lists, and has obtained others from Horace Walpole's set of annotated catalogues (now the property of Lord Rosebery) and from yet other sets to which he has had access. It is possible that more names may be obtained from some source as yet undiscovered, but it is scarcely likely that the additions will be numerous. Those which Mr. Graves has obtained are printed in italics, and begin with Lemuel F. Abbot (p. 2), who in 1788-9 exhibited eight portraits of "a gentleman"; of these the names of six have been recovered, and if this percentage is maintained throughout the result can only be described as extremely satisfactory. Of course, many of the names are now obscure; but of the six Abbot portraits above-mentioned, one was of David Hartley, who was appointed to arrange with Franklin the terms of acknowledgment of the independence of the revolted North American Colonies; another was Valentine Green, the engraver, who himself engraved his portrait in the autumn of the same year. A few such names as these therefore fully compensate for dozens of others which convey little or nothing to the student or antiquary of to-day. A search in *The Gentleman's Magazine* might reveal their numerous virtues and accomplishments.

Sir William Beechey is the most important name in the first volume, and he occupies ten columns, not to mention two more columns taken up by various other Beecheys. Beechey painted an extraordinary number of eminent and distinguished people during the sixty-three years of his exhibiting career; but his fame has been completely submerged by the showy magnificence of Sir Thomas Lawrence. He started, and for many years continued, to paint small whole-lengths, similar to those of Hogarth and Zoffany, but he recognized that such things were out of favour after he had removed from Norwich to London. We trace this change in Mr. Graves's book, and the small whole-lengths cease with the year 1788. We have examined the Beechey list very minutely, and have very little fault to find. We have good reasons for believing that the 1791 picture (No. 127), 'A Nobleman's Family with a Dog,' is of the Duchess of Devonshire and two of her children, although it is more than curious that the identity of such a well-known woman should have been passed over in the lists of portraits which appeared at the time in the newspapers. This is probably the picture mezzotinted by J. Young under the title of 'The Fortune Teller,' and published on September 1st, 1792. It was dedicated to the Duchess, with the Devonshire and

Spencer arms quartered together. 'Miss de Devisnier,' 1795, No. 70, is obviously a misprint for 'Miss De Vismes.' H. Bone exhibited an enamel of this lady in 1796, No. 583, Mr. Graves in this instance printing the name 'Miss de Visne.' Under 1809, No. 62, Mr. Graves has an entry of 'Mrs. and Miss Cockerell'; we think that this surname should be Wetherall, as we have come across more than one notice of the picture in contemporary newspapers under the latter name. Mr. Graves may be correct, as there were families of both names living in London at the time. But surely 'Sir Hugh Leycester' of 1819, No. 57, is wrong. He was a K.C., Recorder of Chester, a Judge of Assize for Carnarvon, &c., and M.P. for Milbourn Port (he died in London in 1836); but there is no record, so far as we can find, of his ever having been knighted. Another portrait of him was exhibited by Beechey in 1821, and here he appears as 'Hugh Leicester, Esq.' The 'Earl of Aylesbury,' also of 1821, No. 186, should be "Ailesbury." J. T. Barber's frame of miniatures in the Royal Academy of 1796, No. 553, contained one of Mr., not Mrs., Burghall, if Anthony Pasquin's list is to be relied on. Probably other small points might be detected by comparing Mr. Graves's names with those in the various newspapers of the time, but these "authorities" are not always trustworthy, and sometimes differ from one another.

Of many of the artists whose works are recorded by Mr. Graves one feels that more ought to be known. Who, for instance, was the miniature painter Miss M. Barret, whose address in 1797 is given as "at Mr. Romney's, Cavendish Square"? In this year she exhibited a portrait of Romney's old friend Walker, the lecturer on philosophy. She was probably the daughter of George Barret, R.A., and died in 1836, but until now she has only been known as a painter in water colours. From a cross-reference under 'Anonymous (with initials),' we learn for the first time that, under his initials of E. V. U., Utterson, the famous bibliophile, was an artist, and that he exhibited at the Academy from 1807 to 1820—a fact not recorded of him in the 'Dictionary of National Biography.'

Mr. Graves has, fortunately for himself, wisely resisted all attempts at annotation; the material for it is very voluminous, and ready at hand for those who care to embark on such an enterprise — a substantial life-work for a syndicate of compilers. The contemporary newspapers afford much interesting and hitherto almost unused information of this sort. For instance, in one of our cuttings relating to the R.A. of 1791 we have the owners' names of four of the eleven exhibits of Sir Francis Bourgeois—*e.g.*, 'A County Gaol' (No. 14) was painted for Capt. Topham, who edited *The World*; 'The Inside of a Rotunda,' with several portraits of Polish noblemen and ladies (No. 104), was done for the King of Poland; the 'Portrait of a Female Child' (No. 374) was done for Mr. Pybus; and 'The March of an Army' (No. 445) for M. de Calonne. Such facts as these at once suggest a clue to the present owners of pictures.

We are glad to be able to commend this great undertaking, which will become more and more useful to every well-equipped library as time goes on. In printing it Mr. Graves undoubtedly gives away an important item of his stock-in-trade, and he ought to be handsomely recompensed by a large sale. In France such a book would immediately receive the "patronage" of the Minister of Public Instruction, and the Government would purchase a large portion of the issue for distribution among the libraries in Paris and the provinces. It is, of course, hopeless to expect any English Government to do such a scandalous thing.

THE CHEYLESMORE MEZZOTINTS.

THE change of exhibits in the White Wing at the British Museum is always an event of some interest. We are accustomed by now to find a particular phase of art there presented in an admirable selection, illustrated by the most thorough and scientific critical apparatus. The present exhibition of mezzotints, though it is, from a purely artistic standpoint, less important than the two preceding shows of drawings, is no exception to this rule. Mr. O'Donoghue's excellent catalogue, with an introduction by Mr. Sidney Colvin, gives a complete and lucid account of the art from its original inventor, Ludwig von Siegen, down to its manifest decay about 1820.

Mezzotint has been used so little for original work, though Turner showed in a few splendid specimens what its possibilities in this direction were, that the exhibition is almost confined to works of translation and reproduction. And it is for this reason that it misses inevitably something of the stimulating effect of an exhibition of original design. No purely reproductive process is likely to attract and retain the services of a great artist, and though something of the translator's personality emerges, one feels, in looking at so large a selection, a certain sense of monotony and fatigue. This, however, is avoided so far as possible by the excellent selection that Mr. Colvin has made. He has varied to the utmost both the subjects and the treatment, and the long lines of pretty and insipid eighteenth-century ladies, whose charms quickly pall, are broken by more vigorous and virile examples. Still, on the whole, the impression left on one is that mezzotint easily degenerates, and tended at all periods to degenerate, into a rather vapid and generalized agreeableness of quality, without any close or incisive rendering of form, and without grandeur of tonality. Like most arts, it sprang into existence in full perfection. Even the primitive Ludwig von Siegen, in his portrait of the *Landgravine of Hesse Cassel* (No. 1), is already a master of a grey blondness of tone which has distinction and charm. His pupil, Prince Rupert, mere amateur though he was, starts straight off with the superb *Executioner* from Spagnoletto (A. 5), which has, perhaps, never been surpassed. Certainly nothing even in this, the finest collection of mezzotints in existence, is undeniably superior. It has a breadth and vigour, a feeling for expressive tone contrasts, and a largeness of handling, which proclaim the artist, and not the mere translator. It gains something, too, by the imperfect laying of the ground. In the later examples the ground is laid so evenly, has such a uniform perfection of velvety blackness, that there is none of that possibility of happy accidents of quality which all artists desire, and which happen to the great ones.

After Prince Rupert comes Blooteling, also large and easy in treatment, and then a series of rather dull and laborious translators of Lely and Kneller. But among these we must except Gerard Valck's exquisite *Duchess of Portsmouth* (A. 33), and William Sherwin, who was much the best of the early English exponents of the art. In all these early works the ground is laid with a fairly open grain, and while more attention is paid to precise and delicate modelling, there is no such effort as the later men made to force the density of the darks and increase the brilliance of the tone contrasts. The first great English mezzotinter, McArdell, is excellently seen here in his *Duchess of Ancaster* (B. 19), from a picture which makes one for once think highly of Hudson. Indeed, though McArdell lived long enough to do a number of Reynolds's portraits, this from Hudson remains the most attractive of his works. When Reynolds came the pre-eminence of mezzotint in England was assured. His whole style of composition, his perfect mastery of chiaroscuro design, his rich impasto and massed effects of tone all suited the medium to perfection, and nothing could be finer than some of Dickinson's and J. R. Smith's translations. Dickinson seems to us, on the whole, the greatest of the English engravers of this period—incomparably more delicate and precise than the overestimated Valentine Green, who realized nothing but the general effect of tone, and really never filled his contours with modelling at all. Green is typical of the faults of eighteenth-century English art, and in this room, with so many average examples, one gets, perhaps, unduly sensitive to these—a facile grace and charm, a vague perception of form which is easily satisfied with approximations, and never rises to strenuous or intense significance. No one can fail to note the contrast between Reynolds and Gainsborough in the matter of mezzotint reproduction. For Gainsborough's art was as repugnant to mezzotint as Reynolds's was inviting.

The reason is simple: that Gainsborough's art was essentially that of drawing with dark on light as opposed to Reynolds's light masses on dark. Gainsborough invariably modelled his final forms with delicate pencillings of shadow upon the lighter grounds, and it is this pencilling which defies the mezzotinter. The best attempt, perhaps, is Dean's rendering of *Mrs. Elliott* (C. 99).

Besides the regular translations of portraits, we note a number of curious experiments made in various directions. Pether's hard and tight but brilliant renderings of Wright of Derby, and Earlom's elaborate translations of Huysum, are among the most curious.

WEDGWOOD CHINA.

LORD TWEEDMOUTH'S collection of Wedgwood china is now on view at Davis's Gallery. Besides the china itself, which is of exceptional quality, and contains several unique pieces, there are to be seen many of the original wax models by Flaxman and his school, from which the superposed figures in Wedgwood's plaques and vases were cast. These have so long lain hidden from public view in Lord Tweedmouth's Inverness-shire home that it has been at times supposed that the wax models were destroyed in the process of manufacture. Their history is curious, as it brings together such diverse geniuses as Josiah Wedgwood, Erasmus Darwin, and Charles Darwin. It was from the author of 'The Origin of Species,' who had inherited them from Erasmus Darwin, that Lord Tweedmouth acquired them in 1856, after a vain attempt to induce the authorities of the Victoria and Albert Museum to purchase them for the nation. They all show extraordinary technical skill, and are marked by a cold excellence and negative perfection. There is, too, an interesting equestrian portrait of Josiah Wedgwood, painted in enamel colours on a Wedgwood plaque by Stubbs, a careful, deliberate, and honest, but scarcely inspiring work. But it gives one an idea of the shrewd intelli-

gence and resource of the man who accomplished what hardly any one else has—the feat of making a commercial success of fine-art pottery. As pottery, Wedgwood's work is beyond praise, though it probably contributed to the final destruction of the art, as an art, in England, since it set a standard of mechanical perfection which to this day prevents the trade from accepting any work in which the natural beauties of the material are not carefully obliterated by mechanical means. In fact, Wedgwood destroyed the craftsman's tradition by substituting the artist turned craftsman for the craftsman grown artist by experience and natural aptitude. Still, destructive as it proved, Wedgwood's performance was remarkable, and of great interest as one phase of the classic reaction at the end of the eighteenth century. Together with the Adam furniture and architecture, with which it perfectly agrees, it makes up the English analogue to the Empire style. Only in the vase (No. 48) with designs by Lady Diana Beauclerc do we get a trace of the earlier, more free and easygoing eighteenth-century tradition. For the rest, the designs are confined to a rigorous and exact adaptation of classic models. In one interesting plaque the original has been an archaistic work, but for the most part the forms are those of late Græco-Roman art. Classic art for Flaxman's and Wedgwood's generation meant the Belvedere Apollo and the Portland Vase. That in itself was no harm. Almost all the great movements of European art have started by a reference to Græco-Roman, often to bad Roman originals; but both in twelfth- and fifteenth-century movements the intended copying led to a development of a quite original art, which far surpassed in beauty the models it proposed. In the eighteenth-century movement the intended copying really succeeded, with the result of almost complete sterility. The difference lies in the fact that in the earlier return to classic models, while the forms were borrowed, the content was entirely new, and the content changed and modified the forms, till they also became in effect an entirely original art. Flaxman, on the other hand, borrowed both alike, and having nothing new to say about Endymion or Pluto or Thetis, the utmost that could be hoped was a perfect approximation to his originals. The cold and lifeless precision which results from this attitude was really destructive. It existed solely for the exquisite perfection of its workmanship. The moment that relaxed, as it did on Josiah Wedgwood's death, nothing but a progressive degradation was possible. An art inspired by some vital idea has the power of adaptation and growth, which was entirely wanting in this particular return to classic models. That the reaction was inevitable one may guess from its almost simultaneous appearance in various countries. It produced its one genius in Piranesi, a wild romantic spirit, who poetized and dramatized in decorative and architectural form the spirit of ancient Rome. In France it produced the deadening tyranny of David. Ingres, ultra-classical though he was, was really in revolt from David's influence, or one might claim for the movement a second great master in him. In England we were perhaps fortunate, in that the reaction took the form of architecture, and such charming minor arts as Wedgwood's, and did not inspire any serious school of painting. The transition from Reynolds to modern sentimental realism was made without any turgid efforts at classical correctness.

The purely decorative part of Wedgwood's china displays essentially the same negative perfection as the figures. One admires the ingenuity and taste with which these extremely correct patterns are combined and applied. What a wealth of charming caprices, of living and elastic forms, the Florentine sculptors and Roman painters had quarried from the same mine! It was reserved for Wedgwood's artists to show that classic art contained, as well as these, a mass of absolutely dead formal patterns, and to proclaim these truly classic. There are great ingenuity and infallible exactitude in Wedgwood's patterns, but they have not the same vivacity, the same spark of originality, which saves the work of the Adams. For all that, Wedgwood was a great potter, and, we have it on Gladstone's authority, a great man, and his work has what will ensure it a lasting interest, namely, within its narrow bounds, perfection.

The catalogue, which is written in a perfectly bewildering style, contains a great deal of interesting information, and above all an extract from a speech by Gladstone, who is always worth listening to on art. His *obiter dicta* on that subject should be collected as an appendix to an English edition of 'Bouvard et Pécuchet.'

MUNICIPAL ART PATRONAGE AT BRADFORD.

Corporation Art Gallery and Museum, Bradford.

As the article in your issue of July 1st is based on a misconception of the facts, or rather on an insufficient statement of them, I shall be glad if you will allow me a brief word of explanation.

The writer assumes that the pictures recently acquired for the Permanent Collection were purchased from the profits arising from the inaugural exhibition in the Cartwright Memorial Hall. This is not the case. The purchases were made from the annual spring exhibition out of ordinary revenue, in accordance with our usual custom. As a matter of fact the amount due to the Corporation from the Exhibition Committee has not yet been handed over, and when this is done the sum will not be 16,000*l.*, as stated in your article, but 15,000*l.* Out of this amount only 10,000*l.* is to be set aside for the purchase of works of art, the remaining 5,000*l.* being destined for paying off the balance of cost of building over the amount of Lord Masham's gift.

In view of these facts, it would be wasting time to further discuss the matter, but I may assure the writer that he sadly misjudges the aims of the Art Gallery Committee if he imagines they are not as fully alive as himself to the importance of securing the best examples possible of the great English painters for the Cartwright Memorial Hall. This they intend to do as the occasion arises, but they must wait until the fund is available for this purpose.

Referring to the writer's remarks upon the work of the London Committee, may I be allowed to say that we in Bradford appreciate to the fullest extent the services of those gentlemen who laboured so strenuously to make the Bradford Art Exhibition such a great success, and that they need have no fear that the profits will be devoted to anything but the highest uses? The collection then brought together undoubtedly embodied the best examples of the quality and range of British art ever seen in the provinces, and it would be base ingratitude on our part if the services of the London Committee were not fully and freely acknowledged.

It may be well to point out, however, that the success of the Exhibition as a whole was due to the Industrial Section, and the musical and other attractions, quite as much as the Art Section, and that it is therefore hardly fair to assume that the profits are attributable solely to the success of the latter department.

BUTLER WOOD, Director.

A LOST PORTRAIT.

THE rediscovery of a picture of Lady Fanshawe, wife of Sir Richard Fanshawe, is a good instance of how old pictures may yet be brought to light. In her will, dated October 30th, 1679, Lady Fanshawe left to her son, the second baronet, besides her husband's "picture drawne by Lilly," her own "picture drawne by Toniars." Both these pictures had long disappeared from the possession of the family, having probably passed to the descendants of the daughters of Lady Fanshawe. The former is probably the picture in the possession of Capt. Stirling, of Keir, which was exhibited by the late Sir William Stirling Maxwell at the National Portrait Exhibition, held at South Kensington in 1866. The latter has now come to light in the possession of a gentleman to whose family it passed from Miss Colman, a descendant of Lady Fanshawe, who in 1786 made the transcript of Lady Fanshawe's 'Memoirs' from which the editions of 1829 and 1830 were published. On the back of the picture is the following endorsement, made in 1827 by the father of the present owner:—

"When in May last I sent this picture to Smith in Bond Street it was on the stretching frame now on the top of the wardrobe in my room, which has written upon it in a large hand and with ink now very yellow, 'my ever loved and deare mother Lady Fanshawe, 35 years old, and poor little Mary, by Teniers, 1660.' My mother tells me that my father told her that this picture was given to him by an old lady named Colman, descended from Lady Fanshawe, living in or near Frith Street, Soho, about the year 1773-4. She also gave to my father some MS. papers written by Lady Fanshawe, who was wife of Sir Richard Fanshawe, Bart., Ambassador to Spain, but these have been unfortunately lost. The reason she assigned for giving these things to my father was that he was the only relation of the family who had ever shown her any attention, but I have tried in vain to trace the relationship."

Lady Fanshawe is dressed in mourning, no doubt on account of the loss of her son Richard at Paris in October, 1659. The little girl is charmingly painted, but looks somewhat younger than a child of three and a half years of age; she was born in July, 1656. Lady Fanshawe was born in 1625, so that she was thirty-five years old in 1660, as stated in the inscription. She was in Brussels for three weeks early in 1660 (see her 'Memoirs'), and Teniers was residing there at that time. It is hardly possible that a person of her attainments could be mistaken about a person by whom she says she was painted; and, so far as can be tested, the facts of her life fit in perfectly with the details of the picture and of the old inscription on it. This would seem to have been written by her son, as it was in a large hand; he was only fourteen and a half years old when she died, in January, 1681.

THE ASHBURTON SALE.

MESSRS. CHRISTIE'S last great sale of the present season was one of varied interest, and of that miscellaneous description which nearly always provides surprises. The seventeen pictures from the collection of the first Lord Ashburton, and inherited by the second wife of the second Baron, formed the chief attraction of the sale, realizing 30,397*l.* 10*s*, although the quality was by no means even. The two whole-length Van Dycks, King Charles I. and Queen Henrietta Maria, both of which were at Burlington House last year, and are described by Smith in his 'Catalogue Raisonné,' were undoubtedly very fine portraits, and of a type which now only occurs in the open market at long and irregular intervals; but they will not bear comparison with the two superb Genoese portraits in the Peel sale. That of the King differs from the other known portraits, but there are several versions of that of the Queen. The 17,000gs. which the pair realized may be regarded as, on the whole, a very high price. The Botticelli Virgin and Child with Saints was, like nearly all the other pictures in this collection, at Burlington House last year; it was not universally accepted as an undoubted work of Botticelli, but it realized 6,000gs. Two small whole-length figures by Carlo Crivelli, St. George and St. Dominic, brought 1,500gs.; and a Giorgione, A Young Man with his hand on a skull, 1,600gs. Lord Leighton, Mother and Child, 250gs. Sir J. Reynolds, Portrait of Charles James Fox as a young man, painted in 1764 in an oval, 520gs. Two by G. F. Watts, Time, Death, and Judgment, 200gs., and Ariadne, 500gs. L. Back-

huyzen, The Landing of William of Orange (Smith's 'Catalogue,' No. 97), 530gs. The other Ashburton pictures do not call for any special notice.

The miscellaneous properties included the following drawings: J. Downman, Portrait of a young lady, probably Mrs. "Perdita" Robinson, in white cloak, a white hat, and fur muff, signed and dated 1788, 160gs. J. Russell, Portrait of Miss Mary Dykes, only daughter of the Rev. Thomas Dykes, of Hull, pastel, 1806, 95gs. F. Dumont, Portrait of Queen Marie Antoinette, in rich white satin dress, a miniature done at St. Cloud in 1786, 240gs. D. Gardner, The Ballad-Seller, pastel (catalogued as by "Hoppner"), 1,050gs. The pictures included: Sir T. Lawrence, Portrait of Lady Elizabeth Whitbread, wife of Samuel Whitbread, the famous M.P. and brewer, 2,000gs. G. Morland, A Scene in Westmorland, signed and dated 1792, from the Martineau of Norwich and Heugh collections, 480gs.; A Farmyard, signed, from the G. H. Morland and James Morris collections, 260gs.; and Wreckers at Work after a Gale, signed and dated December 15th, 1791, 740gs. Sir H. Raeburn, Portrait of Miss Fullarton, in white dress, seated in a landscape, 1,700gs. This was one of the surprises of the sale, as it had been subjected to very bad usage, but when cleaned and put in order the portrait will probably turn out to be one of great beauty. J. Highmore, Portrait of a Youth in yellow dress with blue cloak, holding a book, signed and dated 1748, 310gs., an unusually good example of an early English artist inadequately represented in our national collections. The two good Romneys were both portraits of men: Thomas Wildman, of Turnham Green, in plum-coloured coat, with wig, 610gs., and an unknown gentleman in brown coat and white vest, holding a book in his left hand, 660gs. P. A. Baudouin, The Surprise, the engraved subject, 520gs. F. Hals, A Toper holding a Glass, 260gs. A. Canaletto, A Fête on the Piazza of St. Mark's, Venice, with numerous figures bull-baiting, 105gs. F. Boucher, A Shepherd and Shepherdess, with sheep and goats in a landscape, 750*l*. C. Janssens, Portrait of a Lady (said to be the wife of Grotius) in black dress, in white ruff and lace cap, 100gs. Sir J. Reynolds, Portrait of Elizabeth, Countess of Winterton, in white dress, playing a guitar, 260gs.; and James Bourdieu, a city banker, 200gs. J. Northcote, The Wanton and The Modest Girl, two of the series exhibited at the Royal Academy of 1796, and engraved by Gaugain and Hellyer, 460gs. M. Hobbema, A Woody Landscape, with a stream and two peasants, 180gs. Greuze, The Dauphin, in dark coat with blue ribbon, 140gs. S. Memmi, Portraits of Laura and her husband De Sade, a pair taken from the binding of a missal belonging to Piero de' Medici, 100gs. T. Gainsborough, an early portrait of Capt. Thomas Cornewall, in naval uniform, holding his hat under his arm, 400gs. N. Maes, Portrait of a Child, in rich dress, standing by a fountain, with a dog and bird, 245gs.

SALE.

AT Messrs. Christie's on the 11th inst. the following engravings were sold. After Zoffany: The Flower Girl, by J. Young, 28*l*. A London Crossing-Sweeper (painter and engraver unknown), 29*l*. After Baudouin: L'Agréable Négligé, by F. Janinet, 29*l*. After Reynolds: Countess of Salisbury, by V. Green, 52*l*.; Jane, Duchess of Gordon, by W. Dickinson, 325*l*. After Constable: The Lock, and The Cornfield, by D. Lucas, 231*l*.; Salisbury Cathedral, by the same, 31*l*. After Turner: Calais Pier, by T. Lupton, 31*l*. After Landseer: Hunters at Grass, by C. G. Lewis, 42*l*. By J. M. Whistler: Nocturne Palaces, 96*l*.; The Riva, 34*l*.; Putney Bridge, 29*l*. By Sir F. Seymour Haden, The Breaking-up of the old Agamemnon, 26*l*.

Fine-Art Gossip.

THE painter Anton Burger, whose death in his eighty-first year is announced from Frankfort, was better known in the artistic world than to the general public, as his works are mostly in the hands of private owners, though a few are to be found in the galleries of Munich and Frankfort. His pictures of old Frankfort and his peasant scenes are marked by a certain emotional simplicity.

THE set of five "dessus de porte" panels of Beauvais tapestry, designed for the carved wood salons of the Château de Rambouillet, are now being placed in their permanent positions. These five panels, which cost about 44,650 francs, were executed at Beauvais between 1899 and 1903, and were lent by the State to the St. Louis Exhibition as masterpieces of the historic manufactory. Their subjects are 'Le Faisan,' 'Le Coq,' 'Le Paon,' 'Le Perroquet Blanc,' and 'Le Cacatoès,' and were executed from the *cartons* of the artist, M. Achille Cesbron.

WE have to note the publication of the Annual Report of the Trustees of the National Portrait Gallery (2*d*.); and the Report of the Director of the National Gallery, Ireland (1*d*.).

A CERTAIN number of French artists, collectors, and art critics are endeavouring to form a society for the encouragement of the art of engraving, and to rescue it from its threatened extinction by the modern means of "process" work. The Chamber of Deputies is to be asked to grant a sum of 10,000 francs for the foundation of the society, which proposes to organize three successive exhibitions of etching, of lithography, and of engraving on wood.

'REASON IN ARCHITECTURE,' by Mr. T. G. Jackson, R.A., is announced by Mr. Murray. It traces the development of the styles of modern Europe to natural and social causes.

CANON CLARE HUDSON writes:—

"Should the very interesting and instructive exhibition at St. Albans ever be repeated, *e.g.*, in London, I would suggest that the Documentary Committee should not omit to exhibit a good example of a 1538 Parish Register Book on paper, as well as an example of a 1559 transcription on vellum, references to both of which are found on pp. 75 and 91 of the St. Albans Catalogue. I could name one or two excellent specimens which deserve the honour of exhibition."

AT the meeting of the Society of Antiquaries on Thursday, June 29th (Lord Avebury, President, in the chair), the following resolution was proposed by Mr. Philip Norman, Treasurer, seconded by Sir J. Benjamin Stone, M.P., and carried unanimously:—

"The Society of Antiquaries of London has heard that a proposal is under the consideration of the Town Council of Berwick-on-Tweed to make certain structural alterations in the old bridge which spans the river, whereby its character and appearance will be altogether changed. The Society would earnestly deprecate the adoption of any such drastic steps in the treatment of a monument of great public interest and importance, and would urge on the Town Council the propriety of leaving the old bridge intact."

It was also resolved that copies of the resolution be sent to the Town Clerk of Berwick, to the local Society, and to the local members of Parliament.

SIR HERBERT MAXWELL, President of the Society of Antiquaries of Scotland, has made a public appeal for funds to complete the important series of excavations on the Roman station at Newstead, near Melrose. He says truly that if the committee are compelled to discontinue operations this autumn it will be a great misfortune to archæology and history, since a peculiarly interesting stage has been reached. Contributions may be sent to the Secretary, National Museum of Antiquities, Queen Street, Edinburgh.

A REPRESENTATIVE committee has been formed with the object of excavating, preserving, and enclosing the remains of the ancient abbey of Hyde, the burial-place of King Alfred, his wife Queen Elswitha, and his son King Edward the Elder. The remains are within a short distance of the spot where the statue of Alfred was erected in 1901, to commemorate the 1,000th anniversary of his death; but up to the present time no proper care has been taken for their preservation. Subscriptions may be sent to the hon. treasurer, Mr. Alfred Bowker, Lankhills, Winchester, or may be paid to the account of the Hyde Abbey Remains Preservation Fund at the Union and Smiths Bank, Winchester and London.

THE temple of Apollo at Didyma, near Miletus, and the ground immediately surrounding it, have now become German property, and it is hoped that the work on the site will be carried on rapidly and successfully.

MUSIC

THE WEEK.

COVENT GARDEN.—*Madama Butterfly*.

SIGNOR PUCCINI has been a fortunate composer. 'La Bohême' and 'La Tosca' have won for him fame and also fortune. He is, however, in the prime of life, and by no means content to rest on his laurels. In the year 1900 he was in London and saw Mr. Belasco's dramatic version of Mr. Long's story of Madame Butterfly, which appeared in *The Century*, and he perceived in it the material for a good opera libretto. The story was pathetic, the dramatized version effective, and in the libretto prepared by Signori L. Illica and G. Giacosa there is much that is calculated to stir a composer's fancy, and also his feeling. Signor Puccini set at once to work, and his opera was produced at Milan in 1904, but it was not favourably received, and the composer at once withdrew it; then after revision it was reproduced at Brescia, and, according to all accounts, successfully. Its failure at the first seemed to indicate that the composer had written for himself rather than for the public, and now, having heard the work, which was performed at Covent Garden on Monday evening for the first time in England, we feel that there is some truth in that surmise. There are fine outbursts of impassioned melody of Italian type; there are telling dramatic moments, skilful writing, and most finished and picturesque orchestration. Yet in spite of much that is strong, beautiful, and characteristic, there are certain features in the book, also in the music, which disturb as it were the emotional current: realistic effects which offer contrast, not always interesting, and which are sometimes dwelt on at too great length.

The Italian public may not have been affected by such things, but it may have been disappointed at the subordinate character of some of the music. It is curious that Wagner considered music only one factor contributing to the interest of the drama, yet the public is much more impressed by his music than by his dramas. In Puccini's 'La Tosca,' and again in 'Madama Butterfly,' the reverse, generally, is the case. In this way Puccini is more Wagnerian than Wagner himself. But the interest in the book is intermittent, and there are, therefore, slack moments which can only be concealed by music in itself strong. F. B. Pinkerton is the very prosaic name of the man whom Butterfly loved with genuine love, but by whom she was deserted. Such a character is part of the stock-in-trade of every opera librettist. But for Pinkerton, in the last act, to take his American bride into Butterfly's presence, offering to help her child, and thus increase her anguish and hasten her death, seems an unnecessary refinement of cruelty. The appearance of Kate, the American lady, and her words, weaken the dramatic close of the work as much as the Marke speech does the end of the second act of 'Tristan.' In the tale and in the play the impression may have been different.

The arrival of Butterfly's mother, uncles, cousins, and friends to witness the Japanese form of marriage between her and Pinkerton gives rise to a picturesque scene, and in the music associated with it realism plays a large part; it is all very curious and the music very clever; but it is unduly prolonged by Butterfly's two uncles, whose gestures and singing seem fit only for a pantomime. Then in the second act there is a delightful duet between Butterfly and her attendant. The arrival of Pinkerton's ship has been announced by the firing of a gun, and the two are filling the room with flowers from the garden, but dramatically it is too long. So also is the patient watching and waiting of the faithful Butterfly. It is a touching scene. Butterfly, Suzuki, and the child stand motionless at the windows looking on to the harbour; after a time, indeed, maid and child, wearied out, fall asleep; only the figure of faithful Butterfly is seen. The music, wonderfully simple and effective, reveals to the audience the hopelessness of that watching, for it was the music connected with a letter from Pinkerton announcing the arrival of himself and wife, which the American Consul tried to read to Butterfly, but had not the heart to finish. Now this fine ending of the first part of the second act just missed the mark, both by reason of length and by a close somewhat too formal. We cannot help noticing what seem to us weak points, principally owing, let it be noted, to the librettists. The love duet at the end of the first act, which contains some of the composer's most impassioned melody, is magnificent, and here inspiration is intensified by technical skill and admirable orchestration. There is also much to admire in the first part of the second act. In the second part of that act—why could it not have been simply called what to all intents and purposes it is, viz., a third act?—Puccini shows his full strength as a writer of dramatic music. Such are our first impressions of a work in which the composer has achieved great things. He ought really to write a libretto of his own and set it to music. He imitates Wagner in some good things; why not in this?

Of the performance we must speak very briefly. Mlle. Destinn's impersonation of Madama Butterfly was simply magnificent; nothing could have been finer, either musically or dramatically; she displayed earnestness—absorption in the *rôle* she is playing—which reminded us of Fräulein Ternina. Signor Caruso (Pinkerton) sang and acted admirably. Madame G. Lejeune took the part of Suzuki with good effect. Signor Scotti as Sharpless, the American Consul, showed both feeling and restraint; while M. G. Dufriche as Goro, the marriage broker, deserves commendation. Signor Campanini conducted with great tact and skill. The orchestra was at times too loud, but at the second performance this can easily be set right.

On the whole, the production reflects the highest credit on all concerned in it. The piece was splendidly staged. At the close there was great enthusiasm. During the remainder of the season the opera will form the chief attraction. It will be given again this evening, after which there will be still two performances.

Musical Gossip.

THE matinée, chiefly organized by Madame Melba, for Miss Bauermeister at Covent Garden on Wednesday afternoon was a great success. The theatre was crowded. Madame Melba, though not quite recovered from her recent illness, sang in the two acts of 'Roméo,' Miss Bauermeister appearing for the last time on the stage in the *rôle* of the Nurse. Her reception was most hearty; it was a happy close to a long and useful career. Miss Bauermeister, overcome by emotion, spoke a few simple words by way of farewell. The performance ended with the third act of 'La Bohême,' in which Madame Melba, Miss Parkina, and Messrs. Caruso and Scotti took part.

THE opera season at the Waldorf ends this evening. Changes are to be made in the arrangement of the house, and something ought certainly to be done to make the orchestra less seen and less heard; that it was frequently too loud during the last season was not altogether the fault of the conductor. The Waldorf will reopen, it is said, with a new musical play by Paul Rubens.

MR. S. ERNEST PALMER has presented to the Musicians' Company in the City, through Sir Homewood Crawford, the sum of 1,000*l.* to enable it to establish two more scholarships at the Guildhall School of Music: one for competition amongst choristers leaving the choirs of St. Paul's Cathedral and Westminster Abbey, the other for the girl under eighteen years of age who is the best reader of music at sight.

MR. JOHN NORTHCOTT, the kind-hearted and honest musical and dramatic critic of *The Daily Chronicle*, has passed away after a lingering illness. He was highly respected by all who knew him. Mr. Richard Northcott, his son, has been appointed his successor. He was choral exhibitioner at King's College, London, and studied under Dr. W. H. Monk, and at Heidelberg University under Dr. Wolfrum.

MR. H. H. STATHAM writes:—

"I read with some astonishment, in the musical column in your issue of July 1st, that Gluck's 'Orfeo' is 'the one opera of the eighteenth century,' besides those of Mozart, 'which has survived.' It is only a few weeks ago that I was hearing a fine performance of Gluck's 'Armide' at the Paris Opera, to a house crowded in every part. In fact, 'Armide' has been one of the 'draws' of the season at Paris."

We meant "survived" for the English public.

WE regret to hear of the death, at the age of forty-nine, of Mrs. Black, wife of Mr. Andrew Black, the well-known baritone singer.

A TWO months' season commenced at the new Royal Opera-house, Berlin, on July 1st with Hermann Goetz's 'Taming of the Shrew,' a delightful work produced at Mannheim in 1874. It had not been given at Berlin for over twenty years. Frau Rosa Günther was the Catherine and Herr Hermann the Petruchio. The performance was under the direction of Dr. Kunwald. The opera was introduced into England by Carl Rosa at the Prince's Theatre, Manchester, in 1874.

THE artists of the Royal Bavarian Theatre at Munich gave a grand reception on June 29th to Ernst von Possart, who is now retiring from the post of intendant which he has so honourably filled for close on thirteen years. The Court actor Häusser addressed Von Possart, expressing the deep regret felt by all at his resignation. Von Possart replied, stating that he had always striven to do his best for the institution with which he had been connected for forty-one years.

THE monument by the sculptor Franz Seifert in honour of the two great waltz composers Joseph Lanner and Johann Strauss, sen., was inaugurated at Vienna on June 21st. The late Baron Nathaniel Rothschild gave 30,500 kronen to the fund, on condition that the monument should not be erected, as was at first proposed, in some noisy thoroughfare in the city, but in the beautiful and peaceful Rathaus park.

A GUITAR which belonged to Gounod has just been deposited in the Paris Opera Museum. The instrument was found in a house outside Paris where the composer resided during the siege. On the case is an inscription in ink in Gounod's handwriting.

THE hundredth anniversary of Boccherini's death was recently celebrated at Lucca, the composer's native city. He died at Madrid, and his tomb has fallen into decay. The committee formed at Lucca to arrange the centenary festival has petitioned the Spanish Government to allow the remains of the composer to be transferred to his native country.

PERFORMANCES NEXT WEEK.

MON.—SAT. Royal Opera, Covent Garden.

DRAMA

THE WEEK.

HIS MAJESTY'S.—*Oliver Twist: in Five Acts.* Adapted by Mr. J. Comyns Carr.

IN 1837–8 'The Adventures of Oliver Twist' was published in *Bentley's Magazine*, of which Dickens was at that time editor. Before the latter year was out the first of four separate adaptations was given at the Surrey Theatre, the others appearing at Sadler's Wells, the Adelphi, and the City of London. Of the Adelphi version—in which Yates was Fagin; Mrs. Yates, Nancy; O. Smith, Bill Sikes; Frank Matthews, Mr. Brownlow; Wilkinson, Grimwig; Wright, the Artful Dodger; Henry Beverley, Bumble; Miss Fortescue, Miss Maylie; and Mrs. Keeley, Oliver—a few memories survive. At the Queen's Theatre, Long Acre, a new version, by John Oxenford, was produced, with indifferent success, on April 11th, 1868, with Mr. Toole as the Artful Dodger, Irving as Bill Sikes, Ryder as Fagin, John Clayton as Monks, Mr. Lionel Brough as Bumble, Miss Henrietta Hodson as Oliver, and Miss Nelly Moore as Nancy. Since then, so far as memory extends, the subject has slept. Nowise reluctant to employ melodramatic methods was Dickens. There are few of his works in which he does not depict some being who, in the words of 'The Two Noble Kinsmen,'

> I' th' blood sized field *lies* slain,
> Showing the sun his teeth, grinning at the moon.

In 'Oliver Twist,' however, he lays himself out deliberately to depict scenes of violence and characters, some of them, of unmitigated ferocity. To the unredeemed brutality of the central action it is due that none of the renderings attained lasting popularity. Oxenford's, indeed, on its first production elicited a tumultuously unfriendly demonstration. The most workmanlike adaptation yet witnessed—the 'Oliver Twist' of Mr. Comyns Carr—is free from most of the blemishes of its predecessors. It is, of course, impossible to deprive of brutality the relations between Bill Sikes and Nancy, or to render other than repellent the character of Fagin. With sound judgment, however, Mr. Carr has relegated behind the scenes the murder of the unfortunate woman, and has given in narrative the death of the assassin. The effect of these measures is to lighten the action of the

play, and spare the feelings of the audience. No perceptible loss of strength attends these proceedings, and the jubilation of Fagin over the crime for which he is responsible loses nothing of its fiendishness. The workhouse scenes are omitted, as are those of Oliver's early tribulations, and the action begins after the juvenile hero has found shelter beneath the hospitable roof of Mr. Brownlow. Among the scenes retained or introduced are the shooting of Oliver when the attempted burglary miscarries; the practice drill of Fagin's acolytes in the den; Nancy's interview with Rose and Mr. Brownlow beneath the arches of London Bridge, which is overheard not only by Barney, but by Fagin, a dubious improvement, since that precious scoundrel is little given to overt action and prefers the agency of others to his own; and Fagin's interview with Brownlow and Oliver in the condemned cell. The acting generally was good—in the case of Fagin and Nancy signally so. Mr. Tree has shown us nothing so grim and lurid as his Fagin, which is in its line unsurpassable, and may, perhaps, claim to be a masterpiece. Miss Constance Collier is far away the best exponent of Nancy to be recalled. Bumble shrinks into insignificance, and the love passages between Harry and Rose remain colourlessly sentimental, though the former character is well played by Mr. Basil Gill. So long as Oliver is to be acted by a girl, Miss Hilda Trevelyan is as good as any exponent, and better than most. The reception was enthusiastic.

CRITERION.—*The Axis: a Comedy in Three Acts.* By Cyril Harcourt.—*Where the Crows Gathered: a Romantic Play in One Act.* By Stephen Bond.

'THE AXIS,' which constitutes the principal item in the new programme at the Criterion, is an unambitious and a moderately successful attempt to turn to modern use the Benedick and Beatrice motive in 'Much Ado about Nothing.' It is so far suited to midsummer heats that it may be seen without effort, it has a moderately effective environment, and it is written with neatness and vivacity. No condemnation of it is involved in saying that it will not set the Thames on fire, no such intention having animated the author. Starting with the assumption that the main duty of young folk is to arrange themselves in pairs like the inmates of Noah's Ark, the story shows that some slight impediments to sorting are to be expected and overcome. Some competent actors were seen to fair advantage, and Mr. C. V. France showed more seriousness of purpose than is common on our stage.

That the presence on the roof-tree of a crow boded ill to those within a house is a piece of folk-superstition with which we are unfamiliar, though we knew, of course, that the presence of the raven is regarded as of evil omen. In the new and gloomy 'Where the Crows Gathered' of Mr. Stephen Bond four crows deliberately settle *seriatim* outside a Breton cottage. As the widowed owner is too indolent or too occupied to drive them away, two deaths are the result of their undesired and unsolicited presence. One of these is the daughter of the house, "a beautiful and famous courtesan of Paris," who is down on a visit and commits suicide; the other an operatic singer who has come for the purpose of abducting and marrying a girl of the village. So distasteful to the maiden's father is the anticipated alliance that he runs into the heart of his proposed son-in-law the knife he uses for the purpose of carving crucifixes. Some faint suggestion of incest hangs about the contemplated nuptials, but is scarcely definite enough to render imperative such prohibitive methods as are employed. Miss Ethel Irving played the courtesan with remarkable if rather undisciplined power. The piece belongs, however, to a spasmodic, gloomy, and unpleasant order, which we have no wish to see established on our stage.

Dramatic Gossip.

WITH a performance on Saturday last of 'Fédora' the promised programme of Signora Duse at the Waldorf was exhausted, and on Thursday as Marguerite Gautier she took her leave of London. During her present visit she has enriched our stage with one great creation, that of Odette. In 'Fédora' she is not likely to make us forget Madame Bernhardt, for whom the part was written, and who remains its greatest — it may, perhaps, be said its only—exponent. La Duse's gentle and specially winsome style is not in the least suited to the character. Signora Maty Wilson created an eminently favourable impression as Olga Soukaroff. She is the only exponent we can recall who has divested the character of a shade of caricature.

THE farewell visit to America of Sir Henry Irving has, after all, been postponed until the autumn of 1906, and the whole of his next season will be spent in England.

THE run of 'The Dictator' at the Comedy is suspended this evening, but will be resumed on the return, at the end of September, of Mr. Collier, who, at a later date, will produce 'On the Quiet,' a comedy by Mr. Augustus Thomas. As has already been announced, Mr. Weedon Grossmith will have a short intercalary season with his own play 'The Duffer.'

ON the resumption of the management of the Adelphi by Mr. Otho Stuart on August 5th, 'The Taming of the Shrew' will be played, with Mr. Oscar Asche and Miss Lily Brayton in their original parts. This will be continued for three weeks, after which 'Dr. Wake's Patient,' a four-act play by Messrs. W. Gayer Mackay and Robert Ord, already given at the Shakespeare Theatre, Liverpool, will be transferred to London, with a cast comprising Miss Lottie Venne, Mr. C. M. Hallard, Mr. Alfred Brydone, Mr. Charles Rock, and Mr. Gayer Mackay. A production of 'As You Like It,' with Miss Brayton as Rosalind, may be anticipated at Christmas.

AMONG novelties contemplated by Mr. Lewis Waller are an adaptation by Mr. Louis N. Parker of 'Harlequin Roi,' by Herr Lothar, and a romantic play by Mr. Henry Hamilton on the subject of Robin Hood.

MR. ALEXANDER'S season at the St. James's closed on Friday, and will not recommence until Christmas. As heretofore the house will be occupied during the holiday season by Mr. and Mrs. Kendal.

'DIE KINDER DER SONNE,' a new play of Maxim Gorki, has been read by the author to a select circle of friends.

LITERATURE

The Life of St. Patrick. By J. B. Bury. (Macmillan & Co.)

THIS profoundly interesting digression of the Cambridge Professor of History into Irish history has relieved us of the apprehension we expressed when we reviewed in these columns his Inaugural Lecture. In that discourse we were told to study history as an objective science, free from all personal flavour; it was to be a pure (and dry) science, rather than the work of a human artist. This was at least the impression his words produced upon us. We are delighted to find in the present volume that Prof. Bury has been unable to lay aside his powerful personality, and has produced a life of St. Patrick in which careful and minute research has not quenched a bold and vivid imagination. Moreover, Prof. Bury is no mere sceptic, content to show contradictions or inconsistencies in a legend, and sit down in despair at the prospect of eliciting any truth from such materials. His far higher attitude is that of a critic striving to find out the element of fact in almost every legend, and often giving us a bold conjecture as worthy to take its place in a tentative history. If we have any fault to find, it is that now and then the author seems rather easy of faith. He tries to fit all the legends to the same great personality, and scouts the idea that the adventures of some lesser Patrick may have been confused with those of the great apostle. Yet, after all, what is more probable? Has not Patrick of Rosdela disturbed the saint's day of the older Patrick, as Mr. Bury tells us? The transference of myths is a real agent, perpetually disturbing history. Thus the common people about Thebes in Bœotia used to attribute—and probably now attribute—all the legends about St. Luke in that place to the Evangelist, whereas they really belonged to another Luke, who came centuries later.

In this connexion we will quote one of many suggestive passages from Prof. Bury's fascinating book:—

"It is a common fallacy that legends attach themselves to a figure only after a long lapse of time, and that the antiquity of biographies may always be measured by the presence or absence of miracles. The truth is that those men who are destined to become the subjects of myth evoke the mythopœic instinct in their fellows while they are yet alive, or before they are cold in their graves. When once the tale is set rolling it may gather up many conventional and insignificant accretions of fiction, and the presence or absence of these may indeed be a guide in determining the age of a document. But the myths which are significant and characteristic are nearly contemporary; they arise within the radius of the personality to whom they relate. The tale of Patrick's first Easter in Ireland and his dealings with the king is eminently a creation of this kind."

All this is most instructive. We will even add that every remarkable man is apt during his life to attract into his legend stories attached to earlier men of a similar type; while legends already existing cluster round him, and pretend to be newer than they really are. Instances of this process may be found in the sayings attributed to Sydney Smith and Jowett.

So true is Prof. Bury's warning that legend does not require a lapse of time to arise in human history. But when he adds that the later additions are conventional and insignificant, and may be known as such, he seems to forget the possibility that a really characteristic legend—one which would naturally and sentimentally fit a long past life—*may* arise and be tacked on to the old hero because of its fitness. In such a case the acutest critic may be deceived, and in any case, to lay down the distinction of what is characteristic and what is not is surely to appeal to the subjective learning and the judgment of the individual historian. In no book have we found more ingenuity in probing for historic truth amid a cloud of absurdities, and such weighing of evidence as the appendix offers seems to us a model of acuteness in conjectural criticism. But it is very far from being incontrovertible history, and it is therefore more human and more fascinating. "If God," said Malebranche, "were to offer me with one hand the truth, with the other the search after truth, with all reverence I should choose the latter."

To turn to the general results of this striking study in Irish ecclesiastical history, the first large outcome is the proper placing of St. Patrick and his work in the European history of the fifth century. And here it is that the author's wide and accurate knowledge gives his book a value which no mere provincial, or antiquarian, or theological study of St. Patrick can attain. Such, indeed, has been the general character of previous essays on the subject. Of one writer Mr. Bury says, "His whole narrative and argument are vitiated by his astonishing ignorance of imperial history." How strict a standard Mr. Bury requires is shown in the succeeding words (p. 340). The flight of St. Patrick in 395 had been associated with barbarian devastations of Gaul. But these latter did not begin till 407. Errors of the sort are, however, less important than wrong views as to the general position of St. Patrick in the spiritual history of his adopted country; for, like most great Irish figures, he was not an Irishman. What is more exceptional is that he never posed as an Irishman. Instead of being a founder or advocate of a separate Celtic Church, more or less in opposition to that of Rome, he was, Mr. Bury shows, a powerful agent in introducing the use of Latin, and more generally the influence of the Latin upon the Irish Church. On the other hand, our author agrees with Prof. Zimmer that earlier missionaries had carried the Gospel into Ireland, probably into the south province. But these earlier teachers are mere names, with the exception of Palladius, whose identification with Patrick, recently asserted with confidence by Prof. Zimmer, Mr. Bury with equal confidence rejects, and on this point his arguments are to us convincing.

He has discussed with great care the peregrinations of the saint and the historical value of the foundations attributed to him by the legends. In the present day there are still (apart from Armagh) three places associated in name with his visits — Downpatrick, Croaghpatrick (in Mayo), and St. Patrick's Purgatory (Lough Derg, in Tirhugh, Donegal). Concerning the last, we would gladly have had some criticism of legends which have held fast to the spot, and which have made it by far the most remarkable of the Irish places of pilgrimage all through the Middle Ages to the present day. There seems to be no direct evidence that the great St. Patrick went there, but the 'Lives' bring him through country very near the spot, and the attachment of his name to it ever since the twelfth century by public consent is worth considering. Here, too, the suggestion of a smaller and later saint of the same name, and of local veneration, is not without plausibility.

Prof. Bury's views as to the age and nature of *ogam* writing are sane and reasonable, when compared with the hallucinations of Irish patriots about them. To say that they point to an ancient and independent use of letters, and that they were the vehicle of a considerable literature in pre-Christian times, is to adopt a hopelessly uncritical attitude. It is very remarkable, and admitted by the present author, that this system of writing was used in pagan times, or rather for pagan inscriptions, which makes it probable (though not certain) that it dates earlier than the fifth century. We say not certain, for dying paganism might possibly have invented this script to conceal itself from rising Christianity. But if we assume that it is pre-Christian, it is certainly not pre-Latin in Ireland—that is to say, the inventors had before them the Latin alphabet. One fact proves this to any student of primitive alphabets. The vowels are divided into a separate class of signs, and they are the vowels of the

Latin alphabet. No primitive alphabet that we know has ever such disengaged vowel-sounds. Nor is there any evidence that this script was used for anything but brief lapidary inscriptions.

It was not within the author's scope to do more than sketch the social condition of the country at this early date; but his fascinating fourth chapter makes us long that he had undertaken this task in detail. There is considerable material extant, as appears from Dr. Joyce's remarkable book, recently reviewed in these columns; but to separate the wheat from the chaff, above all to bring some chronological order into the facts gathered by Dr. Joyce from widely separated and diverse centuries—this would be a task worthy of the author's learning and insight. He would probably reply that such a work should not be undertaken without a thorough knowledge of old Irish, to which he does not aspire. Yet as no historian can be expected to master all the languages of Europe, it would seem reasonable that a scientific thinker should weigh and order the materials collected for him by the linguists. To master Irish is, indeed, no ordinary task; of all the Aryan languages of Europe it is the most difficult. Many of the place-names cited through this book are of strange and barbarous aspect to the average reader. It is plain at first sight that they are not, and could never have been, pronounced as they are written, if the alphabet be indeed our alphabet. Sometimes Prof. Bury is kind enough to give us the name phonetically, as when he tells us that the present Aghade is the *Ath Fithot* of the old books. If these two profess to be the same name, what is the ignorant man to think? and how is he to face the pronunciation of the following gentleman's name—Eochaidh Muigmeadhoin—once High King of Ireland? We know very well that such observations only excite the scorn of Celtic scholars, but they nevertheless point to an obstacle in making Irish a popular or a general study.

Mr. Bury's geography is, on the whole, accurate, and shows knowledge of the country; hence we call his attention to the following sentence:—

"Thence he [Patrick] may have journeyed southward through the plains and wilds of Kerry, till he came to the lake country on the confines of Mayo and Galway."

We cannot conceive such a journey without a return northward through Clare or Limerick in the middle of it. The slight connexion of St. Patrick with the south may seem remarkable to those who do not know that up to the plantation of Ulster by James I. the north was not only the most Irish, but also the most barbarous part of the island. Hence it was the natural ground for a great missionary to choose. But Patrick was not less active in Meath and in Northern Connaught. The Protestant irruption into the north makes these things, which are really natural, seem strange to modern men.

We have no fault to find with this excellent and instructive book except that the last 170 pages are simply headed Appendix, though there are A, B, and C, and moreover twenty-one separate articles under C. Surely these numbers and letters should have appeared on every page to facilitate reference. Nor did we find our labour in seeking for passages we desired to re-read lightened by the index, which is wholly insufficient and not prepared with a fraction of the care required. Surely that is a duty Prof. Bury might well consign to some diligent pupil. For it is mainly a mechanical business; the great features of the book stand apart from it, and of these not the least is that the author's Irish origin and connexions have given him an intimate local knowledge, a keen local interest, and an amount of local help, which no Englishman could ever hope to command.

Henry the Third and the Church. By Abbot Gasquet, D.D. (Bell & Sons.)

THIS substantial book is beyond doubt a valuable study of the ecclesiastical policy of Henry III. and his advisers, and of the relations between England and Rome. The whole of the chapters on this exceptionally interesting half century of English history, when the relationships of Church and State were sorely tried, are written in a spirit of admirable calmness and fairness of citation, nothing apparently of importance being kept back on one side or the other of the questions that come under discussion. Dr. Gasquet's endeavour has been to state the facts as far as possible in the actual language of the letters and documents of the time, or in the statements of such chroniclers as Matthew Paris. The result of this honest endeavour is a trustworthy contribution to the story of this long reign on the very points upon which most historians are either silent or provokingly brief.

Dr. Gasquet's own opinions, formed on the material set forth in these chapters, are very briefly and modestly expressed. They are not interwoven with the narrative, but are contained in a single paragraph of the introduction. He believes—and there seems little, if any, reason to differ from his conclusions—that the Pope, through John's action, obtained a paramount position in this country, England becoming a fief of the Holy See, and that successive Popes acted upon this idea time after time, in spite of constantly renewed opposition; that this opposition was as strong on the part of the ecclesiastics as on the side of the laity, if not stronger; that the gravest discontent existed with regard to the actions of the officials of the Roman Court, but that it was a discerning discontent, confined to pecuniary exactions and the appointment of foreigners to benefices, and had within it no elements of hostility to the spiritual supremacy of the Popes. That form of hostility to Rome was a plant of later growth.

If we understand properly the position of this learned English Benedictine, right through these pages, Dr. Gasquet, had he been living in the days of Henry III. and the Council of Lyons, would have found himself intensely loyal to the spiritual supremacy of the Pope, admitting theoretically the Papal right to deal as it willed with the fruits of benefices, but vexed beyond measure and profoundly saddened by the persistence with which these theories were put in practice in favour of a swarm of Italian absentees.

Dr. Gasquet has made good and frequent use of the earlier volumes of the great "Monumenta Britannica" series of manuscript transcripts of Papal letters from the Vatican, which were made for the Abbate Marino in the eighteenth century, and begin with the accession of Honorius III. in 1216. These fifty volumes, transferred to the British Museum in 1845, and well indexed, have been strangely neglected by several of our historians.

The array of incidents brought forward or cited from letters and chroniclers is so considerable that it is, perhaps, almost superfluous to suggest others; but we think it is always well to refer in such matters to the colourless statements of facts that are to be found in the Patent and Close Rolls. The references, for instance, among the letters patent to the legate Pandulph are exceedingly numerous. For the most part these references are of trifling value, but occasionally they throw strong light on the events that are specially discussed in these pages. Pandulph arrived in England in December, 1218, with full legatine powers, on the appointment of the new Pope Honorius III. In the following May, William Marshall, Earl of Pembroke, the king's regent, died, and Dr. Gasquet observes that from the Regent's death to the time of his recall in 1221 the legate acted almost as if he were king. As to his interference in matters of state, it is pointed out that almost immediately after Pembroke's death, Pandulph wrote to the Bishop of Winchester and to De Burgh, the Justiciar, as to the collection of the royal revenue, directing them to add one Walter Malclerc to the sheriffs for that purpose. In the following July he wrote to these same two nominal heads of the kingdom, "strictly commanding" their obedience to his injunctions on various other matters pertaining to the general welfare of the kingdom. Dr. Gasquet might, had he consulted the Patent Rolls, have found still further proofs of Pandulph's almost unlimited authority, even before the death of the Earl Marshal, who was actual regent. Within a month of his landing in England, namely, at the beginning of January, 1219, Pandulph sent a letter to William Marshall and Bishop Peter de Rupibus, describing himself as bishop-elect of Norwich, Papal chamberlain, and legate of the Apostolic See, wherein he demanded the release of one William de Leiham, a clerk, who was then in daily anguish in prison. As Mr. Shirley has remarked in his introduction to the first volume of 'Royal Letters,' "the authority assumed by Pandulph was not that of a judge, but of an executive magistrate."

Perhaps the most odious character that appears in these pages is that of Peter de Rupibus, the Bishop of Winchester. Himself a Poitevin, he was the only bishop who abetted King John in his evil ways, and who, as a foreigner, counselled that monarch on several occasions to resist the national will. It was this bishop who crowned Henry III., a boy of nine, at Gloucester in October, 1216, and afterwards became the royal tutor, and on several occasions the evil genius of his pupil. No one changed his policy more frequently than Bishop Peter. Notwithstanding his at one time strenuous support of Henry, according to

Dr. Gasquet he was probably the real instigator of the rebellion of the barons in 1223; and fifteen years later, when he returned to the kingdom, his influence with the king was so great, that the barons declared that there could be no peace so long as De Rupibus was paramount. Nevertheless, Dr. Gasquet's style is so quiet and restrained that he does not allow himself any invective as to this unprincipled bishop's life and conduct, preferring, in company with some of the best historians, to let a man's actions speak for themselves. All the same, we wish that the Bull of Innocent III., recently brought to light at the end of a collection of the letters of Peter de Blois, Archdeacon of London, had been cited, wherein this bishop is upbraided, in the time of John, in terms of the utmost vehemence, almost unparalleled even in the vituperative ecclesiastical Latin of the day, and complaint is made of his intense acrimony (*amaritudinem suam amarissimam*).

One of the most striking sections of the volume is that which brings before us the position of the English at the Council of Lyons. It is vivid, though free from any attempt at fine writing. On December 22nd, 1244, Innocent IV., having ascended the pulpit of the cathedral church of Lyons, publicly announced the convocation of a general council for the next 24th of June. In the following week the pontifical letters of summons were dispatched; some at least of these missives, in addition to the summons, ordered that the Papal excommunication of the Emperor should be proclaimed. This order was by no means always popular, and a story is cited from Matthew Paris of the admirable address made to his flock on this occasion by a French priest:—

"Listen, all of you. I have been ordered to publish a solemn sentence of excommunication against the Emperor Frederick, with bell and candle. I do not know why, but there has been a grave quarrel and lasting hatred between them. I know, too, that one has injured the other; which I do not know. But, as far as my powers go, I excommunicate, and declare excommunicated, one of them; that is, he that has done the injury, whichever it is; and I absolve the other who has suffered the wrong, for the matter is most hurtful to the whole of Christendom."

The authorities differ much as to the number of bishops attending the Council, the partisans of Frederick II. doing their best to minimize its weight. The number of English representatives was certainly small, although they had been summoned *en masse*. The Archbishop of Canterbury represented the English hierarchy, and the Archbishops of St. Andrews and Armagh those of Scotland and Ireland. Among the lesser dignitaries was the Dean of Lincoln, who was consecrated Bishop of Coventry and Lichfield by the Pope during the session of the Council. Among the excuses for absence made by the English bishops and abbots were the king's business by the Bishop of Carlisle and the Abbot of Westminster, sickness by the Bishop of Ely and the Abbot of St. Albans, poverty by the Bishop of Llandaff, gout by the Abbot of Edmundsbury, and old age by the Abbot of Waltham. Henry III. was represented by Roger Bigod and the Earl of Norfolk, with William de Powick as their official spokesman.

One of the first acts of the Council was to ask for the canonization of Edmund, the late Archbishop of Canterbury. During the six years of his prelacy he had been involved in a series of quarrels with the monks of Canterbury and others; but of his remarkable personal sanctity and fearless sense of duty no one seems to have had the least doubt. Since St. Edmund was not a man of any great prominence, the petition for his canonization was not a little remarkable. Not only did it reflect the almost unanimous wish of the English people, but it was also signed at a small council by eight archbishops and over twenty bishops. The Pope deprecated haste, and the matter was for the time deferred. So far as Innocent IV. was concerned, the chief business before the Council was the quarrel between the Emperor and himself; but England had a far more important matter, from her own point of view, to discuss. On Monday, July 17th, 1245, the proctors of the nobles of England presented their celebrated letter complaining of the constant demands and exactions of Roman officials, and especially of the immense number of Italians appointed to English benefices. "They know not their sheep, and their sheep know them not." They had not dispensed alms to the poor of their parishes, but were at that moment carrying off across the seas more than 60,000 marks annually from their English livings—a sum greater than the annual revenue the king, who was the guardian of the Church, had to spend on the government of his kingdom. Further, the nobles protested warmly against the exactions of the Papal clerk, Martin, the recent visitor to these shores, and stated that they did not believe for a moment that the Pope knew what his agent was doing. They concluded with a plain declaration that if these practices were not stopped by the Pope, they would not continue any longer to bear these intolerable oppressions. When this formidable petition had been read, the Pope answered that he recognized its gravity, and proposed to take time to reply.

Two years later the French, under St. Louis, made a very similar protest. Dr. Gasquet is evidently in sympathy with the attitude manifested first in England, and afterwards reflected in France, towards provisions and other Papal exactions, and considers that the protests were perfectly consistent with absolute loyalty to the Pope "as sole head of the universal Church." In arguing that such views were not even inconsistent with a full admission of the theoretical rights of the Popes to act as they were doing with regard to ecclesiastical revenues, and that it was the practical question of the expediency of such tyrannical action that was disturbing the two nations, Dr. Gasquet is, after all, only following the line adopted at the time by that most strenuous English opponent of the temporal Papal actions, Bishop Grosseteste. Whilst most determined in his resistance to a policy that he thought disastrous and unhappy, Grosseteste at the same time recognized that in theory the holder of the central apostolic see possessed, if he liked to use it, the power of doing as he thought best with the benefices of England or of any other country. In the midst of his vehement antagonism to the expediency of the action of Rome, he was content to write:—

"I know and truly acknowledge that to the Lord Pope and the holy Roman Church belongs the power of dealing freely with all ecclesiastical benefices."

Dr. Gasquet is fully justified in stating that there is no suspicion of disloyalty to the supremacy of the Pope in the letters and protests from England of this period, either cleric or lay. Protests were abundant, but there was no breath of Protestantism in doctrine or in the general principles of church government as now understood.

A Peculiar People, the Doukhobors. By Aylmer Maude. (Constable & Co.)

MR. AYLMER MAUDE must be considered our great authority on the Doukhobors, the interesting Russian colony which has taken up its abode in Northern Canada. He was not only one of the instigators of the settlement, but has also seen them settled in their new home. We are, therefore, glad to have his account of their present position. They have some difficulties to arrange with the Canadian Government, but these difficulties have been of their own making. They still refuse to take an oath of allegiance to the British Government, to be registered and subjected to a census, and to acknowledge the division of property. Perhaps this dislike to a census may arise from a fear that they will be subjected to conscription. We are reminded of the story of a German ethnologist who was measuring the head of a young peasant in the Caucasus, whereupon his mother burst into tears, fearing that her son was going to be enlisted. Otherwise the Doukhobors appear a modest and God-fearing people, but liable to strange outbursts of fanaticism, as shown in their mediæval pilgrimages. Mr. Maude's robust English intellect leads him, as Prof. Vinogradoff said of Sir Henry Maine, to search for the meaning of life as it really is; and thus we find him combating the extreme views of Tolstoy on property and resistance to authority, and some of the advanced opinions of Mr. Tchertkoff. The latter gentleman while writing about the Red Indians resuscitates the conventional native of Fenimore Cooper's novels. We are wholly sympathetic with our author in his trenchant remarks on imperialism, war, and conscription. In this, as in some of his other books, Mr. Aylmer Maude has revived the wholesome teaching of his master Tolstoy. The difficulties with which the Canadians have to contend are not peculiar to the character of the Doukhobors, but seem due to human nature itself. We see one of the inherent weaknesses of our race in the complete submission of the Doukhobors to the rule of their leader, Peter Verigin, who reached the colony in 1903, and has controlled matters autocratically since his arrival. It is just this tendency by which Mr. Maude explains the "atavism of humanity," through which the kingly caste has been carefully fostered and handed down. In the con-

cluding chapter of his book our author writes almost in a pessimistic tone. But he thinks, on the whole, that Canada has gained by the arrival of this simple-hearted people. He believes that their customs will be modified by the foreign elements which surround them:—

"Even to-day the men who have been away at work on the railways or elsewhere would many of them be inclined to break from the enchanted circle, were it not that the women hold them back. The women are the chief repositories of the 'Living Book' that enshrines the traditions of the sect, and they are exceedingly conservative."

Their communities will probably gradually break up, like the Serbian *zadrugas* or house communities, about which so much has been written so well by Prof. Bogišić and Sir Henry Maine. The Canadian Government seems to be getting a little tired of some of their vagaries, to judge by the extracts which Mr. Maude gives from the Canadian papers. One of the officials who was sent to register the Doukhobors fairly jumped out of his seat with rage, and asked them whether they supposed they had come to alter the laws of Canada. Occasionally strange stories travel to Europe about these enthusiasts, as when they let their horses and other animals go loose, thinking it wrong to hold them in any kind of bondage.

In the third chapter of his very interesting book Mr. Maude supplies an historical sketch of the rise of this strange sect. If we want a complete account of those marvellous phenomena the heresies of Russia, we cannot consult a more authoritative work than 'L'Empire des Tsars,' by Anatole Leroy-Beaulieu, the third volume of which is entirely occupied with 'La Religion.' One thing pointed out is clear enough. However much a Russian may allow his political life to be fettered, he has always kept his conscience at his own disposal, and has challenged the power of the Tsar by his readiness to undergo all kinds of punishments. Nay, he has even immolated himself, as we see in such books as 'Self-Burning among Russian Heretics,' by D. Sapozhnikov. The elements of the "heresy" of the Doukhobors may be found as early as the Paulician or Bogumil tenets, which rapidly spread over Western Europe, and took form as the doctrines of the Albigenses, which were extirpated with great cruelty. Hence proceeded Wickliffe, Huss, and the less-known Peter Chelčicky, whom we are glad to find mentioned by Mr. Maude. No man ever wrote more vigorously against war than this Bohemian reformer. We recommend all those who wish to be acquainted with his writings to read the account of him in Count Lützow's 'History of Bohemian Literature.' Certainly the germs of Protestantism were bursting out in various parts of Europe long before the period of Luther.

Nearly two years ago appeared the book of Mr. Joseph Elkinton, an American Quaker, who had taken a deep interest in these immigrants, and has left a picturesque account of their arrival in Canada, when, as they neared the coast, like the wanderers of old time, they chanted a stirring hymn. To Mr. Elkinton's book that of Mr. Maude may justly be looked upon as a pendant. There can be no more complete well-wisher to the Doukhobors than he; he confesses, however, that he has had some things to unlearn. If the Doukhobors are to become the new citizens of a country teeming with manly sense and progress they must divest themselves of some of their dogmas, which seem to belong to visionaries rather than practical men. There must be a government of some sort, and that government must have the power of enforcing its decrees. Even the learned and philosophic Prof. Kropotkin was found too anarchical for the French Republic, and passed some of his days in a French prison. The book is furnished with some excellent illustrations. We like the portrait of Peter Verigin. He is evidently a manly fellow, and we hope that we shall hear that his leadership of the Doukhobors has been profitable to themselves and their adopted country.

The Coptic Version of the New Testament in the Northern Dialect. Edited and translated by the Rev. G. Horner. 4 vols. (Oxford, Clarendon Press.)

IT would be difficult to overpraise the scholarly edition of the Coptic New Testament in the Memphitic dialect which we owe to the labours of Mr. Horner, or to express adequately our gratitude to the Delegates of the Clarendon Press for giving to scholars in a complete form one of the most interesting versions of the Gospels and other New Testament Scriptures. In the work before us we have all the materials necessary for arriving at a right conclusion as to the age, authority, and position of the Coptic version of the New Testament, which was in general use in Lower Egypt during the early centuries of our era, and Mr. Horner has been scrupulously careful to reproduce his texts, without addition or diminution. The Coptic texts will, of necessity, appeal to only a limited number of scholars, but we believe that the exact English renderings of them which are printed page for page with them will be widely used both by theologians and laymen. Both type and arrangement leave nothing to be desired, and the size of the volumes makes them convenient for reference and easy to handle. The first two volumes appeared in 1898, and contain the four Gospels and an elaborate *apparatus criticus;* the third and fourth volumes have just appeared, the former containing the Epistles of St. Paul and a full description of the MSS., and the latter the Catholic Epistles, the Acts of the Apostles, and the Apocalypse. Text and translation fill close on 2,300 pages, and the descriptions of the MSS. used or consulted fill 216 pages more. So far as we can see, every manuscript of importance in London, Oxford, Paris, Rome, Göttingen, Berlin, and elsewhere, whether in public or private collections, has been collated or examined; and though less ponderous than some, Mr. Horner's work must take its place among the great editions of Biblical and ecclesiastical texts which will remain standard authorities for some generations.

The chief point of general interest which arises in connexion with the appearance of Mr. Horner's edition of the Coptic version of the New Testament is, naturally, the age of the version. A generation or so ago some scholars asserted that it was not older than the seventh or eighth century of our era, and others held the view that it was to be attributed to the second or third. In 1882 Stern believed that the version was the work of monks who were settled in the Nitrian Valley, and that it was produced in the fifth century. The opinion of so eminent a Coptic scholar is not to be passed over lightly, and it is possible that some of the recluses, who varied the monotony of the ascetic life as led in the monasteries or in the "cells" there, may have promulgated a rendering of the books of the New Testament in the northern dialect of Egypt; but even if this be the case, it is certain that it cannot have been the first rendering of them which was made in the Delta. There is no reason for doubting that St. Anthony lived from about A.D. 250 to A.D. 355, and all the histories of this ascetic agree in saying that he was an uneducated man, that he knew neither Greek nor Latin, and that he could neither read nor write. That he was shrewd and possessed great natural ability is clear, but he knew no language except his mother-tongue, Egyptian, and even when he was an old man, and philosophers came to question him about his religion and belief, he was always obliged to employ an interpreter, who was "exceedingly skilled in the Egyptian language," to make his answers clear to them. Moreover, tradition asserts that when he was a youth he frequently attended the services in the church of his native town; and in his 'Life' by Athanasius, Archbishop of Alexandria, it is expressly stated that he distributed his possessions among the poor, and embraced the ascetic life, in consequence of having heard read that passage in the Gospel in which our Lord said to the rich man: "If thou wouldst be perfect, go and sell everything which thou hast," &c. We are told that Anthony did this soon after his eighteenth year, and if this be so, it follows as a matter of course that he must have heard the Gospel read in Egyptian about A.D. 270. On another Sunday he went to church, and from the Gospel for the day he heard read the words, "Take no thought for the morrow," and, as he could neither read nor write, it is certain that the quotations from the New Testament made by him in his later years when he lived in the "inner desert" must have been learnt by him during his attendance at divine service in his youth.

It may be deduced from these facts that an Egyptian version of the New Testament existed in the third quarter of the third century, and that it was generally known and accepted is evident from the fact that it was divided into sections, which were read on specified days publicly in the churches. How long such a version had existed cannot, of course, be said, but it seems only reasonable to suppose that translations of the Gospels at least were made from Greek into Egyptian so soon as bodies of monks began to live together in monasteries. Attendance in the monastery chapel on Sundays was obligatory on all followers of the monastic life, and the reading of selected portions of the Gospels

was, of course, one of the most important features of the service. It seems impossible that the Christian communities which existed in and about Alexandria in the second and third centuries should have been without Egyptian, *i.e.*, Coptic, translations of the Gospels, and that any preacher of Christ's gospel should attempt to spread abroad a knowledge of the new religion, which was intended for the people, without possessing the means of reading to his hearers in their native tongue the message which he sought to deliver. On the whole, then, there are good grounds for assuming that portions of the New Testament, the Gospels first of all, were translated into Egyptian a century and a half at least before the time of the two great ascetics, Paule and Anthony. The making of authoritative versions, which were intended to be used by the whole Christian community of Egypt, came later, probably not before the fourth century, and the revision and correction of them in the light of good Greek MSS. came later still.

Mr. Horner's labours prove that the Jacobite Copts took great pains to preserve a tradition as to the correct readings of their version, and though corrections occur in all their MSS., "frequent notes in several state that the corrections are Greek and not Coptic." The theory of the preservation of an unchanged form of text is thus strikingly confirmed. A study of Mr. Horner's text makes it clear that the version in Memphitic is older than the Sa'idic, or version in the dialect of Upper Egypt, and the general evidence derived from the enormous mass of variants which he has printed confirms this view. The importance of the Memphitic version, in the writer's opinion, consists largely in the fact that it represents the contents of Greek MSS. which contained the traditions of Christ and His Apostles in a primitive and pure state, and it serves, moreover, to indicate the character of the Christianity which was preached to the Egyptian Christians in the Delta in the second century, and which was current among them before the middle of the third century. Besides this, the student of the Coptic texts in it who is familiar with the demotic and hieroglyphic forms of the Egyptian language will appreciate the skill with which the translators modified the older meanings of many words in order to suit their new surroundings. The Memphitic version was the version understanded of the people, and many parts of it are certainly coeval with the existence of Christianity in Egypt, so that in publishing it in an unmutilated form the Delegates of the Clarendon Press have conferred a great boon upon all Egyptologists. Want of space makes it impossible even to call attention to its striking merits and defects, or to account for the omissions of certain passages from good MSS.; the most important point is to recognize that abundant material is now available for the study of these and other matters, and make use of it without delay. No set of Coptic texts has before been so conscientiously or thoroughly edited, and, for many reasons, no other Coptic scholar was so well equipped for the work of editor as Mr. Horner. The English translation which accompanies the text is literal, and faithfully represents what the Egyptian translators thought that the Greek original meant. The Lord's Prayer may be given as a typical and interesting example:—

"Our Father who art in the heavens, hallowed be thy name. Thy kingdom come. Thy will be done as in (the) heaven so upon the earth. Give us our bread of to-morrow to-day. And forgive us our debts as we also forgive our debtors. And bring us not into temptation: but save us from the evil."—St. Matthew vi. 9–13; vol. i. p. 39.

In taking leave of this book it is impossible not to wish that it could be widely circulated in a cheap form among the poor members of the Coptic community in Egypt. There are in Upper Egypt and Cairo at the present time large numbers of men who are dissatisfied with the state of affairs which exists in their Church, and who have formed themselves into an "advanced party," with the object of bringing about reforms. Such men look in vain to the hierarchy of their own Church for scholarly editions of the Scriptures; and even if funds were to be provided out of the vast wealth possessed by the Copts all over Egypt, there are among the Copts no scholars sufficiently well trained to know how to edit texts or select the best readings of MSS. Large sums of money are spent every year in trying to educate the Copts, and it is a pity that a little more cannot be expended in providing those who need them with copies of the Scriptures in the ancient language of Egypt. Cannot the British and Foreign Bible Society or the Church Missionary Society be induced to make some arrangement with the Clarendon Press, whereby the Coptic text of Mr. Horner's edition can be sold in Egypt for from ten to twenty piastres? A very handy edition of the New Testament in Arabic can be purchased for ten piastres (two shillings) or even less, and a considerable number of copies are bought by Mohammedans each year. Those in whose hands the welfare of the Copts rests ought to consider this matter.

Clan Donald. Vol. III. By the Rev. A. Macdonald, minister of Killearnan, and the Rev. A. Macdonald, minister of Kiltarlity. (Inverness, the Northern Counties Publishing Company.)

THE volume before us concludes the history of the most important Highland clan, historically, and still one of the most numerous. The Clan Donald of old was the dominant tribe, as the race which furnished the Lord of the Isles, until the forfeiture of 1493, and the overthrow, in the course of the sixteenth century, of the last vestiges of Celtic sovereignty. From that period its vassals became independent, and its glories paled before the rising fortunes of those who knew how to invoke the resources of Lowland feudalism, as the Campbells, Gordons, and Mackenzies. Yet the branches of Clan Iain Mhoir, of Antrim, of Clanranald, Glengarry, Keppoch, and Glencoe had enough of the energy of the race to leave their mark on history, though the field of their activity was comparatively local. The present volume is dedicated to the memory of the late Admiral Sir Reginald Macdonald, "twenty-first in direct male descent from Somerled, King of the Isles, and fifteenth in descent from Reginald, eldest son of John, Lord of the Isles," the distinguished chief of Clanranald. The house of Clanranald has already been fully dealt with. The first two chapters of this volume are concerned with the line of Sleat, or Clan Uisdein, represented by the present Lord Macdonald. He is by Celtic usage, as the representative of the surviving issue of Alexander, Earl of Ross and Lord of the Isles, chief of the whole Clan Donald. On two notable occasions the direct line of the Isles was broken, with the acquiescence of the subordinate chiefs: first when Alastair Og, the Anglophil ruler, was forfeited by Bruce in favour of his supporter Angus, Alastair's younger brother; and secondly when Donald, the eldest son of the "Good John of Isla" by his second wife, the daughter of the King of Scotland, was preferred by common consent to his half-brothers. They were the offspring of Amie Nic-Ruari, the eldest of whom, Reginald above-mentioned, as Steward of the Isles, obtained the consent of the clan to the nomination of his younger brother as "Macdonald." From the latter chief descends the house of Sleat. The story of Clan Uisdein or Sleat is rather sordid at the outset. Internal feuds and fratricide darken its early days. Misfortune from without, struggles with Macleans and Macleods, the ceaseless pressure of Argyle, fill a picture common in Highland history. Yet the clansmen bore themselves gallantly at Worcester, Killiecrankie, and elsewhere, having become supporters of that Scottish throne against which most of their ancestors had been ranged. In 1745 the chief held aloof, though Prince Charlie could hardly have made good his escape without Macdonald's connivance.

The legislative revolution which followed the last Highland rising put the Sleat Macdonalds, like all other chiefs, in the position of mere landlords, without any corresponding provision for the interests of the tenants, whose support had gained and maintained for them their lordship of the soil. Tighearna and people were alike steeped in poverty. After the mild rule of the scholarly Sir James, "the Scottish Marcellus," fondly remembered, compulsory emigration and other results of purely commercial conditions destroyed the old clan sentiment in its practical form, leaving a bitterness in the island district as elsewhere. Such a book as this shows the revival of better feelings.

These chapters are well written, as is that on the social history of the clan, which shows sympathetic knowledge of the peculiar conditions of the past and the political and economic questions of the present.

The remainder of the book is largely taken up with genealogical tables. The labour involved in these must have been immense, and almost disarms criticism. Yet we regret that so many inaccuracies in regard to names and dates appear; and for the absence of a general index there is little compensation in the list of houses dealt with in the genealogy. Unless one knows to what *stirps* the individual belongs it is impossible to discover from the book the status of such well-known names as those of General Sir James Macdonell of the

Glengarry tribe, "who shut the gates of Hougoument" (and, *pace* Mr. Lang, made atonement for "Pickle the Spy"); of Provost McDonnell of Trinity, Dublin, whose descendant is the lineal representative of the oldest *stirps* of the Lords of the Isles; or notable modern men like the present Lord Kingsburgh, "tam Marte quam arte potens," or Sir Claude Macdonald the diplomat.

Not unnaturally errors occur in the Irish pedigrees—for example, in the account of the Irish Alexanders. There can be no doubt that they sprang from the Kintyre tribe, for their settlement in Ireland can be traced to the time when the Campbells were exterminating with fire and sword the Mac Alisters, and all others who followed the Clan Iain Mhoir. Moreover, they were probably settled there under the auspices of William Alexander, Earl of Stirling, who afterwards (1631-2) induced the then MacAlister of Tarbert and his tribe to acknowledge him as their chief, and quartered the arms accordingly.

But the exact affiliation of the Caledon Alexanders has never been established. To date the siege of Derry in 1649 instead of 1689 is a wild attempt to bridge a chasm. At the latter date Andrew Alexander did his devoir on the Protestant side, and it is likely that he was a grandson of John Mac Alexander, the settler in Donegal. After tracing the family for some generations, we come to James, Nathaniel's third son, who became the first Earl of Caledon, a Union earl, whose patent was in 1801, not 1701, as given. Neglecting other branches (though the earl's eldest brother was grandfather of the Lord Chancellor Cranworth, and his second the ancestor of the present Archbishop of Armagh), our authors make the eldest son of the first earl the third holding the title; and the succession grows rapidly, like Falstaff's men in buckram. The fourth earl (so called) is succeeded by the seventh, again his eldest son, and the present (fifth) earl is promoted to be eighth.

Other dates and names are doubtful, but we would rather dwell on the merits of the compilation. It concludes with sufficient monographs on Alastair Mac Colla (Milton's "Colkitto"), on the gallant Flora, on Sir John, the Canadian statesman, and other distinguished representatives of the clan. Numerous portraits and a collection of autographs, the latter being interesting in view of current ideas of Highland education in past times, add to the value of the book.

The Regent of the Roués. By Lieut.-Col. Andrew C. P. Haggard, D.S.O. With Seventeen Illustrations. (Hutchinson & Co.)

THE title of this book sufficiently indicates its character. It is history in the form of a "chronique scandaleuse," history based on the memoirs of a time when memoir-writing began to be the fashion. It recalls to our minds the series written by Touchard-Lafosse, and entitled 'Chroniques de l'Œil-de-Bœuf.' "The evil that men do lives after them." Of no man is the saying more true than of Philippe, Duc d'Orléans. His difficulties and achievements, his success as a soldier, his honest endeavours as a statesman to deal with an impossibly difficult situation, have been eclipsed by the memory of his mistresses, of the cynicism he learnt from his *drôle*, his tutor and minister, the infamous Dubois, of his "petits soupers," and his orgies at the Palais Royal. "Mon neveu est un fanfaron des crimes," said Louis XIV., and it is as the Regent of the Roués that he lives in popular estimation. Of his vices and those of his Court we hear enough, and more than enough, in this book. But Col. Haggard has also endeavoured to present the good work and the good qualities of the man—his tolerance and good nature, his wit and his love of plain speaking, of art, literature, and science, his belief in the equality of man, his real humanity. The author has arranged his material well, and he writes in a style which, though strained and jerky, is always vigorous and vivacious. But his narrative is occasionally inferior in interest to the sources from which he draws. His account, for instance, of the *coup d'état* of 1716 cannot compare with the vivid narrative of Saint-Simon, and he does not add to the elucidation of the events which led to the downfall of the Duc du Maine and the pretensions of the illegitimate princes by misprinting "1617" three times in three pages for 1716 and 1717. Similar instances of careless proof-reading are the statement that Cardinal Fleury was sixty-eight years of age in 1620, and a reference to the House of "Condi" (p. 107). It is scarcely wise to couple the Queen of Spain with Alberoni as two "foolish Italians" (p. 113) who crippled Spain by plunging her into war. Alberoni wanted time for the completion of his preparations, and time was what the ambitions of the Queen did not allow him. With Col. Haggard's general appreciation of Law's aims and the results of the Mississippi speculation, we find ourselves in agreement, though he does not point out that one of the great social lessons taught by that disastrous enterprise was that money makes the man, that a lackey is as good as a lord, a lesson which was illustrated when a lackey who had gambled successfully was able to place his carriage at the disposal of his ruined master. But the account given here of the financial transactions of the "system" is confusing, and, we fancy, confused.

We cannot believe that Law "hesitated when France put herself at his feet, demanding that his bank should become the Banque Royale." It was always a fundamental part of his "system" to identify the State with the Bank. Even after his fall we find him writing to the Regent: "It is for the sovereign to make credit, not to receive it." It was only when his proposal to establish a Royal Bank had been rejected by the Council of Finance in October, 1715, that he set about establishing a private bank. One of the strongest opponents to the establishment of the Royal Bank at that time was the Duc de Saint-Simon, who, in answer to Law's endeavours to persuade him, used the very arguments which Col. Haggard attributes to Law in "his fear that the State would swallow up his Bank." Saint-Simon, after a characteristic avowal of his disgust for all financial matters, made the shrewd criticism that the Bank was an excellent thing in itself, but in a country where finance was entirely popular, and not in an autocracy like France, where war expenditure, the avidity of a first minister, a favourite, or a mistress, or the prodigality of a king might soon exhaust it. Col. Haggard puts all the blame for the failure of Law's schemes upon the shoulders of "the pack of titled robbers" who surrounded him. But these vampires were the very people whom Law did his utmost to interest in the gambling side of his system. Similar relations between financiers and the nobility have been seen even in our own day. The financier cannot be regarded as altogether blameless. Before the smash in 1719, in order to pay 4 per cent. on the price paid for the shares (5,000 livres), the Company would have had to pay a dividend of 200 per cent. Perhaps Law thought that this might have been done, and he appears to have regarded such future possible profits as the legitimate basis of a paper currency. It was the fundamental error of his financial system that he believed and always preached that the wealth of a country depended upon the amount of money in circulation, and he seems to have held that a mere rise in the nominal value of shares in the market, apart from any production of material wealth which money and shares really represent, would increase proportionately the value of the national capital. With this idea he did everything in his power to increase the gambling fever in all classes, and to force up the price of the shares on sale in the Rue Quincampoix. Such a policy could have only one ending, and its author, however excellent his intentions, cannot be exonerated from all blame. It is strange that a man who had had great experience of gambling should have forgotten that inexperienced players are likely to lose their heads.

Col. Haggard devotes a couple of chapters to the "secret of three kings," the story of the man "on whom," as Madame Campan remarked, "people have been pleased to fix an iron mask." He has not resisted the temptation to adopt the romantic fabrications of Voltaire and of the Abbé Soulavie, in whose 'Mémoires du Maréchal Duc de Richelieu' he seems to place every confidence. Soulavie's invention of a younger twin born some hours after Louis XIV., born without the knowledge of the Court, and spirited away thereafter for ever as a masked prisoner, has found supporters, it is true, not only in Dumas and the popular taste, but also in historians like Michelet and Sismondi.

Col. Haggard is puzzled by the character of Louis XV., and makes some rather fantastic suggestions to account for it. "How did it come about," he asks himself, "that by a freak of nature such a mute insensible child could ever have been born to the lively Duchesse de Bourgogne?" Lively, not to say giddy and vulgar according to modern notions, the Duchess certainly was; backward and taciturn, till he was at length *déniaisé* by a series of clever and immoral women, was her child. But we are not convinced by the suggested explanation that "upon him had fallen the spirit of the year of which he was the fruit, the terrible famine year, 1709," or that the

mere presence of the young Duc de Fronsac as the intimate associate, if only playmate, of the Duchess affected the unborn child with the evil influences of his imp-like nature. A simpler explanation would be that the boy's constitution had not recovered from the shock of the illness, whether caused by poison or not, from the fatal effects of which it is recorded that Madame de Ventadour saved him by administering an antidote when he was still a child at the breast. Or we might trace in the *farouche* manners of the boy a trait inherited from Louis XIII., if that monarch was, indeed, his great-grandfather. On that contemptible *coureur des dames*, Fronsac, or Duc de Richelieu as he afterwards became, Col. Haggard is sufficiently severe. In criticizing Richelieu's illiterate *discours de réception* as an Academician, he might have applied to the speaker, with a slight variation, his own elegant remark to Madame de Gœbrillant: "Restez dans la cour des Cuisines, vous n'êtes bonne qu'à écrire pour les marmitons." Unfortunately Col. Haggard's own grammar is not always beyond reproach. We find such examples as "the lady who appeared to be her of the Regent's choice," "he is but a few years older than him," and "everything would be ruled by whomever should rule the king," and odd phrases like "find up." But these slips will hardly mar the enjoyment of the readers for whom this book is intended—the large class who vote scientific history dull and dry, but delight to pry into the corridors and peep into the antechambers of dead kings. There is no lack of gossip and scandal here, too often of an unsavoury sort.

RECENT VERSE.

Peace, and other Poems. By A. C. Benson. (Lane.)—

> I would speak the gracious thing
> That I grow to understand,

says Mr. Benson in the prelude to his latest volume of verse—a just appreciation this of work which, always gracious, reveals with each venture a fuller understanding of a certain aspect of nature and life. 'Peace' and 'The Charcoal-Burner' have a tranquil and pellucid flow, broken only by occasional bursts of a higher inspiration, as in this stanza of the latter:—

> The broad face of the tranquil sky
> Is mirrored in the forest pool,
> And somewhat fatherly and high
> Walks in the forest in the cool.

The longer poems as a rule are the most successful, elegy and not epigram being Mr. Benson's forte; but one exquisite little lyric, a model of terseness and the art which conceals itself, we give ourselves the pleasure of quoting in full, with the omission of a single verse, which interrupts the homogeneity of the piece:—

THE GUERDON.

> Twenty long years ago,
> And it seems like yesterday!
> And what have I got to show,
> What have I gained by the way?
>
> I have loved my fellow-men,
> But have loved yet more my will;
> I was heedless and faithless then,—
> I am faithless and heedless still.
>
> Thirsting for love and joy,
> Eager to mould and plan,
> These were the dreams of a boy,
> These are the dreams of a man.
>
> East and West they are gone,
> My comrades of yesterday;
> Some of them striding on,
> Some of them fall'n by the way.
>
> Yet this is my thought alone,
> This have I won by the way;—
> That twenty long years have flown,
> And it seems like yesterday.

In tone and workmanship this recalls the plaintive and wayward songs of R. L. Stevenson. The lines on Mrs. Gladstone and the 'Ode to Music,' which are here reprinted, are already well known.

Love's Journey. By Ethel Clifford. (Lane.)—The "native wood-notes wild" that were first heard in 'Songs of Dreams' are heard again in 'Love's Journey,' and once more we capitulate to their fresh grace of spontaneous fancy. It is not the mode to praise fancy in poetry; we all prefer to talk of imagination. But there are many minstrels in the court of verse, and Fancy is not the least of them, being, indeed, a true cousin of Imagination. When Milton called Shakspeare "Fancy's child," he was a young man, and probably he was alluding to Shakspeare's early poems, but he used the word in no unflattering sense. Fancy, indeed, is the characteristic quality of 'Venus and Adonis,' of the sonnets, and of the earlier plays. It would be well to use it more freely in defining a vast quantity of poetry which is not in the true sense vitalized by imagination. There is certainly more fancy than imagination in most modern poetry. Miss Clifford (we give her the maiden name which appears on the title-page of this volume, though she has married since it appeared) must, therefore, not think us uncomplimentary if we say that her poetry is full of fancy. What is fancy? It might be defined as derivative imagination. The poet in our day is saturated with the poetry of the past. His mind is stored with imagery that has been wrought into a kind of dialect. He thinks and feels in this dialect, and he writes in it with skill so supple that his verses seem to glow with the authentic fire and creative imagination. It is the perception of this fact that makes many a poet forswear verse for prose. For to the true poet nothing is more intolerable than the consciousness of imaginative mimicry. That is why youth is the most voluble of all the ages of poetry. Youth is not given to self-criticism. It takes the poetic dialect and says over and over again what has been said before.

Miss Clifford has this golden dower of volubility. She is steeped in the poetic dialect. The best images and symbols and metaphors come naturally to her lips. She uses them with spontaneity and freshness, and her freedom from self-consciousness enables her to express moods and states of emotion with winning *naïveté*. For your young poet in these days is apt to be too learned and too fastidiously anxious to invent a new diction which will express the old feelings in an original way. The remedy for this oscillation between the obvious and the eccentric is not easy to discover, but we may hazard the suggestion that the root of the mischief lies in the choice of hackneyed themes. Poetry ought to grow with the growth of the human mind. It ought to mirror the mental and spiritual processes of modern souls living in the modern world. Its failure to do so has alienated the cultured reader, who turns away impatiently from its everlasting reiterations of puerile sensations.

Miss Clifford is still in love with the poetic dialect which she uses so prettily:—

> Look down into the river. Can you see
> The mingled images the water shows?
> So lies my soul in yours. As close as lie
> The folded petals in an unblown rose.

She does not realize that the second metaphor actually weakens the effect of the first, for the "folded petals" are the rose, whereas the water and the reflection in the water are things distinct and different, and further, their relation is vague, troubling, elusive. That, however, is the peril of poetic fancy. It is always destroying one image with another, and cloying us with crowded comparisons. It may seem cruel to rob the poet of his stock-in-trade, but it really is necessary to hint, with the deferential humility proper in a critic, that the game of comparisons has been overdone, and that the sole end of poetry is not the discovery of resemblances, most of which have already been discovered by many other bards. We like Miss Clifford best when she is describing a simple mood in a simple way. For example:—

> Belov'd, if you should cease to love my eyes
> Not any saint that prays in Paradise
> Could comfort me; nor any magic spell,
> Nor memory of the ways we loved so well;
> Nor lasting fragrance of remembered roses;
> Nor shadows' beauty when the long day closes;
> Nor sound of falling water; nor the cry
> Of wind-blown birds across a purple sky.
> My soul would ask nor earth nor Paradise,
> Belov'd, if you should cease to love my eyes.

But it is difficult to quote enough to convey the faint charm of these poems, a charm which is diffused rather than distilled. It is necessary to read page after page in order to become conscious of a gracious personal presence exhaling youth in love with its own delicate sentiment and its own unsated delight in winds and waters, flowers and trees, and all the sights and sounds and odours of the open air. This charm hangs round these gentle processions of wistful moods in which romance seems to be always listening for the disaster and the disillusion which it fears, but does not feel. It is the sensitive spirit of youth in the very penumbra of transition, half eager and half reluctant to emerge from its dreams into the shadow of life. This shy adventurousness of the spirit is airily caught in 'The Song in the Beechwood,' where the mingled reserve and abandonment of nascent love are tenderly suggested. As a maker of haunting refrains Miss Clifford is often felicitous. Here is a song that lingers in the memory, though it recalls a touch of Henley's verse:—

> The wheel turns and the water falls.
> Shall we not linger here and rest?
> The sun grown weary of the day
> Has lit his camp-fires in the west.
> And far away
> A late bird calls.
>
> The wheel turns and the slow hours fall
> From off Time's spindle. You and I,
> Shall we have woven a cloth of gold,
> To make Love brave in, ere we die
> Or grow too old
> To hear him call?
>
> The wheel turns and the water falls.
> The singing stream that knew the hill
> Leaps to the wheel, and, broken there,
> Goes coursing onwards, singing still,
> And hasting where
> The deep sea calls.
>
> The wheel stops. See, the shadows fall.
> The sleeping sun no beacon shows.
> Belov'd, we too, even as the stream,
> Have known the breaking wheel it knows;
> But hold our dream
> Till Death shall call.

Different poets have different affectations. Some are for the simplicity of brown paper, but Mr. Bliss Carman for the sumptuosity of fine red and black print, a folio page, and a binding of crushed green leather. Such is the garb in which his collected *Poems* (Murray), in two volumes, now come before us, and it is for Mr. Carman to consider whether it is wholly appropriate to the nature of his talent. For his is the most out-of-doors poetry of our day, the fullest of the sights and sounds of the woods and of that craving for the open road which makes him look to R. L. Stevenson, "the prince of vagabonds," as his undoubted master. Stevenson and Browning—the association is perhaps a little incongruous; but these are the two forces which have most clearly contributed to fashion Mr. Carman's literary manner. Touches of poignant mysticism from the one and touches of high-hearted sanity from the other meet and mingle throughout his verse. Yet the out-of-doors note is predominant, and such a lyric as the following his most characteristic kind of utterance:—

> There is something in the autumn that is native to my blood,
> Touch of manner, hint of mood;
> And my heart is like a rhyme,
> With the yellow and the purple and the crimson keeping time.

The scarlet of the maples can shake me like a cry
Of bugles going by.
And my lonely spirit thrills
To see the frosty asters like smoke upon the hills.

There is something in October sets the gipsy blood astir:
We must rise and follow her,
When from every hill aflame
She calls and calls each vagabond by name.

The bulk of Mr. Carman's verse appears from these volumes to be greater than we had realized. Perhaps its range of sentiment and expression is not proportionately wide; but it is genuine and sometimes exquisite poetry, and deserves to be better known in England than it is at present.

Dream come True, poems by Laurence Binyon, is issued by the Eragny Press of Hammersmith, which, aiming at artistic beauty combined with honesty and excellence of craftsmanship, seems to carry on, to some extent, the movement by which Hammersmith was first associated with reform in book-production. This, its most recent publication, consists of sixteen short poems by Mr. Binyon, linked into a sequence by the connecting thought expressed in the title.

The outward volume is slight, as is the poetry within; but the subject is one which calls for delicacy of feeling rather than depth of thought. This slightness is, however, now and again too much in evidence, and brings with it something of disappointment. For Mr. Binyon is a poet, and a poet ought not to run the risk of having the single epithet "graceful" applied to his work; yet that is the term which seems proper to this volume considered as a whole. Nevertheless, things which are graceful have their share of beauty, and there is beauty here, particularly where the author's vivid pictorial sense finds expression. For example, in the poem called 'Ricordi' each stanza has its picture clear, delicate, and suggestive, as in the following:

Of a tower, of a tower white
In the warm Italian night,
Of a tower that shines and springs
I dream, and of our delight:

Of doves, of a hundred wings
Sweeping, in sound that sings,
Past our faces, and wide
Returning in tremulous rings:

Of a window on Arno side
Sun-warm when the rain has dried
On the roofs, and from far below
The clear street cries are cried.

Or in these lines from 'Venice':—

White clouds that rose clouds chase
Till the sky laughs round blue and bare;
Sunbeams that quivering waves outrace
To sparkle kisses on a marble stair.

Here breathes the very spirit of morning, and here the poet excels.

For the rest, there is much pretty fancy in 'The Tie,' and all the poems show melody and tenderness of feeling; but these are what we expect of Mr. Binyon, and there is nothing here better than what he has done in the past.

The Rainbow and the Rose, by E. Nesbit (Longmans), is full of that essential human feeling which separates genuine poetry from the manufactured article. At her best the writer has a sudden poignancy of expression which impresses itself on the memory. She has observation, too, though her evident fluency leads to more of the commonplace than the artist would allow. Thus many of the occasional pieces here tremble on the verge of success, and it seems as if a little more trouble and thought would have made them excellent. Still we are not inclined to cavil at a volume full of understanding and the sweetness of the best home life. The attempt in classical metre ("In answer to those who have said that English poets give no personal love to their country") is dignified in language, but metrically poor. It is singsong, as, without deep study of classical originals, such things almost always are. A carefully selected volume of the author's poems would be a real treasure.

A Hymn to Dionysus, and other Poems. By Margaret Sackville. (Elkin Mathews.)—This prettily bound volume has much to recommend it apart from its appearance, for it contains some real poetry and genuine feeling for beauty of word and rhythm. There are a few minor blemishes which could, we think, have been avoided; for example, the word "furled" is used on three occasions with little regard to appropriateness, "but," as Calverley wrote, "simply and solely to rhyme with 'world.'" Again, in 'The Queen's Cabinet,' a poem of considerable power, where the dominant characteristic of the verse is the calm, even flow belonging to the octosyllabic metre, the reader is disturbed by a line uneven, like

The faint jewels flashing in her crown,

where there is some harshness in the compression of "jewels" into a monosyllable; or ugly and halting, like

Those inspired forms the mind's depth hold.

The tendency to squeeze into a line more syllables than it can hold peeps out in many of the poems, but we can for the most part readily forgive it. Metrical irregularity has, of course, its artistic uses, but it is a licence which should not be too freely employed, particularly by young poets.

We would single out 'Philomela and Procne' for the imagery it contains, expressed with a commendable simplicity, and especially for the picture and the music in the following stanza:—

Ah, sister, canst thou dream
As I do of great chambers, where
Cool-handed maidens spin,
Gazing the while over unruffled seas,
Day out, day in,
Bright, marvellous tapestries
Which picture many things that mortals fear,
And yet so daintily devised
Men there may see old sorrows realised
Without a tear?
Sister, I hear the thread
Whisper between their fingers, and the sound,
Whilst all things lie in droway calm around,
Soothes the worn heart and the worn head.

The unrhymed stanzas to 'Autumn' are not very successful. A poem in which the aid of rhyme is dispensed with, while a form suggestive of rhyme is retained, must, if it is to live, have some special power, such as the glowing imagery of Collins's 'Ode to Evening,' or the haunting sorrow of Lamb's 'The Old Familiar Faces.' While protesting mildly against the rhyme, in 'A Farewell,' of "last time" and "pastime"—which savours rather of comic verse—we would repeat that there is real poetry in this book.

The Flying Lesson. By Agnes Tobin. (Heinemann.) — This is a second series of translations from Petrarch — containing ten sonnets, two Canzoni, a Ballata, and a Double Sestina—by Miss Tobin, whose former volume, 'Love's Crucifix,' will be remembered. These translations are of great poetical merit. If they do not succeed in achieving the impossible, that is, in a perfect reproduction of the Petrarchian spirit, they have, at any rate, much of the rare atmosphere which pervades 'The House of Life' and Rossetti's translations from the Italian.

The following lines from the second Canzone will give some idea of the excellence of Miss Tobin's work, and of the success with which she makes the spirit of devotional Love, proper to Italy, breathe sweetly and simply in English verse:—

God gave brief touch and sight of her, then higher
He rapt her than where seraphs' songs are heard—
That like a homing bird
I might mount heavenward through my great desire.

We must add a word of praise for the book's external charm, as also for Mr. Walter Pritchard's frontispiece, which, in its beauty and simplicity, is a fit prelude to the verse which follows it.

In *The Garden of Memories, and other Poems*, by Mabel Greenwood (Drane), we find some pretty verse. The author has obviously a natural turn for such writing, and she makes the regrets and fantasies of lost love, the insistent quality of *desiderium*, much more real to us than the average writer of the day. But her powers of expression and vocabulary need to be improved. Observation of nature she reveals here and there, but her verse contains much that is commonplace, and will appeal more to the common mind than to the good judge of poetry. Whether she has a sense of style which will lead on to distinction or not we are doubtful. The quality of these pages is unequal, but their message seems genuine, not academic trifling for the sake of effect.

We doubt if cricketers, who are reputed simple, if not Philistine folk, and whose efforts in the new way of journalism are not generally of a high standard, will like *More Cricket Songs*, by Norman Gale (Alston Rivers), as well as his first flight in the same direction. The cultivated, however, may prefer the volume before us, which is certainly the cleverer. Mr. Gale makes skilful use of cricket sentiment, and is up to all the latest dodges of the game, including the swerve. He plays prettily with the two kings—Arthur of the Table Round, and the monarch Grace, the Bat of Bats—and he has the ardent cricketer's jealous view of rival games.

To watch with joy the crimson lark
By Jessop bullied to the sky

is a good specimen of his elaborately felicitous manner. He follows after Calverley, in fact, rather than Dibdin, or any master of songs meant merely to be sung. But he should be read at home and at leisure; then his gift of neat phrasing will be fully appreciated, and his phrases which parody well-known poets, if, indeed, they are well known in the cricket-field or the pavilion which holds the elders who look on.

Violent, even brutal, songs M. Émile Verhaeren has sung us before now, the full-blooded expression of a passionate and catholic vitality. *Les Heures d'Après Midi* (Brussels, Deman) is full of serene songs. The ferment of life has subsided, and the wine pours golden and mellowed from the vat. This is true lyric in its power of arresting and fixing the exquisite mood. M. Verhaeren's touch is of the most subtle in its evocation of atmosphere. He calls up the subdued ardours of a Flanders afternoon, the silent, shaded house, with its books and its large empty rooms, the garden hot with sun and scented with roses, where nothing stirs save the restless gold-fish in their sleepy pool. And all this is background for a humanity which, though ardent and laborious still, has lived through its storm and stress, and has come to feel the quiet joys of reminiscence and repose.

Dans la maison où notre amour a voulu naître,
Avec les meubles chers peuplant l'ombre et les coins,
Où nous vivons à deux, ayant pour seuls témoins
Les roses qui nous regardent par les fenêtres,
Il est des jours choisis, d'un si doux réconfort
Et des heures d'été, si belles de silence,
Que j'arrête parfois le temps qui se balance,
Dans l'horloge de chêne, avec son disque d'or.
Alors l'heure, le jour, la nuit est si bien nôtre
Que le bonheur qui nous frôle n'entend plus rien
Sinon les battements de ton cœur et du mien
Qu'une étreinte soudaine approche l'un de l'autre.

For the heart also has its afternoon. The book is dedicated "A celle qui vit à mes côtés," and is fragrant with a love which has lost its perturbation, but nothing of its intensity, and still glows like the roses "en notre bonne et pensive maison."

THEOLOGY AND RELIGION.

The Book of Genesis: Expositions of Holy Scripture. By Alexander MacLaren. (Hodder & Stoughton.)—The venerable author of this volume has obtained a place of no mean repu-

tation among English theological writers, and this book will be welcomed by many readers. Dr. MacLaren does not say that these expositions have been delivered to congregations, but they are written in the form of addresses. The expositions deal with various religious ideas suggested by passages of the Book of Genesis, and among these are included 'How Sin Came In,' 'The Course and Crown of a Devout Life,' and 'Faith and Righteousness.' The following words from the address on the 'Vision of Creation' will illustrate the author's method of exposition:—

"The record is emphatic and unique in its teaching as to the mode of creation: 'God said.....and it was so.' That lifts us above all the poor childish myths of the nations, some of them disgusting, many of them absurd, all of them unworthy. There was no other agency than the putting forth of the divine will. The speech of God is but a symbol of the flashing forth of His will."

Speaking on the subject 'How Sin Came In,' Dr. MacLaren says:—

"There are beings who desire to draw men away from God. The serpent, by its poison and its loathly form, is the natural symbol of such an enemy of man. The insinuating slyness of the suggestions of evil is like the sinuous gliding of the snake, and truly represents the process by which temptation found its way into the hearts of the first pair, and of all their descendants."

It may be pointed out that these words show that even so careful an expositor of the Bible as Dr. MacLaren may make a blunder. The loathly form of the serpent and the sinuous gliding of the snake are graphic phrases, which may suggest an enemy of man, and the process by which temptation finds its way into the heart of man; but, according to Genesis, when the serpent beguiled Eve it had no loathly form, and the sinuous gliding was the snake's punishment for its part in the tragedy of the Fall. Dr. MacLaren does not excite himself nor his readers over the Higher Critics who have made daring speculations regarding Genesis. His aim as an expositor is religious, and he can afford, since he is not dealing with the problem of inspiration, to leave the critics of the text of Genesis to their dangerous though necessary task. While we find him getting over difficulties in the easy fashion with which he treats the mark of Cain, "We need not ask how God set a mark on Cain," we find him also boldly facing other difficulties. Thus, for instance, he begins his book by saying: "We are not to look to Genesis for a scientific cosmogony, and are not to be disturbed by physicists' criticisms on it as such." While Dr. MacLaren's volume is in no sense a contribution to theology, it deserves commendation as the work of a man of spiritual experience who knows how to be helpful to pious students of the Bible, and who feels the difference between theology and religion.

In *The Book of Isaiah according to the Septuagint* (*Codex Alexandrinus*), translated and edited by R. R. Ottley (C. J. Clay & Sons), the author sets before himself two objects: first, to interest "those who have Greek, but little or no Hebrew," in the Greek Bible; and secondly, to illustrate the relation of the Greek to the Hebrew. The task is very difficult, since the translation ought, on the one hand, to be readable, and, on the other, to be close to the Greek original. Yet the Septuagint is often hard reading even in the Greek, and the reader is sometimes led to wonder if the translators attached any clear meaning to their own renderings. Mr. Ottley has faced these difficulties through a book of considerable length, and generally with success. Two specimens of the work may be given:—

"The blood of bulls and of goats I desire not, (Ver. 12) Not even if ye come to appear before me. For who hath demanded this of your hands? Tread my court (Ver. 13) Ye shall not any more; if ye bring me fine flour, it is vain," &c.—Chap. i. 11-13 (part).

This is good, but it would be better if the Hebrew verse divisions were marked less obtrusively; the capital letters at the beginning of vv. 12, 13, should have been replaced by small letters.

"And we saw him, and he had no form nor comeliness, (Ver. 3) But his form was unhonoured, and failing among all men; a man under a stroke, and one that knew how to bear sickness; for his face is turned away, he was dishonoured and not esteemed. (Ver. 4) This is He that beareth our sins, and sorroweth for us," &c.—Chap. liii. 2-4.

Mr. Ottley adds a rendering of the Hebrew, interpaged for reference.

Niceta of Remesiana: his Life and Works. By A. E. Burn, D.D. (Cambridge, University Press.)—This book deserves the warmest commendation. Dr. Burn had a very difficult task to perform, and has executed it with enthusiasm, diligence, and every requisite of scholarship.

Niceta of Remesiana had passed almost entirely out of sight during the Middle Ages, and it was not till the sixteenth century that his name came again to the notice of the world. But then it was merely to raise questions about him, not to settle them. And the perplexities in dealing with him are innumerable. The name Niceta in various forms was common, and it is still a question whether the works of a bishop of that name in Aquileia and another in Gaul have not been confounded with those of the Bishop of Remesiana. In regard to the bishop himself there are a few ascertainable facts. He is mentioned by Paulinus as a dear and learned friend, but the province of Dacia is represented as the scene of his labours, and Paulinus takes no notice by name of Remesiana, the city of Dacia in which Niceta is supposed to have had his bishopric. Gennadius has a chapter on 'Niceas, Romatianæ civitatis episcopus.' One MS. has the form *Niceta*, and Bernoulli notes another variant *anechita*. No ecclesiastical writer bearing the name of Niceas is mentioned in any other writing. A "civitas Romatiana" is also unknown. But it is conjectured that the word "Romatianæ" is a mistake for Remesianæ. This is nearly all that is known of Niceta, Bishop of Remesiana, with some certainty. Works are attributed to an author or authors bearing the name of Niceta in its various forms.

Such is the material on which Dr. Burn had to work. First of all, he has edited all the fragments that might be assigned to Niceta of Remesiana. He has collated all the MSS. that are accessible, or got collations of them. He has done this with great accuracy. His book is thus the *princeps editio*, or first complete edition, of the works of Niceta, though many of the fragments have been edited before, but not certainly with the same care. He has also put together every allusion that might be supposed to bear on Niceta, and tried to form a picture of his life. He has described Remesiana and the province of Dacia, and pointed out the dogmatic position which the churches of Dacia occupied at the time of the bishop. Dr. Burn has done this with great success, as his previous studies on the Creeds had prepared him for such work. But when we look at the results we are compelled to confess that we are in the midst of a few probabilities and very numerous pure conjectures which are attempts to fill up gaps, and therefore the results may at any time be completely overturned. Only this can be said, that, so far as present investigations go, Dr. Burn's ideas hold the field as against those of Kattenbusch and some other writers who have examined the evidence. The ideas, however, were not originated by Dr. Burn, for they have been expounded by several writers, such as Czapla in his edition of Gennadius in 1898.

Dr. Burn, following Dom Morin of Maredsous, thinks that Niceta was the author of the 'Te Deum,' but the evidence is unsatisfactory. He bases his opinion on some resemblances to the 'Te Deum' in the works which he attributes to the bishop, and on the ascription in some MSS. of the hymn to a person called Nicetius. But the resemblances are slight, and an equal number might be found in several ecclesiastical writers, and the name Nicetius may be the invention or the mistake of one copyist repeated in the MSS. which have it. The MSS. do not appear to associate Niceta with Remesiana, and indeed the two which Dr. Burn quotes make him Bishop of Vienne or a resident in Rome.

Dr. Burn publishes an able note by Mr. Burkitt on the Biblical text used by Niceta. In this note attention is drawn to the circumstance that Niceta substitutes Elizabeth for Maria, "whereby the 'Magnificat' is assigned to the mother of John the Baptist." Mr. Burkitt thinks that Niceta was right. Dr. Burn includes also another note, in which the Bishop of Salisbury tries to show that Mr. Burkitt is wrong. It is singular that neither of them refers to the paper published by Prof. Harnack in the *Transactions* of the Prussian Academy of Sciences, in which that writer adduces various arguments for attributing the 'Magnificat' to Elizabeth, and claims to be the first scholar who has done this with any fullness of detail.

On Theological, Biblical, and other Subjects. By Robert Flint. (Blackwood & Sons.)—The essays collected in this volume deal with subjects as varied as 'Apologetics and Dogmatics: how Related,' 'The Wisest of the Ancient Greeks—Socrates,' and 'The Biblical Idea of God.' The author admits that the subjects "are of a somewhat miscellaneous nature," but claims that they are "not altogether unconnected or of a dissimilar kind." A miscellany may have a charm as a literary variety entertainment; and, in the case of this volume, we have the treatment of a number of subjects by one whose position in the world of letters gives him a right to speak with authority. The first five essays are grouped under the heading 'Advice to Students of Divinity'; and they deserve attention, as containing advice from one who for many years occupied with distinction one of the theological chairs in the University of Edinburgh. The essay on 'The Idea of the Divine in Chinese Thought' illustrates Prof. Flint's learning and at the same time his power of lucid exposition. In a valuable dissertation on 'The Biblical Idea of God' he sets forth that the God of the Old Testament is a God known in actions and commands, not a God found out merely by theorizing. Experience, he says, is the permanent ground of the faith. There are many who will not object to the statement that God gave the commands recorded in the Old Testament; but no one can fail to believe that national experience, and, in cases, individual experience were interpreted and recognized as divinely directed. In endeavouring to show the distinctive character of the representation of God in the Old Testament, Prof. Flint states the objection that the

"Old Testament represented God as in many respects like men.....that Jahveh had ascribed to him eyes, ears, a mouth, and hands; is represented as sitting, driving, and dwelling in various places; and acts from such passions as anger, jealousy, pity, revenge, and repentance, &c., very much like a human ruler."

He admits that the fact on which the objection rests is real, and cannot be explained away. Having made this admission, he proceeds to show that God, in the Old Testament, possesses the characteristics of personality—life, knowledge, affection, and will—and adds that He "possesses them all without the limits or defects peculiar to created and finite beings." The admission regarding anger, jealousy, and revenge contradicts, surely, the statement in reference to the

affection that is without the defects peculiar to created beings. The criticism can be made, and is not to be set aside merely because of the sacred subject of the essay, that Prof. Flint finds a harmony that is too great and a divine exaltation with unbroken uniformity in the idea of God presented in the Old Testament. In these days, when ecclesiasticism is of paramount interest, attention will be given by readers of this volume to the lectures on 'Duties to the Church of Scotland.' These lectures will, of course, appeal chiefly to Scotsmen, but sayings like these, "There is a principle of national religion," "Establishment is not a principle, but simply a fact," will be examined by all observers and critics of ecclesiastical politics.

The Permanent Creed and the Christian Doctrine of Sin, by the Bishop of Birmingham, is, on the whole, the most valuable attempt we have come across of the many that are being made to face the present intellectual situation from the Christian standpoint. We hope Mr. Murray will secure it a wide circulation. Dr. Gore's views are well known, and there is nothing particularly new in this brochure, which consists of a couple of university sermons. But he is, we believe, entirely justified in declaring that there will be no real revival of Christian belief without a much more general consciousness of sin than at present exists. All apologetic is perfectly futile, so long as those to whom it is addressed have no use, as the Americans say, for penitence. Christianity, as a religion, exists to meet man's need for redemption; for those—and they are many—who either do not feel this need or else deny its existence a religion, if they want one at all, which is not Christianity will do a great deal better. The *raison d'être* of Christianity is the sense of sin; where this is dead or dormant Christianity cannot long, in any distinctive sense, retain its hold.

Religion: a Criticism and a Forecast. By G. Lowes Dickinson. (Brimley Johnson.)—This book, small though it be, should be read by all clerics, whoever else neglects it. It is very important. Not merely is the writer a man of genius—a fact which has been evident for some time to those acquainted with his writings; not merely is he the master of a style which seems to sweep the whole gamut of human emotion, and to make language rise and fall like the notes of a violin; but he has written a book which should make many think. Its importance lies in its object. The writer believes that "a man's life is significant in proportion to his faith," yet he appears to take the general position of an agnostic. His aim is to supply to the agnostic without any creed—even theism—all the emotional and spiritual stimulus which devout believers derive from the Christian creed. How far the attempt is likely to be a success we do not undertake to say. But the point is that it is being made. A writer of the highest education, transparently single-minded, anti-clerical and anti-Christian in his general standpoint, seeks to secure for those who think as he does an emotional substitute for religion which is not poetry; it cannot be demonstrated, but faith asserts that it can be secured, and that unless it be secured life will become futile and ignoble. This we take to be Mr. Dickinson's aim. His success or failure is of little moment, compared to the fact of his attempt.

OUR LIBRARY TABLE.

MLLE. DE BOVET, to use the maiden name of "Mab," publishes through M. A. Lemerre, of Paris, under the title of the first story in the volume, *Plus Fort que la Vie*, eight stories, all of them of high merit, although we greatly prefer some of the later to the earlier contributions. The first is a clever little pamphlet against divorce, so well contrived that it hardly smells of the tract, and may be read on its own merits. Next comes a terrible tale, which forms spiritually a sort of second part to Ibsen's 'Ghosts.' Then we have a curious study of Auvergne, such as will reveal to readers who do not already know it that suppleness of mind which makes Marie Anne de Bovet the most diverse of writers; and next, again, a still more curious study of married life. A fifth story, 'Prise à son Piège,' and the last two in the volume are, we think, the best short stories which we have noticed for many years; and 'Prise à son Piège' is, in fact, though only thirty-eight pages long, a complete novel of the highest merit. It is followed by a story as horrible as the second in the volume, which we have already named. Down to this point the bitter note usual, though not invariable, in Mlle. de Bovet's writings is to be found throughout. The last two stories are different again, for the bitter note is almost wanting in the last but one, and entirely absent from the final story, which is simply pretty, and shows what the author has once before already shown—her power to write "for young ladies" without falling into the namby-pamby and uninteresting style of the professional writer "pour jeunes filles." We fear that we must add that most of the earlier stories in the volume are not intended for that public.

Select Statutes, Cases, and Documents to illustrate English Constitutional History (1660-1832). By C. Grant Robertson. (Methuen.)—Mr. Robertson's personal experience of the need for such a compilation as this in connexion with the Honour School of Modern History at Oxford must necessarily be accepted as a sufficient justification for its publication. Moreover, with a definite purpose of this sort in view the editor may not have felt justified in departing from the traditional method of presenting the constitutional precedents of the post-Restoration period. At the same time it may be pointed out that the analogous treatment of the constitutional documents of an earlier period, to which Mr. Robertson has called attention in connexion with certain well-known collections, has at least some claim to originality. By breaking new ground both Dr. Prothero and S. R. Gardiner were able to improve upon the conventional series of Tudor and Stuart documents in several particulars, and we are unwilling to believe that historical scholars will remain content for all time with the scope or authority of the old series of the State Trials. In his selection and editing of the statutes and cases that were available Mr. Robertson has certainly displayed excellent judgment and sound learning. Perhaps in the next edition he will consider the possibility of reinforcing these indispensable cases with the results of some researches amongst the wealth of manuscript material in official and private archives.

A Book of Essays. By S. A. Hirsch. (Published for the Jewish Historical Society of England by Macmillan & Co.)—Dr. Hirsch's essays are decidedly interesting. He first gives us an account of Roger Bacon and the English Hebraists (few in number, indeed) who preceded him. A parallel is drawn throughout between the strivings and aim of the chief character in this essay and those of Reuchlin, who repeated the same efforts on a larger scale about two and a half centuries later. Dr. Hirsch works out his points very well, but he does not seem to make sufficient allowance for the spirit of the age in which Roger Bacon lived. It is hardly fair to make complaints about "miscalled study and research" when speaking of an age which had hardly any idea of the connotation we are in the habit of assigning to these terms. The next essay deals in a careful manner with the story of Johann Pfefferkorn and what is known as the battle of the books. Here Reuchlin figures, of course, as the great defender of the Hebrew books which Pfefferkorn wished to destroy. The same great humanist of the fifteenth century is the sole subject of the third paper. The chief theme of a subsequent essay is the third book of the Sibylline oracles. In 'Some Literary Trifles' Dr. Hirsch refers to the Jewish elements in 'Daniel Deronda,' 'Oliver Twist' (Fagin), and other notable works. The titles of the remaining papers are: 'Israel: a Nation,' 'Jewish Philosophy of Religion,' 'Samson Raphael Hirsch,' and 'A Survey of Hebrew Literature.' The illustrations (portraits of Bacon and Reuchlin, &c.) are interesting. The index, though far from perfect, will be found useful.

The Bride. By Samuel Rowlands. Reprinted for the First Time from a Copy of the Original Edition of 1617. With an Introductory Note by Alfred Claghorn Potter. (Boston, U.S., Merrymount Press.)—Samuel Rowlands had luck with the booksellers of his day. He has had, perhaps, more than his deserts with their successors. For it is seldom a question of "literature" with this "letter of humours" and retailer of Elizabethan small-talk. He has, however, attracted considerable attention, because, despite his great output of work and the rush of editions, his pamphlets have become bibliographical rarities. At best they are antiquarian documents; but, had they been duller, they would have been welcomed by scholars in their craving for every detail of Elizabethan life. It was, therefore, not improper that an antiquarian society such as the Hunterian Club should have printed all the available Rowlands in sumptuous quarto, especially when Utterson, Halliwell-Phillipps, Collier, and others had prepared limited editions of small portions; and not less proper that, when one of the three lost works has turned up, the tradition of select issues should continue. This good fortune has befallen 'The Bride,' first published in 1617, and now printed on "old Italian hand-made paper" at the luxurious Merrymount Press of Boston, U.S. Mr. Alfred Potter, who supplies an introductory note, informs us that the unique original was discovered in a bookseller's shop in a small German town, and that it is now in the College Library, Harvard.

'The Bride' is a poem of 119 six-lined stanzas, in easy pentameters, rhyming *ababcc*. It is a dialogue between a Bride, who exalts matrimony, and Mistress Susan, Cate, Besse, Jane, Doll, Grace, Sara, Nell, Mall, Prudence, and Francis, who are, in varying degrees of impenitence, leaders of apes in hell. The "arguments" and experiences of these unattached damsels and the counsels of the happy wife follow on the conventions of this literary type, which seems to have been a favourite with Rowlands. But 'The Bride' is a poor supplement to his ''Tis Merry when Gossips Meet' (1602) and 'The Whole Crew of Kind Gossips' (1609), chiefly because it is denied some of the never-failing elements of comedy. There is no widow here, as there is in the first of these—that widow as we know her in Dunbar's famous sketch and a hundred other pieces; and there is no provocation to coarse fun, as there is in the second, where six women meet to tear their husbands to tatters. It is merely a pretty sermon to presumptuous girls who think it better to avoid men or to choose as they go. In the prefatory verses, 'The Bride to all Maydes,' we read:—

> Not out of bubble blasted Pride
> Doe I oppose myselfe a Bride,
> In scornefull manner with vpbraides
> Against all modest virgin maides,
> As though I did dispise chast youth.
> This is not my intent of truth.
> I know they must liue single liues,
> Before th' are gracëd to be wiues.

But such are only touch'd by me,
That thinke themselues as good as wee.

There are few memorable passages in the poem, either for sentiment or form. Yet there is that verse-facility, apparent throughout, and perhaps most clearly in the letter of Doll's lover, which we are accustomed to find in even the dullest dogs of the age. The discussion of the main topic often wanders into digression, as when the Bride finds opportunity to tell the tale of Merlin's birth. There, by the by, Rowlands gives the name of "the Lady Adhan" to Merlin's mother. His couplet describing the lady's plight reads quaintly:—

This to be honest, all her friends did doubt it;
Much prittle prattle was in Wales about it.

The editor informs us that "the misprints, which are unusually numerous, even for a book of this period, have been left uncorrected." We doubt the value of the antiquarian zeal which gives us such a line as

There lines not such another at this day.

The general excellence of the typography and the claims set forth in the end-note make it the more necessary to refer to the bad printing of the first page of the introductory note. In the first nine lines there are more than twenty broken or partially inked letters. And the paper, though known as "old Italian hand-made," brings home to those who are familiar with the sixteenth-century presses the fact that imitation is not always successful.

Reminiscences of Manchester, by Louis M. Hayes (Sherratt & Hughes), will no doubt interest many of the present generation of Manchester folk, especially those whose memories go back half a century or more, but the general reader will find the book dull. It is curious how few men of national importance seem to have crossed Mr. Hayes's path. With the exception of a few, such as the late Lord Russell of Killowen and Bishop Fraser, there is scarcely a name that will be known outside Lancashire, and it is odd to read an account of the literary circle of Plymouth Grove and find no mention of Mrs. Gaskell. In an age which takes so deep an interest in the personal paragraph the book should find plenty of local readers, and no doubt a century hence the student of Manchester history will occasionally turn to its pages, to learn the personal appearance and characteristics of some nineteenth-century worthy. For the sake of such students we regret to note that the book has no index.

The Legal Position of the Clergy, Chancellor P. V. Smith's contribution to Messrs. Longman's "Handbooks for the Clergy," is admirable. It is clear and brief, and will tell the ordinary parochial clergyman just what he needs to know in regard to his legal rights and duties. In the present condition of clerical incomes, it will be a consideration to many that half-a-crown will purchase all the information likely to be wanted on a subject of great importance.

The Earthly Paradise of William Morris is, to use a phrase which can be rarely, alas! employed, literature and delight, and we can imagine no more suitable reading for a summer's day under the trees, bright and clear as Morris's own imaginings of bygone heroes. The edition before us in four volumes of "The Silver Library" (Longmans & Co.) supplies a portrait of Morris and admirable type throughout. It will be one of the most popular parts, we hope and believe, of a series which occupies many good places on our shelves.

MR. MURRAY has sent us in a new "Pocket Edition" of Borrow's works *The Bible in Spain*. The type is excellent, and the whole forms a wonder of compression which should find its way into the pockets of many wayfarers on their holidays.

WE have received in the new "Author's Edition" *Lady Audley's Secret* (Simpkin & Co.), a work which we remember reading with great eagerness in earlier days, and which will hold its own with the later efforts of sensational writers, being, indeed, better constructed and written than most of their stories.

The Braille Weekly, which started last Saturday, has our very best wishes, and will, we hope, get sufficient support to be a permanent institution. It is, say its promoters, the Braille Printing and Publishing Company (24, St. Giles Street, Edinburgh), double the size and half the price of any other newspaper for the blind of which they know. The editor has secured various items of news, articles, &c., from many leading newspapers, and from the Press Association the right to use their telegrams. There are sixteen pages of matter, and we feel sure that the paper has only to be brought to the notice of the blind to secure their immediate approval and patronage.

THE usual fault with second-hand booksellers' catalogues is that they are short. This, at all events, is not the case with the latest catalogue of Mr. Thomas Thorp, of Reading. It forms a substantial volume of 320 pages, in the course of which 7,426 works are described. There is a "fine confused" kind of browsing to be obtained in turning over its leaves, and it is not easy to imagine the specialist who will fail to find something in it of interest. Mr. Thorp may be congratulated on having provided something to keep the book-collector employed during the summer holidays. It is, however, a mistake to describe *Bibliographica* as "the journal of the Bibliographical Society," although most of the contributors were also members of that body. So, too, Murger's 'Bohemians of the Latin Quarter' has nothing to do with 'Bohemia,' under which it is catalogued.

THE 'BON GAULTIER BALLADS.'

12, South Castle Street, Liverpool, July 13th, 1905.

As no bibliography of the English editions of this still popular book has been published, some of your readers may be glad to have one. The only surviving author (Sir Theodore Martin) of the 'Ballads' is (or was recently) unable to supply the necessary information, and I have not been able to find a complete collection of the editions issued during the last sixty years in any national, university, municipal, or private library I have consulted personally, or by correspondence; neither do (or did lately) the present publishers possess a copy of all the editions. Should any of your readers possess copies varying from those quoted below, perhaps they may think it worth while to furnish particulars.

The first edition (1845) was a small volume of viii and 152 pp., measuring $5\frac{15}{16}$ by $4\frac{1}{16}$ in., containing 39 Ballads and 24 illustrations by one artist. The last edition (1903) contains xxxiv and 302 pp., measuring $7\frac{1}{2}$ by $5\frac{1}{2}$ in., with 56 Ballads and 57 illustrations by three artists. I refrain from giving full collations and extended titles, from fear of trespassing too extensively upon your space; but I possess all the editions enumerated, and shall be glad to supply full particulars of their variations if the author or publishers think it desirable to print them in the next edition of the book:—

First Edition.—London, published by Wm. S. Orr & Co., 1845. 39 Ballads; a frontispiece of Bon Gaultier as a Spanish cavalier; 24 illustrations by Alfred Crowquill (*i.e.*, A. H. Forrester). The illustration on p. 86 does not appear in any succeeding edition.

Second Edition.—London, same publishers, 1849. 51 Ballads; same frontispiece as preceding edition; 39 illustrations by Alfred Crowquill and Richard Doyle. The arrangement of the Ballads is changed.

Third Edition. — London, same publishers, undated. 53 Ballads; a new frontispiece of Bon Gaultier as a Pantagruellist; 57 illustrations by Alfred Crowquill, Richard Doyle, and John Leech.

Fourth Edition. — London, same publishers, undated. 54 Ballads; same frontispiece and illustrations as in the third edition. A new border, designed by Doyle, with elf figures in the four corners, surrounds each page.

Fifth Edition.—Edinburgh and London, published by Wm. Blackwood & Sons, 1857. 54 Ballads; same frontispiece as preceding edition; 58 illustrations by the same artists. Eight of the illustrations are new; seven of those in the previous edition are cancelled, and do not appear in any succeeding edition. Also the "Elf" border is cancelled, and does not reappear until the sixteenth edition, and then in an altered form.

The sixth edition (1859), the seventh (1861), the eighth (1864), the ninth (1866), the tenth (1868), the eleventh (1870), the twelfth (1874), and the thirteenth (1877), all issued by Messrs. Blackwood, were reprints of the fifth edition.

Fourteenth Edition.—Same publishers, 1884. This edition, also reprinted from the fifth, is smaller in size than any of the preceding editions, except the first edition; and the frontispiece, though the same as that in all the editions from the third to the thirteenth, is reduced in size.

Fifteenth Edition.—Same publishers. Reprint of the fourteenth edition, 1889.

Sixteenth Edition.—Same publishers, 1903. 56 Ballads; same frontispiece as in the fourteenth and fifteenth editions; 57 illustrations by the same artists, and a preface by Sir Theodore Martin, giving a history of the work. From this edition the Ballad 'The Young Stockbroker's Bride' and its accompanying illustration are omitted; and three Ballads—'A Warning,' 'To Persons about to Marry,' and 'Want Places' — are added. The "Elf" border used for the fourth edition reappears in an altered form.

The first four editions have an ornamental illuminated title-page, in addition to a printed title-page. All the other editions have only a type-printed title-page.

HENRY SELDEN YOUNG.

THE CANTERBURY AND YORK SOCIETY.

ROLL OF HUGH WELLS (LINCOLN), PART II.

THIS episcopal record society has put out a second part, consisting again of a thin pamphlet of 64 pages, making the total output of 128 pages for a year's work. We are glad to see that the outrageous composite title of "Societas Cantuareboracensis" has been dropped from the green cover, though it still retains a foolish mixture of English and Latin. Free use is made of the insides of the cover for a display of general comment, signed W. P. W. P. On the first of these appears a list of 34 *errata* of the 64 pages of the first part. The editor coolly states that "it is quite possible, even probable, that it may hereafter be augmented." Actually 28 of the *corrigenda* occur in the English abstracts, and all, except perhaps two, could not, we think, have appeared had average care been expended. The mistake of translating *secundum* "second," when it ought to mean *according to*, is not included in the list of corrections.

On the second inside cover, in the midst of a long comment on the review of part i. which appeared in these columns on July 1st, the intention of the Society to proceed almost immediately with some post-Reformation registers is reiterated. The desire of one member for the issue of eighteenth-century registers "as likely to prove more generally useful than the earlier ones" is cited. This member can hardly have looked over episcopal registers of that period. The earlier registers are absolutely invaluable as historical documents, and will, when printed, throw a flood of new light on England's general history. But at the rate this society is proceeding, they will not be completed even in a couple of centuries.

In this second small instalment the attempted identification of the counties is a hopeless muddle. Pickworth is not in Northamptonshire, but in Rutland; Buckden is not in Northamptonshire, but in Huntingdonshire; Holcot is not in Bedfordshire, but in Northamptonshire; and Sudbrook is not in Northamptonshire, but in Lincolnshire. To give the counties is helpful if done with care, but worse than useless when the work is full of errors. We are not in any way in the secrets of the Society, and we know not if there is a paid editor or editors; but we note that the Society's offices are in Chancery Lane. Within a stone's throw of that office are scores of capable record agents and writers of both sexes, any one of whom could have readily made this county list right in a morning's work at the cost of a few shillings. If this is amateur work, it is dear at the price.

One of the interests pertaining to old scripts is the curious variety of spelling, particularly in proper names. But the time has long gone by when such eccentricity was considered in any way commendable in print. It would really seem, however, as if the unknown writer responsible for giving an English version of this early thirteenth-century roll had determined on perpetuating a variety of orthography on mediæval lines. Thus we have (p. 97) "Hockliff" in one line, and in the very next line "Hockliffe"; and (p. 103) "Bullington" in one line, and "Bollington" in the next. With regard to some place-names, a new line of departure is struck out. Thus Patteshall, a Northamptonshire village of some repute as the birthplace of a well-known Bishop of Coventry and Lichfield, is sometimes spelt "Pateshull," which was the usual form of the bishop's name; but this modern record scribe has invented (p. 75) the new and false form of "Pateshill" as his best English equivalent for "Pateshulla" of the Roll, changing it yet again in another place (p. 115) to "Pattishall." On p. 75 the fairly well-known priory of Chalcombe or Chacombe is given in a wrong form, though the usual spelling is given in a later entry. On the same page the Leicester abbey of St. Mary de Pré ("Sancte Marie de Prato" on the roll) is rendered "St. Mary du Pre." Such instances of carelessness could easily be multiplied, but three on a single page will suffice.

The library of the writer of this English abstract must be singularly limited, or else we must conclude that his work is characterized by laziness. A difficulty arose in his mind as to the county to which Ashwell ("Essewella") pertained, and he came to the conclusion that it was in Hertfordshire, though his preference is qualified by a query after "Herts." A few minutes over that fairly common work, Dugdale's 'Monasticon,' would have shown him that Ashwell in Herts was in the hands of Westminster Abbey from very early days, and that the Ashwell on the Roll was in Rutland. Again, "Askeby" occurs on the Roll, and it is suggested that Asgardby, Lincolnshire, is intended; but the entry records a presentation by the abbot and convent of Selby. Here, again, if this wantonly careless writer had but turned to the 'Monasticon,' he would have found that the church in question was probably Ashby ("Ascheby"), and certainly not Asgardby. Half an hour's work would have sufficed to settle the question of two or three other unidentified parishes, provided that the writer had the knowledge where to look for information.

The whole management and editing of this society must be recast, if it is to do any good historical work by securing and retaining a sufficiency of subscribers. It is not enough to have the two archbishops as "joint presidents," and a variety of bishops and temporal peers as vice-presidents.

THE EGYPT EXPLORATION FUND AND PROF. PETRIE.

July 17th, 1905.

THE letter from Prof. Ernest Gardner in your last issue is so directly at variance with the letter of Sir John Evans, the President, and Mr. H. A. Grueber, the Treasurer of the Fund, which appeared in *The Times* of June 17th, that I feel I cannot do better than to put the two documents side by side thus:—

Prof. Gardner.	*Sir John Evans and Mr. Grueber.*
"As soon as this proposal [*i.e.*, to reorganize the Research Account by converting it into a School of Archæology] was formulated, it was brought before the Exploration Fund Committee, and that body agreed that it was most desirable that some of its members should serve also on the Committee of the Research Account."	"We must express our surprise that in this announcement [*i.e.*, that of the establishment of a British School of Archæology in Egypt] the existence of the Egypt Exploration Fund, through the aid of which Prof. Flinders Petrie has in the main been enabled to carry on his important work in Egypt, is entirely ignored."
"There is.....in the opinion of the Exploration Fund Committee, no inconsistency in the position of those whose names appear on the direction of both bodies."	"We refrain from discussing the desirability or the prospects of such a school."
"The relations of the two are, so far, upon perfectly amicable lines, and my object .....is to preserve friendly relations between the two, to avoid any friction or overlapping."	"We venture to remind the subscribers to the Egypt Exploration Fund of this fact [that Prof. Petrie has had more than 7,000*l.* of their money], and to express a hope.....that existing subscriptions may not be diverted elsewhere."

To put it briefly, while Prof. Gardner wishes us to believe that there has been no quarrel, and that the Fund and the School are working harmoniously together, the President and Treasurer think that the School should not have been established, and fear that the result of this will be that some of the Fund's subscribers may be drawn away to it.

One word more. Prof. Gardner says, in effect, that the School, instead of being a new thing, "has been working for many years, and a dozen former students are in various positions in archæology at present," by which curious phrase he apparently wishes to imply that they have obtained lucrative employment by reason of their connexion with it. It is quite true that Prof. Petrie has from time to time been assisted in his work by gentlemen who have since received official appointments, among whom I may instance the present Readers in Egyptology at Oxford and Liverpool, and at least one of the inspectors of the Service des Antiquités. Yet we do not find any of these gentlemen appearing upon its committee or otherwise recommending the School to intending students. Why?

THE WRITER OF 'ARCHÆOLOGICAL NOTES.'

The Priory, Elstree, July 18th, 1905.

THE future of the Egypt Exploration Fund, the Research Account or British School of Archæology, and the work that Prof. Flinders Petrie and others have done in Egypt, should interest a large proportion of those who frequently visit Egypt as well as many who, like myself, are dwellers in the land, though not Egyptological students.

I should like, before it is too late, to endorse one particular point touched on by the writer of your 'Archæological Notes' of July 8th: "Yet the competition for subscriptions to which it has led seems likely to be disastrous to English exploration in Egypt." This seems to me absolutely true. If the School of Archæology is being started mainly to supply Prof. Petrie with funds to continue his work, however interesting that work may be, it is a misnomer, and likely to deceive; if the School is to be a really effective educational force — which is doubtless the object of many subscribers, and would appeal to many more when brought to their notice—I should like to see it constituted not as an entirely British School of Egyptology, but as an Egyptian School of Archæology, with the Adviser to the Ministry of Public Works as President, and the Director of the Museum at Cairo as Principal, if they would accept the positions. The Exploration Fund, Research Account, and other funds of ours and other nations would be absorbed as far as possible, with their nominees on the Council, and thus, if they considered it

wise, Prof. Petrie's most interesting work could be continued under effectual supervision, and the most intelligent students encouraged by his enthusiasm. Reports could be exchanged officially with other learned societies, and subscribers would get for their subscriptions not only the volumes of cumbrous size they now do, but also the knowledge that their subscriptions were being turned to the best possible use in research, and in the education of those of all nations who were desirous of becoming familiar with this most fascinating branch of learning.

While I am on this subject, I should like to add one word more. It has always seemed to me such a mistake that so many independent people with little knowledge should be allowed to poke about and dig in Egypt. I trust that, if it be possible to carry out some form of Egyptian School of Archæology, no one will be permitted to dig except they be members of the school. Surely the Government would be willing to give every assistance in its power to enable this to be done, and thus secure the thorough investigation of any place once touched, and obviate the overlapping Prof. E. Gardner speaks of. Arthur J. Davey.

FIVE SHAKSPEARE QUARTOS.

This season's auction sales of books will always possess an historic interest, from the number of early Shakspeare quartos which have come under the hammer. A series of five, the property of Mr. George Carrington, of Great Missenden, will be offered for sale at Messrs. Sotheby's on July 29th, when the season closes. These would seem to have been at one time in the same collection as the 'Richard III.,' 1605, sold at Messrs. Sotheby's on July 15th—as the 'Second Part of King Henry IV.,' 1605, contains also the autograph of William Penn. It would be interesting to know the circumstances in which the former got separated from the others. The example of the 'Second Part of King Henry IV.' is not perfect—the title is in MS., the top corner of one leaf is defective, and some head-lines are shaved. The only early edition of this play recorded by Lowndes is that of 1600. The copy of 'Henry IV.' (Part I.), 1608, is of the fourth issue, is slightly defective, and is not so rare as many of the other editions of the quartos. The copy of 'King Lear,' 1608, is a good one of the second issue, and would seem to have been George Steevens's, as it bears his autograph signature on the title-page, although it is not the example which realized two guineas at his sale. 'The Merchant of Venice,' 1652, is a fine copy with uncut leaves, but it is naturally far less interesting than those issued in Shakspeare's lifetime. The copy of 'Richard II.,' 1605, has the title in MS., and wants signature A 4. In spite of defects these five quartos, coming all from one collection, form a most interesting series, and will probably all go to America.

Literary Gossip.

To *The Cornhill Magazine* for August Canon Beeching contributes an article on 'Atterbury,' and Mr. J. B. Atlay a biography in brief of 'Tarleton of the Legion.' In 'Some Natural History, II.,' the Rev. H. G. D. Latham gives a new chapter in the life of his East-Ender, Albert. The causerie 'From a College Window' deals this month with the rival claims of sociability and solitude. Mr. Roden Shields, one of the two boys whose companionship in Edinburgh Infirmary W. E. Henley immortalized in his hospital poems, gives his youthful recollections of the incident in 'A Blurred Memory of Childhood.' Verse is represented by Mr. Leonard Huxley in 'The Pass of the Thousand Steps'; science by Mr. W. A. Shenstone, F.R.S., in 'Some Recent Theories of the Ether'; and sport by Judge Prowse in 'The Willow Grouse in Newfoundland.'

In the August *Blackwood* Mr. G. W. Forrest, C.I.E., ex-Director of Records, gives an account of the constitution and working of the Government of India, and Mr. Walter B. Harris, in an article on the Morocco crisis, shows how and why the French policy failed and led to the ascendency of the Germans. A holiday paper describes 'The Island of the Saints,' one of "the Islands of the Sea" in the Firth of Lorn, on which St. Columba built a cell, to which he retired at intervals. Col. E. D. Malcolm discusses 'The Defence of the Coasts of the British Empire,' in view of the decision to abolish submarine mining; and other articles in the number are: 'Man-Hunting by Lions,' the experiences of Mrs. S. L. Hinde in Central Africa; 'With the Mehtar's Falcons: a Morning in Chitral,' by Major R. L. Kennion; and 'The Preliminaries to the Battle of Mukden,' by Chasseur.

Mr. Wilfrid Ward's appointment as the biographer of Cardinal Newman was a foregone conclusion, and it has now followed on the recent death of Father Neville, the Cardinal's literary executor, who during fifteen years of procrastinations and scruples never could make up his mind, to put the work definitely in hand. Mr. Ward, as the biographer of his father, Newman's Ultramontane antagonist, has the subject at his fingers' ends, and a good deal of material for the Newman book has already accumulated. Some three or four years are likely, however, to elapse before the completed manuscript is made over to Messrs. Longman.

A new Life of Cardinal Manning, also, has been commissioned by his last surviving executor. The biographer in this case is the Rev. W. H. Kent, a son of the well-known journalist and friend of Dickens, Charles Kent, and a member of the religious community founded by Manning at Bayswater. Though brought within the compass of one volume, this memoir will present a fuller picture than any yet offered of the Cardinal's public social work and of his spiritual history, as to which there were phases and developments in his last years known only to his intimates. Much new material is at the biographer's disposal, including an affecting diary kept by Manning at Lavington during his wife's fatal illness; also that subject of many rumours, the paper on the Jesuits, suppressed by Mr. Purcell; and the important early correspondence with Gladstone, which that statesman, on Mr. Purcell's mistaken authority, believed and complained that Manning had destroyed. The volume will be ready for issue by Messrs. Burns & Oates at the end of the year.

Mr. Unwin will publish in the autumn a volume by Mrs. Archibald Little, entitled 'Round about my Peking Garden.' "A tribute to a time of dalliance in one of China's many pleasant places," the author calls it, and the book is full of local colour and of curious odds and ends of Chinese lore, interspersed with some graver reflections.

Among the articles which will appear in the August number of *The Independent Review* may be mentioned: 'Education in Japan,' by Baron Suyematsu; 'Liberal Intolerance,' a paper dealing specially with the Irish University question, by Mr. D. C. Lathbury; 'The Great Conservative,' a review of Mr. Temperley's 'Life of Canning,' by Mr. G. M. Trevelyan; 'Herefordshire from Within,' an account of the agricultural situation in that county, by Mr. H. P. Bulmer; and 'The Newest Philosophy,' a criticism of Prof. Santayana's 'The Life of Reason,' by Mr. G. L. Dickinson.

As some misconception seems to have arisen, and some misstatements have already appeared in the press, regarding the new publishing firm of E. Grant Richards, to which reference was made here some four weeks ago, it may be well to state that the business is under the sole proprietorship of Mrs. Grant Richards, who is taking an active part in its conduct, and that the position Mr. Grant Richards will hold is that of her manager. Offices have been taken at No. 7, Carlton Street, Regent Street.

On June 24th we called attention to the very useful work which is being done by *The Library*, a quarterly begun in 1889 with the advice and encouragement of Henry Bradshaw. We now learn, to our great regret, that the publication is being carried on at a considerable loss, and that it is doubtful if it can be continued unless special efforts are made to help the promoters. We appeal to all who care for books and the knowledge which so greatly enhances the delight of possessing them, to make the very moderate outlay which will prevent a loss disgraceful to English letters. Some book-lovers doubtless are subscribers; but there must be very many who are not, and have not realized their chances. As it is, more support comes from America and the Continent than from this country. *The Library* can be had at 10*s.* 6*d.* a year, single numbers costing 3*s.* net, and we should not recommend it if we were not assured that it represents the best work to be had in its special subjects. Inquiries, subscriptions, &c., may be sent to 20, Hanover Square, W.

At "Casa Laura," in a suburb of New York City, died on the 15th inst. Mrs. Clarence Stedman, well known in the literary circles of London in the seventies and eighties, and still better known then, and down to the time of her death, in New York. The wife of the eminent poet and critic, she was brought into touch with most of the poets and men of letters on both sides of the Atlantic during a quarter of a century. She was notable for her hospitality and her great social qualities. Her death will be regretted by many in England and America.

Lady Laura Ridding writes:—

"It is hoped that a short memoir of my husband Dr. Ridding, forty-third Head Master of St. Mary's College, Winchester, and first Bishop of Southwell, may be published. I am anxious for the help of his friends in the matter,

and shall be most grateful for any letters and information which they consider of sufficient importance to lend me. I am desirous especially of gaining information about his days as a scholar at Winchester, and about his life and work at Balliol and Exeter. My address is Wonsington House, Micheldever, Hants."

PROF. ALBERT SMYTH'S edition of the 'Works and Correspondence of Franklin' is completed, and the first volume, now in the press, will, it is anticipated, appear in September. The remaining volumes, ten in all, will be issued monthly. Owing to the necessity of seeing the work through the press, the editor's annual visit to Europe has this year to be abandoned.

WE hear of several interesting historical works in progress, some of which will be published in the coming autumn. Col. W. G. Maxwell, the continental correspondent of several London journals, has had a 'History of the Pyrenees,' based on original records, on hand for some time, which Messrs. Blackwood are to publish. Mr. W. J. Hay will publish a new edition of Home's 'History of the Rebellion of 1745.' The author was a volunteer in a royal corps raised to repel the attack of the Chevalier, but as his history was written in later life, and submitted to the inspection of the reigning family, it proved a more sketchy outline than might have been expected. The discovery of the original MS. will make this edition a great deal fuller than that of 1802. The work is edited by Mr. G. H. S. Beveridge, who has also written a history of the Sobieski Stuarts, which is not yet published. Another work in progress is a history of the Rosebery family, by Mr. J. Macbeth Forbes, an Edinburgh banker, author of 'Jacobite Gleanings from State Manuscripts.'

GEORGE MEREDITH, O.M., purposes to spend the month of August at Aldeburgh.

No. 4 of the *Revue Germanique*, that for July-August, is before us, and maintains a high standard of interest. Prof. Émile Legouis has a sympathetic and discriminating notice of the master just mentioned, especially of 'The Egoist.' He is doubtless the E. L. who, later in this number, has a severe, but obviously just notice of a faulty French translation of the same romance by Maurice Strauss. The reviews generally of English books show knowledge and capability. Art occupies a considerable space in the number, which leads off with four plates of pictures by Mathias Grünewald, whom E. Polaczek finds closely allied to Böcklin.

THE August *Scribner* will contain an article by Mr. Richard Harding Davis on 'The Passing of San Juan Hill,' showing that the traces of the battle there are being obliterated; 'The Fruits of Japan's Victory,' by Mr. T. F. Millward; a description of "Baigha," a sort of polo, the national sport of the natives of Turkistan, by Mr. James Locke; and a special supply of fiction, which has been for some years associated with this month's issue of the magazine.

WE are glad to notice that Guy Lawrence, the grandson of the author of 'Guy Livingstone,' has just secured a scholarship at Winchester.

WE referred some months ago to the appearance of a new monthly magazine at Bombay, specially devoted to the interests of the Parsi community and bearing the title of *The Parsi*. The sixth number, that for June, has just been received in this country, and it contains some noteworthy articles. Among them is a strong appeal for a systematic search for early Parsi (Avestaic and Pahlavi) MSS. in Persia. The sum of 2,000*l.* appears to be required for the purpose, and the writer adds that it should be easily raised among "the plutocratic Zoroastrians who throw away hundreds of pounds sterling on motor-cars." Another contribution is by Mr. B. D. Patel, C.I.E., an enterprising Parsi merchant of Quetta, who points out the need for a Parsi colony, and advocates the immediate establishment of a settlement within the limits of British Baluchistan. There are other indications that the Parsi community after a period of apathy is beginning to bestir itself. Among these is an indictment by some of the leading Parsis of the Parsi Panchayat, which has long exercised an authority that its critics now term "unconstitutional." Another reform advocated in the pages of *The Parsi* is the substitution of a crematorium for the "Towers of Silence" which some one has called "a stigma on the civilization of the Parsis."

IT is announced in the Anglo-Indian papers that the Government Press at Calcutta will shortly issue a 'History of the Hyderabad Contingent' from the end of the eighteenth century, when it was formed from the Nizam's army, down to 1903, when it was absorbed in the Indian Army. The work will be compiled by Major R. G. Burton, of the 94th N.I., late Russell's Regiment of the Contingent, and should be of considerable interest. The volume will be illustrated with maps and plans, and there is to be a portrait of Henry Russell, Resident from 1811 to 1820, covering the critical period of the Maratha War.

IN *Macmillan's Magazine* for August Mr. Marcus Reed reviews a recent Japanese novel which appeared last year in an English translation; Mr. Arthur C. Benson supplies a suggestive paper on 'A Classical Education'; S. G. Tallentyre's sixth paper on 'The Fellow-Workers of Voltaire' deals with the career of Condorcet; Mr. George Bartram writes on 'The Old English Peasantry'; and 'A Puritan Bishop' gives an account of the life of Joseph Hall.

Temple Bar for August contains a paper by Mr. Arthur L. Salmon on some of the literary memories of Somersetshire, called 'With Coleridge and Tennyson at Clevedon'; Miss Elizabeth Banks contributes a description of 'A Bit of Old English Bric-à-brac in Yankee-land'; Miss Laura Hain Friswell gives a pen-and-ink sketch of 'Benjamin Disraeli,' with some unpublished letters; and Miss Elena Washington narrates how she went 'Up the River to Canton.'

THE August number of *Good Words* will contain an article by Mr. J. Ballard, in which is included a hitherto unpublished letter of the poet Rogers. The letter is dated Paris, November 26th, 1802, and describes Napoleon as he looked shortly after the Peace of Amiens.

THE Locker-Lampson copy of the First Quarto Shakspeare, 'The Second Part of Henrie the Fourth,' mentioned in *The Athenæum* of April 15th last, is not, we hear, in the Public Library, Boston, U.S., but is in the fine literary collection of Mr. E. Dwight Church, of Brooklyn.

THE new catalogue of Messrs. Joseph Baer & Co., of Frankfort, includes the copy of the Great Latin Psalter of Fust & Schoeffer of 1459, sold at Messrs. Sotheby's on December 10th last year for 4,000*l.* Messrs. Baer now offer it for 96,000 marks, or about 4,800*l.* The catalogue contains not only a long and interesting bibliographical account of this particular copy, but also a fine facsimile of the noble colophon. We may further call attention to the extraordinary number of *incunabula* described in this catalogue, four hundred and seventy-four in all, many being of exceptional rarity; full bibliographical details are appended to each entry. The works are grouped in an alphabetical arrangement, according to the town or city in which they were printed. There are numerous facsimiles.

THE first contributions from former students of the Bedford College for Women towards the new buildings now amount to over 3,000*l.*, and it is expected that a good deal more will yet be received from them. Not less than 50,000*l.* is required before the end of the year, so that the plans may be proceeded with without delay.

WE are glad to learn that the fine collection of books and pamphlets formed by the late Mr. S. W. Silver, and known as the York Gate Library, will not be dispersed under the hammer. It has been purchased privately by the Adelaide branch of the Geographical Society of Australasia, and will be at once transferred to Adelaide. The library, which comprises some 6,000 volumes and pamphlets, is well known through the elaborate and exhaustive catalogue compiled by Mr. E. A. Petherick, who largely assisted in the formation of the collection. Several hundred additions have been made since Mr. John Murray published the second edition of the catalogue in 1886.

MR. GORDON HOME writes:—

"In your issue of July 8th you printed a review of my latest book (published by Messrs. Dent), but I should like to point out that the title of the book is not 'The Town of Pickering,' but 'The Evolution of an English Town.'"

THE French Académie has always had its detractors, who, it is almost unnecessary to add, have been on the wrong side of the door. But we do not remember that any of its critics have advocated its suppression. M. Georges Pellissier, a professor at the Paris University, now insists, in the pages of the *Revue* (the old *Revue des Revues*), on that trenchant remedy. His article is entitled 'Quelques Vérités sur l'Académie,' and he complains that the "Compagnie" is essentially and hopelessly conservative, and entirely opposed to new movements. It fought against Boileau, Chateaubriand, Victor Hugo, Flaubert, the De Goncourts, and Zola, and against "romantisme" and "réalisme"—all in vain. M. Pellissier points

out that many of the former academicians are now entirely forgotten; but we think that objection holds good with every learned society, and it is one which cannot possibly be guarded against. Perhaps the best thing which the Académie could now do would be to elect M. Pellissier.

The number of students who matriculated at the German universities this summer is, according to the recent lists, 41,928, a considerable increase on last year, when the total was 39,581. Of this number 3,178 are foreigners, of whom 2,775 are Europeans. The Russians head the list with 1,153, while there are 160 English, 607 Austrians, 284 Swiss, &c. Among the 403 non-Europeans, 206 come from America, 108 from Asia, mostly from Japan, 19 from Africa, and 8 from Australia. Berlin continues to be the university most frequented by foreign students; and medicine, philosophy, philology, history, mathematics, and natural science are the favourite branches of study.

The Institute of Archæology, founded for the purposes of teaching, study and research in association with the work of the University of Liverpool, has invited Dr. T. G. Pinches to join the staff in the capacity of Assyriologist.

The Parliamentary Papers of the most general interest to our readers this week are: Report on Admiralty Surveys for the Year 1904 (2*d.*); Annual Statistical Report of the University of St. Andrews (2*d.*); Abstract of Accounts of the same University (3*d.*); and Building Regulations for new Elementary Schools, England and Wales (2*d.*).

SCIENCE

ENGINEERING.

Marine Engines and Boilers: their Design and Construction. By Dr. G. Bauer. Translated from the Second German Edition by E. M. Donkin and S. Bryan Donkin, and edited by Leslie S. Robertson. (Crosby Lockwood & Son.)—This somewhat bulky volume, containing 772 pages, and fortified by 552 illustrations, comprised in 16 plates and figures in the text, furnishes a fairly complete treatise on the most modern types of marine engines and the boilers in ordinary use, and embodies the theoretical and practical rules used in the design of marine engines; and its object is defined to be "a handbook for the use of students, engineers, and naval constructors." The value, indeed, of the work in Germany to many engineers engaged in the construction and working of marine engines, as well as to students of naval construction, is amply proved by the circumstance that though the book was first issued as recently as 1902, a second edition was called for in little more than a year after its first publication. It is this second edition—containing several emendations, a considerable extension of the chapters on 'Arrangement of Marine Engines' and 'Water-Tube Boilers,' and the addition of tables giving particulars of engines constructed by various ship-building firms for battleships, cruisers, destroyers, torpedo boats, gunboats, Atlantic liners, mail steamers, freight steamers, ice-breakers, and various other craft—which has now been issued in English, with English dimensions, for the benefit of British marine engineers and naval architects. The publishers have also been fortunate in obtaining the assistance as editor of Mr. Robertson, who had previously shown his qualifications for the task by his book on 'Water-Tube Boilers' and translation of the book 'Chaudières Marines, Cours de Machines à Vapeur,' by M. Bertin, Director of Naval Construction in France, published in 1896.

The subject is divided into eight parts, dealing successively with 'The Main Engines,' 'Pumps,' 'Shafting, Resistance of Ships, Propellers,' 'Pipes and Connections,' 'Steam Boilers,' 'Measuring Instruments,' 'Various Details,' and 'Various Tables.' Each of the principal parts is divided into sections or chapters, in which the several subjects are indicated by black-letter headings, numbered consecutively throughout the book and given in the table of contents, thus facilitating reference; but the introduction of sub-headings in some cases causes complications, and generally only the main subject is given at the head of each section. The most important portions of the book are primarily the first part, relating to the main engine, occupying more than a third of the book, and secondly, the one dealing with steam boilers. The former comprises sections on 'Determination of Cylinder Dimensions,' 'The Utilisation of Steam in the Engine,' 'Stroke of Piston, Number of Revolutions, Turning Moment, and Balancing of the Moving Parts,' 'Arrangement of Main Engines,' and lastly, a long section on 'Details of Main Engines,' with numerous sub-headings, one of which has been erroneously added to the main heading. The fifth part, treating of steam boilers, contains seven sections, on 'Firing and the Generation of Steam,' 'Cylindrical Boilers,' 'Locomotive Boilers,' 'Water-Tube Boilers,' 'Smoke-Box, Funnel, and Boiler Lagging,' 'Forced Draught,' and 'Boiler Fittings and Mountings.' Locomotive boilers are disposed of in two pages, for, though formerly employed in all light vessels, they have in the last ten years been superseded by water-tube boilers; and the most important section in this part is undoubtedly the one on water-tube boilers, which have come into considerable prominence of late years. The Belleville, Dürr, Yarrow, Normand, and Thornycroft boilers are described with illustrations, and various data concerning them are given in tables. The advantages of this class of boilers are concisely stated to be their

"capacity to raise steam rapidly; facility in responding to a change of speed in the engines, and with which they can be fitted on board ship; less danger in the event of an explosion; capacity for being greatly forced; and reduced weight";

and the disadvantages,

"increased susceptibility to irregular feeding, to irregular stoking, and to rapid fouling; and difficulty of internal cleaning."

A valuable addition to this section on water-tube boilers is furnished by an appendix giving the Final Report of the Naval Boiler Committee, presented to the Lords Commissioners of the Admiralty in June, 1904, in which it is stated, as a result of a series of trials in ships fitted up with cylindrical, Belleville, Babcock & Wilcox, Niclausse, Dürr, and Yarrow large-tube boilers respectively, that two of these boilers (namely, the Babcock & Wilcox boiler as tried in H.M.S. Hermes, and the Yarrow large-tube boiler as tried in H.M.S. Medea) are satisfactory and suitable for use in battleships and cruisers without cylindrical boilers.

It may be reasonably anticipated that this book, with its clear and simple descriptions and its numerous diagrams, drawings, and illustrations of marine engines and boilers, will prove as acceptable and useful to British marine engineers and students and naval architects as has already been notably the case in Germany. Notwithstanding, however, the general completeness of this treatise, there is one very important omission, deliberately made by Dr. Bauer in preparing his second edition, as stated in the following paragraph of his preface, dated January, 1904:—

"In spite of the great, not to say fantastic, expectations entertained in some quarters in regard to the future of steam turbines for ships, I have not ventured at present to add a chapter on the subject to this edition. Although the Parsons turbine has had considerable success *on land*, and has already been fitted in a number of ships employed in running regular services, reliable results from these latter, especially as regards the consumption of coal, are not yet available."

The reason alleged for excluding this interesting, novel, and remarkable development in marine engines, which is regularly growing in favour and is being extended in various directions with most satisfactory results, appears hardly adequate in the circumstances; and it may confidently be predicted that if Dr. Bauer should be fortunate enough to be requested to prepare another edition of his book, he will be obliged to include a full description of the Parsons marine steam turbine, together with some account of the results achieved, if he wishes to keep his work abreast of the times. The somewhat strong wording of the preface to the second edition has probably made Mr. Robertson feel precluded from supplying the omission. This is a pity, for it unquestionably detracts, to some extent, from the interest and comprehensiveness of the book.

James Watt. By Andrew Carnegie. "Famous Scots Series." (Oliphant, Anderson & Ferrier.)—The life of James Watt, born at Greenock in 1736, was chronicled, in conjunction with that of his partner Matthew Boulton, many years ago in considerable detail by Dr. Smiles, as furnishing a history of the development of the steam-engine. The present handy little book, though much less voluminous than the earlier work, and devoid of the illustrations with which Dr. Smiles was accustomed to brighten his 'Lives of the Engineers,' nevertheless, owing to its much greater conciseness, presents a very vivid picture of Watt as an inventor, a discoverer, and a man. Watt, like Smeaton, began his career as an instrument maker, and gradually developed into an engineer. The story of Watt's early struggles in the construction of a steam-engine is graphically told; and his many failures and disappointments are traced to the imperfect mechanical tools and appliances available in 1764, when he began to make his first working model, and the absence of skilled workmen. His invention in 1765 of a separate condenser, and the encasing of the cylinder to maintain its heat, formed the basis of his final success; but it was not till about ten years later that all the difficulties in the way of the construction of the steam-engines he had devised were removed. One serious obstacle was the inadequacy of funds at Watt's disposal for the necessary models and experiments, which was only partially overcome by the proceeds of the surveys he undertook of various canals in Scotland, and by his partnership with Dr. Roebuck, the proprietor of some ironworks, who unfortunately failed after a time, owing to the drowning of his pits with water, which it had been hoped the new steam-engine, if completed in time, would have remedied. The turning point in Watt's fortunes was his partnership with Boulton, who possessed the business capacity and resources which Watt lacked; and this connexion, which was finally arranged shortly after the extension of the patent for Watt's invention had been secured for twenty-four years, with Boulton's assistance, in 1775, led to Watt's removal from Glasgow to Boulton's Soho works, near Birmingham. Not long after Watt had settled at Birmingham, he superintended the erection of his first engine in one of the Cornish mines, which, owing to the increased depth of the workings, the Newcomen engines were no longer able to keep dry. The results of the trial of this engine, which soon raised more water than the older engines with about one-third the consumption of coal, led to numerous orders for engines for pumping out the water from the deep

mines, which otherwise would have had to cease work. For these Watt had himself to prepare the drawings and attend the erection; and thus, eventually, the value of Watt's steam-engine was fully established, and, after passing through some financial straits during a period of great depression of trade in England, the success of the firm of Boulton & Watt was permanently assured. By January, 1824, 1,164 steam-engines had been constructed at the Soho works, with a total of 25,945 nominal horse-power. Watt, however, was not only a very successful inventor and discoverer, but he also possessed remarkable scientific attainments, and a great variety of other knowledge and information, which a wonderfully retentive memory, and a power of readily grasping essential points, enabled him to utilize to the utmost advantage. This unusual combination of characteristics, and also the modesty, simplicity, and amiability of his disposition, are fully endorsed by the tributes to his memory accorded by the most eminent men in different departments of life, which are quoted in the last two chapters of the volume, dealing with 'Watt, the Inventor and Discoverer,' and 'Watt, the Man.' Mr. Carnegie writes about Watt in a lively and enthusiastic vein, as a man enamoured of his subject; and like a true Scotchman, and remembering the series to which this book belongs, he seizes the opportunity of sounding the praises of the Scottish race with no faltering voice, as may be realized by the following extracts:—

"The steam-engine is Scotland's chief, though not her only, contribution to the material progress of the world. Watt was its inventor—we might almost write creator, so multiform were the successive steps. Symington by the steamship stretched one arm of it over the water; Stephenson by the locomotive stretched the other over the land. Thus was the world brought under its sway, and conditions of human life transformed. Watt and Symington were born in Scotland within a few miles of each other. Stephenson's forebears moved from Scotland south of the line previous to his birth, as Fulton's parents removed from Scotland to America, so that both Stephenson and Fulton could boast with Gladstone that the blood in their veins was Scottish."

"The history of the world has no parallel to the change effected by the inventions of these three men. Strange that little Scotland, with only 1,500,000 people in 1791, about one-half the population of New York City, should have been the mother of such a triad, and that her second 'mighty three' (Wallace, Bruce, and Burns always first) should have been of the same generation, working upon the earth near each other at the same time. The Watt engine appeared in 1782, the steamship in 1801, the locomotive thirteen years later, in 1814. Thus, thirty-two years after its appearance, Watt's steam-engine had conquered both sea and land."

Watt, indeed, was a man of whom any nation might be justly proud; and in Mr. Carnegie he has found a worthy and sympathetic biographer.

AMERICAN GEOGRAPHY AND COMMERCE.

The St. Lawrence Basin and its Borderlands. By S. E. Dawson. (Lawrence & Bullen.)—The selection of Dr. S. E. Dawson as contributor of the volume dealing with the St. Lawrence Basin to "The Story of Exploration" series must be described as happy, as this learned Canadian not only enjoys a wide personal knowledge of the region he deals with, but is likewise possessed of the critical faculty, which has enabled him to deal satisfactorily with a subject involving a good many disputed points. At the same time we cannot help thinking that his work would have gained much in brightness had most of these inevitable discussions and arguments been relegated to footnotes or appended to each chapter.

In discussing the voyages of John Cabot the author adheres to the opinions expressed by him in an elaborate paper published in the *Transactions* of the Royal Society of Canada in 1894. Cape Breton is there declared to have been Cabot's landfall in the first voyage, and from that point, owing to failing provisions, Cabot is assumed to have returned at once, without exploring the coast to the west, and to have first sighted the south coast of Newfoundland, as far as Cape Race, on the homeward voyage. But if we accept Juan de la Cosa's map of 1500 as embodying information furnished by Cabot himself to Pedro de Ayala, the ambassador of the King of Spain (and we see no reason to doubt this), then the Bristol vessel, before turning homeward, must have sailed westward to the furthest British flag shown on the map, say, as far as Cape Sable; and only if she did so can it be said that "the English were the first to tread the soil of the continent of the new world," for Cape Breton is on an island, not on the mainland. Whilst for an account of Cabot's first voyage we are dependent upon the scanty information to be found in the archives of Spain and Italy, the details of the second voyage, terminating in September, 1498, are derived exclusively from statements made by Sebastian Cabot, whom Harrisse denounces as a *menteur fieffé*, but whom our author is content to describe as a man "deficient in candour and greedy of reputation, who, like Columbus, would take credit for himself at anybody's expense." We are inclined to accept the assertion made as early as 1521, that Sebastian was never in the land he claims to have discovered, and only reported what he heard his father and others say. Indeed, we very much doubt whether, during this second voyage, the whole of the coast from lat. 58° north to Cape Hatteras was examined. If such an extensive voyage of discovery had really taken place, the claims put forward on behalf of Cortereal and of others would have to be rejected absolutely. There is no doubt, however, that Cabot was really the first discoverer of Newfoundland and its fishing grounds, and it is equally true that Portuguese, Bretons, Normans, and French were the first to take advantage of this discovery:—

"The English nation did not know the time of its opportunity, and had to win back with blood and treasure much of the territory it had thrown away. From those despised coasts of Bacallaos, for centuries, a large portion of the food of Western Europe was drawn. Richer than the mines of Potosi, these treasures replaced themselves by a perennial reproduction."

Parenthetically we may observe that the author appears to be mistaken when he derives the German *Stockfisch* from the Portuguese *bacalhao*. We believe, on the contrary, that the Portuguese name of the cod is a corruption of the Teutonic *Kabeljau*, and not of the Latin *baculus*, for it was through the northern nations that the Portuguese first became familiar with this popular article of food, which, as a rule, reached them in the shape of *Stockfisch*, that is dried cod, or *bacalhao secco*.

Controversial subjects are not even left behind when the author deals with Jacques Cartier's three voyages (1534–43), which made known the St. Lawrence as high up as Hochelaga, near the present Montreal, or the explorations and colonizing activity of Champlain, the founder of Quebec. The "colonization" of the country in these early days, however, made but little progress, and when the English, for the first time, took Quebec in 1629, there were hardly a hundred Frenchmen in all Canada.

The author, whilst doing full justice to the self-sacrificing labours of the Catholic missionaries, insists that the venturesome fur-traders were the real pathfinders:—

"Some of these men were educated and very intelligent, and their adventurous explorations have only in recent years received adequate acknowledgment. That followed naturally from the fact that the books and other literature were written by ecclesiastics, and are chiefly concerned with matters of spiritual interest. Mention is no doubt made in the Jesuit-Relations of some of those pioneers of commerce, but these Relations are, primarily, missionary reports published for the purpose of enlisting sympathy, and gaining support for the extension of missions and the salvation of souls. Bancroft's statement that 'not a cape was turned nor a river entered but a Jesuit led the way' must be taken with a large deduction for rhetorical effect. The Relations themselves make no such claim."

One of the earliest men of this stamp was Étienne Brulé, who, ascending the Ottawa river, was the first to reach Lake Huron (1610), and who, after a life of adventure, was murdered by his Indian hosts, boiled, and eaten. Jean Nicollet, in 1634, extended the exploration westward to Lake Michigan. Even more successful were Radisson and Chouart, whom the author unhesitatingly credits with the discovery of the "great sea" of the Indians or Mississippi (1632), and who subsequently pushed north to Hudson's Bay, but being robbed on their return of the results of their labours, and unable to obtain redress from the French Government, transferred their services to England. Their reports on the wealth of the countries surrounding Hudson's Bay led to the foundation of the most famous and successful of the American fur companies. Full justice is done to the labours of Louis Jolliet, actually the head of an expedition which first descended the Mississippi to the Arkansas, though his "leadership has been obscured by veneration for the humble and saintly Jesuit" who was his companion. A clear account is likewise given of the explorations of the bold, self-reliant, and indomitable pioneer, Cavalier de la Salle, from his first appearance on the Ohio, which he explored to the Falls of St. Louis, to the day, in 1682, when he planted a pillar bearing the arms of Louis XIV. on the Gulf of Mexico. Father Hennepin, who attempted to rob other travellers of the fame due to them, is described as a "vain and mendacious friar."

There are about fifty illustrations, including portraits of Cabot, Cartier, and Champlain, reductions of old maps, and a fine orographical map of the St. Lawrence Basin by J. G. Bartholomew; but a map showing the ancient forts and factories, the routes of the principal explorers, the former seats of the Indian tribes, and the geographical nomenclature of the past, will be looked for in vain.

Études Critiques sur la Vie de Colomb avant ses Découvertes, par Henry Vignaud (Paris, H. Wetter), should prove of interest to the general reader, no less than to the serious student of the history of the fortunate discoverer of a "new world." The student may not find in this volume much that is new to him, for the author has not brought to light any unpublished documents; but he will meet with a full and fair statement of all controverted questions connected with the early life of Columbus, and having thus been put in possession of the information scattered through hundreds of volumes and essays, he will be in a position to form an estimate of the value of the views advocated by the author. To those who have read 'La Lettre et la Carte de Toscanelli' Mr. Vignaud is known as a ruthless iconoclast. On the present occasion, however, he makes no startling revelations, and although several of his contentions are open to argument, and are never likely to be finally set at rest, we are happy to be able to agree with him in the main.

Concisely put, this is the story of the early life of Columbus as told by the author. The great discoverer was born at Genoa in 1451, the son of a well-to-do master-weaver. The claims to a noble descent cannot be sustained, while the statement of Columbus that he was not the first admiral in his family must be rejected as untrue. Columbus received the usual education of his class, was apprenticed to his father, and is referred to in official documents as a "weaver" up to 1473. He never visited the University of Pavia, and the smattering of knowledge which he possessed was

acquired by him in after years. The assertion of Columbus that he first went to sea when fourteen years of age is disputed, for up to 1473 he worked at his father's trade. He certainly never commanded a war galley of King René. His earliest voyage, so far as is known, was to Chios, an island at the time in the possession of the Genoese. In 1476 he joined a Genoese ship—whether as a sailor or in some other capacity is not known—which was bound for England, and which sailed in the company of three other vessels. When off Cape Vincent this flotilla was intercepted by a noted French pirate, Guillaume de Casenove *dit* Coullon or Colon. Two of the vessels, including the one which bore Columbus, managed to escape to Lisbon, and, having been refitted, proceeded on their voyage to England. It was in this manner that Columbus visited Bristol, and perhaps also Galway, but he certainly never went so far north as Iceland. On the homeward voyage, early in 1477, Columbus remained behind at Lisbon. In 1478–9 he married Felipe Moniz, the daughter of Bartolomeo Perestrello and Isabel Moniz. It was only after his settlement in Portugal that he conceived the scheme of reaching Zipangu and Cathai by sailing across the Western Ocean.

It must be admitted that the facts as established by Mr. Vignaud and by other students of the history of Columbus reveal the great explorer as a man utterly to be doubted whenever a question personal to himself is touched upon: "Colomb n'a jamais dit un mot de vrai sur ce qui le touchait personnellement." This is perhaps too strong, but there is much truth in it.

Amerika: seine Bedeutung für die Weltwirtschaft. Herausgegeben von Dr. Ernst von Halle. (Verlag der Hamburger Börsenhalle.)—The economic development of America is an attractive subject, which in competent hands should yield valuable conclusions as to the variations of economic laws in different environments. Dr. Halle's book contains much useful raw material for such an inquiry, but he has contented himself with presenting a summary of the data rather than a series of reasoned conclusions. The economic development of each country of the American continents is outlined in convenient statistical summaries, the account of the existing economic conditions, from banking and exchange systems to the number of motor ploughs and railway waggons, compiled by various specialists, being full and trustworthy. From this point of view the book is by far the most compendious summary of the subject which has yet appeared. In particular it presents the German outlook on America, and emphasizes the part which Hamburg traders play in the foreign trade of the continent. It is a useful book of reference for the student of economics and politics as well as for the business man. It is to be regretted, perhaps, that in so comprehensive a work more pages were not allotted to the consideration of potentialities as well as actualities. This part of the subject has received some attention in the account of the Panama Canal, and an occasional sentence or paragraph deals with it incidentally elsewhere. On the whole, however, the interpretation is left to the reader. The tale is told with German fullness of detail, but the moral is not pointed. In the case of America this moral is so complex and important that we regret that the editor did not assign to himself or one of his learned collaborators the task of setting it forth.

ASTRONOMY AND METEOROLOGY.

Astronomy for Amateurs. By Camille Flammarion. Authorized Translation by Frances A. Welby. (Fisher Unwin.)—The astronomical works of this popular writer are almost as well known in England as in France, and the appearance of a new one in his attractive style, well adapted to amateurs who desire to learn some of the marvellous facts of the noblest of the sciences without having the means or opportunity of taking part in its further progress, cannot be otherwise than welcome. After a description of the principal constellations, we are led to contemplate the fixed stars as suns of infinite space, then more minutely the sun of our own system, and afterwards the planets and other bodies of that system, including the earth on which we live, and its near neighbour and companion the moon. The chapter on eclipses will probably be found of especial interest at the present time; added to this is another on the methods of celestial measurings and weighings, and the book finishes with a chapter devoted to some striking and suggestive reflections on "life, universal and eternal." The illustrations are numerous and on the whole good; but we fancy that Mr. Saunder and other great selenographers will take some exception to the distinctness of the supposed young lady's face on the moon, figure 67 (p. 238). A few errors may be noted: at p. 65 Centaurus appears as "Centauris"; at p. 265 Cyaxares, the Median king, is called "Cyaxarus." The eclipse often called that of Thales occurred in B.C. 585, not 584, as stated in p. 265; and the eclipse of Agathocles was certainly that of August 15th, B.C. 310. Amongst the illustrations, we may remark, is a reproduction of a photograph of the solar eclipse of May 28th, 1900, taken by our late royal visitor, Alfonso XIII., at Madrid, where it was not quite total.

Twenty Years on Ben Nevis: being a Brief Account of the Work, Life, and Experiences of the Observers at the Highest Meteorological Station in the British Isles. By Wm. T. Kilgour. (Paisley, Gardner.)—The greatest elevation in the British Islands, the summit of Ben Nevis, is 4,406 ft. above the level of the sea, or about 850 higher than Snowdon. It is seven miles to the south-east of Fort William, and a conspicuous object to travellers up the Caledonian Canal. In the year 1883 it was decided to erect a meteorological observatory on this commanding spot, from which the weather changes were to be communicated as regularly as possible below, access being at the same time made easier by the construction of a road up the mountain. These observations have proved of great value, and it is matter for regret that they have recently been brought to an end. Let us hope the loss is temporary, and that the desire of our author may be realized that his book will aid in procuring their speedy resumption. The book is not a collection of dry meteorological facts (perhaps the scientific reader, indeed, may wish for more of these), but a pleasant and occasionally amusing sketch of the life and occupations of the observers, who were at certain seasons gladdened by the calls of visitors to the top of the mountain, some of whom did not fail to record their impressions. As a specimen of their facetiousness, we are told that few could resist the temptation of telegraphing from the summit, the most frequent communication being "Missed the view, but viewed the mist." As a proof that the mountain is more easily accessible than those who have not ascended it may think, we may mention that a female post-runner (her name, Miss E. Tait, deserves to be recorded) accomplished the ascent on one occasion in half a minute under two hours, whilst to do this in less than three hours was no uncommon experience. Mr. Kilgour does not forget to level a joke at the inaccuracy of newspaper printers, one of whom converted "covered with cirrus clouds" into "covered with cirrus clowns." We have, however, seen worse errors than this without going to Dogberry, and, indeed, it could hardly deceive, for though warriors have been detected in the sky (during an appearance of aurora), we believe clowns never have. We suggest to the author an alteration in a word used by himself. After a brief description of how the observatory was built (principally constructed of granite blocks), he tells us that it was opened on October 17th, 1883, by Mrs. Cameron-Campbell of Monzie, then the "proprietrix" of the mountain. Now proprietor is not a Latin word, the equivalent in that language being *proprietarius*, which should have been englished proprietary; the proper form of the feminine is proprietress, if it must be used.

The book as a whole may be recommended to the notice of the public, and its interest is much enhanced by a number of excellent photographic illustrations, in addition to a folded map which it contains. The style and excellence of the typography make it also an eminently readable book in another sense. In conclusion let us repeat our concurrence with the author's wish that this very important meteorological station will not be permanently abandoned, as continuous observations of the climatic conditions of Britain's nearest approach *ad sidera* cannot fail to be of great value to science. That there is at least something unique about them is evidenced by the facts that, during one day in October, 1890, nearly 7½ inches of rain fell on the mountain, and that a single month in the same year was credited with 48 inches, whilst in 1898 the fall (the largest recorded in any year of the observations) amounted to the enormous total of 240 inches. The chapter on storms gives some stirring instances of their magnitude; in this the author cannot resist another dash into facetiousness. He tells us that a scale had been formed to represent increasing force of wind; 12 on this scale was reserved for use when the roof was blown off the observatory, or the observer hurled over the cliffs, a fact to be noted by his surviving colleague; but our minds are relieved by the announcement that this catastrophe never actually took place.

We have received the fourth appendix to vol. iv., second series, of the *Publications of the United States Naval Observatory*, which contains a most interesting account of the present status of the use of standard time, drawn up by Lieut.-Commander E. E. Hayden, Head of the Department of Chronometers and Time Service. By standard time is meant the reckoning of longitude or time either from the Greenwich Observatory, or from meridians an exact number of hours east or west of that. This method is now followed by most of the nations of the world, Great Britain, Holland, Belgium, and Spain taking the Greenwich meridian itself; Germany, Italy, and most of the countries of Northern Europe one 15° (corresponding to one hour in time) to the east of Greenwich, which is slightly to the west of Berlin. France, however, adheres to Paris, Portugal to Lisbon, Russia to Pulkowa, and Greece to Athens. In Ireland, also, time is reckoned from Dublin. The United States adopted standard time in 1883, on the initiative of the American Railway Association, and at noon on November 18th in that year the telegraphic time signals sent out daily from the Naval Observatory at Washington were changed to the new system, according to which the meridians of 75°, 90°, 105°, and 120° west from Greenwich became the time meridians for what were called Eastern, Central, Mountain, and Pacific standard time respectively. Thus, 12 o'clock in the day at Washington and New York (which is 5 o'clock in the afternoon at Greenwich) corresponds to 11 o'clock in the morning at Chicago, and to 10 o'clock at all places on the Pacific coast. Japan uses standard time 9^h (135°) west of Greenwich. Another point which has to be considered is this: At 180° east or west of Greenwich the day must change according to the direction in which that meridian is approached. This is called the international date line; and here each day has its birth at the instant when it is

exactly noon of the preceding date at Greenwich, when it is 7 o'clock in the morning at Washington and 4 o'clock at San Francisco. In order to adjust dates uniformly, it is customary, when a vessel crosses the 180° of longitude from Greenwich, to drop a day when sailing in a westerly, and repeat a day when voyaging in an easterly direction. In the former case, for instance, Monday, July 17th, would be immediately followed by Wednesday, July 19th; whilst in the latter case Monday, July 17th, would be followed by another day called also Monday, July 17th. For the sake of convenience, however, this date line is taken irregularly in some places, it being considered very desirable for all the places in Eastern Siberia to have the same date, for all the Aleutian and Hawaiian Islands to have the same date as the United States, and for all the Fiji and Chatham Islands to have the same date as Australia and New Zealand.

We conclude by noting that the following resolution (which it is hoped will gradually secure general acceptance) was proposed by the writer of the appendix before us at the Eighth International Geographic Congress, held at Washington in September, 1904, and carried: "Resolved, in view of the fact that a large majority of the nations of the world have already adopted systems of standard time based upon the meridian of Greenwich as prime meridian, that this Congress is in favour of the universal adoption of the meridian of Greenwich as the basis of all systems of standard time." To mark the occasion the superintendent of the Naval Observatory, Rear-Admiral Chester, held a reception of the Congress, and a special midnight time signal was sent out on September 8th. One effect of the universal adoption of this scheme would be that the minute and second hands of all chronometers, clocks, and watches set to ordinary solar time would be exactly the same all the world over, only the hours differing, so that a single international noon signal by wireless telegraphy would be due at an exact hour on board of every vessel and at every city, town, and village in the world.

RESEARCH NOTES.

SOME remarks of mine in the last instalment of these Notes (*The Athenæum*, July 1st) upon Mr. Butler Burke's so-called "radiobes" have given occasion to a gentleman, of whose identity I do not profess ignorance, for a great display of wrath in the 'Scientific Notes' appearing in an evening paper over the signature C. W. S. In spite of his rhetoric, I still venture to think that the inside of a brick-bat has as much relation—though perhaps of a different kind—to its outside as C. W. S.'s own interior has to his. But, this apart, I notice that my opponent avoids the real point of my criticism, which I will now put in interrogative form. Had Mr. Burke ever heard of M. Leduc's experiments in cytogenesis when he first announced his own discovery? Had C. W. S., when he was the first, as he claims, to draw the public attention to Mr. Burke's work in "a brief and continent" note? How does either of them distinguish between the "radiobes" and M. Leduc's gelatine cells?

Meanwhile the *Revue Scientifique* points out that Mr. Burke's discovery as to the effect of radium upon gelatine has been made before. M. Raphaël Dubois, in his opening lecture at the University of Lyons in November, 1904, announced that by dropping a small crystal of radiferous chloride of barium into a culture-bouillon of gelatine, corpuscles were produced which, he said, had the appearance of "vacuolides," the largest of them appearing to divide spontaneously. He also declared that these bodies eventually evolved into crystals, thereby suggesting the earlier experiments of Von Schrön that I have before alluded to. That crystallization may be one of the earliest forms of life is indeed likely enough, on many grounds. But this is very far from what either Mr. Burke or those who have advertised his work to the unlearned public have yet asserted.

More important for the present—as it seems to me—is the discussion initiated by M. Henri Poincaré before the Académie des Sciences of the experiments of Michelson and others as to the movement of the ether. According to the most prevalent theory on the subject, the movement of the earth through space ought to drag with it the ether existing between the molecules of substances, or, for that matter, between the electrons. Mr. Michelson's experiments have, however, all gone to show that nothing of the kind takes place, and this has led to many mathematical theories on the subject, including that apparently held by the Dutch Prof. Lorentz and others, that the electron in its passage through ether becomes "deformed," or perhaps passes from the spherical to the elliptical shape. It seems from this that the detection of absolute, as opposed to merely relative, motion is impossible, as all the instruments used to establish it will vary in the same ratio as the thing measured. M. Poincaré, in the course of the discussion, sees reason to doubt the assertion made by the celebrated Laplace that the speed of gravitation is infinite, and appears to think, on the other hand, that it may be a good deal inferior to that of light. If this be the case, he thinks that it should be possible to confirm it by astronomical observations, and the result of these will be looked for with anxiety. Gravitation is, perhaps, the next unexplained mystery of nature that will be taken in hand by physicists, and any lifting of the veil which at present shrouds it is likely to have very wide practical as well as theoretical effects. Yet here, too, the solution—when, if ever, it is found—may turn out to be much more simple than anything imagined by mathematicians.

Not unconnected with this is the question of magnetism, which has been considerably complicated by M. Villard's suggestion (see *The Athenæum* of May 27th) that such things as magnetons, corresponding in part to the now familiar electrons, actually exist. The discovery that alloys of metals not including iron can be made which possess a high degree of magnetism shows that it is a property much more widely spread throughout nature than was formerly supposed. Some recent experiments, of which I hope to give a more detailed account later, go to prove that the magnetism of these alloys is largely, if not entirely, dependent on temperature. Everything, therefore, at present seems to indicate that we are in sight of a great simplification in physical theory.

The Royal Society's *Proceedings* for May 24th contains an account of a successful attempt lately made to produce ammonia by the synthesis of nitrogen and hydrogen, and it is noted that this process is, like the formation of ozone from oxygen, irreversible. On the other hand, Dr. Auer von Welsbach, of incandescent-mantle fame, announces that he has succeeded in decomposing ytterbium, which has hitherto ranked among the group of elements known as the rare earths, and finds that it is composed of several constituents. Sir Norman Lockyer has also observed in the chromosphere of the sun the spectrum of the rare element scandium, the predicted discovery of which was one of the crowning triumphs of Mendeléeff's Periodic Law.

A new explanation of the fact observed by Mr. Marconi, that wireless telegraphy proved more practicable over sea than over land, has been furnished by the discovery, lately announced in the *Revue Scientifique*, that sea-water is impermeable to the Hertzian waves. M. Branly's experiments on the transmission of power to an appreciable extent by the same waves were illustrated in a lecture given by him at the Trocadéro in Paris on June 30th, and are still proceeding; while M. Biscan has been making some attempts with the same view at Töplitz. Meanwhile the prize offered at the St. Louis Exhibition to any one who could transmit by Hertzian waves the tenth of a horse-power to a distance of 300 metres remains unclaimed. No doubt this and kindred problems will be discussed at the Congress of Radiology which will be held at Liège during September in connexion with the Exposition Internationale now in progress there. F. L.

Science Gossip.

THE death in his fifty-fourth year is announced of the distinguished physician Dr. Hermann Nothnagel, professor at the University of Vienna, and author of several valuable medical works, among them 'Handbuch der Arzneimittellehre,' 'Topische Diagnostik der Gehirnkrankheiten,' 'Erweichungen des Gehirns,' &c., and of a number of interesting contributions to the chief medical journals. He was a man of liberal views, which he expressed freely, and which, in spite of his popularity among his students, exposed him to occasional hostile demonstrations.

DR. ANDERSON, of Edinburgh, has detected the variability of a small star in the constellation Ophiuchus. It is included in the Bonn Durchmusterung, where it is numbered +3°.3656, and rated of the 8·6 magnitude. Dr. Anderson states that on the 8th, 11th, 22nd, and 30th of May it was out of the reach of his three-inch refractor, although a star of the 10·4 magnitude, preceding it by about fifteen seconds, was continuously visible. On the 30th ult., however, the star in question (which will be reckoned as var. 77, 1905, Ophiuchi) not only outshone that star, but a somewhat brighter one a little to the north-west of the variable, so that its magnitude must have been about 9·9, at least a magnitude fainter than when the observations were made for the Bonn survey.

WE have received the sixth number of vol. xxxiv. of the *Memorie della Società degli Spettroscopisti Italiani*, containing a second note (the first was in the tenth number of vol. xxxiii.) by Prof. Mascari and Signor Cavasino on the relation of the solar images, agitation of solar images, and atmospheric movements, and a continuation of the diagrams of images of the sun's limb for August, September, and October, 1902.

MEETINGS NEXT WEEK.

WED. British Numismatic, 8.—'The Moneyer Torhtulf,' Mr. L. A. Lawrence.

FINE ARTS

Forty Years' Researches in the Burial Mounds of East Yorkshire. By J. R. Mortimer. (A. Brown & Sons.)

THIS admirably printed and profusely illustrated volume of some 450 quarto pages does justice to the wonderful collection of prehistoric implements and other early curiosities formed at Driffield through the indefatigable labours of Mr. Mortimer. Throughout the East Riding Mr. Mortimer's name is a household word. Some twelve years ago the newly formed East Riding Antiquarian Society took the excellent step of providing all the elementary schools of the division with illustrated and descriptive cards, to hang on the walls, of the stone

and bronze implements that are often found on the surface of the fields and wolds. A schoolmaster was explaining to his scholars the meaning of the stone-implement card soon after its arrival at a place nearly twenty miles from Driffield, where Mr. Mortimer resides, when a boy interrupted him with the exclamation, "Why, they 're nowt but mortimers!" On inquiry it was found that he had no knowledge of the existence of Mr. Mortimer as a person, but had been used to call such things by the name mentioned. Perhaps the word "mortimer" will some day find its way into the dictionaries as a synonym for a flint implement, after the same fashion as the personal names "boycott" and "grimthorpe" have attained to distinction in our own days. Mr. Sheppard, of the Hull Museum, in his introductory note to this volume, speaks of having met with this word "wherever one goes."

In the course of forty years Mr. Mortimer opened nearly three hundred British burial mounds of the stone and bronze periods, over sixty mounds of the early iron age, together with several Anglo-Saxon cemeteries, and a few Romano-British interments. He has also carefully examined and mapped a considerable portion of the ancient earthworks that intersect the wolds. The collections formed during these excavations became so considerable that they outgrew the accommodation to be found in a private house, and so long ago as 1878 a special museum was built by Mr. Mortimer for their accommodation in Lockwood Street, Driffield. The leading antiquaries and geologists of this country, as well as of the northern part of the Continent, have visited and consulted this museum from time to time. One of its special peculiarities and attractions is the fact that it is entirely local, all the contents having been gleaned within an area of about seventy-five square miles among the mid-wolds of Yorkshire, which must have been one of the most thickly populated districts of these islands in prehistoric days. Another particular feature of the museum, the contents of which are fully described and illustrated in these pages, is that the original site, even often the precise depth and surroundings, of almost every article are known and notified, offering in this respect a most wholesome contrast to the general character of the great Lomberdale collection of the late Mr. Bateman, drawn from the burial mounds of Derbyshire and Staffordshire.

An interesting fact about the illustrations, which are excellent of their kind and exceed one thousand in number, is that they are all from drawings by Mr. Mortimer's daughter. He remarks in his outspoken and homely preface:—

"For the sketches of the specimens figured in this book, and for numerous illustrations used elsewhere, I am solely indebted to my daughter Agnes, who, from the time she was thirteen years of age until she was nineteen, devoted many of her leisure hours to the completion of this, which at her age must have been a tedious and irksome task."

One of the several curious and unusual points mentioned in this volume, which demand attention of archæologists in other parts of the country, is the subject which Mr. Mortimer describes as "embankment crosses." The explorations of the barrows in the neighbourhood of Fimber and Sledmere revealed the fact that the earlier Anglo-Saxon settlers occasionally used some of the British barrows as their cemeteries, and also utilized several of them, as Mr. Mortimer believes, as moot hills:—

"A British barrow, conveniently situated near an Anglo-Saxon settlement, was chosen as a place on which the people gathered to conduct secular and religious matters. After embracing the Christian faith, they seem to have often excavated in their Moot Hills a large and deep trench in the form of a cross, reaching through the mound. Seven examples have come under my observation. They sometimes extend 5ft. to 7ft. into the rock below; and always with the arms towards the four cardinal points of the compass. The trenches have invariably been filled in with a mixture of soil and rock, in which are potsherds, animal bones, and corroded pieces of iron. Sometimes, along the bottom, a cross is built, of two to four horizontal crosses of stones, walled with clay. Many of these mounds now bear the name of Moot-hill, Mall-hill, Mill-hill, Gallows-hill, and Hangman or Hanging-hill."

Besides the crosses excavated in some of the circular moot hills, Mr. Mortimer has noted eleven others consisting of two ridges of earth and stones, crossing each other near their centre at right angles. Plans and descriptions are supplied of each of these crosses. One of them, on the high ground to the north of the site of the ancient village of Haywold, was known by the name of Christ Cross. When originally surveyed, each of the four arms was about 66ft. long, 3½ft. high, and 8ft. wide. Such structures as these are not altogether peculiar to East Yorkshire, though they are unknown in the North Riding. Mr. Mortimer, in following up this subject, has shown that he possesses no small ability for literary research, as well as for research undertaken with the aid of spade and pick. From the *Journal* of the Archæological Institute, *The Gentleman's Magazine*, and one or two county histories he has traced accounts of similar cruciform structures in seven other localities, notably near Cæsar's Camp, Wimbledon.

For our own part we doubt the Christian significance that Mr. Mortimer is inclined to attach to their shape. The embanked crosses outside barrows are traditionally called "Bields" by the country folk of the East Riding, and here etymology ought to be some help. Locally they are supposed to have been made for cattle shelters, from whatever quarter the wind might be blowing. So far this seems to be the most reasonable theory. Mr. Mortimer, however, considers that the ditch by which the arms are usually surrounded, and from which the material to form their elevation was taken, is an objection to this surmise. At any rate, all archæologists will be grateful to Mr. Mortimer for the account he has given of these singular structures, extending over several pages, and for the numerous learned notes by which that account is accompanied.

The work throughout is characterized by much scientific precision, and is worthy of being placed on the same shelf with the fine series of volumes describing the excavations undertaken by the late General Pitt-Rivers.

WE notice under 'Fine Art,' as chiefly interesting to the antiquary, *Museums, their History and their Use, with a Bibliography and List of Museums in the United Kingdom*, by David Murray, 3 vols. (Glasgow, MacLehose). It cannot be said that the author has achieved much success in this work. We are willing to admit that it is a difficult subject, and ranges over a large area; but, if it is undertaken at all, we are entitled to expect accuracy and instruction. Vol. i. consists of a preface of ten pages octavo, constituting a representative essay on egotism; the personal pronoun I truly glitters in our eyes as we turn over these preliminary pages, occurring no fewer than seventy-four times. The body of this volume deals with a number of subjects relating to museums of early or late foundation—the British Museum, Scottish museums, some foreign museums—their use, arrangement, and dispersion. This comprises 289 pages. Of its value to the general reader one or two examples will suffice. In the account of 'The Beginnings of the British Museum' one would have expected a paragraph descriptive of the world-renowned Cotton Library of Manuscripts, the brightest jewel of the national collections preserved there; but not a word of history or description can be found. A passing allusion to the Act of Parliament for the purchase of the Sloane Library and Museum and of the Harley Collections, and for uniting them "to the Cotton Library," appears to be the sole mention of the mere title. The whole history of the British Museum's progress in the nineteenth century is summed up (on p. 144) in a paragraph of twenty-six lines, with no account of the great new Reading-Room (one of the principal sights of London), the labours and achievements of Panizzi, the comprehensive classed catalogue of MSS., the Ethnological Gallery and the work of the late Sir A. W. Franks in connexion with it, the removal of the natural history collections to South Kensington, or the marvellous expansion of the Egyptian and Assyrian exhibitions. This is writing the history of museums with a vengeance! Then follows a 'List of Museums in the United Kingdom,' but it contains no mention of the museum of H. Syer Cuming, of which we gave some account a few years ago at the time of that collector's death, and which has now been acquired for the benefit of the public.

The second volume deals with the literature of museums in fourteen pages. Here the numerous issues of the British Museum are summed up in a single entry of notice of the 'Bibliography of Publications, 1823 to 1891.' Thirteen busy years of output are absolutely ignored, with the exception of the Report of a Botanical Committee in 1901. Under a heading of 'Catalogues—British Museum,' occurs the single entry of 'Catalogue of Books in the Department of Zoology.' This heading mentions the 'Catalogue of the Library of the Entomological Society of London,' but is silent as to the 'Catalogue of the Library of the Society of Antiquaries,' and that of the library of the British Archæological Association. This volume next treats of 'Museography,' a strange word, apparently intended to signify the art of writing about museums, real or imaginary, and many other matters as well. It embraces, for example, Dr. John E. Gray's 'Report on Museums: their Use and Improvement,' and Prof. J. O. Westwood's 'Descriptive Catalogue of the Fictile Ivories in the South Kensington Museum.' The third section of this volume is devoted to noticing works on the collection, preparation, preservation, and exhibition of specimens; the fourth is a long list of 'Catalogues and other Works relating to Particular Museums and Special Collections.' This latter runs through to the third volume, which concludes with the fifth section of 'Travels and General Works,' a list sufficiently elastic to include such works as

Melchior Adams's 'Vitæ Germanorum Medicorum,' the *Archæologia* of the Society of Antiquaries of London, and G. Naudé's 'Advis pour dresser une Bibliothèque'—a work, by the way, plainly belonging to the previously mentioned section of 'Museography.' In the fourth series we notice the omission of the late Dr. Samuel Birch's catalogue of the Egyptian antiquities in possession of the Duke of Northumberland at Alnwick, although the late J. C. Bruce's catalogue of Roman and British antiquities in the same place has been recorded. Under Chester two works on the Roman stones are noticed; another has been omitted. Under British Museum the list is singularly incomplete and chaotic, a condition of which the author appears to have been conscious where he simply says, "There are an immense number of Catalogues of Departments and of Special Collections published by the Trustees." It is unfortunate that the author of this work has undertaken it without realizing the difficulties in the way of bringing so extensive a subject into an orderly and systematic form. The arrangement is irregular and arbitrary; and due research would have ensured the gathering of numerous titles of works passed over in silence.

Robert Adam, Artist and Architect: his Works and his System. By Percy Fitzgerald. (Fisher Unwin.)—After being unduly neglected for a considerable period, the work of Robert Adam has become the object of a craze, and is likely to be valued and sought after unduly for a time. It would have been worth while, in these circumstances, to write a book which should give the injudicious sufficient insight into the peculiarities of his productions to prevent them from making themselves foolish in the pursuit of their fad. Instead of doing so, Mr. Fitzgerald has given us some ninety pages of indiscriminate eulogy.

The author writes as a layman for laymen, and his architect friends have asked him "Que diable fait-il dans ce galère," thus showing their ignorance of Molière and French grammar. Having been thus unfortunate in his choice of architectural friends, he proceeds to lash architects in general—Wren, Vanbrugh, Inigo (without the usual Jones), Scott, Barry, and Street—and architectural writers in particular; thus Gwilt is "incompetent," Stuart and Revett "rather obscure," and Ferguson "prejudiced," while the late Mr. Brydon, who was as Scotch as Adam, and designed the new Government offices now being erected at Westminster, is called a "local architect" of Bath.

In regard to Adam this trenchant critic cries, "Who have we, or have had we, like him?" flinging grammar to the winds in the excess of his emotion. Thereafter follow comparisons—Adam is "the English Benevenuto Cellini" (we remark, in passing, that Adam was Scotch and Cellini spelt his first name otherwise), "an Admirable Crichton," a "Napoleon," a "Walter Scott," a "Watteau," and a "Richard Wagner." The characteristics of Wagner's music are, however, by no means well described, and the analogy with Adam's architecture is false. Nor can we wonder that epithets should become deranged and metaphors mixed by a writer on an architectural subject who misconceives the quality in a column known as entasis and applies the term to a door-handle, who speaks of the "oval" when he means the ellipse, who compares engaged columns in a façade to the steel framework of the American style of building, and who considers the cement joints of a wall more pervious to moisture than the bricks. Such mistakes as "cimara versa" for *cyma reversa*, "cavela" for *cavetto*, "fenestation," and "Porta Aena, or Brazen Gate," we may charitably ascribe to the compositor; but such suggestions as that the tower of Westminster Abbey—which one?—requires a spire, or that the clock tower of the Houses of Parliament merely serves as a lighthouse, are lamentable examples of misappreciation of fact, and resulting falsity of judgment.

In a book that is remarkable for its want of correction and arrangement it is hardly worth notice that the same item of information, as, for instance, that Adam designed a dog-kennel, should recur, but it is very remarkable that a reference to the Adelphi buildings should appear twice in widely different forms. On p. 53 it is stated that

"Walpole humorously declared that the embroidered pilasters reminded him of 'warehouses laced down the seams, like a trull in a soldier's old coat'";

and on p. 57 that

"Walpole described the warehouses as being laced down the seams, like a soldier's frill in a regimental old coat."

In his preface Mr. Fitzgerald says:—

"Without unduly flattering myself, I please myself with the fancy that the perusal of this slight treatise will foster in many a sort of taste for architecture."

It is not the "sort of taste" that we can commend to anybody.

Répertoires de Peintures du Moyen Age et de la Renaissance, 1280–1580. By Salomon Reinach. Vol. I. (Paris, Leroux.)—M. Reinach has here given us the first instalment of a work which is to do for early painting what Bartsch did long ago for engraving, and what M. Reinach himself has already done for classical sculpture. That is to say, he has given scholars of early painting for the first time a means of certain reference to any picture included in this vast collection. Already in this first volume we have 1,046 pictures described by means of outline, for in effect these outlines are rapid and summary descriptions of the pictures. Thus, in future discussions about pictures, all that will be necessary will be to quote 'Rép. de Peint.,' i. 424, and the reader will be referred to a picture by Lorenzetti no longer to be found, to which he would otherwise have had no clue. Or, to take an opposite instance, i. 217 will take the reader to 'La Belle Jardinière' of the Louvre. The advantage, not to say the necessity, of this common reference for all students is so obvious that, as M. Reinach says in his witty preface, he would be ashamed to labour the point were it not that some people have criticized this effort on the irrelevant ground that no æsthetic quality of the original can survive the process of translation into small line zincogravures. The author has himself no illusions on this point. His work is scientific, not artistic, though it is a science devoted ultimately to æsthetic ends. He is, as he himself says, making roads in a country which has been frequently explored, but never civilized. The road-maker undoubtedly gives the traveller the means of admiring the scenery, but its beauty is not his immediate concern. And, indeed, though these thousand odd small engravings make no pretence to artistic beauty, they are for their purpose wholly admirable. No one familiar with early paintings can fail, as he turns over the leaves of this book, to recognize instantly any picture that he has seen. The open line work is perfectly clear and lucid, and the character of the original is caught extremely well, so that a Raphael does not look like a Van Orley, or a Giotto like an Andrea del Sarto, as is not infrequently the case in those earlier collections of line engravings which tantalize the student by their attempt at elegance of style. The collection is arranged according to subject, while spaces left blank by the larger prints are given to portraits, which are thus scattered through the book.

This book is, of course, by no means exhaustive, either of any one subject or any one artist's work, but the series is capable of indefinite extension in future volumes. The legend includes the gallery or collection in which the picture is, or the sale at which it appeared last, and the name of the artist, and, where this is a subject of dispute, M. Reinach adds various attributions with the names of critics, and not unfrequently bibliographical references, which will be of the greatest help. Altogether the book is the result of an erudition and industry, aided by a keen intelligence, which merit the highest praise. M. Reinach has here performed not the least of his many great services to the methodical study of art. It is a book which no student can possibly dispense with, since it is bound to become the standard, as it is the only, universal book of reference.

Pictorial Composition. By H. R. Poore, A.N.A. (New York, Baker & Taylor Co.)—There is a wild and Western freedom about this book which is entertaining at first and becomes in the end exasperating. The author is certainly no respecter of persons, and he has no hesitation in contravening the received opinion of centuries. He sets out to show how great has been the improvement of the art of composition in modern painting as compared with that of the Old Masters. He corrects Andrea del Sarto with the same assurance that he recommends for praise Detaille and P. Moran and E. Spitzer—to mention but a few of the entirely undistinguished modern painters in whose work he finds his principles exemplified. He considers that he has solved the whole problem of composition by the principle of balance about a central line. It is true that to establish this he invents after the event innumerable rules for establishing the weight and stress on either side of his fulcrum. At one time he discovers that "the placement of the important item or subject has little to do with the balance scheme of a picture." It is true that at others he calls attention to the significance of a form as affecting its weight in the balance, but that he should ever have formulated so amazing a statement as that we have quoted shows how far he is from understanding the subject.

For if there is one element of design in which the Old Masters are supreme, one element which modern art has persistently neglected, it is that of composition. Composition, as Mr. Poore understands it, is a purely negative quality. The kind of balance he establishes is merely something of which we should miss the absence; it affords about as much æsthetic pleasure as the irregular but balanced grouping of a handful of shot upon a flat rectangular plate. Composition as Raphael, Titian, Rubens, and Reynolds understood it meant a closely woven mesh of interacting lines and masses, each of which had its function both as decoration and expression, with these two coefficients of the line acting and reacting upon one another in such a way as to heighten indefinitely either value. Composition thus understood becomes one of the chief elements, if not the chief, in the material decorative beauty of the picture, as well as one of the chief vehicles of its spiritual expressiveness. That unity is the aim of composition both in Reynolds and Detaille one may admit, but the unity is capable of all degrees of intensity and richness. In the one case the richest elements of design are woven together so as to produce a complex and yet instantly apprehended whole; in the other analysis may reveal that the apparently disparate figures are grouped with a certain deliberation, and that we should be not merely indifferent as we are, but acutely displeased, if there was not this elementary recognition of the principles of harmony. In fact, Mr. Poore's remarks might be of some use to photographers, and it is clearly a selective rather than a creative art that he envisages. No one can fail to get some idea of the nature of art by the study of composition, and even our author's random speculations often contain suggestive and useful hints, though his main conclusions are calculated to do more harm than good. Of his critical

standard, a few lines of the poetry which he quotes, or perhaps composes, with perfect complacency will give a just idea :

Great are the symbols of being, but that which is symboled is greater;
Vast the create [*sic*] and beheld, but vaster the inward creator;
Back of the sound broods the silence, back of the gift stands the giving;
Back of the hand that receives thrill the sensitive nerves of receiving.

There is more "back of" this, but the reader may perhaps be satisfied with this sample.

NUREMBERG.

Nuremberg. Painted by Arthur George Bell and described by Mrs. Arthur Bell. (A. & C. Black.)—There are few cities in which the spirit of place is more pronounced, or which have a more definite and charming atmosphere of their own, than Nuremberg, the "quaint old town of toil and traffic, quaint old town of art and song." And, since the days of Prout and Ruskin, few English or American visitors fail to appreciate it, though they may be perturbed by the signs of modern progress which have sprung up within and without the old walls of the town. Mr. and Mrs. Arthur Bell, who have contributed the present volume to Messrs. Black's series of books illustrated in colour, have certainly appreciated Nuremberg; but, unfortunately, it is one thing to appreciate and another to convey one's appreciation by means of pen or brush. Mr. Bell, no doubt, saw and appreciated the grey walls and the red roofs of the old houses and towers that mount up to the grand old berg on the castle rock. But the impression which he has succeeded in communicating is that of a city with light chrome yellow walls and pink roofs; he has even given us a pink St. Lorenzkirche. His fondness for lemon yellows, indeed, lends a bilious effect to some of his pictures — for example, that of the Fleischbrücke; whilst a passion for prettiness or the desire to use as much of his palette as possible on each illustration has produced results very unlike the Nuremberg we remember. For Nuremberg is not built of coloured marbles, and the colours of Venice are not to be seen on the banks of the Pegnitz. Any one who formed his opinion of the oriel window of St. Sebald's parsonage from the picture facing p. 74 would be likely to find himself very wide of the mark. Much more successful is the part of the inner wall on p. 140.

When we turn to the text we find it difficult to say anything in praise of it. There is such a thing as the art of composition, though Mrs. Bell has paid apparently but slight attention to it. She calls almost every building or work of art she sees "a gem," or "a poem in stone," or "an epic," but these flights of imagination do not compensate the reader for slovenly, unrhythmical, and sprawling sentences, which drag their slow length of jerky parentheses across the weary page, or for the indolent verbs which have forgotten the number of their subjects. Much good work has been published concerning the history of Nuremberg during the last ten years, and it would have been easy, if it was necessary to go over the same ground, to reproduce with proper acknowledgment the results of the labours of others. Mrs. Bell, however, though she devotes a page to telling us that she wrote this book at Nuremberg, gives no references at all for any of her statements of fact, and makes no acknowledgment whatever of her indebtedness to other writers, beyond prefacing almost every sentence or opinion by the vague phrase "is supposed," or "seems," or "is considered." Even so her statements are not to be taken as the real result of modern research. She tells us, for instance, that the first mention of the Nuremberg Rat, or Council of Burghers, occurs in a manuscript bearing date 1526. This is a trifling error of some two hundred and fifty years or more. She places the construction of the Laufer, Spittler, and Frauen Towers in the thirteenth century, though if anything is certain this is, that they were added long after the outer gates of those names were built, which was in the years 1377-91. They were added, as defences of vulnerable points, in the middle of the sixteenth century. Tradition ascribes them to Albert Dürer, but they were not begun till 1555, and the name of the architect was Georg Unger. In her account of the revolt against the Rat, which was suppressed by Karl IV., Mrs. Bell, misled, we suppose, by the name, appears to think that the Nuremberg Patriciate, which monopolized the council, was composed of men of birth to the exclusion of merchants, "a manifest injustice," she says, "for it was chiefly to the merchants and craftsmen that the city owed her prosperity." As a matter of fact the Nuremberg patricians consisted of merchants and landowners, and the obscure and complicated revolution at that period was a rising of the craftsmen, who claimed a share in the government of their town and the right to form guilds. Mrs. Bell thinks that the building of the outer wall

"was arranged for in a very singular manner. All householders, with their children over five years of age and their servants, were compelled to work at it one day in the course of every year."

There is nothing singular in this, except that the order of the council applied to children not over five but over twelve years of age. Mrs. Bell need go no further from home than Oxford to find a similar order for providing a town with fortifications. Perhaps we need not attach too much importance to the statement that the windows of the Lorenzkirche are "among the best preserved examples of early stained glass in Europe." Those who know something of the thirteenth and fourteenth century glass in the French cathedrals will, however, hardly be prepared for this description of the late fifteenth-century glass of Nuremberg, fine as it is. But after this sort of loose description we are not surprised when we are told that the affected Tugend Brunnen by Wurzelbauer is a "very fine example of German Renaissance plastic art at its best," though it was made sixty years after the death of Peter Vischer. On the other hand, it is ignorant praise of a beautiful thing to say that the shrine of St. Sebald by the latter artist is "justly considered the most perfect piece of metal work in the world." But Mrs. Bell's inaccuracies seem endless. Kaiser Wenzel may or may not have been the son, as rumour had it, of a Nuremberg blacksmith, but that he was the son both of a cobbler and of a blacksmith, as we are told on p. 102, we find it very hard to believe.

The name of the founder of the Carthusian monastery, who himself lived in a cell in the building which is now the German Museum, was Marquard Mendel, not Marquand; the battle of Mühldorf should be well enough known to one writing German history not to be misspelt; and the first name of Stoss, the carver, is Veit, not Viet. The habit of giving no references or authorities renders it difficult to ascertain on what grounds Mrs. Bell thinks that Veit Stoss was "falsely accused" of forgery. The document which he forged was produced in order to get back some money of his own which he had deposited with a defaulting merchant, but we do not know of any proof that it was not, as the Rat decided it to be, forged. And surely it is hardly accurate to speak of the "grim Iron Maiden awaiting in the Five-cornered Tower fresh victims for her cruel embrace." We fancy the present Maiden at Nuremberg is a virgin indeed, and that the original instrument of torture is in Lord Shrewsbury's collection.

We have said enough to show that Nuremberg in this handsome series has not fallen into ideal hands for treatment; such excellent print and reproduction of colour were worthy of better stuff. But we are grateful to Mrs. Bell for calling attention to the statue of the bagpipe player on the fountain in the Ebner Gasse, and for recounting in connexion therewith a legend of the genuine Nuremberg brand, which we have not come across in any other writer. It would have been worth while to add that the statue is modern, for the bronze was cast some thirty years ago from the model in wood now in the German Museum. It is possibly by Pancraz Labenwolf.

Nuremberg and its Art to the End of the Eighteenth Century. By Dr. P. J. Rée. Translated from the German by G. H. Palmer. "Art Cities." (New York, Scribner; Leipsic, Seemann; London, H. Grevel.)—The Librarian of the Bavarian Museum at Nuremberg has written a careful survey of the art treasures in that city. He scarcely touches the history of the place, and in that respect the modern traveller will find this book colourless and unsatisfying. To say, for instance, that the application of the town to be allowed to appropriate the Jewish quarter was granted is not a picturesque way of stating the horrible circumstances under which the site of the Hauptmarkt was cleared. The Bratwurstglöcklein is likewise baldly dismissed as "the most widely famed thing in the town." But Dr. Rée traces the development of German art, as illustrated by the buildings and in the museums of Nuremberg, in painstaking and elaborate fashion. His treatment of the artists and craftsmen who succeeded Dürer will be found especially valuable by English tourists who wish to learn something more of designers and artist-craftsmen like Peter Flötner, Wenzel Jamnitzer, or Virgil Solis than they can find in most of the books on Nuremberg. We are pleased to note that Dr. Rée agrees with those who now think that the famous Nuremberg 'Madonna' resembles the works of the Vischers so much that it may well be attributed to the hand of Peter Vischer the Younger, and be regarded as a model by him intended for casting. The author is hardly on such safe ground when he assigns the bronze font in the Löffelholz Chapel of St. Sebald's Church to Hermann Vischer on the strength of its resemblance to that in the Town Church of Wittenberg. It probably belongs to an earlier date. Hermann Vischer may have been responsible, however, for the first version of the gigantic bronze crucifix outside the choir of the same chapel, which was to earn the Nurembergers the nickname of Herrgottschwärzer. Dr. Rée's account of this monument of the Starck family would lead one to suppose that it was first set up in 1624. It was recast then, but erected originally in 1482. The reference to the Baumgärtner altarpiece by Dürer might lead the unwary to think that it was still in the church of St. Catherine, for which it was painted. We doubt if the system of great underground passages which connect the castle and town hall, and run outside the town, can be adequately explained as merely or especially for the water supply. Probably they formed an important part of the defences of the town, and a means of exit in times of crisis.

This volume of the "Art Cities" series is abundantly illustrated by one hundred and twenty-three photographs, well executed and well chosen. But in spite of its merits, we fear that English readers will find it hard to digest. The translation of the book looks as if it had been made in Germany. A succession of German sentences, with all their parentheses, however accurately rendered, does not constitute readable English prose, even if the original had any pretence to charm of style or literary grace. Of one church we are told that, "taken from its true use after the Reformation, it has from strange causes housed since 1620 the singing schools of the Meistersinger." The Water Tower,

we are informed, in an amazing mixture of metaphors,

"makes an exceedingly solemn impression, and it is so well suited to give an effect of sullen silence, that it calls up before us gloomy figures.....and awakens in us a whole series of gruesome pictures."

This must, indeed, be a noisy silence. The effect of a series of such sentences is that of a schoolboy's exercise rather than that of an English book. We have noted misprints on pp. 12, 13, 32, 135, and 152. And the translation of Frauen Thor as Women's Gate misses the significance of it. To be consistent, Mr. Palmer should translate Frauenkirche as the Women's Church, not, as he rightly does, the Church of Our Lady.

AN UNRECORDED REMBRANDT.

139, Gloucester Road, S.W.

To maintain that an admirable work, fully signed and dated, by one of the three greatest painters, could be exposed for sale, unrecognized, for some time in the window of a shop in a frequented and by no means obscure thoroughfare in the largest city in the world, and be finally purchased by a lady for a small sum—an infinitesimal fraction of its probable value—on account of its general merits, and without a suspicion as to its identity, would blast the reputation for verisimilitude of the most popular novelist. Yet such an incredible event has in very truth recently taken place in London. The signature, unquestionably an authentic one, which, though easily visible, was not discovered until after the delivery of the purchase to the present owner, is "Rembrandt ft. 1634," and the picture is a splendid example of his practice at that period, when he was mastering the tightness of handling arising from the timidity of inexperience, but had not altogether attained the forceful ease of his later years. It is a portrait of Saskia in her youthful beauty, quite the most charming I have ever seen, at the age of twenty-two, painted the year of her marriage. In general effect it resembles the smiling, or rather grinning, portrait at Dresden, painted in 1633, the bust in profile, the head somewhat bowed forward and turned almost full face to the spectator; but the pose of the head is slightly different, and there are many variations in the colouring. The feather in the broad red velvet cap she wears is here light green instead of grey, the dress is blue instead of blue and white, and the shoulder-knots dark blue, not gold. But the most important distinction is in the expression. In place of the forced grimace which wrinkles up the face muscles in the Dresden portrait and makes her look years older than her real age, we have here the lips only slightly parted in the most natural and fascinating smile. The painting, which is on canvas 20¼ in. × 17½ in., is in remarkably excellent preservation, the only scars from the scythe of Time, all slight and easily remedied without detriment to the beauty of the work, being two small patches from which the paint has been scraped, one in the background, the other at the bottom of the shoulder-knot, and a break in the canvas under the shadow of the hat which has been not too skilfully patched up.

The history of the picture is at present totally obscure, and it has no place in Dr. Bode's monumental work. In Smith's 'Catalogue Raisonné' there is a description of a picture, numbered 579, which strikingly suggests it:—

"A young lady of a smiling countenance, with her head bent a little forward, and turned over her shoulder towards the spectator, and one hand placed on her breast. She has on a large slashed silk hat and feathers, and her dress appears to be of costly materials."

As, however, he only knew and described it from an engraving by Riedel, which I have as yet been unable to discover, this does not throw much light on the subject.

In conclusion, by the kind permission of the owner, I am enabled to announce that those who are genuinely interested in the matter may procure the opportunity of judging for themselves the authenticity of the work by applying by letter only to Mr. Hubert C. Corlette, 2, New Square, Lincoln's Inn, W.C.

MALCOLM BELL.

SALE.

THE following pictures were sold at Messrs. Christie's on the 15th inst.: H. Fantin-Latour, A Basket of Roses and Poppies in a Glass Bowl, 325*l.* Pieds d'Alouette et Roses Trémières, 399*l.*; Hollyhocks in a Glass Vase, 346*l.*; Roses, Asters, and Dahlias in a Bowl, 220*l.*; Roses in a Glass, 147*l.* B. W. Leader, Dartmoor, 105*l.* S. E. Waller, Outlaws, 126*l.*

Fine-Art Gossip.

AN interesting pamphlet has been produced by Mr. W. J. Davis, of Birmingham, the Secretary of the Brassworkers' Trades Union, on 'The Brassworkers and Metal Mechanics of Berlin.' Mr. Davis pays a tribute to the beauty of the Berlin hammered work, which "finds employment for very many art metal-workers," and constitutes a process in which, according to Mr. Davis, we are mere "imitators." As regards Berlin brasswork generally, he thinks it too heavy for our modern fashion, but notes, on the other hand, that we prefer polish, whereas Berlin has a preference for simpler finish. Mr. Davis describes the brasswork of the altar and candelabra of the new cathedral at Berlin, and that of the electric-light great lamp of the central lobby of the new Parliament House.

MR. E. A. B. BARNARD writes concerning the Campden maces:—

"I have only recently read Mr. William Mercer's letter in your issue of July 8th, in which he alludes to the 'fate of the Campden town silver maces, which have gone nobody knows for certain whither!' I am happy to say that the maces always have been, and still are, in excellent and safe keeping, and that arrangements are at present being made by the Campden Town Trust for the proper placing of them in the Campden Town Hall, where they will remain on permanent view."

The Antiquary for August will contain, among others, the following articles: 'Prehistoric Pile Structures in Pits in South-West Scotland,' by Mr. L. Maclellan Mann; 'Notre Dame de Brou' (illustrated), by Miss E. C. Vansittart; 'The Wines of Horace,' by Mr. G. L. Apperson; 'Leprosy in Lancashire in the Twelfth and Thirteenth Centuries' (illustrated), by Lieut.-Col. H. Fishwick; an account of the Sherborne Festival; and 'The Dunmow Chair' (illustrated), by the Rev. C. H. D. Grimes.

TRINITY COLLEGE, Dublin, has followed the good example of Magdalen College, Oxford, and has voted a conditional 50*l.* towards the 300*l.* required by the Græco-Roman Exploration Fund to continue work next winter. These subscriptions will be paid as soon as the full sum is guaranteed.

MUSIC

Musical Instruments.—Part I. *The Irish and the Highland Harps.* By Robert Bruce Armstrong. (Edinburgh, Douglas.)

IT is hard to overestimate the service done both to archæologists and musicians by this admirable monograph on the relics of a lost art. How important the harp was in old Irish society is manifest from its appearance on its azure field in the royal arms. Beginning with Giraldus Cambrensis, all early observers of Ireland were struck with the importance and brilliance of harp-playing at the court or castle of every Irish chieftain. They also seem to agree in wondering more at the marvellous execution of florid passages than the simple expression of melody, though praise of this latter is not wanting. There were, indeed, noted amateurs, and most good houses once possessed a harp, which took the place which the piano occupies in our drawing-rooms; but the professional harpers were a distinct class, once known at sight by their finger-nails, which were grown into claws, and were used as a natural plectrum for striking the strings.

If we can draw any inference from the two scales to which these harps were said to be tuned, and which Mr. Armstrong gives us from antiquarian sources, it is this—that the harp with 43 strings had only one note wider compass than that with 30, the additional strings merely adding chromatic intervals within the same four octaves and a third. But the 43-string scale, reproduced from Prætorius's old book (Wolfenbüttel, 1619), is so queer that we cannot but suspect that some Irish harper was "pulling the author's leg" when he gave it. There is, indeed, not a little suspicion that Bunting met with the same treatment when the old harpers, collected at Belfast in 1792, gave him the technical names of their strings; for O'Curry, the great Irish scholar, coming thirty years later, sets down all these technical terms as simply apocryphal. Yet to a musician they do not seem mere inventions for the purpose of gulling a Saxon, though this instinct in the Irishman must always be reckoned with, when we are dealing with uncorroborated evidence. The scale written down by Bunting for 30 strings is rather what we should expect, especially the tuning of two adjacent strings to the G which was the key-note of most of their music. For a shake upon these "sisters," as they were called, would produce the effect of a sustained key-note, and it may well have been the direct descendant of the *mese* in the old Greek music. But, alas! all Mr. Armstrong's intelligent and painstaking researches have produced but little trustworthy information on this all-important question. The remains of the extant harps are but fragments patched together; in no case could a harp ever have been kept in tune like a piano, for the strain upon the frame of the stretched strings was such that, with every care, these instruments went to pieces in the course of a few generations.

The Highland harp, twin sister of the Irish, receives, of course, from the Scotch antiquary full and sympathetic treatment. He can find only two specimens to describe, but these are better preserved than the dozen or more from Ireland. He thinks the Scotch "Queen Mary" harp worthy to be called the queen of the tribe, and this may be admitted so far as its condition is concerned. But surely the splendid restoration of the FitzGerald harp pictured on the cover of his stately volume far exceeds the rest in artistic beauty, not only of form, but also of ornamentation.

The decoration of these instruments is indeed a curious and wide subject in itself, and Mr. Armstrong has given the student

of Celtic ornament ample materials for studying this branch of it in the many exquisite plates, besides scholarly drawings, which make his volume a thing of beauty as well as a mine of learning. Since the extant Irish harps date from Tudor or Stuart times, if not later, the first and most obvious point of interest in their decoration is the survival of a far older style, reaching back to that of the high crosses, or even to the Book of Kells. Both the elaborate geometrical designs and the introduction of wholly foreign animal life are there, though we see them gradually fading out into modern weakness and vulgarity. We have not sufficient evidence to judge the Scotch side of the question; the extant specimens, except, perhaps, for the metal ornament on the Lamont harp and the fore-pillar of the "Queen Mary," are poor and tame in comparison with the Irish designs.

Mr. Armstrong has also given us specimens not only of the tunes, but also of the *fioriture* played on these harps, the Irish being from Bunting's collection. We cannot say that either of them strikes us favourably, but we can tell the reader that the melodies, which at first sight seem poor, are very delightful, when sympathetically sung and played in some of the modified forms now current throughout Ireland, and the same is no doubt true of the Highland tunes. Without the interpretation of national feeling, the pure notes of national music have seldom any obvious value. Owing, we suppose, to the costliness of the harp, and the difficulty of using it, the fiddle and the pipes have long since supplanted it both in Scotland and Ireland, and the melodies have been, of course, influenced by the medium used for conveying them to the public. Many old Irish melodies can be played, in their simplest form, in a pentatonic scale (*e.g.*, on the black notes on the piano), which points to a stringed instrument so tuned. This archaic quality very soon disappeared when the same tunes were played on the fiddle—especially when the harpers had already led the way by using chromatic embellishments. We have recently spoken in these columns of the ill-treatment of these melodies at a later age by Moore and Stevenson in the now popular 'Irish Melodies.' Perhaps the professional harpers were in their day just as criminal in their handling of ancient music.

We can hardly imagine that this extinct instrument, representing an extinct art (or rather *virtuosity*), will ever again receive such elaborate handling. All that can be said archæologically has been said by Mr. Armstrong, and whatever can be added musically must come from some practical harp-player who is able to make a comparative study of the early stringed instruments of civilized races. We have only to regret that in his very careful descriptions Mr. Armstrong is not always clear. In every case, when the construction of an instrument is described, the ordinary reader wants an outline drawing, with letters or numbers to guide him. This is but seldom vouchsafed in the present volume. Here, for example, is the account of an all-important feature in the Celtic harp. We constantly find allusions to the T shape of the fore-pillar. When we seek to discover what this means we find the following:—

"The pillar was more or less curved, and had for a considerable portion upon either side of the outer curve a projection, the section taking the form of the letter T. When this formation was made to commence and terminate near to either extremity of the fore-pillar, an exceptionally strong arm, able to withstand the tension of the strings towards the left, was the result."

Now all this, with the exception of the allusion to the left, is intelligible; but is it clear? We have given but one such sentence; we might have cited many. Moreover, if the reader looks out for references to the T formation in the index, he will find no mention of it at all. For the index is unworthy of the book, and almost useless. How often the most careful and accurate writers seem incapable of compiling even a decent index!

We will add, in conclusion, this note on the history of the harp in Ireland during the last hundred years, that up to forty years ago it was still fashionable for young ladies to learn the pedal harp and play it at evening parties, mainly (we were told) on account of the graceful attitudes assumed by the players. The nunneries in which girls are educated still regard harp-playing as an elegant accomplishment, and there are yearly competitions at the Feis Ceoil in which that instrument is included. But in Protestant society it is no longer heard.

Memories: an Autobiography. By Walter Macfarren. (Walter Scott Publishing Company.)—The memories of a musician who can boast of "upwards of three-quarters of a century's experience" cannot fail to prove interesting, for they carry one back to the olden days when Mendelssohn first visited London; when Rossini was the most popular of opera composers, and when Wagner was studying at the Nikolai-Gymnasium, Leipsic, and making his first essays at composition. In 1831 young Walter heard Handel's 'Acis and Galatea' in the old, recently demolished, Queen's Theatre in Tottenham Street, and this was probably his earliest musical recollection; he was then a "little four-and-a-half-year-old chap." In 1836 he was admitted a chorister in Westminster Abbey. Of two events of the year 1844 our autobiographer has a vivid remembrance and special souvenirs. He submitted his juvenile attempts at composition to Mendelssohn, and he heard young Joachim play the Beethoven Violin Concerto. The souvenirs consist of musical entries in their handwriting in his album.

Joachim, then fourteen years of age, had his portrait taken at the Daguerreotype Studio in the Strand, and it forms one of several interesting illustrations in the present volume. Macfarren's latest remembrances of Mendelssohn are centred round two of the five performances of 'Elijah' in its revised form at Exeter Hall, under the direction of the composer; the performance of Beethoven's Pianoforte Concerto in G, when the composer extemporized two wonderful cadences; and the improvisation at a conversazione given by the Society of British Musicians, when he invented a fantasia on themes of three works he had just heard by Lovell Philipps, Charles Horsley, and Mr. Macfarren's brother, the late Sir George. The recalling of those early events has a certain fascination. We now live in very different times. Mendelssohn, though not forgotten, no longer enjoys the same public favour. It is curious to note how little Mr. Macfarren has to say about the man who, in a different way, has since taken hold of the public. That he should speak coldly of Wagner when the latter came to conduct the Philharmonic Concerts in 1855 is not surprising, for the Mendelssohn influence was still strong over him; but when, nearly thirty years later, he records the death of Wagner—the only other allusion to the master in the volume—he adds that at a concert given by the Philharmonic Society, the first part was devoted to his music, but that the last item in the programme, "the brilliant overture to 'Ruy Blas,' by that composer whom the author of 'Tannhäuser' affected to despise," pleased more "than anything in the Wagner selection." Wagner may have despised the indiscriminate, exaggerated praise of Mendelssohn which prevailed when he (Wagner) came to London, but his references to that composer in his famous essay on 'Judaism in Music' show how highly he esteemed Mendelssohn's gifts as displayed in some of his best, most characteristic work. Mr. Macfarren, who heard Liszt in 1842 and again in 1886, and thought that at the latter date the pianist "had greatly refined his style and touch," must possess a keen memory to be able to compare performances so far apart. The volume recalls many interesting names and events, but we have confined our remarks almost exclusively to the men who played so important a part in the musical history of the nineteenth century.

Briefe von Hans von Bülow. Herausgegeben von Marie von Bülow. 5 Band. (Breitkopf & Härtel.)—Many of the letters in this volume, edited by the widow of the great pianist, are written *currente calamo*, and thus one gets nearer to the man than would be possible in essays or books in which spontaneity of thought, if not marred, is more or less modified by reflection. Bülow's pen, like his tongue, was sharp, and at times bitter; but he possessed a strong intellect and a keen critical faculty. His letters are, therefore, instructive as well as interesting.

A few extracts may be given. Most artists are naturally very sensitive to unfavourable criticism, although they frequently try not to show it. Bülow, indeed, in one letter thanks a friend for not sending him "newspaper-rubbish," but begs him to go one better, and never mention what the papers say; yet from other pages of this correspondence we gather that he did read notices, and was highly pleased when his great gifts were recognized. Writing about a concert at the Crystal Palace in 1874, he makes a pleasant reference to the orchestra as the best in England, and to Sir August (then plain Mr.) Manns as one of the most excellent conductors. In the following year he plays a Beethoven Sonata with Joachim, and this reminds him that twenty-three years previously they played the 'Kreutzer' Sonata together at Erfurt for the first and only time. This allusion to the past serves also to remind us that notwithstanding the long period during which Dr. Joachim has laboured in the cause of high art, he is still active. The music of British composers is now attracting far more attention in Germany than it once did. Bülow, in his day, helped to make it known. Writing from Hanover in 1878, he says, "To-morrow at a benefit concert I play a quartet (Op. 11) by my Scotch friend Mackenzie."

Bülow heard 'Lohengrin' at Drury Lane, and describes the performance as unintelligent, and the reception as cold. We find that he possessed the power of self-criticism. The late Sir Charles Hallé was of somewhat phlegmatic temperament, whereas Rubinstein was the contrary: "I am," said Bülow, "between the two." The name of Rubinstein reminds us that Bülow greatly admired him as a pianist, if not as a composer. He once wrote to Ullmann to engage Rubinstein without fail for Paris, adding that "the composer will not ruin the pianist's impresario." The letters vary in interest, yet there are few which do not contain some racy sentence or keen criticism.

Musical Gossip.

THE Promenade Concerts, with the Queen's Hall orchestra, under the conductorship of Mr. Henry J. Wood, will begin on August 19th and end on October 27th. Mr. Henri Verbrugghen will be principal violin, and Mr. Percy Pitt, as usual, organist and accompanist. A list of vocalists engaged includes the names of Mrs. Henry J. Wood, Miss Emma Holmstrand, Miss Edith Clegg, and Messrs. Lloyd Chandos, John Harrison, Gervase Elwes, Robert Maitland, William Ludwig, Albert Garcia, and Frederick Ranalow.

IT is proposed to form a choir at Leighton House for the sole purpose of singing English madrigals. The madrigal, though born in the Netherlands, flourished exceedingly on English soil: the madrigals of the Elizabethan period rank among the best of that particular form of art. In London much more attention is paid to instrumental than to choral music. In the time of Elizabeth the man who could not take his part in a madrigal was regarded as a "barbarian," and people "wondered where he was brought up." The intention of the new society is to give two concerts annually, and from time to time lectures on the madrigal. The concert programmes will include specimens of madrigals of which there are no modern reprints. Further particulars respecting this new and worthy undertaking may be obtained from the hon. secretary, Mr. C. L. Stocks, 16, North Street, Westminster.

ARRANGEMENTS have been made by the Grand Opera Syndicate and Mr. Frank Rendle with the San Carlo Opera Company (of Naples) to give a season of Italian opera for a period of eight weeks, beginning in the first week of October. The musical public will not have forgotten the excellent performances given by that company last autumn, while those who are interested in novelties will probably not be disappointed.

MADAME ALBANI has been engaged for the forthcoming festivals at Worcester, Bristol, and Norwich.

IT has been frequently stated that the great singer Madame Pauline Viardot possesses the autograph score of Mozart's 'Don Giovanni,' and it is only recently that a foreign paper of some standing repeated the error—for such it is. The score was presented by her to the Paris Conservatoire. Last year M. Weckerlin, librarian of that institution, showed us the treasure; but he was unable to name the exact date at which it came into the library. Feeling that in the history of the autograph the date of transfer was of importance, we made inquiry of Madame Viardot herself, but she too could not remember. After that she was again asked by letter if she could furnish the date. Weeks passed, and no reply came. We felt, indeed, somewhat ashamed, although in a good cause, at having troubled a lady now midway between eighty and ninety. Last Monday, however, we received a letter from her, in which she says: "I have *at last* found the date of the day when I put the score of 'Don Giovanni' in Ambroise Thomas's hands, *July 6th, 1872*."

THE proprietors of *The Gentlewoman* offer a prize of 25*l.* for the best composition, of any character or length, scored for an ordinary concert orchestra by a lady of British or colonial nationality, residing in any part of the British Empire. The prospectus issued by them states that, although woman has shown herself the equal of man as an executant in music, she does not appear able to approach him as a composer. "All the great musical works of the world," it is truly remarked, "are the outcome of man's creative genius." This they seem to think may be owing to woman's lack of opportunity. Whole columns might be filled regarding the reasons for this inferiority, but we refrain from comment, and merely express our hope that the offered prize will result in a musical work of real interest. The judges, who will soon be named, may withhold the prize if no composition of sufficient merit is sent in. Further information may be obtained by application to the editor of *The Gentlewoman*.

THE Italian papers announce that Umberto Giordano, composer of 'Andrea Chenier' and of 'Siberia,' the latter of which has recently been given with great success at Paris, is about to set to music a French libretto in four acts, by MM. Victorien Sardou and Moreau.

PERFORMANCES NEXT WEEK.

MON. and TUES. Royal Opera, Covent Garden.

DRAMA

Dramatic Gossip.

WITH rapidity almost unprecedented one theatre after another has closed its doors, and the season may almost be held to have reached its nadir. The slack time will, however, be exceptionally short, and an amount of novelty rare at this period is to be witnessed during the coming month. It is curious that of the houses at which dramatic, as distinguished from musical, entertainments are given, the four situated *dos-à-dos* in Charing Cross Road and St. Martin's Lane are almost all that remain open.

AT the Criterion will before long be presented 'The Lucky Miss Deene,' a comedy by Mr. Sidney Bowkett, the heroine of which will be played by Miss Ethel Irving.

MISS JESSIE MILLWARD hopes to produce in the West-End 'The School for Husbands,' an English comedy of manners, by Mr. Stanislaus Stange.

'LES PHÉNICIENNES,' adapted from Euripides by M. Georges Rivollet, and first given in the Roman arena in Orange, has been produced at the Comédie Française, with M. M. Mounet-Sully as Œdipe, M. Silvain as the Shepherd, M. Albert Lambert *fils* as Polynice, M. Paul Mounet as Créon, and Madame Segond-Weber as Antigone. An ode in favour of peace, which is rendered by the young shepherd, has been introduced by the translator.

AMONG novelties accepted by the Comédie Française are 'L'Union Libre,' two acts, by MM. Jules Paublan and Léo More; 'La Concurrente,' three acts, by M. Jean Ray; and 'Sans Religion,' four acts, by M. Claude Frémy.

'LE VIEIL HOMME,' a comedy by M. Georges de Porto-Riche, will be produced during the autumn at the Gymnase, with Madame Réjane and M. Huguenet in the principal *rôles*. The same dramatist is said to be preparing for the Vaudeville an adaptation of 'Manon Lescaut.'

AT the Odéon during the coming season will be given a play by Pierre Loti, the scene of which is laid in India.

LITERATURE

The First Romanovs (*1613–1725*). By R. Nisbet Bain. (Constable & Co.)

TILL recent times the history of Russia, in England at least, has been treated mainly in compilations, where the writers were generally incapable of using the original authorities, owing to their ignorance of the Russian language. Thus we are not inclined to attach much importance to the work of Dr. Dunham, which appeared in the early thirties of last century, and other compilations which were issued at the time of the Crimean war. A better day began with Rambaud's 'History' (1878), a work based upon original research, and written in a readable and picturesque style. Others followed on the same lines, and at the present day the field is chiefly occupied by the meritorious labours of Mr. Nisbet Bain, of the British Museum, and M. Waliszewski, a Polish gentleman residing in Paris. These authors have pretty well covered the ground from the days of Ivan the Terrible to the death of the Empress Catherine II. M. Waliszewski is said to be preparing the reign of Paul, and we may expect something very piquant in his account of the eccentric career of that unfortunate monarch.

These two writers have much in common: a fondness for anecdote—sometimes, perhaps, we might regret that these "good things" have not more evidence to support them—and a very praiseworthy habit of giving the social condition and everyday life of the people. These descriptions have been in vogue in historical composition in this country since the days of John Richard Green. We might go further back, and say since those of Charles Knight in his 'Pictorial History of England.' Mr. Nisbet Bain, in the volume before us, discusses Russian history from the accession of Michael Romanov in 1613 till the death of Peter the Great in 1725. The reigns of Michael, Alexis, Feodor, and Ivan comprise a barbaric period of Russian history which, we fear, is for the most part interesting only to the antiquary. The ordinary reader will glance at it, just to learn how the first elements of a powerful Russia arose, but will then put it aside till he comes to the times when Russia shook off her Eastern environments, and took rank among the powers of Europe. The story of the continual struggles between Russia and Poland is interesting and well told by our author. The treaty of Andrusovo (why Andrussovo, which is neither Polish nor Russian?) marks the conclusion, as Mr. Bain says, of the open struggles between Poland and Russia. The policy was afterwards to be intrigue directed against a country which was breaking up. The days of Stephen Bathory were to come no more, and Sobieski, great as a soldier, was no politician.

We are glad in some of these pages to find Mr. Bain in a more placable mood. He shows his fondness, of course, for Charles XII., but his invectives against Peter and the unfortunate Patkul are not so truculent as in former books. He still makes Soloviov his *Magnus Apollo:* not that we have the least desire to depreciate that painstaking but somewhat heavy historian, but Mr. Bain follows him implicitly, even to believing that Peter, when surrounded by the Turkish host at the Pruth, sent the famous letter to the Senate. No contemporary authorities endorse this statement, and it is only half believed by Soloviov himself. In the same way, in his book on the 'Pupils of Peter the Great,' Mr. Bain accepts the whitewashing of Bestuzhev-Riumin, in which we are glad to see that M. Waliszewski, in his biography of the Empress Elizabeth, does not follow him ('La Dernière des Romanov,' Paris, 1902, p. 116). If we accept the Russian historian's view of the case, then Sir Charles Hanbury Williams and Lord Hyndford sent home lying dispatches, and the Austrian Ambassador was equally guilty. We are glad that Mr. Bain in this volume has described at considerable length the career and fate of Nicon; of whom Leroy-Beaulieu says with considerable justice that, after Peter the Great, he is the most prominent figure produced by Russia. We imagine that few people in England know any more about him than can be gleaned from the pages of Dean Stanley. The work of William Palmer, in which he made use of manuscript material which has not been published even in Russia, has become very scarce. In some other points we feel inclined to disagree with our author. He evidently does not believe that *hetman* and *ataman* are the same words, although Miklosich, the greatest Slavonic scholar who has appeared up to the present time, thought they were (see also Gorayev, 'Sravnitelni Etimologischeski Slovar Russkago Yazika,' Tiflis, 1896, p. 7). Miklosich thought Malo-Russian a language, and not a dialect, according to the opinion of Mr. Bain.

But it is perhaps unfair to carp at these minor inaccuracies (as they seem to us), and it is a more congenial task to praise this interesting book for the many pictures of old Russian life with which it abounds. Chaps. v. and xiv. may be especially cited as teeming with valuable details of the social condition of the country. Mr. Bain is full, as we have hinted, of picturesque little stories. For our own part we cannot wish any of these away, as they give a great deal of colour to an otherwise dull period of history; but we can conceive some readers thinking that the standard of history is lowered by them. Your pragmatical historian, the man full of the political importance and "philosophy" of history, is frequently displeased with these digressions, and will grow tired of Mr. Bain's accounts of dwarfs and drunken orgies. The story of the fate of Alexis, the son of Peter, has often been told, and we believe that the conclusions at which Mr. Bain arrives as to the immediate cause of his death are sound. Much is naturally said in these pages about the eminent foreigners who betook themselves to Russia in great numbers, and having first helped Alexis, the father of Peter, in his reforming measures, in some cases remained to guide his son, and improve their own fortunes in Russia. The tracing of the careers of many of these men would furnish interesting facts. Although Burton and others have done something, much more remains to be chronicled. We are more than ever inclined to think so, if we look at such a work as the 'Brief Sketch of the Scottish Families in Finland and Sweden,' published by Prof. Otto Donner of Helsingfors in 1884. Many of the Scots who went to Sweden and Finland passed over to Russia. We cannot find space to enumerate the Dalziels, Gordons, Carmichaels, Erskines, Hamiltons, Ramsays, and Leslies who made their way into the country and have left descendants at the present day. At the beginning of his fifth chapter much is said by Mr. Bain on the influence of foreigners on the country. All shrewd observers, certainly Kotoshikhin and Krizhanich, had seen that Russia must be civilized by outsiders. That clever barbarian, Ivan the Terrible, may be said to have begun the transformation when he sent a certain German named Schlitt to procure artisans for him. Schlitt, however, was not allowed by the enemies of Ivan to return; they felt that the barbarian would become too powerful with such assistants. Russia was getting rid of her isolation and was willing to send embassies to France in the reign of Michael, and again later in the century. How they behaved on the last occasion has been described at considerable length by M. Leger of Paris in one of his lectures. We also have the ambassador Prozorovski visiting England in the time of Charles II. Pepys has some strange stories about such envoys. As the number of educated men fit to serve diplomacy was scanty, foreigners were frequently employed on these errands, and Menezius was sent to Venice and Rome, disguising under this Latin form his Scotch name Menzies. We think that Mr. Bain has shown skill in his treatment of the Cossack rebellion which transferred the Dnieper Cossacks to the Russians. The history of these events is

rather involved. Readers who wish to take a connected view of Russian development will be glad to get the account of Alexis Mikhailovich, a sovereign to whom the country owes a great deal. The account of this reign will prove a greater novelty than the story of the duel between Charles XII. and Peter, which has been often described. Although, like M. Waliszewski, he seldom spares Peter, Mr. Bain is generous in his words of praise when speaking of the Tsar's death :—

"In frightful physical suffering, with the full consciousness of human weakness, demanding comfort from on high, and imploring the forgiveness of those around him, one of the very greatest of the world's great men had passed away."

As we read such words we cannot altogether find fault with Mr. Bain's treatment of the national hero of Russia. The words quoted are only part of the noble panegyric of Peter with which the book concludes. Some of these clever "appreciations," to use the popular shibboleth, are perhaps a little marred by straining after epigram.

The Native Races of South Africa. By George W. Stow. Edited by George McCall Theal. With Numerous Illustrations. (Sonnenschein & Co.)

MORE accurate than the title printed on the cover of this stout volume is its sub-title, 'A History of the Intrusion of the Hottentots and Bantu into the Hunting Grounds of the Bushmen, the Aborigines of the Country.'

Mr. G. W. Stow, who settled in Cape Colony in 1843, occupied much of his leisure, up to the time of his death, about twenty years ago, in collecting information at first hand concerning the Bushmen, in whose antecedents and wasting condition he, like his friend Miss Lucy Lloyd, took special interest. His work was in September, 1880, sufficiently in shape to be provided with a preface bearing that date, but he appears to have made some alterations in the course of the next year or two, and the book—left by him in manuscript, and since acquired by Miss Lloyd, who asked Dr. Theal to prepare it for publication—has, perhaps discreetly, been very considerably "edited." Besides dividing it into chapters and breaking up the overlong paragraphs, Dr. Theal has struck out "a vast number of extracts from almost every English book previously published upon South Africa," with which, in his opinion, "it was clogged." Expedient as this course may have been, and even serviceable to the general reader, it has rendered it difficult for those more careful students for whom such books are primarily intended to see to what extent the author's views were corroborated by others, or how far he had corrected their inaccuracies. The result is a rather cumbrous mass of speculations, based on laborious and praiseworthy investigations, but lacking the scientific thoroughness that writers like Dr. Roth, Mr. A. W. Howitt, and Messrs. Spencer and Gillen, in their learned treatises on Australian and Tasmanian aborigines, have accustomed us to look for.

Such as it is, however, the work is of great value. Nearly half of its 560 bulky pages deal exclusively with the Bushmen, whom Mr. Stow somewhat fancifully supposed to have sprung from two distinct sets of tribes, a painter set and a sculptor set. It has long been recognized that the Bushmen, called A-ba-twa by many of the Kafir communities, came in remote centuries from Central or Eastern Africa (probably, somewhere near the Ituri forest from which the pigmies now on show in England have been brought), and were of kindred origin to the dwarfish people, often styled Watwa or Ba-twa, who survive there and in other tropical regions. It is also claimed —and this is the most remarkable fact in evidence of their early culture in some particulars, differentiating them from other primitive people presumably superior to them in many qualities, intellectual and physical — that the Bushman tribes have always possessed singular artistic talent, some as painters, others as sculptors. But the inferences based by Mr. Stow on these facts are disputable. He says :—

"This difference marks two distinct divisions of the Bushman race, and judging from the relics which they have left of their former ownership, they entered the widespread territories of Southern Africa by two different lines of migration. The sculptors moved to the southward through the more central portions of the country, crossing the Zambesi and traversing the country by the Lake Ngami, the Mariqua, and the upper Limpopo, thence to the Malalarene and the 'Gij Gariep or Vaal. In the valleys of these two rivers and in that of the Gumaap or Great Riet river they appear to have established their headquarters.....The painters, on the other hand, appear to have advanced through Damaraland along the western coast. On arriving at the great mountain ranges in the south, they turned to the eastward, in which direction they can be traced as far as the mountains opposite Delagoa Bay. The main body of them, however,.....occupying the whole of the Colesberg and Aliwal districts, and crossing the river ['Nu Gariep or Upper Orange river], filled every rock shelter to the east and north-east with their cave paintings. .....The painters were the true cave-dwellers, and delighted in ornamenting the walls of their rock shelters ; the sculptors lived in large communities, but they preferred the stony hills covered with projecting rocks and boulders, which they sculptured over with their carvings. Their great places were permanent residences, from which they started on their hunting expeditions ; their huts were small spherical structures, opening to the east. The occupants of the plains lived in fragile portable shelters, constructed of withes and small rush mats, which they rolled up and moved as fancy and the game might lead them."

Miss Lloyd is probably right in questioning her friend's assumption that the Bushmen reached South Africa in two distinct branches, as painters and sculptors, and in thinking that "this matter was determined by locality and convenience." For the rest, the profuse details given by Mr. Stow concerning Bushman habits and traditions are extremely interesting, and justify his contention that these unfortunate people, the actual aborigines of Africa so far as we know, were not only more intelligent, but also of kindlier disposition, than most other writers have represented. Apparently sole masters of South Africa for at least a thousand years or two, they began to be encroached upon some centuries ago by migratory hordes of Hottentots, of allied stock to the Bushmen, and in later times by the Bantu or Kafir hosts, who were in turn driven south by the Arab invasions of East Africa. When to the persecutions the Bushmen had to endure from both these sets of assailants was added the treatment they received from Dutch, English, and other European appropriators of the country in yet more recent days, it is not strange that, in the efforts to save themselves from the ruin that has befallen them, they met cruelty with cruelty, and developed capacities far more revengeful and treacherous than there was occasion for in their simpler and happier age. The wonder is, rather, that among the survivors of such prolonged and accumulated hardships, so much crude virtue remains as is acknowledged by the farmers, travellers, and others to whom they render faithful and often ill-requited services as drudges, scouts, guides, and so forth.

The second half or more of Mr. Stow's valuable collection of facts and theories, dealing with the Hottentot and Bantu encroachments, is less satisfactory than its forerunner, and, though there are frequent intimations in the course of the work that he intended to include in it, if he had not already compiled, an account of the European waves of conquest, this does not appear in Dr. Theal's text. The volume, indeed, ends abruptly with an incomplete description of the Matabele invasion of what is now the Transvaal in and about the year 1837, although incidental references to Boer and British proceedings, as well as to native wars and readjustments, in the course of the following half-century, are made in several parts of the book. Its fragmentariness in this respect is the less to be regretted as Mr. Stow was evidently more at home in Bushmen's caves and huts than in Kafir kraals, or among the white men's archives in Cape Colony, of which Dr. Theal is the custodian.

For all that, the later scarcely less than the earlier chapters abound in new and useful information for all who will take the pains to search it out and sort it. It is especially helpful in throwing light on the confusing miscegenations consequent on perpetual raidings, as plentiful before as they were after the European occupation. Here, for instance, we are told much about the forming, through mixture of Hottentots with Bushmen, of the Korana clans, chiefly on the western side of the Kalahari and to the north, with some of whom the Germans are now having so much unprepared-for trouble. Other instructive chapters concern the Griquas, whose coloured ancestors were Hottentots, but whom several generations of Dutch settlers converted into Africaanders or Bastaards, and who, before the British Government granted their request to be renamed Griquas, had for leaders Barend Barends, Andries Waterboer, Adam and Cornelius Kok, and other local patriots now famous in South African history.

A Publisher's Confession. (Gay & Bird.)

CONFESSION in the ordinary use of the word implies the revelation of crime, or, at any rate, matters of secrecy. The public, which

loves the amusement provided by indiscretion, will find nothing particularly piquant here, since very few names of actual persons are mentioned, and those only in a laudatory connexion. The ten papers before us, moreover, suggest that the art of confession is to advise others—in this case chiefly authors—and explain the deficiencies of other people who share the writer's calling. We learn, for instance, very little of cases in which the anonymous mentor is sorry that he has profited by the ignorance of authors, or been imposed upon by their exaggerated sense of their own importance as literary assets. We do, however, get some opinions of real value, things put in a way which may strike the man in the street, though not, perhaps, so trenchant to experts in the trade. Notable certainly is the writer's point of view, which deserves high commendation. He recognizes ideals, and deprecates the influence of the almighty dollar, so that one may condone his rather evident insistence that he is not as other publishers.

The Publisher is of the United States, and these papers appeared in *The Boston Transcript*. Consequently, the reader will have to translate dollars and cents into our insular currency, and will note certain marked differences between the general state of letters on this side of the Atlantic and the other. The writing is generally clear and, apart from some repetitions, effective. The only phrase which may be obscure to the English reader is "peanut methods."

The book opens with the contention that it is not good business to pay a 20 per cent. royalty to a popular author. It is not worth while, in effect, to advertise one's own liberality and generosity at such a price. We can well believe it, and that "a 10 per cent. royalty on a book that sells only reasonably well is a fair bargain between publisher and author." The cost of advertisement is one of the most serious things to be considered, and the extent to which it can be judiciously practised. It is a thing, we may add, over which the author, in this country at any rate, has little, if any control, legally or practically, so that his book may lose by not being fairly exhibited to the public. It is impossible for him to keep an eye, day by day, on the numerous publications which include advertisements, or to judge the relative value of the positions they occupy as inducements to buy. The fashion of big "booms" is, it is satisfactory to hear, on the wane, and

> "the authors whose books will be remembered longest have not caught the fashion of demanding everything. It was that passing school of 'booms' and bellowing that did it all—the writers of romances for kitchen maids and shop girls, whose measure of book values was by dollars only. Such fashions always pass. For, if novel writing be so profitable an industry, a large number of persons naturally take it up; and they ruin the market by overstocking it."

We are told that there are perhaps a dozen American novelists who secure large incomes from their work; there are many more who are in comfortable circumstances, but profits generally are overstated by the writers of paragraphs.

Of the "literary" class the Publisher has but a poor opinion. In the United States, it seems, they are all limited, one-eyed people; they never see fiction steadily and see it whole. We learn that the

> "'literary' view of fiction is no more trustworthy than the 'literary' view of politics or of commerce; for it concerns itself more with technique than with substance."

Mr. Howells and Mr. James "write to unresponsive markets"; but much as we admire their books, we think it ludicrous special pleading to select them as representative specimens of "literary quality." Their works have definite and exceptional exclusions which make against popularity. Construction is the great thing, says our author, in novels, but we see no reason to suppose with him that the average member of the public which makes large circulations knows more about construction than the professional literary man. On our author's own showing, "Very few books have a serious chance to become literature unless they have good construction." "Literary" men, we presume, read literature; the big public does not; and so we think it highly probable that the "literary" man has profited (dimly, perhaps, and not like a gifted publisher) by ample gazing at books which do exhibit the "architectonic faculty," if we may be allowed, as having a slight tinge of literature ourselves, to use a phrase for a thing we have recognized and studied for years. This talk about "construction" leads to an outburst containing several statements which are certainly not true of this country, and which will amuse or amaze a good many readers in any country which boasts a literature or a supply of well and ill constructed novels. Here it is for the benefit of our readers:—

> "I, for one, and I know no publisher who holds a different opinion, care nothing for the judgment of the professional literary class. Their judgment of a novel, for instance, is of little value or instruction. It may be right—often it is. It may be wrong. But whether right or wrong (and there is no way that I know to determine finally whether any judgment be right or wrong) it is of no practical value. A literary judgment of a new novel cannot affect the judgment that men will form of it ten years hence. Therefore it is of no permanent value. Neither can it affect the sales of a new novel. It is therefore of no practical importance for the moment. I look upon reviews of novels as so much publicity—they have value, as they tell the public that the book is published and can be bought, and as they tell something about it which may prod the reader's curiosity. Further than this they are of no account. Not one of the three publishers whose personal habits I know as a rule takes the trouble to read the reviews of novels of his own publishing."

We know of several English publishers whose habits (why "personal" habits? we see no point in the adjective) include the reading of the reviews of books they publish. The ideal critic of a novel is "un homme du monde doublé d'un lettré," and we think the latter qualification as important as the former. No doubt the Publisher is right in stating that what the public resents most is lack of story in a novel. But is the literary man blind to story because he likes it well told?

Of authors a high opinion is expressed. They are by no means, on the whole, an irritable tribe—a description, by the by, which is not traditionally applied to authors, but to poets, the least fortunate class of authors.

One great difference between publishing here and in the United States is that school-books and "subscription-books" are, in the latter case, separated from general publishing, and are generally produced by houses that publish nothing else. "Two great text-book houses have made large incomes; and they publish nothing but school-books." So your real but unremunerative classic cannot be paid for by your commonplace, but steady-selling arithmetic, as it is, perhaps, occasionally in happy England. The Publisher has a great tirade against what he calls the "brass-band method," and the gambling in popular novels which "break the record":—

> "A successful advertising 'dodge' makes a biscuit popular, or a whiskey, or a shoe, or a cigarette, or anything. Why not a book, then? This would be all that need be said about it but for the 'literary' journals. They forthwith fall to gossiping, and keep up a chatter about 'great sellers,' and bewail commercialism in literature, until we all begin to believe that the whole business of book-writing and book-publishing has been degraded. Did it ever occur to you that in the 'good old days' of publishing there were no magazines that retailed the commercial and personal gossip of the craft?"

It will be seen that the Publisher has a very poor opinion of the "literary" journals; but surely those of the best repute do not deal mainly with chatter about big circulations. And if they do, who supplies this "commercial and personal gossip"? The writer of "literary notes," who, it appears (p. 48), is kept and specially paid in the publisher's office. The Publisher, in explaining the machinery of literary production later (p. 136), says:—

> "Sly little literary notes about the book and the author begin to appear in the newspapers. These, too, have come from the publisher. From whom else, pray, could they come? But they mean that the publisher has to maintain a literary bureau."

The notes in question might come from the friend who knows what the author's book is worth, as well as the "literary bureau" man whose business it is to write it up, and whose inevitable instinct it is to overpraise the work of his own firm. Are we to understand that the "literary" journals possess no writers with long experience of plenty of books, and a multitude of firms, writers who can indite paragraphs in the form they choose, and modify credulous statements made, perhaps, in all good faith?

American publishing houses of the dignified kind are "conducted with more ability," we are told, than the "old houses whose history has become a part of English literature." There is the more need for this pre-eminence, since we gather from this Publisher that the United States has no decent professional critics. Read the following passage:—

> "The great difficulty is to recognize literature when it first comes in at the door, for one quality of literature is that it is not likely even to know itself. The one thing that is certain is that the critical crew and the academic faculty are sure not to recognize it at first sight."

American professors are much busier

writing books than the teachers of English universities, but perhaps the reference is not to them. We have seen, and see every week, excellent critical work from the United States, which it would do a Publisher good to read, and we cannot endorse this sweeping condemnation of the insight of the "critical crew." The author of these pages, who is not above the cheap alliteration of commerce, appears to us to cherish a distinct animus against "literary folk, pure and simple." Do none of those whose books he publishes, and whose friendship with him makes the publishing an ideal rather than a commercial connexion, fall under this designation? Does technical knowledge exclude the "common sense" which is worth more? We should be sorry to think it, and we do not think it. Our Publisher claims that the best type of his class will "talk good English and good sense," with "no nonsense such as reviewers write in the 'literary' magazines." Review notices are negligible, or worse to him. Yet we know of a case not so long ago in which one of these same notices caused the withdrawal of an incompetent book from a press more famous than any in the United States. Authors in this country no less eminent than any mentioned in this book have thanked reviewers for pointing out deficiencies, and providing help of real value. It looks as if the Publisher had heightened matters a little, perhaps, in order to get a hearing, and he has enough good sense to make us hope he will be heard. But we shall be surprised if the critical journals of America worth considering allow his verdicts to pass without protest, his "Heaven bless our shallow gabble called 'reviews'" (p. 132). It is easy to abuse the incompetent: better and in every way more useful to recognize the ability and existence of the honourable minority which by no means lacks influence because it lacks advertisement.

We are entirely in agreement with the remarks made in chap. vi. about the publication of books by good publishers at the author's own expense. Here we get reasoning which is both subtle and sound. The preceding chapter, pointing out that the unknown author never had so good a chance as now, will be encouraging to the public, though its conclusions are not novel to the expert of to-day. We hear frequently of conspiracies to neglect capable work, but they simply do not exist. Everything that is at all worth publication is carefully scrutinized by publishers both in the United States and this country.

For the rest a Publisher's complaints concerning ingratitude and other things hard to swallow are such as may be heard of every profession. He has not, we gather, made a fortune, and he seems to wonder that the race of publishers manage to make any profit at all. He hardly deals, however, with reprints of standard works, which must, one would think, be profitable enough. We remember reading that the strange thing called "musical comedy" was a dead loss to its promoters, and only worth keeping on in London as an advertisement! Mr. Bernard Shaw, in *The Author*, has a poor opinion of the publisher's verdict on literary matters. He says, indeed:—

"I have had tons of his sympathetic advice; and I owe all my literary success to the fact that I have known my own business well enough never to take it."

But this may be only Mr. Shaw's fun. We have no doubt that the anonymous author of this little volume could give good advice to a great many people, but as he prides himself on his frankness and never reads what reviewers say, we may add that good advice is not so rare as he thinks, and that if it is ever attractive, it is when it proceeds from people who lay no stress on their own superiority.

L'Empire Libéral. By Émile Ollivier. Vol. X. (Paris, Garnier Frères.)

We had hoped that the tenth volume of M. Émile Ollivier would contain his account of the preparation or immediate origin of the war of 1870, the most important historical subject with which he has to deal, illustrated as it now is by new facts, giving the world ground for reversal of all that had been written until lately. These pages appear about the moment of the festivities which have celebrated the author's eightieth birthday, and we can only hope that, as we fully expect, he will be allowed by nature to complete his work, an expectation for which the veteran's admirable health gives ground.

The interest of the tenth volume for non-French readers begins in the middle, with its tenth chapter, where we first see the shadow of the impending war. Just as recent revelations have upset the German account of the origin of the war of 1870, so they have been kind to Benedetti. Looked upon in 1870 as a knave or fool, that diplomatist now shines in history as greatly above the average of his class. M. Ollivier quotes passages from Benedetti which, in their new context, read as though inspired. It is clear that in 1868 the fall of the French Emperor became certain, owing to the hesitations increased in an always undecided nature by the advance of lingering sickness. The first conversations with Austria as to an alliance, and the attempt on the part of Austria and France to take England with them under certain eventualities, are related; and in the present volume M. Ollivier shows himself more absolutely impartial than we have found him hitherto. His criticisms on Thiers are severe, but the contradictory attitudes of that typical man of an independent dynastic opposition become obvious and destroy all possibility of finding serious statesmanship in his speeches, when set one against the other.

The same hesitation which was displayed by France and Austria in their political arrangements reacted fatally upon French military preparations. If Germany had been convinced that France was in fact as peaceful as the Emperor was, at times, and many of his advisers were throughout these years, there would have been no war. It was because Germany could obtain no security that Bismarck prepared, by means which in detail were untruthful, a *casus belli* which at the time put France in the wrong. Just as the desire of the military party to attack France in 1875 was unsuccessful, so the design of any who desired to use force against France without at least some necessity would have failed in 1868 and 1869, had it not been that the councils of Louis Napoleon were divided, while his language and his acts pointed first one way and then the other.

The ups and downs of the military projects of Napoleon III. are related at great length. In the course of these pages we find a magnificent historical portrait of Marshal Niel, the Minister of War, and another, less flattering, of Trochu—in a literary sense the best portions of this volume.

The most novel and historically curious of M. Ollivier's revelations concern his conversations with Prince Napoleon immediately after the visits of that powerful and able personage to Vienna and to Berlin. At the time of the Prince's visit to La Moutte, M. Ollivier wrote down the whole of what he heard from his guest. These notes, taken a few days after the important conversations to which they relate, are vivid in their anecdotic form, though they do not change the general aspect of the situation as it was already known. The conversations of Bismarck with Prince Napoleon only confirm the revelations of Benedetti; disbelieved at the time, and now recognized to have been true.

M. Ollivier states that Bismarck was not acquainted with the negotiations for an alliance between Austria and France in March and April, 1868. We are inclined to agree in this opinion. The Hungarians could only be trusted up to a certain point, and no doubt revealed the intentions of Austria to Bismarck in the autumn of 1869. In 1868 the negotiations were vague and not contrary to Hungarian interests, as understood by the Hungarian Cabinet; and the purchase of horses for military purposes by Austria and France was not more than a reasonable measure of precaution. There was in 1868 no proposal of anticipating attack by Germany, and the alliance was rather of a defensive than, like that of 1869, to use military slang, of "an offensive-defensive" character.

After the chapters of historical importance comes one on the death of Victor Cousin, with large references to French official philosophy; and theologians and students of the history of the Roman Church will also find a good deal to interest them. M. Ollivier holds with regard to Italy and the Western Church views which are personal to himself and hardly in accord with those of any school; but they are based on profound knowledge, and there is no subject on which his lifelong studies have been more fruitful.

The original letters which he gives in an appendix are worth reading: the most curious being one in which Prince Napoleon prepares him for their correspondence being opened in the imperial post.

Atti del Congresso Internazionale, &c., 1903. (Rome, Loescher.)

We have now before us seven more volumes of the Acts of this memorable Congress. They are III. (Literature), V. (Archæology), VI. (Numismatics), IX. (Economics), X. (Geography), XI. (Philosophy and

Religions), XII. (Physical Science). This long series of essays on all branches of historical study, though containing some contributions from the general body of European thought, is mainly to be regarded as the official and detailed exposition of what has been attained at this moment by Italian intellect, and what are the paths in which it is pursuing its most successful investigations. In the controversies which agitated the Roman press at the time, it may be remembered that there were angry opponents of the International scheme; there were those who resented the invitation of foreigners, when there was ample learning and talent in Italy to supply material for any congress. As a matter of fact all the long or elaborate work in these volumes is the product of Italy. The national party cannot possibly complain that local investigators did not get ample scope and hearing, and yet surely occasional essays throughout the volumes by distinguished strangers cannot but add to their interest. It was also to our personal knowledge a great relaxation to the audiences who had listened to Italian addresses for hours to hear Prof. Harnack inquiring why there were four Gospels and not one in our Canon, or Prof. Mahaffy why certain Ptolemies had worse characters in history than they deserved. That such historians of mathematics as Cantor should have their say was not only most interesting to any audience of educated people, but also affords a wholesome variety of information to the reader.

But this is not the permanent interest in these volumes, nor the main reason why they should find a place in every library which regards the history of Italy. The Acts are a record of what scientific Italy of 1903 was doing, what it was thinking out, and what it had accomplished. Thus we find xi. ('History of Philosophy and of Religions') the smallest and thinnest in every sense, while v. ('Archæology') is both a splendid and complete record of researches all over Italy, as well as of the theories of prehistoric civilization which are now in favour. The long essay on the philosophy of the Bible by Prof. Labanca is, to an Englishman, very curious, as manifesting a standpoint of knowledge different from any at our universities. To discuss "the primary scope of the Bible," its "secondary scope," and how such a notion as Christian philosophy must give way to the philosophy of Christianism—all this, even with its learned criticism of texts, &c., seems to us antiquated. On the other hand, the volume on archæology is a very mine of new theories and excavations, and as such we naturally give it prominence here.

The main paper of theory is that of Prof. G. Pinza, who discusses the evidence of a homogeneous West Mediterranean culture in prehistoric times; the main record of excavation is, of course, that of Comm. Boni on the Roman Forum, and both have ample illustrations. The recent discoveries about the Forum have been so constantly announced and discussed that we could hardly expect anything very novel in the official pronouncement here, but the bird's-eye photograph of the Forum and the careful descriptions are of permanent value. His report is but one among the very many from the pen of local specialists, which tell us what has been attempted and what accomplished in each of the various divisions of a country where every valley may yield historic treasure. "Quocunque incedis," as Cicero says of Athens, "historia est." The systematic report of exploration is mainly due to the zeal and enlightenment of the famous Academy of the Lynxes, and might well be a model for other countries. Thus not only Rome and Pompeii, but also South-East Sicily, Bruttii, Apulia, Campania, Venetia, are reported upon. Who remembers now that the Italian Government made earnest and costly researches in the valley of the Crathis in 1887 to find the site of Sybaris, and failed? And yet if a new attempt be made, the first essential will be to study the record of the work in 1887, and, at all events, avoid repeating the same experiments. The widely-discussed project to excavate Herculaneum, which Prof. Waldstein has promoted with such zeal, does not appear among the subjects of discussion, and we much regret it. Perhaps it did not take shape till after the Congress.

On another urgent question there seems to have been also complete silence. The splendid recent works of Bertaux and of Venturi on the mediæval art of Southern Italy have indeed shown what exquisite remains even the earthquakes and bishops have still left us in Apulia and Calabria, but surely some protest should have been made against the actually frequent destructions of ancient work—Norman, Byzantine, Saracen, in flavour—by the pious barbarians who occupy episcopal thrones in these southern provinces. It is, indeed, not much better in the north. Any traveller who has not seen the inside of St. Ambrose, most venerable church at Milan, for a couple of years will find to his horror that it has been new painted in stripes! At Bari this zeal goes further; fusty old buildings are rejuvenated and brought down to date by pulling them down and restoring them in fashionable style. Against this the Congress, though standing rigidly aloof from church matters, should have protested.

We now turn back to Prof. Pinza's elaborate study of the sepulchral uses of early inhabitants of the Mediterranean, with a view of verifying or refuting the theory that civilization was brought by immigrants who imposed their uses upon primitive or barbarous races. The problem is peculiarly interesting as regards Italy, where we have not only layers of Indo-European races, but also that special enigma the Etruscans, whose provenance is still a very open question. In the volume we previously noticed there is an interesting article by Prof. Modestov refuting the theory of the Rhætian origin of this people, and showing that, as far as their remains are concerned, there is much greater probability in Herodotus's opinion that they came from Lydia. The trend of Etruscan civilization was not from north to south, from the Alps towards Latium, but rather the other way. The apparently oldest settlements were about Cære, and near the seaboard. The language, of course, remains a great difficulty, for it has not been identified with the remains of any Asiatic language, though the present author points to the fact of the root *Tarch* appearing in personal names on Greek inscriptions from Cilicia and Caria. This is but small ground to go upon, especially as mercenaries crossed and recrossed the Mediterranean at all periods. But the main fact of very early movements of pre-Aryan people is now generally accepted, and if indeed the Asiatic Greeks could found Cumæ as early as 1000 B.C., why should they not even then have followed the example of Carians, Lycians, or whatever we may call them, who had made older settlements on the west coast of Italy? Hence the immigration of a strange people by sea into Italy in the Mycenæan age, or even before it, is not difficult to accept.

The results attained by Prof. Pinza, so far as we can discover from his elaborate essay, which contains no summary or series of propositions to help the reader through the details, require no such immigration. Comparisons of the dolmens, nuraghe, beehive tombs, &c., all round the basin of the Mediterranean point to a general average of culture, a general similarity of uses, not without exceptional national features, and thus he considers Tyrrheno-Latin arts the outcome of the country and its circumstances, not the importation of superior immigrants. The legends of the Greeks regarding their own teachers, and the actual proofs of a large commerce between the Greece and the Etruria of history, have certainly made the other theory popular. It accords with the cases which we think proved. But, on the other hand, it is profoundly true that among primitive races the same wants will produce the same ways of meeting them, even down to small details, without any borrowing from without. Is it possible, then, that the Etruscans represent a pre-Aryan or primitive population in Italy, and that their language is a survival from this earlier age?

Such problems would very soon carry us beyond the limits of a notice in these columns. We have no space to discuss the labours on the cartography, geological, magnetical, seismical, &c., of Italy, which are reported and summarized in the geographical volume. The catalogue of books and essays cited is itself a valuable index to the literature of the subject. There is also a monograph on work undertaken about the port of Ravenna, with maps, which takes us over many interesting moments in Italian history, from Julius Cæsar's day to our own. This volume is, of course, Italian physically; that on literature, though it is partly work on great foreign writers, and by foreigners, is equally Italian spiritually. Even Otto Harnack's German essay on Goethe speaks altogether of his Italian side; another paper shows that Italy, through Virgil and Dante, is the real mother of all the great epics of the world. This is no doubt true; there is no nation that has suggested more to the other literatures of Europe. And yet with all their advantages, and with their long start in art and culture, how few masterpieces have the Italians contributed to the world! When we have set up Dante and Macchiavelli on their pedestals, what is there that every one ought to read, and without which no education can be considered complete? Why is it that masterpieces are to be found in French and

English by the score, while those of Italy, if they exist, have not forced themselves on the world? It is in the face of these things that the Acts of an International Congress in Italy seem to us peculiarly interesting. That nation still shows wonderful talent and wonderful vitality. The restoration, or rather completion, of the west front of the Duomo at Florence by a sort of plebiscite was a thing that could not have happened anywhere else. Why does not their literature, either in prose or poetry, rise more often to the same high level? Their eminence in physical science, in electricity, in engineering, is recognized throughout the world. Financial prosperity is at last advancing with rapid strides. Is it the absorption of so many finer spirits into an estranged church, within and yet not within the nation, which has hitherto starved its growth in literature? There are problems enough here for another congress.

Customary of St. Augustine's, Canterbury, and St. Peter's, Westminster. Vol. II. Edited by Sir E. Maunde Thompson, K.C.B. (Henry Bradshaw Society.)

THE first volume of these two important Benedictine Customaries was issued in October, 1902, and the concluding volume forms the last publication of the Henry Bradshaw Society for 1904. In this book Sir Edward Thompson has given the Customary of Westminster, so far as it can be set forth from the burnt Cottonian MS., Otho C. xi., which suffered severely in the fire of 1731. To this is added the text of an epitomized or early version of the Canterbury Customary, a rough little volume of the thirteenth century. The text of the first of these MSS. is the first part of the Customary compiled when Abbot Ware ruled, namely, from 1259 to 1283. It may claim to be an original work,

"in the sense of being a codification of the customs and observances of his house, which probably had been committed to writing in brief and undigested summaries before his time."

The two Customaries had, of course, a common origin in the rule of St. Benedict and its adaptation to an English house; but in comparing the Westminster text with that of Canterbury it is found that there is a considerable amount of matter in the former which specially concerns Westminster, and that in other respects the variations from the Canterbury text are not infrequent. Notably, there is considerable divergence concerning the provision of lights, as well as the duties of the cellarers.

The editor's preface, or rather introductory chapter, is of peculiar interest, and will be much appreciated by those who lack the patience to go through these Customaries. The only fault to be found with it is that it is too short. He points out that these authentic revelations as to the habits and ordered life of two of the most important of this country's monastic houses have been laid under contribution in Abbot Gasquet's recent admirable book on 'English Monastic Life':—

"In that book may be read an interesting and valuable epitome which it is not necessary to repeat in this preface; here is presented the original material for the student to consult. But, while we do not undertake to draw the outline, which can be found to better advantage elsewhere, yet we may pass some general remarks, and select a few details which indicate the social standard observed in the community."

One of Sir Edward Thompson's first general remarks shows much shrewdness of observation. When commenting on the extraordinary minuteness of detail in regulations framed to meet every possible contingency by a society whose discipline had to be controlled by many departments, each strictly defined against any possible encroachment from its neighbour, the Director of the whole system of the multifarious staff of the British Museum finds that he is "irresistibly, nay, even whimsically," reminded of circumstances not far removed from his own time. He mentions, as an instance, that the dormitory bell of Westminster had to be supplied by the sacrist, but that the chamberlain had to find the bell-rope and to keep it in repair; adding that he recognizes here an instance of that division of responsibility so well appreciated in more than one of our modern public departments. An almost exact parallel doubtless occurred to Sir Edward's mind. For in recent years the readers under the great Bloomsbury dome were sorely tried for many weeks, if not months, by delay in the due repair of the large clock, owing to the conflicting responsibilities of different officials, who corresponded to the obedientiaries of a monastery.

Every sentence of the introduction abounds in interest. Take, for instance, the information supplied as to this great monastery on a single page. The Westminster choir was strewn with reeds from the marsh, which had a dry salt savour, not with ordinary rushes, the moisture from which might be injurious to the health of kneeling or prostrate worshippers. The under-gardener's dog shared a bread allowance with his master. Two old river customs are recorded—the offering of salmon on St. Peter's Day by the Thames fishermen, on which occasion they dined with the convent; and the presentation by the infirmarian, on St. Katharine's Day, of a new oar to the presiding officer in the refectory. One of the monastery's most valued relics was the coronation robe of Edward the Confessor, which was exhibited only twice in the year. They also possessed the girdle of the Blessed Virgin, given to the Abbey by the Confessor. It was deemed an aid in childbirth, and in 1242 it was taken to Queen Eleanor in Gascony; the queen gave birth on June 25th, at Bordeaux, to her daughter Beatrice. In the account of writing materials, on the same page, it is stated that the ink was made at Westminster by the precentor in the tailor's shop, and that the same officer provided vellum for the scriptorium. It is also of particular interest to note the survival of the Roman waxen tablet in this and other monasteries of the Middle Ages. A waxen tablet was employed at Westminster for the inscription thereon of the daily rota of offices and anniversaries of the Church, with the names of the officiating monks.

In printing and annotating these Customaries of Canterbury and Westminster, Sir Edward Thompson has done one of the most important works yet accomplished by the Henry Bradshaw Society, a body which perpetuates most fitly the fame of a great scholar.

NEW NOVELS.

The Game. By Jack London. (Heinemann.)

THIS book is simply a good and spirited little report, rather too loud for quiet tastes, of an imaginary prize-fight; just what, in real life, the "news-editor" of an American paper would call "a good, bright story" (the news-editor, by the way, would sternly insist upon a good deal of judicious condensation). We find much margin, a good deal of allegorical illustration of the vignette type, and something under two hundred small pages of big print. But though the form is that of the novel, the thing itself, as has been said, is simply a clever journalistic account of a single prize-fight, led up to by a little rather unpleasant sentimentalizing about a girl's admiration of her sweetheart's biceps. If Mr. London knows this, well and good; we have only to remark that he is a clever young man who has given the public rather short measure for its money by sending forth a racy sort of magazine sketch in book form. But if, as here and there one is led to suspect, the author fancies that this sketch of his is a novel and a piece of literature, he is mistaken. Mr. London is an enthusiast regarding things primitive and elemental, and when his studies take him to the Klondyke or the seal fisheries he is interesting and strikes a true chord. But there is nothing elemental here; this is sheer street-bred sensuality, if it is anything. The author would be well advised to guard against the dangers of self-consciousness, and shun the seductions of the "literary atmosphere." These influences are not beneficial to his particular kind of work.

The Rook's Nest. By G. W. Appleton. (John Long.)

IN real life he would be a pigeon of surpassing and downy innocence who could be imposed upon by the mummeries and mysteries of the house in St. John's Wood which gives its name to this book, and in which the scene of the story, for the most part, is laid. The story is a "shocker" of the conventional type; we need not describe in detail the plot or motive. A gang of thieves and swindlers—headed by an English viscount, who, with the aid of an actor's make-up box, maintains a dual personality—have their headquarters in two apparently respectable houses. The head of this criminal firm engages as his private secretary—for no other reason that the reviewer can detect than that a narrator was required for this sensational story—a young man whose principal claim for consideration, by his own showing, is that he is a B.A. of Oxford and a friend of such reputable folk as members of the Middle Temple. Beyond this, the young gentleman's attainments, though not remarkable, are up to the level of the story he is made to tell. The language of the book is mostly grammatical, and its incidents

(whether convincing or otherwise) succeed one another with the promptitude and regularity which the traditions of such fiction require.

A Marriage in Burmah. By Mrs. M. Chan-Toon. (Greening.)

THIS story shows perfect familiarity alike with the country and the life of its natives, or, at least, with those of its natives who, in such a centre as Rangoon, have assimilated many of the customs of the European. The tale is ugly and squalid as a tale could be, yet, upon the whole, no more ugly than the reality it handles. The subject is the married life of an English girl who, ignoring the counsel of her elders, takes a Burmese law student for husband, and learns too late, though at a very early stage, that she has made a dismal mistake. But, though she certainly stands up bravely to a life of ever-increasing wretchedness and humiliation, neither she nor the teller of the tale seems to have acquired sufficient philosophy to enable them to see the fundamental wisdom of the average European attitude towards the contracting parties in such marriages. The author is, to the end, bitter in her reflections upon the chilly reserve maintained by the European community in Rangoon towards a white woman who marries a native of the country. This attitude is a social necessity, as the story told here should have taught its writer. Its absence would bring about a state of things of which, perhaps, the least deplorable feature would be the certain downfall of the prestige of the British Raj. This book has no particular literary merit, but it is interesting because it is, as the French say, *documenté*. It is altogether lacking in relief, and devoid alike of humour and breadth of outlook. But since the lesson it should teach is wholesome, it was worth writing and is worth reading.

The Weird Picture. By John R. Carling. (Ward, Lock & Co.)

THE idea that the privileges accorded to the surgeon's knife might conceivably be shared by the painter's brush appears at first ludicrously fantastic; but many strange things have been done in times past in the sacred name of Art—many crimes, even, committed. Giotto, we are told, found inspiration for his 'Crucifixion' in the dying agonies of a murdered model, Parrhasius depicted the actual torture of a living slave. Built on decidedly gruesome foundation, this stirring story grips the attention in the first chapter and holds it tenaciously till the end. A somewhat lurid exterior suggests the "shilling shocker"; but those who venture on a closer acquaintance will find here no mere string of blood-curdling incidents, but a well conceived and constructed story, which contains some crisp dialogue and characterization.

L'Isolée. By René Bazin. (Paris, Calmann-Lévy.)

M. BAZIN'S new book is an account of "an expulsion" of nuns in France and of their subsequent hard fate. To judge from its last pages, which by their exaggeration mar the novel considered as a work of art, the volume is intended for a clerical pamphlet, a fact to be regretted in the interest of M. Bazin's European reputation. An attack of "Nationalism" seems as a rule to make the patient look on his own country as a land mainly inhabited by bandits. It would not be fair, however, to state these truths without explaining that the greater portion of the story is so excellent in treatment and in style that it would have been M. Bazin's best had he not spoilt it by overstatement at the last.

Femme de Lettres. Par Mary Floran. (Hachette & Cie.)

THIS story belongs to the "Petite Bibliothèque de la Famille," and in France "family reading" is more carefully supervised than in England. In some grades of social existence the young French girl is still an institution and has to be carefully "written for." This volume is an obvious example of this kind of writing. It has all the limitations, conventions, and catchwords of the species. A mother, excellent in every department of life, of provokingly *digne* manners and utterances—"worthy" is not quite the equivalent for the thing meant—and two young girls, one tamely *espiègle*, the other with a "regard pur et profond" (and a fiancé), are the principal types.

HEBREW AND SYRIAC LITERATURE.

The Peshitta Psalter according to the West-Syrian Text. Edited, with an Apparatus Criticus, by William Emery Barnes. (Cambridge, University Press.)—Prof. Barnes has by this publication rendered a great service to Bible students and Syriac specialists, and we are glad to see that Cambridge takes no less interest than Oxford in the recently revived study of the Syriac Vulgate or "Peshitta." One of the great results so far reached is that it is no longer possible to regard the problem connected with the Peshitta of the Old Testament as being identical with that of the New. Mr. Gwilliam's edition of the Gospels in the Peshitta version, which was issued by the Clarendon Press a few years ago, has demonstrated very clearly that there are hardly any variants of importance for the student of the New Testament to record. Not so, however, in the Old Testament. Here variations of interest and importance are frequently encountered. The reason is obvious. The New Testament being the groundwork of Christian doctrine, the necessity for a uniform text became, as time went on, a matter of urgent necessity. The Old Testament, on the other hand, was naturally less connected with the settling of dogma than the New, and so it came to pass that variant texts were not regarded with any special sense of fear by the Churches. This absence of uniformity showed itself clearly enough in Prof. Barnes's work on the Peshitta text of Chronicles, published in 1897, and the book now before us greatly serves to emphasize the same fact. It was, indeed, only to be expected that MSS. of the Psalter should exhibit at least as many variants as any other part of the Old Testament Peshitta. Its universal liturgical use could, in the circumstances, produce no other result. In the valuable introduction prefixed to the present edition Prof. Barnes tells us that he originally intended to construct a text on the combined evidence of both eastern and western Syrian authorities. In this way he had hoped to produce a form of the Peshitta version "which would prove to be older than the division" of Syrian Christianity into the eastern, or Nestorian, and the western, or Jacobite, Church. He later, however, found this object difficult of realization, and he has accordingly

"fallen back on the easier task of attempting to restore in some measure the early western text, whilst reserving the eastern readings for the *apparatus criticus*."

Our author's mode of editing is excellent, and the information afforded to the student on the MSS. and the former printed editions is clear and exhaustive. Regarding the testimony of ecclesiastical writers to the form of the text, Prof. Barnes finds that Aphraates is disappointing, and that "perhaps the most valuable authority for the text of the Peshitta, if we except the MSS.," is the Jacobite dignitary Gregory Bar-Hebræus. Scholars will also give due weight to our author's suggestions relating to the history of the Peshitta version of the Psalter. The book is beautifully printed, the lines of the Psalms looking particularly fine in the handsome estrangelo type of the Pitt Press.

Samaria und seine Propheten. Von Karl F. A. Lincke. (Williams & Norgate.)—The author explains that the problem, in the solution of which he may assist, is set forth in the title of Wellhausen's work 'Israelitische und jüdische Geschichte.' He wisely remarks that the real influences on life in Palestine were not the over-lords of the land, the Egyptians, Assyrians, Chaldeans, Persians, and Syrians, but the religious and moral ideas, and the priestly ideals and institutions. Dealing with Israel or Samaria, he does not concern himself with its external history, but turns to the inner life, influenced by prophets and lawgivers, and its place among the sources or foundations of Christianity. The prophets Hosea and Jeremiah obtain special treatment, and there is an interesting account of the Essenes, who are known to English readers through De Quincey's essay. A chapter on the 'Wisdom of Solomon' includes a section on 'Gottes Sohn und die Gottlosen,' which has a very special bearing on certain New Testament doctrines. One part of the Wisdom, which, of course, is not said to be the work of Solomon, the son of David, is described as

"ein erschütternder Aufschrei zu dem Vater aller Menschen, dem Herrn aller Herren, dass die Leiden des Gerechten kein Erbarmen auf Erden finden."

The part of Prof. Lincke's volume which is likely to command the greatest attention is that which deals with Phocylides, the poet and philosopher who lived in Miletus, in the sixth century before Christ. The poet, whose place in Greek literature has interested such scholars as Jacob Bernays, was the author of many wise sayings, some of which have been placed in columns, along with sentences from the Pentateuch, so as to show parallels. The parallels are striking, and suggest important questions regarding the origin of the sayings and the sentences alike. At the end of the book there is a Greek text, with a German translation, of the γνῶμαι or maxims of Phocylides.

The Tabernacle: its History and Structure. By the Rev. W. Shaw Caldecott. With a Preface by the Rev. A. H. Sayce, D.D. (Religious Tract Society.)—Mr. Caldecott has in the present work set himself the task of demonstrating the correctness of two propositions, which study and observation have led him to adopt. The first of these is that there were in use, both among the ancient Babylonians and the Hebrews in Palestine,

"three cubits of the respective lengths of $\frac{9}{10}$, $\frac{13}{14}$, and $\frac{14}{15}$ of an English foot, the first of which was used exclusively for gold and gold-tapestry work, the second for building purposes, and the third for measuring areas only."

The second correlative proposition is that the ruins of Ramet el-Khulil (or rather, as it should have been uniformly spelt, Ramet el-Khalil), "standing near to, though not visible from, the ancient highway leading from Jerusalem to Hebron," are none other than the enclosure built by the prophet Samuel to surround the altar erected by him in Ramah about 1050 B.C. Both these propositions are startling enough, and are likely to be hotly discussed by future writers on the same topics. Mr. Caldecott bases his demonstrations on the measures of length found on an ancient Babylonian tablet discovered in 1850 at Senkereh, situated near the ruins of Warka and el-Mukayyar. He then finds that these measures tally with the scale of Gudea unearthed by M. de Sarzec not far from Senkereh in 1881; and comparing these results with the measurements of the Tabernacle and Ramet el-Khalil, he believes that he has found the key to much that has hitherto been obscure in Biblical architecture and topography. At this point it is necessary to state that Prof. Sayce, whilst justly commending the book to the consideration of scholars, does not himself agree with Mr. Caldecott's interpretation of the ideographs found on the Senkereh tablet. Its obverse side is, in fact, most difficult to decipher, "nearly one-half of its figures and ideographs being flaked away." The new theory, therefore, rests on a reconstruction of the tablet which is itself subject to criticism. The identification of Ramet el-Khalil with the Ramah of Samuel is, however, supported by some weighty evidence drawn from topographical and historical considerations, and it is, therefore, possible that the second proposition may stand, even if the first should have to be largely modified. The final verdict must, as Mr. Caldecott himself suggests, depend on further research of a very elaborate kind; but it must be acknowledged that, as a working hypothesis, the new theory is of considerable value. The book supplies, besides, a freshly written account of Biblical history so far as it concerns the Tabernacle under all its vicissitudes. The numerous illustrations and diagrams are calculated effectually to assist the reader in the mastery of the work.

Narratives of the Beginnings of Hebrew History from the Creation to the Establishment of the Hebrew Kingdom. By Charles Foster Kent, Professor of Biblical History in Yale University. With Maps and Chronological Chart. (Hodder & Stoughton.)—This work is similar in character to Messrs. Carpenter and Harford-Battersby's 'Hexateuch,' reviewed by us a few years ago, with this chief difference, however, that Prof. Kent intends following up the present volume with three others, so as to cover the whole of the Old Testament. It is also explained in the preface that, apart from the question of expense, the earlier work is by "the technical character of its notes" not sufficiently adapted for "use by the ordinary Bible reader." The notes accompanying the text of the new publication are certainly as little technical as possible, but whether the ordinary Bible reader will attempt to master their contents seems very doubtful. It no doubt depends on the meaning one may choose to attach to the term "ordinary." It is clear that only persons of trained intellect and unusual perseverance can ever hope to grapple successfully with the vast amount of carefully classified critical details which a work of this kind necessarily embodies. Bible readers of the usual type will, we think, prefer to read the Revised Version with the help of some good easy commentary, rather than plunge into the deep and often dangerous currents of close critical investigation. The book is, in fact, suited to the needs of the student, or of those who are determined to become students. Viewed in this light, it deserves warm commendation. Its information is full and eminently trustworthy; the sources from which the Scriptures are supposed to have been compiled are carefully grouped by the side of each other; and the introduction is clear and thorough, if occasionally somewhat dry. In the notes the editor is careful not to be over-dogmatic, but is always ready to acknowledge points of uncertainty in the critical analysis of the text. We also note—and not without satisfaction — that there is a readiness to look at the conservative side of certain historical problems. Prof. Kent thus recognizes that Abraham may have been a real personage; and concerning Joseph he says that "converging lines of evidence strongly suggest the probability that," to reproduce Prof. Kent's Americanism, "an historical character stands back of these later stories." On the question of textual criticism our author owns that he has "little sympathy with certain scholars who regard" the Hebrew text "as thoroughly corrupt, and therefore requiring emendation at every turn." Here also many students will find themselves in agreement with him. In a very useful appendix Prof. Kent gives a selected bibliography, lists of words and expressions peculiar to the different narratives, the Babylonian accounts of Creation, parallels to the story of Paradise and man's fall, and several other interesting topics, including the ancient Babylonian laws regarding marriage with household slaves, as exhibited in the Code of Hammurabi. The maps and other helps will be found equally valuable, and there can be no doubt that the volume will be largely used on both sides of the Atlantic.

A Criticism of Systems of Hebrew Metre: an Elementary Treatise. By William Henry Cobb. (Oxford, University Press.) — The question of Hebrew metre has for a long time exercised a strong fascination on the minds of not a few notable scholars. Men trained from their youth in the strict rhythmical scansion of classical and other poetry would naturally try to apply similar metrical rules to the Psalms and other poetical portions of the Old Testament; but whilst the majority of scholars are soon struck with the peculiar freedom of Hebrew poetic diction, others are emphatic in declaring that Hebrew verse is as much subject to strict metrical laws as by far the larger portion of both ancient and modern poetry. In this way a literature dealing with various proposed systems of Hebrew metre has gradually formed itself, and Mr. Cobb has very properly felt moved to give in the book before us a critical account of the whole matter, and to add the opinion which his own first-hand studies have led him to adopt.

The earlier attempts at establishing Hebrew metrical systems are naturally left by our author where they were in the time of Bishop Lowth, who, in a treatise written in 1753, declared that

"every hypothesis which pretends to define the laws of Hebrew metre and to prescribe the numbers, the feet, the scanning of the lines, may.....be easily overset."

The radical mistake, however, which underlay the systems advocated before the time of Lowth, consisted in the notion that Hebrew metre (real or supposed) was, like classical poetry, based on quantity. Room was thus left for a variety of hypotheses, which remained untouched by the learned bishop's criticism. Johann Joachim Bellermann, writing in 1813, declared an accentual iambus to lie at the basis of Hebrew metre. The great Orientalist and, perhaps, even greater thinker, Heinrich Ewald, attempted, with the success usual to him, to connect the laws of Hebrew metrics with Oriental poetry in general, and to penetrate into the spirit underlying the outward form. The relation of the lines to each other was of greater importance to him than the measurement of feet, thus enunciating a principle by which, under the well-known rule of "parallelismus membrorum," the majority of Hebrew scholars are guided to the present day. Ernst Meier (1853) thought he had found the key to the true system of Hebrew versification

"by a ten years' study of Suabian popular literature, embracing its folk-lore, legends, manners and customs, fairy tales, songs, and nursery rhymes."

He allowed great freedom to Hebrew poetry, regarding a kind of double iambus, which may be subject to several variations, as the verse-basis. Another German scholar, Julius Ley, maintained that the Hebrew verse, though bearing little resemblance to the outward form of a classical strophe, "shows a regular and symmetrical articulation such as occurs in almost no other language." His system is of too elaborate a kind to be indicated in a few words, but one of its main characteristics is that the nature of the metre is determined by the tone-syllable alone, and no attention is, therefore, paid by him to the number of untoned syllables. This system has been severely criticized by Prof. Budde, who was, however, later on led to show some leniency towards it, having himself come to the conclusion that the Book of Lamentations and other parts of the Old Testament exhibit an almost regular metrical form for the "Kinah," or dirge. Prof. Bickell's theory is, perhaps, the best known as well as the best abused in this country. He made a close comparison between Syriac and Hebrew poetry, and insisted, among other things, on the "counting of syllables." The great drawback to his theory is that much violence has to be done to the "textus receptus" in order to fit it into his ingenious system. David Heinrich Müller has tried to prove the existence of regular strophic divisions in Hebrew poetry; Dr. Herbert Grimme developed the principle of "moræ," or units of time, in Hebrew metre; and Dr. Eduard Sievers, Professor of the German Language and Literature in the University of Leipsic, has at the beginning of the present century further enriched the literature of Hebrew metrics by an elaborate treatise in which the anapæst plays a very prominent part.

Mr. Cobb's criticisms of all these theories are characterized by insight and scholarly common sense. His own ideas on the subject are indicated in the first chapter of the book, where he, under the title 'Inductive,' analyzes a number of Psalms and compares their structure with certain free examples of English verse. He arrives at the conclusion that "if all Hebrew poetry is metrical, its metrical principles are not yet manifest." "We are sure, though," he continues, "that it is not all non-metrical.....It is certainly strophic now and then, but it is hard to believe that it is strophic entirely." The most regular form of Hebrew poetic diction can, in fact, as a rule only be declared analogous to the most irregular kinds of English verse. A result like this can hardly be reassuring to believers in Hebrew metre. But whatever the result of Mr. Cobb's investigations, his book is a very timely contribution to an admittedly important branch of Hebrew learning. It is also, so far, the only book of its kind, no complete survey of the whole matter having been undertaken before in English or any other language.

The Jewish Encyclopædia: a Descriptive Record of the History, Religion, Literature, and Customs of the Jewish People from the Earliest Times to the Present Day.—Vol. IX. *Morawczyk—Philippson.* (Funk & Wagnalls.) —Prominent among the general articles in the new instalment of this 'Encyclopædia' are those on 'Music' and 'Numismatics.'

The Rev. F. L. Cohen, of Sydney, New South Wales, who writes on the first-named subject, is the author of a number of related contributions to this and the preceding volumes; and as he is an authority on all matters that concern Synagogue music, the information supplied by him will be carefully studied by a fairly wide circle of persons. The article on 'Numismatics' is by M. Théodore Reinach. His summary of all that is known about Jewish coinage and the circulation of foreign coins in Palestine is excellent. We specially note that he frankly withdraws his former opinions regarding the period to which the much controverted silver shekels and half-shekels belong, abandoning the years 66-70 A.D. (time of the first revolt against the Romans) in favour of 139-135 B.C. (rule of Simon the Maccabee). One of his reasons for this change of opinion is that the revolt just mentioned lasted scarcely four years, whilst there are shekels of the year 5. Another contribution of wide interest is that on 'Periodicals,' written jointly by Prof. R. Gottheil and Dr. William Popper, of New York. It is interesting to notice that almost an entire century passed between the first two short-lived Jewish newspapers (published at Amsterdam in 1678 and 1686-7 respectively) and the renewed attempt at establishing such a paper at Dyhernfurth, which in its turn was also short-lived (parts of 1771 and 1772). The alphabetical list of newspapers and magazines which accompanies the article covers twenty-four pages. Among the contributions of the learned class we may mention 'Palæography' and 'Pahlavi Literature.' M. Seymour de Ricci, of Paris, gives under the first-named heading an account of Greek and Latin inscriptions referring to persons of the Jewish faith; and M. Isaac Broydé, a member of the 'Encyclopædia' editorial staff, writes on 'Hebrew Palæography.' The account supplied by Dr. Lewis H. Gray, of Newark, N.J., of the references to Jews and Judaism in the Pahlavi or Middle Persian writings (third to tenth century of our era) derives its interest from the curious nature of the information. The later Zoroastrians appear to have had strangely distorted notions of the Old Testament and Jewish ideas in general. In one of their writings the Decalogue is first transformed into a code of unmitigated atrocity, and a violent attack on persons holding such a code then becomes a matter of course. Turning now to articles bearing on geography and topography, we notice first 'Palestine,' by Prof. Immanuel Benzinger, of Berlin, whose contribution is followed by an account of exports (wine, honey, silk, &c.) by Mr. J. D. Eisenstein, of New York. The information supplied under this head is useful in itself, though it is probably intended to have a side bearing on the possibilities of Zionism. The sumptuously illustrated series of articles on 'New York,' by Mr. Max J. Kohler and others, occupy in the present volume an even more prominent position than that assigned to 'London' in vol. viii. We can only enumerate the titles of a few other articles. Under the name 'Moses' we have, besides a series of papers on the lawgiver himself, accounts of Moses ben Maimon, Moses ben Nahman, and many others. Archæological matters are treated under, *e.g.*, 'Nimrod' and 'Niniveh.' A gnostic subject is 'Ophites.' There is a long article on 'Names.' Among contributions belonging to modern biography may be mentioned 'Max Nordau' and the composer 'Jacques Offenbach.'

SEVENTEENTH-CENTURY RECORDS.

Middlesex County Records: Calendar of Sessions Books, 1689 to 1709. By W. J. Hardy, F.S.A. (Guildhall, Westminster, Sir Richard Nicholson.) — Attention has already been drawn to the varied and interesting matter contained in the records of the County of Middlesex by the publication of four volumes of extracts by the Middlesex County Record Society, under the editorship of the late J. Cordy Jeaffreson. The last of these volumes appeared in 1892, and since that time the records have been removed from Clerkenwell, where access was difficult, to the new home of the Middlesex County Authority (under the Local Government Act of 1888) at Westminster.

Extracts from original records, like those of Jeaffreson from Middlesex sources, or, again, those taken from the records of the Corporation of the City of London, and published by order of the Corporation in the late H. T. Riley's well-known 'Memorials of London,' make excellent reading, and are full of interest; but at the same time their eclecticism always leaves something to be desired. The County Justices and the County Council of Middlesex have realized this, and, having obtained parliamentary authority for expending county funds on calendaring and publishing the records, are prepared to publish a series of calendars similar to that now offered to the historical and literary student, if only the present volume meets with sufficient success to warrant its continuation. That it should do so must be the sincere wish not only of every good citizen of London and Westminster, but also of every one who takes the least interest in the history and government of his country.

A sub-committee of the Standing Joint Committee of County Justices and members of the County Council, with Sir Richard Nicholson as clerk, having been appointed to deal with the whole question of county records, entrusted the work of calendaring them to Mr. W. J. Hardy, and the manner in which the Calendar now published has been executed proves their trust to have been justified. His plan, as he tells us, has been "to deal with one class of records at a time, instead of making selections, as did Jeaffreson, from various classes, of the most interesting items," and the reason he gives for commencing his work at the year 1690 (the title-page, by the way, gives 1689) is that none of Jeaffreson's extracts comes down so late as 1690. Having prepared this volume for the press, Mr. Hardy received instructions from the sub-committee to continue the Calendar back from 1690 to the commencement of the series of Sessions Books in 1639, and forwards from 1709 to 1759, and this arduous work, we are told, he has already carried out.

The contents of the present volume have been summarized in a useful preface, and show how multifarious were the duties, and how extensive was the jurisdiction, of justices of the peace in those days. At the time of the beginning of the Calendar, the country was agitated by rumours of Popish plots against the Crown, and much of the time of the justices was taken up with seeing that the various Acts against suspects were duly enforced. Towards the close of 1690 they deemed it necessary to order every householder, innkeeper, and keeper of livery-stables within ten miles of London to deliver in writing to the nearest justice, within twenty-four hours, the name and place of abode of any lodger, and of the owner of any horse resting in their houses or stables. Later they ordered a list to be made of all disaffected or dangerous persons throughout the country, in order that they might be summoned to take the oath of allegiance. A long list of reputed Papists in Westminster, who refused to take the oath and were fined in consequence, is recorded under date June, 1692. This valuable list has been printed by Mr. Hardy. Other lists of names in connexion with indictments, recognizances, prisons, &c., he has omitted to set out, and perhaps advisedly, although he confesses that they contain some notable names—for instance, that of Titus Oates, who is simply described in January, 1696, as of Westminster (where he resided for many years in Axe Yard) and as "clerk." No further particulars appear to be recorded in the Calendar of this arch-informer, and it is in vain that we look for some notice of the proceedings which took place at Quarter Sessions held in Westminster Hall on July 2nd, 1702, when Oates narrowly escaped imprisonment for committing an assault on the eccentric Eleanor James for questioning his right to appear, according to his custom, in full canonicals. We cannot help wishing that Mr. Hardy had been a little more liberal with lists of names, and think that the value of his Calendar would have been enhanced, without encroaching on too much space, if he had printed the various lists of justices, if not also jury panels.

Among the duties which fell to the County Bench of the seventeenth century was that of providing for needy soldiers and seamen wounded in action and the poor in general; the "passing" of pauper vagrants, and determining questions of "legal settlement"; the licensing of ale-houses; the enrolment and discharge of apprentices; the supervision of the House of Correction, and the new prison at Clerkenwell; the paving and lighting of streets as well as their watch and ward; the preservation of rights of way and the maintenance of bridges—duties which at the present day rest for the most part on other shoulders. Small wonder that we find a memorial from the justices to the Lords of the Treasury in 1691, setting forth that an allowance had hitherto been made to eighteen justices of the peace for Middlesex, and that owing to the multiplicity of business their number had been augmented, and praying that the usual allowance of 4*s.* a day might be made to six more justices for the county. Mr. Hardy tells us that the names of forty-four justices follow this memorial, but unfortunately, as we have already said, he has omitted to print such lists.

It appears that on a new justice being appointed to the Middlesex Bench he was mulcted in "colt-money," which in the case of the Right Honourable the Lord Coleraine in 1698 took the form of a dozen of claret and a bottle of sack. We know the term "colt" as applied to a rising young cricketer, and also to a junior barister attending his friend on the occasion of his taking the coif, but we do not remember having seen it applied to a justice of the peace.

A word of praise is due to Miss M. Dorothy Brakspear for a carefully compiled index to Mr. Hardy's Calendar.

Register of Burials at the Temple Church, 1628–1853. With an Introduction by the Rev. H. G. Woods, D.D., Master of the Temple. (Sotheran & Co.)—The first portion of this Register, down to the end of the year 1714, has already been printed in appendixes to the 'Calendar of the Inner Temple Records,' edited by the late Mr. Inderwick. It is here reprinted together with the rest of the Register down to 1853, when burials ceased to take place in the Temple in accordance with the provisions of the stat. 15 and 16 Vic. c. 85, intituled 'An Act to amend the Laws concerning the Burial of the Dead in the Metropolis.' As was to be expected, the entries include the names of many who have left their mark on the pages of history, law, and literature. Dr. Woods in his admirable introduction to the volume enumerates nearly a score of judges (three of whom had sometime filled the office of Recorder of the City)—besides other lawyers of varied distinction, including John Selden, the most celebrated jurist of his day—who were buried within the precincts of the Temple. Other lawyers of scarcely less fame, like Plowden, also found

their last resting-place within the same precincts, but some are of too early a date for their burials to be recorded in this Register. Six Masters (or ex-Masters) of the Temple are buried there, whilst science and literature are commemorated by such names as Richard Mead, the famous physician, William Petyt, the antiquary, and Oliver Goldsmith.

The total number of interments recorded in the Register, Dr. Woods tells us, is not far short of 2,500, or an average of eleven a year. Except at the time of the Plague of 1665 comparatively few interments appear to have taken place in the churchyard, most of them being either in the "round" or oblong church. The fees for burial varied according to the site, the highest being charged for burial in the chancel; certain dues also were exacted from those who died in the Temple, but were buried elsewhere. The majority of interments took place either in the "round walk" (afterwards known as "the rounds") or in the "long walk," described by Dr. Woods as running down the centre of the church, but which the late Mr. Inderwick described as being "at the sides of the oblong portion," the probability being that both are right. The arrangement which appropriated the northern side of the oblong church to the Middle Temple and the southern side to the Inner Temple may have extended to a similar division of the circular portion of the church or "round," although the latter appears to have been chiefly used as common ground for conferences between the two houses and for the burial of servants and officials of both Inns alike. The details that are frequently added in order to mark the exact site of interments are of high topographical interest, and with their assistance the present Master of the Temple hopes before long to reconstruct a plan of the church as it appeared in the first half of the seventeenth century. Before the close of that century it had become necessary to build vaults, the earliest entries of burials in these new vaults occurring in 1689, and a stop was put to interments in the "chancel or body" of the church. The vaults and the churchyard became the regular burial-places, although the "rounds" continued to be used occasionally down to the year 1818. In 1840 the churchyard was closed, and thenceforward burials were restricted to the vaults, which had been recently enlarged, until such interments were forbidden by the Act of 1852 already mentioned.

Whilst turning over the pages of the Register one cannot fail to notice the number of foundlings (to whom the surname of "Temple" was almost invariably given) who were buried within the precinct. The last of the Temple foundlings, Mary Ann Littlefield, survived as late as 1865, and was supposed to have been the original of Miss Flite in Dickens's 'Bleak House.' The work has been well edited and has a good index.

OUR LIBRARY TABLE.

The Russian Revolutionary Movement (Alston Rivers) was, we are told in a preface, written to enlighten Finland on the Russian combined Revolutionary and Reform movements. The name given as that of the author is "Konni Zilliacus." Whoever is responsible for the communication of such information to the nationalities of the outlying parts of the Russian Empire is doing the work well; and little fault can be found with the present volume. As we have stated in our notices of the new issue of Sir Donald Mackenzie Wallace's book, on the one hand, and of the volumes which bear the names of "Carl Joubert" and of M. Ular, on the other, we do not believe in that peaceful arrival of reformed institutions in Russia which is preached in the concluding pages of the volume before us. We agree with the present author that an agrarian revolution in Russia would involve much cruelty, and understand why the revolutionists should "tremble before the possibility of such an event." It is suggested that

> "if autocracy cannot be otherwise overcome, then everything points to the probability of the common people being also drawn into the movement in order to enforce an ultimate solution";

but it is open to the bureaucracy and the Emperor to turn the agrarian revolution against the reformers, and we expect that in Russia, as formerly in the Slavonic provinces of the Austrian Empire, this will be done. In Austria-Hungary constitutional reform followed. In Russia there is far less understanding of or demand for such reform; and we anticipate that in Russia agrarian revolution is more likely to be followed by a fresh reign of autocracy. In spite of the quarter from which it proceeds, the book before us far more closely resembles that of Sir Donald Mackenzie Wallace in the charity of the account of the opponents of reform than those of the other revolutionary writers. Alexander III. is praised as a man, and a truthful description is presented of his happy domestic life and his entire devotion to his work. Pobyedonostseff's integrity is lauded, and it is rightly explained that "in itself the position which he holds is of no great account; it is only by personal qualities that his influence has made itself felt." The Dowager Empress, who is described in several of the revolutionary volumes which we have lately noticed as the main supporter of the autocracy and the main opponent of reform, is here shown to have recommended the exactly opposite course of "reform and reconciliation in accordance with the wishes of the liberal elements." We are able for this and other reasons to commend this volume. Among the few slight criticisms which we have to offer, we note that, while Herzen's life in London is described, the more important period of his activity in Geneva is passed over. Tourguenieff's great book of stories, which has often been said to have played for Russian serfdom the part of 'Uncle Tom's Cabin' in America, is called 'Diary of a Hunter,' whereas the better-known titles in Western countries are 'A Sportsman's Notes' and 'Récits d'un Chasseur.' The style of the translation is for the most part good, but it is impossible to defend the heading 'Substitution of the Autocracy by a Democratic System.'

MESSRS. THACKER & Co. publish *The Naval Pocket-Book*, in the tenth year of its issue, by Sir William Laird Clowes, whose competence is universally admitted. The volume is almost entirely statistical, the only real exception being in the account of the torpedoes used in our service. If this is properly included, it is difficult to see why we should not also have explanations of a similar kind with regard, for example, to a more important matter—namely, the big guns. It is explained, for instance, in connexion with corrosive action, that certain torpedoes are no longer to be made. More attention is rightly turned at the moment to the erosive effect of our powder on our big guns, and we see no reason why there should not be some attempt to compare our latest "mark" of cordite and our latest "mark" of 12-inch gun with the guns and powders of the other principal Powers. No doubt to do so is to venture on to delicate ground, and there may be good reason for confining the 'Pocket-Book' to a mere statement of fact. All we venture to point out is that the practice at present pursued is not uniform.

MM. PLON-NOURRIT ET CIE. publish an interesting volume by the Marquis de Barral, under the title *De Monroë à Roosevelt, 1823-1905*, to which the Comte d'Haussonville contributes a preface. The book is violently anti-American, and is intended to lead up to the conclusion of the last page, which states that the peril to the peace of the world from the United States is as great "as that from the Germanic Cæsar himself." In order to prove his case our author discusses American foreign affairs during the last three-quarters of a century, but with large omissions, one of which, the Venezuela frontier dispute with us, and the threats of the Presidential message on the subject, would have helped his case. M. de Barral alludes to American bombardment of Taku as though it constituted a new departure, and entirely ignores the fact that the United States was the first Power to train guns upon the Japanese and to teach that nation the necessity of relying upon force in her dealings with Christian Powers, even with regard to trade. This occurred so long ago that it completely destroys the whole argument of our author on the subject of the recent change in American opinion. The account of the canal projects is extremely interesting. Times have, indeed, changed since we strained the facts relating to our alleged protectorate over the Mosquito Indians in the neighbourhood of Honduras, in order to get the ends of the American canal into our hands. They have changed, though not so completely, since we co-operated with France in resisting the pretensions of Mr. Blaine as late as 1880, and of his successor up to 1884. Lord Granville is looked upon as having been a peaceful and a pro-American statesman, but his dispatches to Mr. Blaine on the subject of the Americanization of the Pacific Canal are in singular contrast to the views of his recent successors. So, too, of the West Indies. M. de Barral ascribes the violent refusal of France and England to accept the views of Mr. Everett, the predecessor of Mr. Blaine, to the importance of their interest in the West Indies. The establishments which we were erecting at much cost to allow us to keep military watch and ward over the Panama Canal are now being abandoned in pursuance of the exactly opposite policy which has prevailed since the signature of the last draft of the Pauncefote treaty, and we are, indeed, far from the days, if they ever had a real existence, when, according to M. de Barral, we "coveted Cuba as much as or more than did the Americans themselves." We differ from our author when we find that he imagines that the Americans are pushing forward towards the assertion of a protectorate over both the Americas, North and South. The facts given concern Brazil, and there is silence in this volume for the rest. It is, however, the case that there is now not the remotest chance of Argentina and Chili accepting any such protectorate, and that those countries are now strong enough to prevent any interference of the United States in their affairs. This fact is thoroughly recognized by the statesmen of the North American continent. They will offer their assistance to Argentina against Europe, whenever it is necessary, but they have ceased to expect any corresponding advantage from the southern and more prosperous parts of the South American continent. We can hardly agree with our author in the opinion that he entertains as to the execution of the Austrian Emperor of Mexico, which was as justifiable as such acts ever can be. We note few positive errors in the volume, but the spelling "Calhoum" is one.

A NEW volume in "The Crown Library" is *The Memoirs of Lady Fanshawe* (John Lane), edited, with an introduction, by Beatrice Marshall, and a note on the illustrations by Allan Fea. The memoirs were first published in 1830, and were well worth a place in this series. Miss Marshall compares them with the contemporary memoirs of Mrs. Hutchin-

son and the Duchess of Newcastle, who also wrote lives of their husbands, and finds that the "Royalist ambassador's wife is incomparably more sparkling and anecdotic than the Puritan colonel's"; while she is not so servilely devoted to her husband as the duchess. Certainly the memoirs have a charm which is by no means dependent on the time of which they treat. Both Sir Richard and his wife were representative of the highest type of Royalist—cultured, refined, and humane. Sir Richard, who died in 1666, devoted his leisure years under the Commonwealth to literary labours of love, and translated Camoens's 'Lusiad' and various other classics. There are three separate portraits of Lady Fanshawe, which seem to have little in common. In the one by Lely she is depicted without that grace and comeliness with which tradition would fain invest her; but the picture which forms the frontispiece to the volume is decidedly attractive. It represents Lady Fanshawe as a handsome young woman of distinction. The memoirs were specifically drawn up for the edification of "my most dear and only son," whom the mother exhorts from time to time in these pages. "Remember your father, whose true image, though I can never draw to the life, unless God will grant me that blessing in you." How charming is that tenderness! The memoirs yield much information as to the events and social practices of a most interesting period in history. Fanshawe was John Evelyn's cousin, and it would seem from this and other contemporary evidence that the high level of culture exhibited herein was far commoner than we are wont to realize in a generation of cheap education.

THE development of interest in nature, which has been so marked a feature of this generation, is seen more manifestly year by year in the increase of the number of books treating of wild life. There are two methods of treatment—the one literary, the other scientific; but some books happily succeed in blending both. Mr. Edmund Selous is one of those fortunate people who have both the will and the way to write well on nature, and hence his *Bird Life Glimpses* (George Allen) is the more welcome. It is the result of three years' observation at Icklingham, in Suffolk. (Why is it that so many naturalists spring from East Anglia?) Mr. Selous modestly professes to have no qualification except as one who has "used his eyes and ears to the best of his ability." He explains the fact that his notes mainly refer to birds on the ground that "there are practically no wild quadrupeds in England." But although he has some reason in this plea, he rather overstates the case. He declares that to be in England a field naturalist is to be a field ornithologist, and that any attempt at something more will cause the enterprising observer to be "immensely dissatisfied" with the way in which he has spent his day. This is a hard saying to one who turns over a book of British mammalia. Yet there is sufficient truth underlying the statement to excuse it. Birds are more in evidence, and catch the eye. We have said that Mr. Selous can write in a literary way, and we will not go back on that assertion, despite his wilful and wanton lapses. For example, he addresses the tits as "birdikins," and breaks off, "Oh, but hang the apostrophe; I can't sustain it, so must drop.....into the sober third person." It is as well he discovered that in time. Yet Mr. Selous makes up for these vagaries in style by the minuteness of his patient research. He states that it is the hen chaffinch alone that builds the nest, which we have not heard stated before. She even puts to flight her own mate. The eccentricities of nest-building would excuse and demand a volume. What is the exact significance, for example, of the fact that the wren builds several nests which it does not use? They are generally known in the countryside as cocks' nests, and it looks as if they are designed to cheat and mislead the enemy. Readers will not find an answer to this problem in the pages of Mr. Selous, but they will have many riddles solved, and not a few suggested for their consideration. The more books of this sort we get the nearer we shall be to an intelligent understanding of nature.

History of India. By A. F. R. Hoernle and H. A. Stack. (Cuttack, Orissa Mission Press; Oxford, Blackwell.)—Until the last few years the history of India, from the point of view of practical instruction, has meant little more than the history of British influence in India, preceded by some account of the leading Mohammedan dynasties. A few years ago a native scholar, Haraprasād Shastri, endeavoured to supply this deficiency; but in the six years that have intervened since the last edition of that little book much new evidence has come to light for the periods of Hindu rule; and in particular one of the present authors, Dr. Hoernle, has been able to sift the important numismatic and epigraphic testimony hidden away from general knowledge in the journals of learned societies. He has now helped in producing what is a trustworthy outline of two hundred pages only, sold at a very moderate price, and as readable as the case admits. For the want of political unity that has characterized India has not only made it the prey of successive foreign invasions in the past, but also renders it difficult to study in the present. The absence in Sanskrit of a formal historical literature is well known, and it is precisely to epigraphists and numismatists like Dr. Hoernle that we must chiefly look for the compilation of the more detailed history of the future. Meanwhile the present manual may be commended to those whose care is the teaching of the history of our empire. A European edition with illustrations better executed and in several cases better selected would be welcome.

Homes of the First Franciscans in Umbria, the Borders of Tuscany, and the Northern Marches. By Beryl D. de Selincourt. Illustrated. (Dent.)—The increase in the number of those interested in Franciscan history fully justifies the publication of this study—a description of the chief places mentioned in the 'Fioretti,' 'Speculum,' &c. It was undertaken at the suggestion of M. Sabatier, and enjoys the benefit of many of his identifications. The chapter on Assisi and its neighbourhood would have been the better for a small sketch map, showing the places named in their relation to the roads from the city. The illustrations, from photographs by Miss Bicknell, are interesting, and present the character of the scenery very well, while the author's account of places and the events which happened there is evidently inspired by great sympathy and admiration. We agree with M. Sabatier that it is not possible to understand St. Francis without knowing Umbria, or, we may add, the 'Fioretti,' without knowing something of the March of Ancona; but, on the other hand, we feel that the Umbria we see to-day has undergone essential modifications, and that the mountains, the cities, and the Roman roads are the only things unchanged. The country has been stripped of its forests, the rivers have dwindled away, the system of agriculture has been altered, and the margin of cultivation has shrunk. A large part of what is waste in our day must have been tilled, since so much of the country now cultivated was then forest land. It is difficult, therefore, to make sweeping statements as to the solitude of such places as the Carceri in the twelfth century, unless one has documents before one showing the actual state of affairs. To our mind there is every appearance that both it and La Verna, to take another example, were by no means so solitary then as now. Considerations of this nature, however, are hardly to be expected from the average student of Franciscan history, who is attracted by the emotional rather than economic aspects of the time. To such a reader we can heartily recommend the book.

FASC. 10 of the *Opuscules de Critique Historique* (Paris, Fischbacher) is devoted to an examination of some recent works on the 'Opuscula' of St. Francis, by Dr. Goetz, Prof. Boehmer, and P. Lemmens. A searching criticism of the 'Analekten zur Geschichte des Franciscus von Assisi' of Prof. Boehmer, by M. Sabatier, lays some stress on the absence of an index, and on a certain high-handed way of treating the texts published, while at the same time due credit is given for the excellence of the work from a literary point of view, and the understanding of the spirit displayed. In conclusion, the text of the 'Oratio seu Expositio Beati Francisci super Pater Noster' is printed from the 'Speculum' of 1509; an inferior version of it was classed by Prof. Boehmer among the *dubia*.—Fasc. 11 deals with the life of Brother Elias, as told in the 'Speculum Vitæ.' M. Sabatier shows that under its perplexing mass of inconsistencies is to be found a solid base of contemporary observation. One source of error has been the substitution of the name of St. Antony of Padua for that of Aymon, the enemy of Elias, by copyists who had forgotten his very existence. As M. Sabatier is not writing the life of Brother Elias he does not, of course, travel far beyond his text; but it is worth pointing out that the real causes of dissension among religious bodies are rarely those put in the forefront of discussion, and that to judge by the results of the strife between Elias and Aymon—the lay scriptor of Bologna (the typical lay university) and the clerical master of Paris (the typical clerical university)—it was a contest in which Elias, who favoured the lay element, represented more faithfully the mind of St. Francis (himself as far as can be proved a layman) than the minister-general, who excluded laymen from office in the order. It is noteworthy that the opposition to Elias was organized and carried through almost exclusively by the *magistri Parisienses*. The number also contains a new text of 'The Canticle of the Sun' and of the covering letter of the 'Legenda Bonaventuræ.'

The Nibelungenlied. Translated into Rhymed English Verse in the Metre of the Original by George Henry Needler. (New York, Holt & Co.; London, Bell & Sons.)—The title-page indicates the distinctive feature of this work, namely, that the metrical form of the original has been preserved. Preceding translators of the poem into English verse have always boggled at the fourth line of the stanza, evidently feeling that it could not be satisfactorily reproduced in our language. And on the whole we are not sure but what they were right. No doubt it is theoretically proper to follow the original form with absolute fidelity, but unfortunately the line in English, or even, for that matter, in modern German, is very different from the line in Middle High German. It drags grievously, and though it breaks the monotony to a certain extent, and occasionally produces a fine effect, yet more often it is merely irritating. Perhaps it has not been handled in this case so artistically as it might have been, for Mr. Needler does not show a very keen sense of rhythm nor a great command of language. His translation lacks ease, and indulges in uncomfortable inversions and the like far more than should have been necessary, for after all the form of the poem is not exacting. He has also, we think, sacrificed too much to the desire of being as literal as possible—a mistake in a verse rendering of

this sort. A couple of stanzas taken at random will illustrate the quality of his work:

And when before the castle they sped in tournament,
The good knights and squires, oft-times the maiden went
And gazed adown the casement, Kriemhild the princess rare,
Pastime there was none other for her that could with this compare.

And knew he she was gazing whom in his heart he bore,
He joy enough had found him in jousting evermore,
And might he only see her,— that can I well believe—
On earth through sight none other his eyes could such delight receive.

Surely nothing could be more tedious than the movement of this last line. It has to be said in the translator's favour that he is well acquainted with the language of the original, and in this respect he may claim the advantage over most of his predecessors. The version will be useful as a crib, but if we were asked the vital question whether it could be read with enjoyment as an independent work, we could hardly answer in the affirmative. There is a good introduction, giving an account of the 'Nibelungen Saga' and a history of the poem.

Hermann Sudermann, Poète Dramatique et Romancier. Par Henri Schoen. (Paris, Didier.)—A dozen or fifteen years ago Sudermann was regarded as one of the most promising of the younger writers of Germany. His early dramas and romances excited keen interest, and it was thought by many that the realistic school had found in him one who would yet do something really great. But it can hardly be denied that these expectations have been disappointed: Sudermann has been something of a failure, and at the present moment few German critics would assign him the importance they did, or would point to him as one from whom much may be looked for in the future. This fact has not been sufficiently recognized, or, at least, not adequately accounted for, by M. Schoen in his little study of the dramatist, which, though sound and sensible so far as it goes, is not particularly penetrating, and does not add very much to our knowledge of the subject. The first two chapters are the most interesting, for they give a good, if somewhat meagre, sketch of the state of the German stage towards the end of the eighties, and tell something of Sudermann's early life and surroundings. The rest of the book is taken up with a conscientious examination of his various works, which are analyzed and appreciated at some length. The criticism has the merit of being sober and impartial, but is not very illuminating. Perhaps Sudermann's novels, which have reached extraordinary circulations, receive somewhat brief treatment in comparison with his plays. The former are, we think, fully as important as the latter, and, indeed, a good many critics consider 'Frau Sorge' the author's finest, as it certainly is his most personal, work. It is much to be regretted that he has devoted himself exclusively to the drama since the publication of 'Es war' in 1894, for his gifts as a novelist are great, and that book, with all its faults, contained much admirable and sympathetic writing. Of course, many of his dramas are exceedingly clever and effective, but they never strike us as being quite sincere: there is something forced and violent in nearly all of them, and it is significant that they lose at least as much as they gain on a repeated reading. No doubt, however, it is too soon to pass definite judgment on a writer who is still comparatively young; in any case, M. Schoen is certainly right when he says that "ses œuvres ont une valeur historique et sociologique incontestable."

WE have received copies of *A Middle English Reader*, edited, with Grammatical Introduction, Notes, and Glossary, by Oliver Farrar Emerson, both from Messrs. Macmillan in this country and the Macmillan Company of New York. The chief difficulties which confront the student of Middle English are those of dialect, and these Prof. Emerson has here set himself to minimize. The ground covered is, roughly, from the 'Ormulum' (1200 A.D.) to Chaucer and beyond, including John Myrc's 'Instructions to Parish Priests' (probably written in 1400, the traditional year of Chaucer's death), so the book may be said to comprehend in one volume much the same period as is contained in the two volumes of the Clarendon Press 'Specimens of Early English,' to which in outward appearance this 'Middle English Reader' bears considerable resemblance. To combat the difficulties mentioned above, the selections are grouped according to dialect, special prominence being given, of course, to those of the Midlands. For a like reason the pieces are chosen primarily for their linguistic rather than literary value; hence, while there are several extracts here which are not included in the Clarendon Press series, we look in vain for Langland, Gower, or Sir John Mandeville. The grammatical introduction will be as comprehensible to the learner as such introductions generally are—something to be assimilated gradually and with care. It is as clear as it can be, thanks to the author's experience as a teacher, and, with the aid of such additional information as is contained in the notes, should prove quite adequate. The glossary accounts for the forms of the words, besides giving their meaning; and at the end is a very useful list of irregular verbs. There is but one fault which we feel tempted to find with this excellent 'Reader'—namely, that the subject of metre is hardly touched upon. It is true that the notes to each verse selection contain a statement of the metre there used, but it is hardly enough. The period is one of innovation in metres as in language, and a brief discussion of them and their origins would not, we think, have been out of place.

Ordo Romanus Primus, with Introduction and Notes by E. G. C. F. Atchley (De La More Press), is another of the excellent volumes, under the general editorship of the Rev. Vernon Staley, intended for the use of the intelligent Churchman who is interested in the rites and ceremonies of his Church, but who has little leisure or opportunity of examining the numerous works that belong to the ceremonial of solemn mass. Mr. Atchley has supplied an English translation of 'Ordo Romanus Primus,' and by the aid of full notes and comments produces a complete picture of a Roman church and the ceremonies that were used at the central act of Christian worship, as they were set forth in the eighth century. In the preliminary parts of the volume every detail is discussed in a careful antiquarian spirit, such as the basilica, lights, incense, the sacred vessels, liturgical costume, hebdomadary bishops and priests, deacons and their hostelries, the college of singers, sextons, &c. In fact, these pages form a valuable and trustworthy compendium of early Christian use, put together after an interesting fashion. The typography of the book is excellent, and the illustrations suitable and instructive. They are fifteen in number, and give all the more important examples of early Italian ambones and of mosaic pictures of ecclesiastical dress.

WE are always glad to see a new edition of Motley's *Rise of the Dutch Republic*. That before us, published by Messrs. Dean & Son, compresses, by means of thin paper, the whole work into one volume, and includes four portraits, and an appreciative note on Motley by Prof. J. F. Jameson, of Chicago University. With these advantages the edition is likely to be popular with students. It has an index, we should add.—Another book showing high scholarship and an excellent sense of lucidity and impartiality is Abbot Gasquet's *The Eve of the Reformation*, the cheaper reissue of which by Messrs. Bell will appeal, we are sure, to a wide body of readers as well as students. The volume includes, for instance, ample insight into the state of letters at the time, and the charming personality of Erasmus.

MESSRS. ROUTLEDGE are continuing their "Muses' Library," a series which is wonderfully cheap and prettily got up. We have before us *Herrick*, 2 vols., with Mr. A. W. Pollard's well-known and admirable editing; Rossetti's translations of *The Early Italian Poets*; *Blake's Poems*, edited by Mr. W. B. Yeats; *A. A. Procter, Legends and Lyrics*; and a volume of the *Poems of Johnson, Goldsmith, Gray, &c.*, which is capably introduced and edited by Col. T. Methuen Ward.

WE have on our table *Presidents of the United States in the Century*, by Francis Bellamy (Chambers), — *Zetetes, and other Poems*, by Maurice Browne (Stock),—*The Use of Penitence*, by Edward T. Churton (Mowbray),—*Agnosticism and Theism in the Nineteenth Century*, by Richard A. Armstrong (Green),—*The Rise of the Quakers*, by T. Edmund Harvey (Law),—*The Child and Religion*, by Thomas Stephens (Williams & Norgate),—*The Witness to the Influence of Christ*, by the Right Rev. William Boyd Carpenter (Constable),—*The Christian Ministry*, by Lyman Abbott (Constable), — *Thoughts Transcendental and Practical*, by M. Carta Sturge (Clifton, Baker),—*Sunny Egypt*, by George Vincent (Ipswich, Smiths), — *Picturesque Essex*, by Duncan Moul and R. H. Ernest Hill (Robinson),—*Women and Wisdom of Japan*, edited by L. Cranmer-Byng and Dr. S. A. Kapadia, with Introduction by Shingoro Takaishi (Murray),—*The Synthetic Dyestuffs and Intermediate Products*, by J. C. Cain and J. F. Thorpe (Griffin), — *Electrical Methods in Affections of the Stomach*, by G. Herschell (Siegle),—*Briefs on Public Questions*, by R. C. Ringwalt (Longmans),—*Backwards and Forwards*, by Summer Spring (Glaisher),—*History of the Pacific North-West*, by J. Schafer (Macmillan),—*The Story of Reptile Life*, by W. P. Pycraft (Newnes),—*The Outlook to Nature*, by L. H. Bailey (Macmillan),—*The Book of the Scented Garden*, by F. W. Burbidge (Lane), — *India and its Problems*, by S. Smith (Thynne), — *The Fight for Canada*, by William Wood (Constable), — *Depositions taken before the Mayor and Aldermen of Norwich, 1549-1567*, edited by Walter Rye (Norfolk and Norwich Archæological Society),—*Dom Francisco Manoel de Mello*, by Edgar Prestage (Sherratt & Hughes),—*Thought Forms*, by Annie Besant and C. W. Leadbeater (The Theosophical Publishing Society),—*Through the Furnace*, by F. E. Reade (S.P.C.K.),— *The Shoes of Fortune*, by Neil Munro (Blackwood),—*Clive Forrester's Gold*, by Charles R. Kenyon (R.T.S.),—*My Palace of Thought*, by Nora Conway (Matheson),—*Sturmsee*, by the Author of 'Calmire' (Macmillan),—*Some Notable Hamlets*, by Clement Scott (Greening),—*The Sun-Child*, by R. C. Lehmann (Bradbury & Agnew),—*Phil Conway*, by A. C. Gunter (Ward & Lock),—*Will of the Dales*, by R. Stead (Blackie),—*The Poet and the Pierrot*, by Dorothea Deakin (Chatto & Windus), — *As the Sparks Fly Upward*, by Lady Napier of Magdala (Drane),—*Dorothy's Holiday*, by Edith A. Smith (Drane), — *The Temptation of Philip Carr*, by May Wynne (Sonnenschein), — *Adolphe*, by Benjamin Constant (Dent),—*Poems*, by John Greenleaf Whittier (Blackie),—*Geometrical Conics*, by G. W. Caunt and C. M. Jessop (Arnold),—*Familiar Scottish Birds*, by A. Nicol Simpson (Paisley, Gardner),—*La Macédoine et sa Population Chrétienne*, by D. M. Brancoff (Paris, Plon-Nourrit),—*Der erste punische Krieg im*

Lichte der livianischen Tradition, by Dr. Max Schermann (Williams & Norgate),—*Geschichte der politischen Beziehungen Siebenbürgens zu England*, by Dr. David Angyal (Budapest, Friedrich Kilian),—and *Lexique Sommaire de la Langue du Duc de Saint-Simon*, by E. Pilastre (Paris, Firmin-Didot).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Abbott (L.), The Christian Ministry, extra cr. 8vo, 5/ net.
Biblia Hebraica, Part 1, edited by R. Kittel, 4to, 5/6 net.

THE LINCOLN MONUMENT TO TENNYSON.

PERHAPS because the ceremonial was entirely local, the unveiling, on the 15th inst., in Lincoln of a statue of Tennyson, the work of G. F. Watts, has attracted less attention than might have been expected from the combination of the two names. Members of the Tennyson family were on the platform, and one of them, Mr. Tennyson d'Eyncourt, briefly seconded a motion of thanks to the wife of the sculptor. Lord Tennyson, though present, remained silent, and the speaking was confined to the Bishop and the Dean, Earl Brownlow, the Lord-Lieutenant of the county, the Mayor of Lincoln, and one or two local celebrities, Lady Brownlow uncovering the statue. The day was brilliant, the gathering large, and the service, which was short, was audible throughout. The statue—which occupies a site on the Minster Green, near the north-east corner of the edifice, under the shadow of the Rood Tower, perhaps the noblest central tower of any English cathedral—is a fine and characteristic work, which the Dean, in Tennysonian phrase, described as a "statue moulded of Arthur, made by Merlin." Its inspiration is found in the lines of Tennyson quoted by the Bishop:—

> Flower in the crannied wall,
> I pluck you out of the crannies,
> I hold you here, root and all, in my hand,
> Little flower—but *if* I could understand
> What you are, root and all, and all in all,
> I should know what God and man is.

It shows the poet with bent head pondering on the flower he holds. A dog by his side looks trustingly and lovingly to his face, seeking, as Watts himself declared, "for guidance to the secret of the larger life" which the poet sought to wrest from the flower. It savours, perhaps, somewhat of irreverence to say that from a distance the effect is rather that of one consulting a watch.

As all will readily believe, the work is a labour of love, and the county subscriptions which have been received have done little more than meet the cost of casting. Without declaring the work the finest statue in England, as it has been called, we may say that it is poetical and imaginative to a high degree, and is such, probably, as no other local centre can boast.

Tennyson's connexion with Lincolnshire is close. There he was born and bred, and the influences of its scenery, its associations, and even its folk-speech are abundantly traceable in his writings, having, indeed, been well traced by another Lincolnshire man, Canon Rawnsley. To Lincoln itself he was bound by no very close ties, and there are towns, such as Louth, whereat he was educated, which might dispute the right to possess his monument. None, however, will dispute the beauty or the appropriateness of a site beneath the shade of that noble edifice which is still an object of pious and incessant pilgrimage. The statue, which is in bronze, is of heroic size, standing 11 ft. 8 in. on a marble base, itself 9 ft. 6 in. in height. Embossed on a tablet of bronze on the front of the base shaft is the single word Tennyson. Very graceful and meditative is the pose. Watts did not live to see the accomplished work, the details of which had been moulded by a hand of eighty-six years, and was, it is said, acutely sensible that his full intention was not realized. His work is, however, noble enough to extort general admiration and to inspire in the capital some reflections over neglected opportunities. At the moment when the figure was unveiled, the Cathedral choir, under the direction of Dr. Bennett, sang the setting by Sir Frederick Bridge of the poet's 'Crossing the Bar.' The prevailing sense among those present was of veneration and reverence, a sense which the environment, the age of the sculptor, and that of the subject of the monument were alike calculated to foster. Added to this was a grateful feeling that conditions absolutely prohibitive of the artistic commemoration of our poets can no longer be said to exist. What Canterbury has done for Marlowe, Lincoln has done, under different conditions, for Tennyson, whose memory is also recorded by a tall cross on the heights above his favourite Freshwater. It seems possible that, as Hamlet saturninely suggests, "a great man's memory may outlive his life" without the obligation to "build churches."

A VILLAGE LIBRARY.

EIGHTEEN miles from London, in the little Buckinghamshire village of Langley, or Langley Marish, there is to be found a small library, which in its position and circumstances posesses an unusual character. Further interest is attached to it from an apparently well-founded tradition that a great poet used the library, and left there what is still shown to visitors as "Milton's chair." Leaving the dust-clouds and dangers of that "Via Appia" of the motor-car, the Bath Road, at the signpost, the road runs north about a mile to Langley Place, and thence a few hundred yards west to the church, which stands in a square formed by picturesque red-brick almshouses, the church cottage, and the road. The church consists of two broad aisles, the south aisle containing a sort of open chapel, at the back of which is a very curious family pew, jealously screened off from the rest of the church by latticed casements. More like a long, narrow stage-box than a pew, it is profusely decorated, in late Renaissance style, with the armorial bearings of the Kedermister family and of their various connexions. Some of the Prayer-Books contain the form of service to be used in "Touching for the King's Evil." But the chief interest of this bizarre family pew is that it leads into a small and probably unique library. The careful donor, Sir John Kedermister (of a Worcestershire family), appears to have been Ranger of the royal park of Langley, within the "honour of Windsor," and to have performed his duties so excellently that James I., with true Stuart lavishness, knighted him and bestowed upon him the mansion and estate of Langley. The knight, anxious to complete the foundation of his family by the addition of a private chapel to the parish church, set about propitiating the Dean and Chapter of Windsor by founding sundry benevolent institutions, such as a hospital, almshouses, and this little theological library. An old deed, or "indenture tripartite," bearing date February 13th, 1649, recites

> "that the said Sir John Kedermister prepared a convenient place for a library, adjoining to the west end of the said chapel, and intended to furnish the same with books of divinity, as well for the perpetual benefit of the vicar and curate of the parish of Langley as for all other ministers and preachers of God's Word that would resort thither to make use of the books therein."

These books are said to have numbered between 500 and 600, but the curiously painted presses do not now contain more than 300 volumes. Old editions of the patristic writings naturally predominate, but the following titles taken at random from a MS. catalogue on vellum, dated 1638, may be of interest: 'Purchas his Pilgrimes,' 'Flores doctorum,' 'Gregorij Thaumaturgi opera,' 'Gregorij Valencia opera,' 'Mendoza in Regum,' 'Biblie Junij,' 'Busaei arca medica,' 'Bridges against the Pope's supremacie,' 'Saxoniæ historia'; and for those who could not go to Nathaniel Butler, his shop, "At the signe of the pide Bull neere Saint Austen's Gate," there was a copy of

> "The True Church, shewed to all men that desire to be members of the same. In six bookes, containing the whole bodie of Diuinitie. The contents

whereof are set downe after the Epistles by Gr. Williams, Dr. of Diuinitie."

That much pious use was made of these facilities may be gathered from certain MS. notes in the fly-leaves of an old Antwerp Bible, in Hebrew and Latin ("ex officina Christophori Plantini," 1584), by one J. C. Werndly, who was never either vicar or curate of the parish. One of these notes is as follows :—

"170½. Jan. the 17. I began again the Reading of this Hebrew Bible (wh. is the sixth time of reading it) may the Spirit of Holiness help me and graciously Enable me to peruse it again to the Glory of God, and to the sanctification of my sinful and im'ortal soul. Amen, Lord Jesus, Amen."

Another quaint note, the last of a series of similar ones, runs thus :—

"1701. XXXIII 8brs the 3rd. I finished the ψalms again by the mercy of my Savr."

From previous entries in the same hand it appears that XXXIII signifies that this was the thirty-third time of reading.

Elaborate precautions seem to have been taken for the safe custody of the little library. From the old deed already quoted we learn

"that the said four poor persons [*i.e.*, the occupants of the almshouses] should have a key of the said library, which they should for ever keep locked up in the iron chest under all their four keys, unless when any minister or preacher of God's Word or other known person should desire to use the said library, or to study, or to make use of any books in the same, and then the said four poor people or one of them at the least should from time to time, unless the heirs of Sir John Kedermister being then and there present should otherwise direct, attend within the door of the said library and not depart from thence during all the time that any person should remain therein, and should all that while keep the key of the said door fastened with a chain unto one of their girdles, and should also take special care that no books be lent or purloined out of the said library, but that every book be duly placed in their room, and that the room should be kept clean ; and that if at any time any money or reward be given to the said poor people for their attendance in the library as aforesaid, the same should be to the only use of such of those poor people as should at that time then and there attend."

If they lost their key of the "iron chest" they were to pay for a new one out of their weekly allowances, &c. Was ever treasure more jealously guarded? Surely it would have been better to place the library in charge of the vicar of the parish (who would, presumably, always be a scholar) than to have left it to the tender mercies of four old bedeswomen. The result has been that an interesting collection is now in a pitiable state of neglect. When the squire resided on his estate there was a fire in the library at least once a week, on Sundays ; now the ravages of damp and rough usage (probably in dusting) are deplorably evident on all the volumes, and particularly on some fine specimens of old binding. Matters have evidently become rapidly worse since the time of the Charity Commissioners' visit (1815-35), for they make no recommendation on the subject in their report.

We have mentioned the village tradition to the effect that Milton used the library. This may well have been so ; for the village of Horton, where John Milton the elder lived for many years, is only two and a half miles away, and we know that the poet spent six studious years there, from 1632 to 1638 ; and although the "indenture tripartite" is dated 1649, the catalogue dates from 1638, whilst a tablet gives 1623 as the actual date of the gift. Alas ! the old house at Horton was pulled down many years ago. But no material changes can rob the neighbourhood of its immortal charm as the environment in which some of the most beautiful poems in our language were composed. 'L'Allegro' and 'Il Penseroso,' 'Arcades,' 'Comus' and 'Lycidas,' were all written at Horton, in the intervals of a truly monumental classical reading ; and it is impossible to conceive that such a lover of books, and diligent collector of them, could have left unexplored and unused what was, for its time, an important library, separated from his father's house by but two or three miles of level meads and shady road. M.

THE EGYPT EXPLORATION FUND AND PROF. PETRIE.

University College, London.

IN *The Athenæum* of July 22nd the writer of 'Archæological Notes' has printed in parallel columns extracts from my letter to *The Athenæum* and from the communication of Sir John Evans and Mr. Grueber to *The Times*, with a suggestion that the two are inconsistent with each other. I have consulted with Sir John Evans and with Mr. Grueber about this matter, and I am formally authorized by them to state that they accept as strictly in accordance with the facts the version which I gave of the official relations between the Committee of the Egypt Exploration Fund and the reorganized Egyptian Research Account.

ERNEST A. GARDNER.

*** Our readers can decide whether the letter to *The Times* and Prof. Gardner's letter to us are consistent. We do not think they are.

CROMWELL AND IRISH PRISONERS.

23, Leeson Park, Dublin, July 20th, 1905.

THROUGH the courtesy of Lord George Fitzgerald, I have been afforded an opportunity of reading a pamphlet entitled 'A Day in Barbados,' written by Lady Blake, wife of Sir Henry Blake, Governor of Jamaica 1889-98. Lady Blake writes as follows in her description of what she saw in Barbados :—

"As we walked down to the beach we passed a group of copper-coloured men and stopped to speak to them. They belonged to the class known in the island as 'Red-legs.' Though almost resembling Red Indians in colour, they are white men by race and have not mixed with the coloured population. The fierce sun of the tropics has burnt them to the hue of bricks, but the young children are quite fair-skinned. They are the poorest of the poor, eking out a scanty livelihood as fishermen ; the white race cannot do hard work in the fields and survive long, they have no land or means of obtaining any, consequently their only resource is fishing.....The name [*i.e.*, Red-legs] has stuck to the white fishermen, many of whom are believed to be descendants of those most miserable of men the Europeans banished to work on estates in the plantations. These were known as 'Christian Servants,' or 'Apprentices' as they came to be called later on, for the Lords of Trade and Plantations at home were scrupulous, and we find by an 'Act for the good governing of Christian Servants' made in 1676, that 'their Lordships were not pleased with the word *servitude*, being a mark of bondage and slavery, and thought fit rather to use the word *Service*, since these servants are only apprentices for years.' Their lot was a far harder one than that of the negro slaves. It was a very brutal or exceptionally short-sighted owner who worked his slaves to death ; they were his goods and chattels, and few men wantonly destroy their own property. But as the 'Christian Servants' were only bondsmen for a term of years, and no large amount of capital had been expended in purchasing them, and as at the end of five years the Christian servant was entitled to ten pounds sterling, 'if his master be soe honest as to pay it,' it was an actual pecuniary gain to the employer should the servant not live till the expiration of the term. The Irish prisoners taken by Cromwell were about the first exported in large numbers to the colonies.....In April, 1657, the Council of State (English) stated to the Committee of Merchants that they 'are informed that 170 Irish have been taken at sea, who pretend they were going to Middleburgh. Desire them to treat with those who trade to the English plantations to transport the common men thither, where their services may be made use of.' A few years later a certain Alderman Tichborne is desired to present to Parliament the 'draft of an Act concerning the transporting of poor Irish children to England and the western plantations.' In the same year comes an order for a license to Sir John Clotsworthy for the transportation of 'five hundred natural Irishmen.'"

With reference to Mr. Dunlop's letter in *The Athenæum* of the 15th inst., I can only say that the evidences sent me from Barbados and published in the same number show that I was correct in thinking that there was practically no difference between a servant and a slave at the time in question. Lady Blake describes the conditions which existed with absolute accuracy.

With regard to the other point raised by Mr. Dunlop, I have only to add that I have sent his letter to Cardinal Moran, who will probably supply the correct reference. His Eminence generally takes special care to verify his quotations. WILLIAM F. DENNEHY.

FANNY BURNEY AND JANE AUSTEN.

IT would be difficult, if not impossible, to name an author of genius even approximately equal to Jane Austen's who owed so little as she to any deliberate study of literary models or conscious attention to the laws of style. Concerning her personal character and private interests we know, indeed, surprisingly little ; but it is certain, on the one hand, that she was not in touch with the men and women of letters among her contemporaries, and, on the other, that her family circle did not practise the gentle art of criticism. The further assumption that she had thought little, and read less, about the theory of her art, is justified by the absence of any such references in her letters, by her contemptuous allusions to such works as *The Spectator*, and by her simple ideas of construction, as developed in the advice to a young relative who was attempting to follow her example :—

"You are now collecting your people delightfully, getting them exactly into such a spot as is the delight of my life. Three or four families in a country village is the very thing to work on."

Jane Austen, however, read novels with keen enjoyment : 'Northanger Abbey' is in part an avowed burlesque of Mrs. Radcliffe, and we can discover, in the language of Shakspearean commentary, the "originals" for several of her plots and persons in the works of Fanny Burney.

Such an investigation, indeed, seems to have been almost courted by the author herself when she borrowed a title from a chance phrase of her sister novelist's for a story with a somewhat similar plot, developed, among other coincidences, in two closely parallel scenes. When at length, after a series of cruel misfortunes, the hero and heroine of 'Cecilia' were permitted to console each other, an onlooker thus pointed the moral of their experience : "The whole of this unfortunate business has been the result of PRIDE AND PREJUDICE."

There must have been a day, about twenty years after they were written, when these words assumed, in Jane Austen's eyes, a sudden significance. She had read them before, probably many times, but on this occasion they proved no less than an inspiration. Within her desk, on which perhaps the favourite volume was then lying, lay the neatly written manuscript of a tale constructed, in some measure, on the lines of this very 'Cecilia.' She had called it 'First Impressions.' Would not 'Pride and Prejudice' be a better name? It was certainly a happy thought.*

Now Delvile, like Darcy, fell in love against his family instincts, and, with an equally offensive condescension, discoursed at length on his struggles between pride and passion to the young lady he desired to honour with his affection. He, too, resisted long, yielded in the end, and was forgiven. His mother's appeal to Cecilia was as violent, and almost as impertinent, as Lady Catherine's to Elizabeth.

* There is good ground for thinking that the change of title was made after the novel was finished, for Mr. Austen-Leigh says that 'Pride and Prejudice' was written between October, 1796, and August, 1797, while it is referred to as 'First Impressions' in letters as late as June, 1799.

A close comparison of these two parallel scenes will serve at once to show Jane Austen's familiarity with the copy and her originality of treatment. Darcy, like Delvile, is not "more eloquent on the subject of tenderness than of pride." But he has overcome his scruples and offers his hand, in confidence of its being accepted, to one who dislikes and despises him. Delvile, on the other hand, wishes merely to explain the reasons that have induced him to deny himself the dangerous solace of the "society" of one whom he believes to be entirely indifferent to him, and to excuse the occasional outbursts of tenderness into which he has been betrayed in unguarded moments. He does not complain of "the inferiority of her connexions," but of the clause in her uncle's will by which her future husband is compelled to take her name. Cecilia had been puzzled by his uncertain behaviour, but, believing him only cautious from respect to his parents, had permitted herself to love him.

Mrs. Delvile again, like Lady Catherine, based her appeal on the "honour and credit" of the young man she was so anxious to release; but her insolence was tempered by affection, and disguised by high-sounding moral sentiments. Cecilia was softened, as Elizabeth had not been, by a sense of gratitude for past kindness and by a strained notion of respect for the older lady. Mrs. Delvile, except in her pride, is intended to inspire us with genuine respect; Lady Catherine is always treated with amused contempt.

There are other instances—less familiar, but equally striking—in which Miss Austen made use, in her own inimitable fashion, of characters, phrases, and situations in 'Evelina' and 'Cecilia.'

Mr. Delvile, the pompous and foolish man of family, reappears in Sir Walter Elliot of 'Persuasion,' and General Tilney of 'Northanger Abbey.' Cecilia could never determine "whether Mr. Delvile's haughtiness or his condescension humbled her most," and he became "at length so infinitely condescending, with intention to give her courage, that he totally depressed her with mortification and chagrin." Catherine Morland always found that "in spite of General Tilney's great civilities to her, in spite of his thanks, invitations, and compliments, it had been a release to get away from him."

Cecilia's friendship for Henrietta Belfield resembles Emma's for Harriet Smith. She was ever watching the state of her young friend's heart; now soliciting her confidence, and again, from motives of prudence, rejecting it. For a time both girls are in love with the hero, and Henrietta dreams as fondly and as foolishly over Delvile's imagined partiality as Harriet did over Knightley's. Neither heroine has any thought of resigning her lover to her friend, or "of resolving to refuse him at once and for ever, without vouchsafing any motive, because he could not marry them both."

The following conversation between Mr. Gosport and Miss Larolles recalls Miss Steele's persistence in laughing at herself about the doctor ('Sense and Sensibility') and Tom Bertram's affected belief that Miss Crawford was "quizzing him and Miss Anderson" ('Mansfield Park').

Gosport attacks Miss Larolles on a rumour now current about her, and, after some skirmishing, confesses to having heard that "she had left off talking."

"'O, was that all,' cried she, disappointed, 'I thought it had been something about Mr. Sawyer, for I declare I have been plagued so about him, I am quite sick of his name.'

"'And for my part, I never heard it! So fear nothing from me on his account.'

"'Lord, Mr. Gosport, how can you say so! I am sure you must know about the festino that night, for it was all over the town in a moment.'

"'What festino?'

"'Well, only conceive how provoking! Why, I know nothing else was talked of for a month.'"

This is the Miss Larolles who haunted the mind of Anne Elliot, in 'Persuasion,' when she moved to the end of a form at the concert, in order to be sure of not missing Capt. Wentworth:—

"She could not do so without comparing herself with Miss Larolles, the inimitable Miss Larolles, but still she did it, and not with much happier effect."

Here is the passage in question: "Do you know," says Miss Larolles,

"Mr. Meadows has not spoke one word to me all the evening! though I am sure he saw me, for *I sat at the outside* on purpose to speak to a person or two, that I knew would be strolling about; for if one sits on the inside there's no speaking to a creature you know; so I never do it at the opera, nor in the boxes at Ranelagh, nor anywhere. It's the shockingest thing you can conceive, to be made sit in the middle of these forms, one might as well be at home, for nobody can speak to one."

The singularly unselfish affection of Mrs. and Miss Mirvan for Evelina, never clouded by envy of her superior attractions, finds its echo in the experience of Jane Fairfax:—

"The affection of the whole family, the warm attachment of Miss Campbell in particular, was the more honourable to each party, from the circumstance of Jane's decided superiority, both in beauty and acquirements."

When Evelina is in great trouble, and the "best of men," Mr. Villars, is penetrated to the heart by the sight of her grief, he can think of no better consolation than:—

"My dearest child, I cannot bear to see thy tears; for my sake dry them: such a sight is too much for me: *think of that*, Evelina, and take comfort, I charge thee."

With similar masculine futility the self-centred Edmund Bertram attempts to soften the grief of his dear cousin:—

"No wonder—you must feel it—you must suffer. How a man who had once loved, could desert you. But yours—your regard was new compared with—Fanny, *think of me*."

Many a reader, doubtless, has, with Elizabeth Bennett, "lifted up his eyes in amazement" at the platitudes of Mary on the occasion of Lydia's elopement, without suspecting that offensive young moralist of having culled her phrases from one of Miss Burney's romances. "Remember, my dear Evelina," writes Mr. Villars, "nothing is so delicate as the reputation of a woman; *it is at once the most beautiful and most brittle* of all human things." Now Mary was "a great reader and made extracts." She evidently studied the art of judicious quotation—"Unhappy as the event must be for Lydia," says this astounding sister,

"we may draw from it this useful lesson: that loss of virtue in a female is irretrievable—that one false step involves her in endless ruin—that her reputation *is no less brittle than it is beautiful*, and that she cannot be too guarded in her behaviour towards the undeserving of the other sex."

The general resemblance of Catherine Morland's situation to Evelina's may have been unconscious, but was scarcely, we think, accidental. In 'Northanger Abbey,' as in no other of Miss Austen's novels, though in all Miss Burney's, the heroine is detached from her ordinary surroundings and introduced to society under the inefficient protection of foolish acquaintances. Like Evelina, she finds in the great world much cause for alarm and anxiety, though, like her, she has the hero for partner at her first ball. She, too, is frequently tormented by the differences between her aristocratic and her vulgar friends. Henry Tilney's attitude towards her, on the other hand, is very similar to Lord Orville's towards Evelina. He can read her like an open book, and his discovery of her suspicions about his father is as ingenious and as delicately revealed as Orville's generous chivalry to Evelina at the ridotto. Indeed, had Fanny Burney been more daring she would have confessed that Orville's affection for Evelina, like Tilney's for Catherine,

"originated in nothing better than gratitude; or in other words, that a persuasion of her partiality for him had been the only cause of giving her a serious thought."

The admiration which Evelina expressed with so much *naïveté* and earnestness to her guardian must have betrayed itself in her looks and conversation. Orville's heart was won by unconscious flattery, though Miss Burney herself was too conventional to admit it. She left the conception and its defence to another. "It is a new circumstance in romance," writes Miss Austen, "and dreadfully derogatory of an heroine's dignity; but if it be as new in common life, the credit of a wild imagination will at least be all my own."

In one of her rare outbursts of self-confidence with the reader, Miss Austen appears to put 'Camilla' on a level with 'Cecilia'; and Thorpe's abuse of this novel in 'Northanger Abbey' must be interpreted as her own indirect praise, for that youth is never allowed to open his lips without exposing himself to our derision. It is immaterial to our purpose that posterity has accepted his verdict rather than Miss Austen's. Her name appears among the subscribers to 'Camilla,' and she was loyal to it without an effort. In so insipid a work she was not likely to find much available material; but the conduct of Miss Margland towards Sir Hugh Tyrold and his adopted children may have suggested some traits in Mrs. Norris, and Mr. Westwyn's naïve enthusiasm for his son bears a strong resemblance to that of Mr. Weston for the inevitable Frank Churchill.

It has been frequently noticed how little Jane Austen was touched by any questions of social or political import; but her satire was never so pointed as when directed against the masculine ideal for women:—

"The advantages of natural folly in a beautiful girl have been already set forth by the capital pen of a sister author; and to her treatment of the subject I will only add, in justice to men, that though, to the larger and more trifling part of the sex, imbecility in females is a great enhancement of their personal charms, there is a portion of them too reasonable, and too well informed themselves, to desire anything more in woman than ignorance."

Miss Bingley made herself ridiculous by her definition of an accomplished woman as one who "must have a thorough knowledge of music, singing, drawing, dancing, and the modern languages." The germ of her satire appears in the experiences of Miss Burney's 'The Wanderer,' and in an allusion to the prevalent idea of feminine culture in 'Camilla':—

"A little music, a little drawing, and a little dancing, which should all be but slightly pursued, to distinguish a lady of fashion from an artist."

So writes Jane Austen, again, in 'Lady Susan':—

"Not that I am an advocate for the prevailing fashion of acquiring a perfect knowledge of all languages, arts, and sciences. It is throwing away time to be mistress of French, Italian, and German; music, singing, and dancing..... I do not mean, therefore, that Frederica's acquirements should be more than superficial, and I flatter myself that she will not remain long enough at school to understand anything thoroughly."

It remains only to notice with what kindred indignation the two writers complain of the little honour accorded their craft. Miss Burney, in fact, did much to raise her profession; but it was not considered "quite respectable" by Miss Austen's contemporaries.

Mr. Delvile complains of Cecilia's large bill at the booksellers', on the ground that

"a lady, whether so called from birth, or only from fortune, should never degrade herself by being put on a level with writers, and such sort of people."

In the preface to 'Evelina' Miss Burney declares that

"in the republic of letters, there is no member of such inferior rank, or who is so much disdained by his brethren of the quill, as the humble novelist; nor is his fate less hard in the world at large, since, among the whole class of writers, perhaps not one can be named of which the votaries are more numerous but less respectable."

Jane Austen is more spirited in her complaint, and takes her example from Miss Burney herself:—

"Yes, novels; for I will not adopt that ungenerous and impolitic custom, so common with novel-writers, of degrading, by their contemptuous censure, the very performances to the number of which they are themselves adding; joining with their greatest enemies in bestowing the harshest epithets on such works, and scarcely ever permitting them to be read by their own heroine, who, if she accidentally take up a novel, is sure to turn over its insipid pages with disgust. Alas! if the heroine of one novel be not patronised by the heroine of another, from whom can she expect protection and regard? I cannot approve it. Let us leave it to the Reviewers to abuse such effusions of fancy at their leisure, and over every new novel to talk in threadbare strains of the trash with which the Press now groans. Let us not desert one another; we are an injured body. Although our productions have afforded more extensive and unaffected pleasure than those of any other literary corporation in the world, no species of composition has been so much decried. From pride, ignorance, or fashion, our foes are almost as many as our readers; and while the ability of the nine-hundredth abridger of the History of England, or of the man who collects and publishes in a volume some dozen lines of Milton, Pope, and Prior, with a paper from the *Spectator* and a chapter from Sterne, is eulogised by a thousand pens, there seems almost a general wish of decrying the capacity and undervaluing the labour of the novelist, and of slighting the performances which have only genius, wit, and taste to recommend them. 'I am no novel-reader; I seldom look into novels; it is really very well for a novel.' Such is the common cant. 'And what are you reading, Miss——?' 'Oh! it's only a novel!' replies the young lady, while she lays down her book with affected indifference or momentary shame. 'It is only "Cecilia," or "Camilla," or "Belinda,"' or, in short, only some work in which the greatest powers of mind are displayed, in which the most thorough knowledge of human nature, the happiest delineation of its varieties, the liveliest effusions of wit and humour, are conveyed to the world in the best chosen language."

R. BRIMLEY JOHNSON.

THE TERM "GWENT."

Brisbane, Queensland.

IN *The English Historical Review* for October, 1904, Mr. Haverfield, in his article on Silchester, wrote:—

"The term Gwent as used by Mr. Green has no proper authority. It seems to have been invented in recent times out of the place-name Venta, which was used for three little towns in Roman Britain. The etymology and meaning of this term are quite unknown."

The following is a summary of notes on Venta collected by me during some years, which I now forward to you in hopes that they will be favoured with space in *The Athenæum*, and so meet the eyes of readers competent to judge whether they might not in some measure help towards a solution. Believing with Mr. Haverfield, in regard to Gwent, that "it seems to have been invented in recent times," I will not waste time by repeating the older views, but will at once proceed to set forth my own as briefly and as clearly as possible.

A word has for a long time been forcing itself on my attention as a very likely derivation of Venta. After much trial I am at last disposed to accept it. It is *cúan*, an Irish word which signifies a harbour, inlet, winding, ocean; a "bay, haven; a field," O'Reilly. As a substantive *cúan* possesses the usual oblique forms, its genit. sing. being *cuain*, and its plural being *cuanta*. As a word also of the Italo-Celtic class of languages, it illustrates one of their phonetic characteristics, which is, that a root or primary form, when in process of becoming a word in any of the different dialects, does so with a different initial consonant. Thus an Italo-Celtic root which on emerging into Irish appears as a word beginning with *f-* does so on emerging into Latin as one with *v-*, into Welsh as one with *gw-*, into English as one with *w-*, and into another language as one with *b-* or with *m-*; *e.g.*, the Ir. *fion* is in L. *vinum*, in W. *gwin*, in E. *wine*; the Ir. *bean*, a woman, is in L. *Venus*, in W. *Gwen*, and *benyw* and *menyw*, in E. *queen*; the Ir. *Fionn* is in L. *Faunus*, in Gk. *Pan*, in W. *Gwion*, in Finnish *Waïna*; the Ir. *fear*, a man, is in L. *vir*, in W. *gwr*, in Gaulish *baro*, in Gothic *wäre*, people; and lastly, the Ir. *cúan* is in Welsh place-names *gwyn-* and *-gwyn*, in Finn. *Quains* and *Finns*, the names of the same people (qu= f) and both signifying baymen, in Lithuanian *wandů*, in L. *Venta*, in Spanish *guano*, an article of commerce, so called from its being obtained along coasts of South America which abound in inlets.

The following are some proper names which it is submitted are derived from *cúan*:—

1. The Cwen Sea, or White Sea. Mr. Keane in the *Jour. Anthr. Inst.*, 1886, p. 213, derives it, if I remember rightly, from Quains or Quens, whose land, Cwenaland, borders on the Arctic Sea. The translation of Cwen here into white argues a relationship for it with *gwén*, the Welsh fem. adj. meaning white (masc. *gwyn*). In fact, there exist numerous inlets round the British and Gaulish coasts involving the elements *white* and *gwyn* in their names, as Whitehaven, Whitstable, Whitby, Whitford, Whitesand Bay, Wissant. These names must be mistranslations of former names of the places, which involved the element *gwyn* in their composition, where, however, *gwyn* represented, not the W. *gwyn*, white, but the Ir. *gcuain*, an inlet. In the class of *gwyn-* or *gcuain-* names the Welsh coast exhibits many, as Gwendraeth, a beach on Carmarthen Bay; Traethgwyn, a beach on Cardigan Bay at Newquay, a name resembling Gwendraeth, except that the elements are in an inverse order; Porthygwenin, a name of the diminutive kind, also exists here, as well as another name, Cilwene, which means behind the bays; Llandegwyn, or the church at the two strands; Llandegwnin, near Pwllheli; Abergwenn, the Welsh name for Fishguard, and referring to Goodwick Sands, Gwenn having no doubt being wrongly applied to the river there; Llanwnda, the church adjoining Goodwick Sands; another Llanwnda near Carnarvon at Abermenai, which church has near it another called Llanfaglan, whose name, like that perhaps of Baglan, near Neath, may be derived from the Ir. *bagh*, a bay. When *gwnda*, i.e., *cuanta*, forms a place-name that is inland, it cannot mean harbours, but fields. Compare the modern Welsh word *gwndwn*, a field, a patch of fallow. Further Welsh instances may be Gwyngregyn at Aber, not far from where is also the O-gwen; Pwllgwyngyll, in the Menai, a name which may be for the Ir. *pol gcuain gaill*, the pool at the harbour of the foreigners—Polven-ton, Cornwall, is a name somewhat like it; Careg y Gwymbill, near Pwllheli, a name which resembles Wampool; Traeth Malgwyn, at the entrance of the Dovey, a name to be explained as regards *Mal-* by the Norse word *mel*, a carse, beach, links, and as regards its ancient history as having been the Roman name of Pennal, which (by metathesis) was Maglona, the military station which guarded the pastoral uplands of Cyfeiliog and the mineral region on the lower slopes of Pumlumon against the Scotic marauders who would beach their flotillas of coracles on the sandy estuary of the Dovey, just as Tomen y Mur, near Trawsfynydd, guarded the passes that led to the vales of Festiniog and Edeyrnion, and to the mining district around the Ganllwyd towards Dolgelly, against the same pirates who would put in at Traethmawr. An important *gwyn-* name is Gwynedd, the portion of North Wales which counts as its maritime border the line of coast extending from the mouth of the Dovey to that of the Clwyd. Gwynedd, says Prof. Rhys in his introduction to Pennant's 'Tour,' is connected with the Ir. *fine*, a sept or clan, and means "Tribedom," "The Tribes" *par excellence*; but he was perhaps thinking of only the phrase "The Fifteen Tribes of Gwynedd." A better view is had by looking at *Gwyn-* as connected with *cúan*, and at *-edd* as being an inflectional ending representing the modern Welsh plural, as seen in *bysedd*, fingers (sing. *bys*). A Latinized form of Gwynedd, Venedotia, may seem to oppose this view, but it is not the same word as *Gwynedd*, being for a bardic *Gwyndud*, a name where *-dud* is for the Ir. *tuath*, or the W. *tud*, both meaning a district, a region. The direct Latin equivalent to *Gwynedd* is *Venetia*, the name of the inlet-abounding Armorican coast where Cæsar won a clever naval victory during the Gallic war. This name is connected with the modern Breton names *Guened*, *Quimper*, and *Vannes*, unless the last name, owing to the place being surrounded by megalithic ruins, is to be explained by the W. *maen* or *faen*, a stone. From this coast, which in Roman times was a section of the Litus Saxonicum, was later called Letavia, and is now known as the Bay of Morbihan, the Goths (Jutes) and the Alans emigrated in the fifth century into Roman Wales, and imposed upon a portion of it the name of Gwynedd. Another name connected, as it seems to be, with the district of Guened, and one, like its name, derived from *cúan*, was Reguiney, a name which may have been carried by pre-Roman Venetian sailors to the Southampton Water, and left there to reappear on the adjoining mainland as Regni, the name of a tribe noted by Ptolemy, and as Guin-ceastra, or Venta Belgarum, or Winchester, the name of their chief town. A list of further *Gu-* and *Gw-* names shall conclude this section: Guanches, natives of the Canary Isles, of the Berber race, and from Morocco; the coast of Guinea; Guana, a typical harbour name in those parts of South America visited by the old Iberian and Gascon mariners; Guienne, a province of France, watered by the Garonne, and washed by the Bay of Biscay; Guingamp, in Brittany; Guinost, an islet in the Hebrides, a fit lurking-place for sea-robbers; Corca-Guiney, in Dingle Bay, near the cyclopean sea-fortress of Fahan; Gwinear, Gwinsea, Keigwin, Porthgwin, these last four being on the Cornish coast.

2. Among derivatives of *cúan* in V- we may cite Vanduara, a place in Ptolemy's map of Caledonia, now the Bay of Ayr; Vendée, on the Bay of Biscay; Venice, at the head of the Adriatic, which was the great distributor of the commerce of Etruria and the Ægean inland around the Alps and along the Rhine and the Upper Danube, just as its namesake, Venetia, on the Atlantic was the distributor of the commerce of ancient Iberia and Belgica to the British Isles; Peny Fantach, the Welsh name of the Mumbles Head, Swansea Bay, which I found in the late R. Pryse's 'Hanes y Brutániaid ár Cymry.' The Irish form of this name would be *beinn na gcuaintach*, which signifies the headland of the baymen. The name Dunvant, which is in these parts, but some way inland, has a different derivation. An interesting name is that of Bran Vendiged, a well-known mythic figure in the 'Mabinogion,' and connected with Harlech on the Merionethshire coast. Put into Irish, this name would be *bruighean gcuaintaich-ed*, which signifies the fortress of the sea-rovers (the last element *-ed* being the Welsh plural ending *-edd*). The story assigns to Bran a daughter Brouwen, whose name—on being explained as the Ir. *bruighean mhainn*, which signifies a fortress of stone or a fortress on a rock—is found only to supply another designation for Harlech. Perhaps it was owing to the element *-gwn* being present in his name that Maelgwn Gwynedd was, by his

legend, identified with Harlech, and also described as having been crowned at Traeth Malgwyn. The possible objection to these things is that there is a Rhydfendigaid far inland in the east of Cardiganshire. But the objection vanishes if it is admitted that in this Fendigaid the element *fend-* need not be explained by *cúan* in the sense of harbour, but by *cúan* in the sense of fields; and that Rhydfendigaid may mean the rivulet of the field workers, that is of the monks of the neighbouring monastery of Strata Florida, who were energetic agriculturists. If this will not do, and if *cúan* is to be entirely discarded, it need only be remembered that the foundation at Strata Florida must have been in the first instance a Benedictine one. As for Harlech, it was the ancient capital of Merioneth, whose own name—as it can be explained by the Irish words *muir dhuinn*, which mean a sea fortress, and by the Roman place-name Moridunium—connects it with the sea; so that Harlech, in virtue of its unique situation on the extreme westerly coast, may be as much the mythic centre of the exploits of the Celtic sea-god Merddyn, Merlin, or Morfryn as Carmarthen or any other "storied" locality in the west could be. We may cite Vandals, the name of pirates from the Baltic, and perhaps from Andalusia in Spain, who in the fifth century invaded Africa under Genseric. Andalusia may be philologically connected with Vandals, as the English Andover can be shown to be with Wendover, the disresemblance to it being due to its having lost an initial *V-* in the way that is illustrated by the phenomenon of the lost digamma in Homer. On the strength of this, it is tempting to connect philologically with -Fantach and -Fendiged, which we have just discussed, the name of a Gaulish tribe on the ocean mentioned by Cæsar, namely, the Andecavi, whom, on the principle above, we may rename the Vandec-avi. The Andecavi are placed by Kiepert on the north of the estuary of the Loire, just east of Nantes; the town which he hesitatingly places within the territory is Condivicnum. The Vandals, as coming from the Baltic, were doubtless the Venedæ of Tacitus, though they are located by him not along the sea, but expressly inland, yet described by him as brigands, if not as pirates. Modern scholarship, however, has referred the name Venedæ, like the name Wends, to a Lithuanian root *wandŭ*, which means "water." They regarded themselves as dwellers around water. The Wends, including the Venetians of the Adriatic, are all now regarded as Slavs.

Coming to the word *Venta*, Mr. Nicholson some years ago explained it as a rustic Latin word *vendita*, meaning "market." Venta Belgarum, our Winchester, was doubtless an emporium on the Test as well as a garrison, and placed well inland to be safe from pirates. Venta Icenorum was Norwich; in Roman times the sea extended as far; all of the East Anglian *-wich* names were at one time *on* the sea. Sweyne in 1004 A.D. led a fleet up to Norwich. Nial of the Nine Hostages, about 400 A.D., may have led his fleet higher up. Anchors and marine tackle are dredged higher up still. Venta Silurum, so described in the Itinerary and the Ravenna geographer, but not by classical authors, was Caerwent, where was clearly the centre of the tribal organization under which the Silures lived in Roman times, as shown by the words *respublica civitatis Silurum* of a recently discovered inscription. The district in later Welsh history was named Gwent. Of Gwent's two cantrefs, one, Gwent Iscoed, was so named, perhaps, on account of the Scoti, a class of sea-rovers who infested the estuary of the Severn, and held Port Skewet as their rendezvous; the naming of the other cantref Uwchgoed was thus, obviously, by way of an afterthought; the reference in the name Gwent is no doubt to the great *cúan*, or inlet of the Severn. The name corresponding to it on the opposite coast of the estuary is that of the Quantocks along North Devon, themselves preserving the memory of the *gcuaintach-s* or sea-rovers, and recalling Quantavic or Etaples, on the river Cauche or Cuent, the port of embarkation from England to the Continent in Anglo-Saxon times. As the Silures are placed by the classical authors around these parts, and, for all we know, were given as much to marauding the coasts as to ravaging territories, it is tempting for one to connect their name with the modern English word "sailors," and with the ancient Irish words *sál fhir*, both of which mean the same thing. It is not necessary to refer the element "sail" of *sailor* to the German word *segel*, "a sail"; nay, it would, perhaps, be incorrect to do so; for Tacitus says of the German sailors on the Baltic in his day that they did not man their double-prowed craft with sails, but with oars, as they manned coracles in some rivers. And the classical authors are not altogether silent about the Romans having had engagements with the Britons at sea, for Propertius, a contemporary of Cunobelinus, in one of his elegies has these words:—

Seu pedibus Parthos sequimur, seu classe Britannos.

3. Place-names in *W-* and *Sw-* which may be referred to *cúan* are Wends, Wensum (or Wantsum), Winchelsea, Winchester, S-wanscombe, S-winstead (once a harbour on the Wash and with a Danish encampment, now six miles from the sea), S-wanpool, S-wansea. Dr. Latham explained the initial *S-* in place-names as a result of the Danish invasions, an explanation doubtless applicable in some cases. But there exists the curious phenomenon of certain words appearing in couples, one of the pair having an initial *s-* and the other not, as the E. *s-now* and the L. *niv-is;* the L. *s-tannum*, the E. *tin;* the E. *s moke*, the W. *mwg;* the Ir. *s-neamh*, the L. *nav-is;* the Ir. *s-luagh*, the W. *llu*, both meaning hosting; the Ir. *s-ruth*, the W. *rhyd*, both meaning a stream; the Germ. *S chwester*, the W. *chwaer;* the Germ. *S-chwager* and the W. *chwegrwn*, both meaning mother-in-law. Is it difficult to accept the possiblity of the name S-wansea, for instance, being explained in this way? In this connexion, a word will be hazarded on the widespread tale of the Swan Maidens. Part of this tale of the motherless daughters of the Irish Lir being transformed into sea-birds is that their wizard stepmother condemned them to live for unearthly periods of time exposed upon the stormy breaksea headlands of Erris Head and the Mull of Cantire. Considering what has just been said about names resembling *swan*, and seeing that *maiden* bears a close resemblance in form and sound to *medn*, a word of the Cornish language which means stone, and which has given their names to many rocky spits embracing inlets on the Cornish coast, we may have some suspicion that we are upon the bedrock of fact—physical, at least—upon which the superstructure of the tale of the Swan Maidens, so important in mythology, has been raised.

4. A few names not so obviously connected with *cúan* as some of the above, and so left to the reader's own consideration, are Bantry Bay, Cancelle (on the Bay of St. Malo), Cavary Isles, Promontorium Canganorum, Ceangi, O-ceanus, channel, Llan-gian, Reti-gonium (Loch Ryan?), Queenborough on the Medway, Queenhithe, Quenvais (in Jersey), Se-quana, Gar-uenus (the river Yare), Ventnor, Ventry, Pe-vensey. DAVID OWEN.

*** We insert this collection of names and conjectures for its interest, but we cannot endorse much of the author's philology.

THE BRET HARTE ASSISTANCE FUND.

WE have received the following:—

"Mr. Bret Harte, the famous novelist whose works have given so much enjoyment in all English-speaking lands, died in poor circumstances, leaving his daughter Ethel totally unprovided for. Miss Bret Harte finds the struggle for a livelihood very hard. Her health has broken down at a time when she has been striving to earn her living on the concert platform and the stage. It is thought that many in Great Britain and the United States who knew her father personally, or who loved his books, would be disposed to contribute a small sum (amounts of even 5*s.* would be exceedingly acceptable), in order that a fund may be raised which may permanently benefit Miss Ethel Bret Harte."

The appeal is supported by a strong committee. Subscriptions may be sent to the hon. sec. to the fund, Dr. L. C. Alexander, of Holly Lodge, Upper Parkfields, Putney, S.W., or to the London and County Bank, Putney branch.

Literary Gossip.

MR. FISHER UNWIN will publish during August a story by Miss A. Curtis Sherwood, entitled 'Tongues of Gossip.' It is a study of varying currents and phases of religious life in a country town.

UNDER the title 'Charles, Duke of Brunswick: a Historical Paradox,' Mr. W. Fitzhugh Whitehouse will publish shortly through Mr. Elliot Stock an account of a mysterious episode leading up to the Franco-German War.

MESSRS. MACMILLAN & Co. have nearly ready an elaborate book on cricket, which is the joint work of Messrs. G. W. Beldam and C. B. Fry, the former being responsible for the 600 action-photographs included in the volume, and the latter having contributed the letterpress. The title of the book is 'Great Batsmen,' and the style of all the leading players of the day is very fully illustrated and described. The work is to be followed shortly by a similar book on 'Great Bowlers and Fielders,' by the same authors.

THE August *Dickensian*, to be ready on Tuesday, will contain, amongst others, articles on 'The Topography of Bleak House,' by Mr. H. Snowden Ward, illustrated; 'Dr. Manette's House in Soho,' illustrated; and 'Oliver Twist Dramatized.' There will be also a poem by E. J. Milliken, entitled 'A Man of the Crowd to Charles Dickens,' and other interesting items. The cover will be reproduced from Phiz's design used on the original parts of 'Bleak House.'

THE publishing business of the Cambridge University Press will be removed next week from Ave Maria Lane to Fetter Lane (St. Dunstan's House), the premises recently acquired by the University.

THAT excellent American weekly paper *The Nation* announces that the completion of its fortieth year was celebrated by a testimonial presented to the editor on July 6th, the date of the first issue in 1865:

"An inscribed vase of great beauty was the visible token, and it was accompanied by a congratulatory note signed by more than two hundred of *The Nation's* staff, some equal veterans with the Editor. Had all this been done in a corner, it should so have remained—a matter among friends. But the utter secrecy observed in carrying out the enterprise having been followed by advertisement in the daily press, the Editor is reluctantly compelled to share the news with his readers."

The inscription on the vase was written by Goldwin Smith, and speaks of "forty years

of able, upright, and truly patriotic work in the editorship of *The Nation*." Mr. Wendell Philipps Garrison, who began his duties at the age of twenty-five, has now just equalled, he says, his father's term of editorial labour, and we congratulate him on a wonderful family record, which must be, we think, without parallel. It is particularly striking in these days of flux and change, when consistent records of any kind are rare. The literary department has been the editor's special charge, and we only express the feelings of a great many readers on this side of the Atlantic when we say that the scholarship, fairness, and independence displayed therein constitute one of our weekly pleasures.

APPOSITION was celebrated at St. Paul's School last Wednesday, and the retiring High Master, Mr. F. W. Walker, was presented with a gold cup on behalf of the Mercers' Company. Mr. Walker has been High Master since 1876, and the wonderful successes of his boys are too well known to need mention here. They include 351 open scholarships taken at Oxford and Cambridge in the last nineteen years. Mr. Walker deserves his leisure, but one cannot help a feeling of deep regret that education should lose so commanding a figure. The resignation of his son, the Rev. R. J. Walker, is also a great loss to the school.

DR. GRAY, the head master of Bradfield College, has sent us a correspondence between the secretary of the Oxford and Cambridge Schools Examination Board and himself, touching principally the decision of that body not to recommend the school to the Army Council for examination in chemistry. We have read the letters carefully, and we think that the Board has shown a lack both of discrimination and discretion. Further inquiry is certainly needed to elucidate various points which are shown by Dr. Gray to be obscure, and which concern the inspection of the secondary schools of the country.

MR. H. R. PLOMER writes :—

"Every one who knows the good work that *The Library* has been doing for the promotion of the study of bibliography in England will be grateful to you for the hearty commendation which you gave it in your 'Literary Gossip' last week. The single fact that one-half of Mr. Robert Proctor's bibliographical essays appeared first in its pages, and could hardly have appeared anywhere else, is the best evidence of the place which it fills. It is greatly to be regretted that English book-lovers seem to prefer to wait till a magazine of this kind is dead, before troubling to acquire it. Complete sets of bibliographical magazines always fetch good prices ; the monthly series of *The Library* itself, when it can be obtained complete, is worth double its original price. Is it too much to hope that bookbuyers will find half-a-guinea a year to help the magazine in its quarterly form to continue its useful existence, instead of waiting for the privilege of paying a higher price for it after its death?"

THE editor of *The Library* wishes us to state that all inquiries as to publication and subscription should be addressed to the publishers, Messrs. Kegan Paul, 43, Gerrard Street, W.

A LITERARY duel not arising out of journalism is a rare event, so we chronicle the fact that a gentleman who thought himself intended by an unflattering portrait in "Gyp's" last novel wrote her a letter which led to a challenge by Comte de Martel de Janville, her husband. When the gentlemen met, the Count alone fired, missed, and the affair was over.

M. PAUL BOURGET'S new book, 'Les Deux Sœurs : le Cœur et le Métier,' is announced for immediate publication by MM. Plon-Nourrit et Cie.

AT the "séance solennelle" of the five French Académies, fixed for October 25th, M. Sénart will read an important essay on recent discoveries in Chinese Turkestan. At a date not yet fixed M. Leger, the well-known historian of the Slavs, will read at the Académie des Inscriptions a paper on the 'Invasion des Tartares,' based on Russian literature of the Middle Ages. Another paper which promises to be of considerable interest, by M. Seymour de Ricci, will deal with some important papyrus discoveries in Egypt.

WE congratulate Messrs. Myers & Co. on issuing their hundredth catalogue of second-hand books. It contains a number of interesting items : the *édition de luxe* of Matthew Arnold's works ; Burton's 'Catullus,' privately printed ; extra-illustrated editions of Traill's 'Biography of Coleridge' ; R. H. Horne's 'New Spirit of the Age,' Sorel's 'Montesquieu,' and Boydell's 'Scenery and History of the River Thames,' extended by the insertion of 942 illustrations. There are a few choice engravings, among which may be noted a first proof of Cruikshank's etching 'The Worship of Bacchus.'

THE Special Committee appointed by the Bombay Government to consider the question of a public museum and library for the city of Bombay has reported in favour of the scheme. It is stated that the initial cost of the museum for the buildings only, exclusive of furniture and fittings, will be about ten lakhs. This sum it is proposed to distribute as follows : four lakhs for the central building for art and archæology, and three lakhs each for the science museum and the public library, which will form the wings of the building.

A NEW revised edition of the standard authority about the political relations of the Government of India, viz., Aitchison's 'Treaties and Sanads,' is in course of preparation at Simla. The editing of the work has been entrusted to Mr. E. H. Kealy, B.C.S., at present first assistant to the Resident at Indore.

AT the monthly meeting of the Board of Directors of the Booksellers' Provident Institution held on Thursday week last the sum of 99*l.* was voted to fifty-seven members and widows of members. One member was elected and three fresh applications for membership were received.

DR. WILHELM STORCK, whose death, at the age of seventy-six, is reported, was Professor of German Philology at Munster, and published a number of valuable works and translations.

THE Berlin Academy of Sciences is about to establish an institution for German literary manuscripts, especially those belonging to the Middle Ages and the early New High German period.

THE death, in his sixty-third year, is announced of Dr. van Manen, formerly Professor of Theology at the University of Leyden, and author of an important work on St. Paul, which made his name well known outside his own country.

WE note the issue of the following Parliamentary Papers : Regulations for the Instruction and Training of Pupil-Teachers (3*d.*) ; Minutes of Proceedings of the Commissioners of National Education, Ireland, relating to Rule 127B of their Code of Regulations (2½*d.*) ; British Museum, Return, 1905 (9*d.*) ; Edinburgh University, Ordinance No. 4, Institution of Degrees in Veterinary Medicine and Surgery (1*d.*) ; and Statutes made by University College, Oxford, and Balliol College, Oxford (½*d.* each).

SCIENCE

OUR LIBRARY TABLE.

Wasps, Social and Solitary. By George W. and Elizabeth G. Peckham. (Constable & Co.)—This is a book of the fields ; it is one of those delightful narratives with which the name of Fabre is associated, and relates to the manners and customs of wasps, thus very much resembling an ethnological treatise on some primitive section of the genus Homo. The comparison is not extreme ; it exhibits, of course, considerable diversity in degree, but little in kind ; we underestimate the reasoning powers of the lower animals, while we often overestimate those of primitive, or, as too frequently written, "savage" peoples. There is a new era dawning in the study of entomology, just as there is in ornithology. Nowadays, birds are being more observed by the field-glass and less slaughtered by the gun ; their skins and skeletons—save those belonging to little-explored countries—are being described with material ample for consultation ; and it is their bionomics which are exciting the greatest attention. We want to know more of the life habits, associations, and mental manifestations of birds rather than to rejoice over the acquisition of one more cabinet carcase. This new purview is gradually qualifying the method of study in entomology ; we become weary of the taxonomical controversies appertaining to deceased, but well-preserved insects impaled on pins, and we would fain know something of their habits and life—how far they are automata, as is frequently stated, and to what degree they are reasoning creatures, as is often predicated on insufficient observation. Much light is thrown on such problems by this profoundly interesting publication.

The Peckhams have gone into the fields with an open mind, and, in spite of sun, fatigue, and the fear of lunacy commissioners, have laboriously dogged the track of their insect as a detective attempts to run down one of our failures in civilization, and in similar method and spirit have sought to unravel the secrets of its career. These wasps care no more for the life of a caterpillar, which they capture and paralyze for the feeding of their unborn progeny, than we, when our food supply is in consideration, do for the existence of a sheep. Those theorists who are never tired of urging the claims of "mimicry" as a protection to the fully developed insect may well consider the wholesale destruction of the creature in its larval condition. The green caterpillar that matches so perfectly the twig or leaf of the same colour on which it rests derives no protection from the busy and discerning wasp ; the assimilatively coloured grasshopper escapes not the same enemy, while the spider falls a ready victim, and in Lepidoptera

it may be fairly well asked if the struggle for existence does not really occur in the larval or caterpillar form. The facts contained in this book relating to the mortality sustained by green larvæ owing to the attacks of wasps may reasonably cause reconsideration as to the protective all-sufficiency of natural resemblance; partial it undoubtedly is, but sufficient to the degree so frequently claimed it undeniably is not. There are many factors in the struggle for existence; let us be careful in claiming as absolute those few only at present known by our observations.

The last chapter of this book is devoted to the question of the instinct or intelligence deduced from the wonderful observations described in its pages. The most excellent observers do not always draw the most philosophical conclusions, just as some of the most fascinating theories lack the corroboration of sufficient observations. Thus Fabre, prince of field observers, from his study of the habits of the Ammophiles, concludes that they "are inspired by automatically perfect instincts, which can never have varied to any appreciable extent from the beginning of time." The Peckhams, however, have demonstrated that "the one pre-eminent, unmistakable, and ever-present fact is variability," and this is predicated in any conception of evolution, material or mental. However, as the problem can only be discussed in terms of human consciousness, we may repeat the cautious words which terminate the volume:

"It hath been an opinion, says Lord Bacon, that the French are wiser than they seem, while the Spaniards seem wiser than they are. We leave it to our readers to determine whether the wasps are wiser than they seem or seem wiser than they are."

Neolithic Dew-Ponds and Cattle-Ways. By A. J. and G. Hubbard. (Longmans.)—This little work, including twenty-five plates, the record of a holiday perambulation in Sussex and Dorset, contains much suggestive and interesting matter, and is very good reading, but not wholly convincing. The great earthworks of the south coast of England offer many problems for the consideration of the student of prehistoric archæology, and the authors have made a praiseworthy contribution towards the settlement of those problems; but it does not follow that the settlement they suggest will meet with general acceptance, or be taken as final. As they say, these vast and probably very ancient structures, with the works incidental to them, are, and have been for many centuries, exposed to gradual destruction by burrowing rabbits and obliteration by the plough. In these circumstances, some of the identifications which the authors somewhat confidently announce may be considered doubtful.

They deal with the great earthworks at Cissbury and Chanctonbury, between which they discovered another large circular enclosure, and with those at Maumbury and Maiden Castle, near Dorchester. The camp of Cissbury encloses sixty acres of ground. It is no doubt rightly called Neolithic, as far as regards the flint quarries, and probably the embankments and pits; but there is also clear evidence of its having been used by the Romans, in the remains of a Roman dwelling within the ring and the Roman cemetery on the slope below. Whether it was occupied by a large force may be doubted. Its great height and the extent of the view obtained from it over the surrounding country indicate that it was constructed for military purposes. In Chanctonbury Ring, also, there is evidence of Roman occupation. The theory of the authors is that both these encampments were continuously occupied in Neolithic times by a large population and by herds of cattle, and the main purpose of their work is to define the method by which water was supplied. If their view of continuous occupation is correct, it is evident that an abundant supply of water would be of the first necessity; yet there is an absence of evidence in these camps of any such means of supply. The authors suggest that this supply was provided by what are called dew-ponds. It appears that pure water can be obtained by the condensation of the moisture of the atmosphere in a specially prepared pond. The earth forming the subsoil must be dry, having no spring or rivulet, must be thickly covered with a layer of straw or other non-conductor, and that in its turn by a layer of puddled clay, wholly covering the straw. Over all is placed a layer of stones. During the summer nights the cold clay will condense the moisture from the warmer air, and a deposition of water will take place. This will be somewhat diminished during the day by evaporation, but not wholly exhausted. The remains of such ponds the authors claim to have discovered in the near neighbourhood of the camps, and state that in one case the pond is still filled with water.

Some of these appear to have been more or less surrounded by embankments and ditches. From the camp at Cissbury to the dew-pond the authors trace two cattle-ways, and suggest that the cattle were driven down the lower of these to be watered, and up the higher on the return journey. The fact that the remains of only one dew-pond were found within any of the rings themselves, they account for by the suggestion that the trampling feet of the animals would have rendered any pond useless. The same result would, however, have followed from the use by cattle of the external dew-pond.

Near Chanctonbury they found another dew-pond sixty or seventy feet in diameter, which in their opinion furnished the water supply of the inhabitants of Chanctonbury Ring, and as the mounds enclose a much smaller space than those of Cissbury, that is a less violent supposition than the one that Cissbury was continuously occupied by a large population and by crowded herds of cattle, and was supplied with water by means of a dew-pond. The absence in Cissbury of any large deposits of animal remains tells strongly against this theory.

With regard to the earthwork in the immediate neighbourhood of the Dorchester railway-station, usually called the Roman amphitheatre, the authors express the opinion that it is Neolithic, and state that they have carefully determined the orientation of the structure, and found it to coincide accurately with that of Stonehenge, to which they consider it was anterior, inferring that it was probably one of the earliest temples erected for sun worship. They believe that a stone corresponding to the friar's head at Stonehenge formerly existed there, and has been buried out of sight by the cultivators of the soil. It is to be observed, however, that the work corresponds in situation and size to that which would be expected in the neighbourhood of a settlement like Durnovaria, and resembles many other amphitheatres of the castrensian type. So many Roman remains have been discovered in the immediate neighbourhood that the general opinion that this enclosure is Roman need not be hastily given up.

With regard to Maiden Castle, our authors speak with justice of the awe-inspiring immensity of the works, which must have formed an impregnable fortress. Even now the embankments are fifty to sixty feet in height, notwithstanding the silting and obliterating processes that have been going on for centuries. Here they found a dew-pond within the rings, and traces of many others outside, but as a supply of running water was at hand, these were placed where that water would not interfere with them. The authors find, as at Cissbury, a double cattle-way, but not, as we understand, in connexion with any dew-pond. Their theory of the existence of large herds of cattle in the camp is difficult to reconcile with the untrampled condition of the internal dew-pond. It is an interesting circumstance that they were directed to some of the ancient road-ways and embankments by observing a more than ordinary growth of daisies along the lines of those works.

They add some remarks on cattle-tracks—that is, roads formed by the treading of cattle, and not formed by man for the use of his cattle. They traced one such track near the road leading from Amesbury to Stonehenge, and discovered a dew-pond upon the track itself, a very unsuitable position.

The close observation which the authors have given to the surface of the country deserves the highest commendation. The photographs illustrating the work are excellent.

We are very glad to see a fourth edition of Mr. Rouse Ball's *Mathematical Recreations and Essays* (Macmillan), which offers that rare combination—both learning and entertainment. The author has wisely added some recreations which are, no doubt, simple or trivial to the strict mathematician, but calculated to amuse the general reader, who has an undying appetite, fostered by the newest journalism, for puzzles and problems. An excellent feature of the book consists in the references given at the bottom of the page, which range from foreign works not easily accessible to *The Strand Magazine*. 'Mazes,' 'The Knight's Path on a Chessboard' (using every square once only), and 'The Fifteen Puzzle' (in a box containing the numbers up to fifteen and one vacant space), are among the lighter mathematical bypaths considered.

Part II. of the volume is now entitled 'Miscellaneous Essays and Problems,' so as to cover the variety of its contents, which are pleasingly discursive. An account of the Mathematical Tripos at Cambridge is an admirably lucid summary, including, *inter alia*, the explanation of the word "Tripos." We doubt very much if Mr. Ball would endorse Borrow's wonderful statement in 'Wild Wales' (chap. lxxvi.) that three out of four senior wranglers will be found to be the sons of shoemakers. Astrology and cryptographs and ciphers are the subject of interesting chapters, while the fourth dimension and the squaring of the circle offer attactions to more scientific readers. What chiefly strikes us in the book, apart from the width of Mr. Ball's range, is the happy lucidity with which he presents his researches and collections to the reader.

The first volume of the Chemical Society's *Annual Reports on the Progress of Chemistry* has been issued by Messrs. Gurney & Jackson at a very modest price. The title of the book naturally suggests a comparison with the long-established 'Jahresbericht,' which has been of very great value to students ever since it started. Comparison, however, is not possible; the two are altogether different both in conception and in execution. On the whole, we think the English volume will be the more useful to the student, and its price will certainly render it more accessible.

A report of this nature can be prepared in two ways—a colourless series of abstracts of all the papers published during the year may be arranged; or a number of chemists, each fully conversant with one special branch, may draw up carefully thought-out accounts of the various researches, assigning to each the position it deserves, and pointing out the general relationships between the results obtained. In the former the treatment will necessarily be fragmentary and the record discontinuous; but judgment is at least suspended, and there is no verdict for the future to reverse. The latter will make more interesting reading, and will be much more useful to the student; but the personality of the writer is a large factor, and time may show that his perspective was not always correct. The 'Jahresbericht' follows the first line, and constitutes a chronicle of the year's work; the English 'Reports' are on the second, and are more in the nature of histories. Very

good histories they are, too, deserving the highest praise. They will be widely read by all interested in chemistry, and will be as useful to the specialist as to the man who takes a broader outlook over the field of science.

SOCIETIES.

BRITISH NUMISMATIC.—*July* 26.—Mr. P. Carlyon-Britton, President, in the chair.—The President announced that Queen Cristina of Spain had honoured the Society by acceptance of its Royal Membership. He read a letter conveying the thanks of the Prince and Princess of Wales for the congratulations which he, representing the Society, of which their Royal Highnesses are Members, had forwarded on the occasion of the birth of the infant Prince; and a letter containing the acceptance, in most gracious terms, by the King of Spain of a specimen of the coinage of Philip and Mary, sent to his Majesty by Mr. Carlyon-Britton, which will be included in the royal collection of coins and medals in the Palace Library in Madrid.—His Excellency Señor Don Luis Polo de Bernabé, the Spanish Ambassador, was elected an Honorary Member; and Major R. W. Richardson and Mr. Leonard Tubbs Ordinary Members.—The Director contributed a paper on 'The Moneyer Torhtulf,' and dealt with the coins of Æthelwulf and Æthelbearht bearing the name of that moneyer. He directed attention to the fact that these coins all have the head of the king *filleted*, and that the same variation from the more usual type having the head without the fillet exists in the case of the coins attributed to Æthelbald. Mr. Lawrence was of opinion that the dies for the coins of Æthelwulf, Æthelbearht, and Archbishop Ceolnoth, all bearing on the reverse the name of a moneyer followed by the word *moneta* upon and between the angles of a cross formed of beaded lines, were engraved by the same officer at a common centre, viz., London, as the work disclosed by the coins is practically the same, irrespective of the name of king or prelate on the obverse, or of the name of the moneyer on the reverse. In addition to the Torhtulf coins of Æthelwulf, some coins of that king by the moneyers Diar and Manna have the filleted head of the king. The writer extended his remarks to the case of certain coins of Rhuddlan, Berwick, and Durham, issued in Plantagenet times, and concluded that the dies for these alone were of local manufacture, the dies for the general coinage being issued from London. He further contended that certain mule coins, pennies of Edward I., having in combination the dies for London and Dublin, and Dublin and Canterbury, a groat of Edward IV. having a Bristol obverse and a Coventry reverse, and another groat of the same reign having a Coventry obverse and a London reverse, were evidence in favour of the proposition that these particular coins were also struck in London; but he did not consider that it was the general custom to strike in London coins bearing the mint-names of other places. The writer and Mr. Carlyon-Britton exhibited specimens in illustration of the paper.—Mr. R. A. Hoblyn exhibited his fine and very representative collection of the English and Irish coins of Philip and Mary; and Mr. Bernard Roth some interesting varieties of coins of Edward the Confessor.

Science Gossip.

THE Clarendon Press will have ready early in September 'Elementary Chemistry: Progressive Lessons in Experiment and Theory,' Part I., by Mr. F. R. L. Wilson and Mr. G. W. Hedley, who have ample experience of teaching in two of our prominent public schools, where the experiments they give have been carried out.

AN imposing monument to Jacques Cartier was unveiled with much pomp and ceremony at St. Malo on Sunday last. Cartier was born at St. Malo in 1491, and his claim on posterity is the discovery of Canada. A deputation of French Canadians took part in the ceremony. Although the English have, so to speak, reaped where Cartier sowed, the intrepid discoverer has not deserved the centuries of neglect of which his name has been the victim, and he well deserved the honour of the inhabitants of St. Malo. The monument is the work of M. Georges Bareau, and was exhibited at the Salon of this year.

WE referred in our number of May 20th to the visit about to be paid to the scenes of the Indian earthquake by Prof. Omori, the Japanese seismologist. He had almost completed his examination when the last mail left India, and he had come to the conclusion that Northern India is safe from any grand convulsion for the next 200 years. This prediction does not exclude the possibility of earth tremors and minor shocks. Prof. Omori thinks that the next big earthquake may be looked for towards Persia.

J. M. L. writes:—

"Your last number, p. 116, expresses the reviewer's belief that the Portuguese name of the cod (*bacalhao*) 'is a corruption of the Teutonic *Kabeljau*, and not of the Latin *baculus*, for it was through the northern nations that the Portuguese first became familiar with this popular article of food, which, as a rule, reached them in the shape of *Stockfisch*, that is dried cod, or *bacalhao secco*.' May I point out that, according to Mr. Montgomery Martin's 'British Colonies,' p. 256, Newfoundland, after having been discovered in early days by the Northmen and then lost sight of, was first visited by the Portuguese and French, and not by the Germans; and that the term *bacalao* was 'the Indian name for the fish,' and therefore not borrowed from the German? Indeed, having reference to the importance of French fisheries in Newfoundland waters, the German *Kabeljau* appears to me in all probability a derivative from the French *cabillaud*, a term habitually applied to the fish by French sailors, and which finds a place in all French dictionaries. Our 'cod' is itself, I suspect, a truly British abbreviation of *cabillaud*."

THE moon will be new about 4 o'clock in the morning (Greenwich time) on the 1st prox.; full about half past 3 o'clock on the morning of the 15th; and new again about 1 o'clock on the afternoon of the 30th. A partial eclipse of the moon will take place on the morning of the 15th, the greatest part of which will be visible in this country, the moon setting at Greenwich at $4^h\ 53^m$, about ten minutes after the last contact with the shadow. The middle of the eclipse will be at $3^h\ 41^m$ Greenwich time, but even then not much more than a quarter of the moon's diameter will be involved in the shadow. For the total solar eclipse on the 30th prox. most of the intending observers have now started. The *Bulletin* of the Société Astronomique de France for this month gives a fine large-scale map of the path of the shadow over Spain, the Mediterranean, and North Africa. At Greenwich nearly eight-tenths of the sun's disc will be obscured at $1^h\ 4^m$ in the afternoon. The planet Mercury will be at greatest elongation from the sun on the 2nd prox., and visible after sunset in the constellation Leo; he will be at inferior conjunction with the sun on the 30th. Venus is moving in an easterly direction through the constellation Gemini; she rises somewhat later each morning and will enter Cancer towards the end of next month. Mars sets at Greenwich about 10 o'clock in the evening, and earlier each night; he will be about 11° due south of β Libræ on the 3rd prox., and pass very near δ Scorpii on the 23rd. Jupiter rises now about midnight in the constellation Taurus, and will pass about 5° due north of the Hyades in the last week of next month. Saturn is at opposition to the sun on the 23rd prox., and visible all night in the constellation Aquarius.

MR. STANLEY WILLIAMS has a paper in No. 4034 of the *Astronomische Nachrichten* relating to the great red spot on Jupiter, in which he states that that object has been particularly interesting during the past opposition on account of several peculiarities relating to its motion and the appearance of its immediate surroundings. The enormous mass of dark material forming what has usually been termed the South Tropical Disturbance (it is, however, wholly included in the South Temperate current), after making a complete circuit of the planet relatively to the red spot, had again overtaken and enveloped the latter, so that in June, 1904, its aspect was similar to what it had been in July, 1902, and the general appearance was that of a brilliant and nearly perfect oval, surrounded or contoured by dark material. The motion of the spot was certainly not uniform during the period covered by the observations, which range from June 20th, 1904, to January 21st, 1905. The mean rotation period for the whole time would be $9^h\ 55^m\ 41^s{\cdot}6$; while that resulting from a comparison of Mr. Williams's observations on January 16th and July 26th, 1904, would be $9^h\ 55^m\ 38^s{\cdot}6$, three seconds shorter than the above, and exactly the same as that found by Mr. Denning for very nearly the same interval.

THE French arrangements for observations of the total eclipse next month include an expedition by MM. Deslandres and Rayet to Burgos; whilst M. Bigourdan will proceed to Sfax, in Tunisia (where the Astronomer Royal and his party from Greenwich propose also to go), and M. Trépied, Director of the Algiers Observatory, will join MM. Stephan and Borrelly from Marseilles, and hope to carry out their scheme of operations at Guelma, in Algeria.

FINE ARTS

Giotto. By Basil De Selincourt. (Duckworth & Co.)

THE origin of Italian painting is a question as difficult and speculative as it is profoundly interesting. The issues involved are so great—even the early works of the school are of such supreme importance in the history of European culture—that it is not to be wondered at that theoretical structures are built up and attacked with each successive work upon the subject. The documentary evidence for this period is of the slightest, the deductions from style-criticism are extremely difficult and none too certain, and yet we have constantly to build up theories to account for the few undeniable facts with which we are confronted. It is not long since the attempt was made to show that the Early Florentine School was negligible, that Cimabue was a myth, and that until the advent of Giotto the Sienese and Roman Schools were the only ones of importance in Italy. In the present work Mr. De Selincourt—who, we think, has approached the subject with conscientious impartiality and an open mind—arrives at conclusions which are the opposite of these. He attributes great power and influence to Cimabue, and thereby diminishes the predominance of the Sienese; and he denies the influence of the Roman School in the formation of Giotto's art. He brings, it is true, no strikingly new facts into the discussion. It is a question of interpretation, and the interpretation which he puts upon the known facts is, as we have indicated, more in line with the older theories than with those which have obtained almost too ready acceptance of late years. It is clearly not a case for dogmatism, and mere contradiction and repeated asseveration on either side will not help matters forward. What is wanted, and what has not yet been undertaken, is something like a complete census and classification of all the remains of pre-Giottesque art. As it is, we shall not attempt to give judgment either way: we find ourselves in agreement with Mr. De Selincourt on certain counts,

particularly on that of the real existence of Cimabue as a remarkable artist, though here, it must be admitted, the argument is not capable of absolute proof. On the other hand, we cannot at all agree with him in his disparagement of the Roman School, nor in his disinclination to admit Giotto's debt to its masters. Of the mosaics in Sta. Maria in Trastevere he declares first that the composition, being of the traditional Byzantine type, shows no new artistic power, and that their author, presumably Pietro Cavallini,

"has missed the priestly dignity and grandeur of the Byzantine representations, and substitutes for it a flabby, nerveless conception of the figure, a uniform mournfulness of expression in the face."

He then points to the fact that Giotto executed his Ciborium at St. Peter's perhaps as early as 1296, and that therefore within seven years of the execution of the Trastevere mosaics the Roman masters had lost favour, and a foreign Tuscan artist was commissioned in their stead to do a work of the highest importance. Apart from the fact that from Crowe and Cavalcaselle onwards most critics have recognized high artistic merit in the Trastevere mosaics, the discovery of frescoes at Sta. Cecilia in Trastevere by the same Pietro Cavallini ought surely to make it impossible to speak as our author does of the Roman School. These are, indeed, the work of a great and accomplished master. They have a solemnity, a classic dignity, and ease of movement that Giotto himself never surpassed.

Now either we must suppose that Vasari is right when he calls Cavallini Giotto's pupil, or we must admit the existence of a great and independent school at Rome which had already become emancipated from Byzantinism at a time when Tuscany was still entirely under its influence. There is some probability that these frescoes were executed about the same time as the Trastevere mosaics, that is about 1290. Now if Giotto was to have taught Cavallini, he must have been at work in Rome at least five years before this in order to have brought his pupil to such a pitch of proficiency in the new style as we see at Sta. Cecilia—that is to say, that by 1285 Giotto had already made the immense step from Byzantinism to the new vital Italian style, and had begun to teach it in Rome. But in 1285 Giotto was only nineteen years old, and even for the greatest artist the world has known such precocity is incredible. The probabilities, therefore, point the other way, namely, to the existence of an independent Roman School — and this is borne out by many other testimonies—a school from which Giotto, if he had been taught only by Cimabue, would have been able to learn a great deal.

The great meeting-place for all Italian artists at this moment was the upper church at Assisi, and in that place it is, we believe, possible to trace the influence of Roman masters upon the youthful Giotto. Certain it is that a small group of frescoes has been alternately ascribed by good critics to Giotto himself and to the Roman School, a fact which shows clearly enough their intimate relationship. But Mr. De Selincourt leaves on one side the whole question of Giotto's precursors in that great series of decorations. Doubtless the discussion of them would have led him too far; but if he was prevented from undertaking it, it was, perhaps, unwise to raise the issue of the position of the Roman School in such definite terms as those we have quoted.

Having once passed this question, Mr. De Selincourt adopts the more currently accepted opinions of the nature and order of Giotto's early works. He passes in review the frescoes in the upper church, considering these to be the earliest works; next he places the allegories of the lower church; then, about 1298, one of the few certain dates of Giotto's career, the Navicella and the Ciborium of St. Peter's. Of the latter he gives an admirable account, with a plausible reconstruction of the form it originally took. With regard to the Navicella, our author makes some curious statements. He says:—

"The figures of the winds and of four saints in the air are modern, and the fisherman who angles in the left foreground from a rock probably formed no part of the artist's original design."

With regard to the last he adds:—

"If Giotto's, it would in fact be more than surprising; it would be wholly without parallel in all the range of his extant work, a freak which, in face of his unrelenting concentration, must appear all but inexplicable. It is of interest, therefore, to learn from Messrs. Crowe and Cavalcaselle that the fisherman was absent in the original drawing of the subject."

We agree that this piece of apparently trivial genre, which delighted Vasari as such, is surprising in a work by Giotto, though it may have had a symbolical meaning already forgotten in Vasari's day; but we fear that, in spite of Mr. De Selincourt's protest, it was a part of the original design. Probably when Vasari first saw it the mosaic had not yet been seriously tampered with; it began its disastrous peregrinations when the portico of the old St. Peter's was taken down, 1606–16, and the first restoration of the figure in question was made in 1616. The original drawing mentioned in Crowe and Cavalcaselle as being without the fisherman was one in Richardson's collection, no longer traceable, and supposed by him to be the original drawing. Though Richardson was a remarkable critic for his day, his supposition no longer carries much weight, and whatever it has is much more than counterbalanced by the evidence afforded by a fourteenth-century copy of the mosaic now at Wilton House. This gives the fisherman, which one cannot therefore doubt was part of Giotto's design.

The frescoes of the Arena chapel are next described in detail. Comparing these with the similar compositions in the lower church at Assisi, Mr. De Selincourt repeats a theory published by him in *The Monthly Review*, that the Assisi versions are later works by a pupil of Giotto, Giovanni Gaddi, and not earlier works by the master himself, as usually supposed. Nothing is known of Giovanni Gaddi's works, and the attribution to him is little more than a guess; nor can we find in the Assisi frescoes the mark of copies. What copyist, for instance, would have failed to notice and exaggerate the realistic rendering of a dead face in the 'Lazarus' at Padua? and yet in the Assisi fresco there is hardly any attempt at this. Moreover, the Assisi frescoes, while far less perfectly elaborated in design, have a dramatic intensity which we never find elsewhere in the adaptations made from Giotto's designs. It may be admitted, however, that there are puzzling features in the Assisi series which make it improbable that they are entirely by Giotto's own hand.

In treating of Giotto's work on the Campanile during the last two years of his life, Mr. De Selincourt contends vigorously for the validity of the tradition which ascribes to him some of the bas-reliefs. He is, we think, quite right in objecting to the theory put forward in the new edition of Crowe and Cavalcaselle, that these are entirely due to Andrea Pisano. Some of the reliefs differ as completely from Andrea's known style as the details of others do from Giotto's painting. Our own impression is that the general design, the planning, the movement, and mass of the figures suggest Giotto, while the details of drapery and the facial types are usually nearer to Andrea. The theory of collaboration between the two, perhaps, best meets the difficulty.

With regard to Giotto's work as an architect, too, there is no reason for the doubts that have been thrown on the tradition. Mr. De Selincourt disposes of them easily enough, but he declines to call in evidence the drawing for the Campanile now in the Opera del Duomo at Siena, which Signor Nardini Despotti first attributed to Giotto. We confess we cannot agree with our author's disparagement of the design in the drawing, while the discrepancy between that with its hexagonal spire and the quadrangular spire of Vasari's description is too slight to go upon.

In discussing Giotto's tempera pictures, Mr. De Selincourt omits all mention of the little 'Presentation in the Temple,' now in the Gardner Collection at Boston. As this is, perhaps, the only quite small composition of Giotto's which survives, it is worthy of mention. On the other hand, our author seems to accept too easily the 'Crucifix' at San Marco, which he describes at length, instead of the marvellous version at Padua, which is, perhaps, the most exquisite piece of tempera painting in existence, and, if our recollection serves, by no means so much damaged as is here suggested.

On the whole, we may say that Mr. De Selincourt's book has a certain value from the freshness with which he attacks many much disputed questions. That he treats them in a too purely logical and forensic manner, and has scarcely sufficient immediate perception of artistic quality, may be gathered from the fact that his style-criticism deals almost entirely with the contents, and not with the actual mode of expression. Doubtless the tendency of recent criticism has been to neglect the former element of a work of art too much, but of all the criteria of judgment it is the most liable to error, since it is the quality which subsists most perfectly in a copy.

A WHISTLER NOCTURNE.

THE National Art Collections Fund announce to their subscribers that they have succeeded in acquiring for the nation Whistler's 'Nocturne of

Battersea Bridge.' This is an admirable result of their endeavour. They have saved the nation from what would, in after ages, have been a serious reproach. To have had working in our midst one of the greatest artists and certainly the most perfect of the nineteenth century, and not to have secured a single work by him for the nation, would have seemed to our posterity to argue an indifference to creative ideas that would be a positive disgrace. And such, but for the energy of private enterprise as organized by the National Art Collections Fund, would have been the sentence passed on our generation, for Whistler's finest works have been bought up with steady persistency and keen intelligence by an American collector. The inclusion of Mr. Frere's collection in the exhibition of Whistler's works at Paris was what made that incomparably more impressive than the corresponding exhibition in London. The opportunities for getting representative works by Whistler are steadily diminishing. Some years ago even so fine a work as the 'Battersea Bridge' might have been acquired for a tithe of its present value; and it is no credit to those who profess to represent British art in an official capacity that it has been left to a private society to buy at a large price what they themselves admit it was their duty to have bought with funds specially bequeathed for such purposes. The explanations which the members of the Royal Academy made before the Chantrey Commission for not having bought a Whistler are now shown to have been mere excuses. The least they can do at this late date to show their good faith will be to complete the representation of Whistler at the National Gallery of British Art, by adding to the Chantrey collection a fine example of Whistler's portraiture. Meanwhile we must be thankful that, even at the eleventh hour, we have secured so beautiful and characteristic a work as the 'Battersea Bridge.' There is, too, a certain poetic justice in thus placing in a permanent National Gallery a work which was once held up to public derision—for this was one of the pieces put in evidence at the notorious libel action against Ruskin.

A LONG-LOST RUBENS.

A VERY imposing posthumous portrait of Charles the Bold, by Rubens, has recently been discovered in London.

Charles is represented standing, wearing a cuirass of shining metal, over which is flung a richly embroidered mantle lined with a vivid crimson and bordered with precious stones. He wears the gold badge of the Order of the Golden Fleece slung from a collar of golden links studded with fire-stones. The picture measures 48 in. by 38 in. It is in a perfect state of preservation, although it seems to have been lost sight of ever since the artist's death.

Among "the pieces made by Sr. Peter Paul Rubens," found in his possession at his death, may be cited:—

"No. 95 the picture of Phillipp the Good in armor. .....No. 96 the picture of Charles the bold in armor. .....No. 107 the picture of Charles the Bold upon bord."

The French edition of the same "catalogue mortuaire" alludes to No. 96 as "Pourtrait de Charles le Hardy Duc de Bourgogne sur fond de toile," and to No. 107 as "sur fond de bois."

A reference to M. Max Rooses's well-known 'L'Œuvre de P. P. Rubens' shows that much uncertainty as to the whereabouts and identity of each of these pictures has long existed. A careful examination of all data leads one to conclude that the portrait of Philip the Good is still missing, while the painting on canvas of Charles le Téméraire—who has often been confused with Charles le Hardi—is that recently discovered. That on panel is unquestionably the one in the Imperial Gallery at Vienna. The principal purchasers at this sale by private treaty are said to have been Philip IV. and Cardinal Richelieu, but nothing is known as to who bought either of the two portraits of Charles the Bold. The last-named did not pass into the Imperial Gallery until 1783, and then went under the title of 'Philip the Good.' Indeed, it was under that title engraved by C. H. Pfeiffer and described by Smith in his 'Catalogue Raisonné.' Nothing is known of its whereabouts between 1641 and 1783.

That Rubens frequently painted posthumous portraits is amply demonstrated. Two striking instances of this are the portraits of Jacques Moerentorf and Christopher Plantin by unknown artists. Such originals were used as models by Rubens a few years later. The Plantin-Moretus Museum now possesses both pairs of portraits.

It is evident from old engravings that the great Flemish artist painted both portraits of Charles from some original painting of about 1468, and still well known about 1635, though long since destroyed. The old chronicles, notably 'Principes Hollandiæ et Westfrisiæ,' published by Pieter Soutman in 1650, give colour to this contention. The plate of 'Carolus Primus' contains in the ornament to the left the words "Jan van Eyck pinxit," and in the ornament to the right "Cornelis Visscher sculp." He is seen nearly full face, turned to the left. He is in armour, with a helmet, at the top of which is a ducal coronet. He has a moustache. He wears a robe apparently of fur over his armour, and over it the collar of the Order of the Golden Fleece. His robe is fastened by a shell-like hook to a large jewel on the shoulder just above the *palette*. Cornelis Visscher was perhaps familiar both with the original portrait of the Duke and also with the version made from the same by Rubens, but the armour is that of the later period. Frederik Bouttats and Pieter Soutman also executed very similar engravings of "Carolus Dictus Bellicosus."

It is, on the face of it, impossible to consider Jan van Eyck as the artist of the original painting. As that artist had executed the portrait of Jean Sans Peur, and had painted 'Duke Philip before the Virgin'—both long lost—and had so ceremoniously gone to Lisbon to paint the portrait of 'La Belle Portugaise'—missing since 1524—it was only natural that he should in the Middle Ages be handed down to posterity as the painter of practically all such portraits of each of the two last Dukes of Burgundy as were not attributed to Roger van der Weyden.

In both the portrait at Vienna and in that recently found Charles appears to be some thirty-five years of age. He was, in fact, just a few months younger when, in the summer of 1468, the prescribed period of mourning for his predecessor was at an end. The time had come for preparing for the solemnization of his marriage with the Princess Margaret of York. In May of that year Charles held at Bruges a chapter of the Order of the Golden Fleece, the first which had assembled since Philip the Good's death, or, indeed, for seven years. The Netherlands had now risen to a height of prosperity that was the envy of the world, and the Burgundian Court, the most costly and magnificent in Europe, had never worn so animated an appearance as in the spring and summer of 1469. It is, therefore, only reasonable to assume that the official portrait of the Duke would be then painted. Here documents in the Ancienne Chambre des Comptes de Lille come to our aid:—

"Nous les maistres d'ostel de notre très redouté et souverain seigneur M. S. le duc de Bourgoingne .....avons commis et ordonné à maistre Jehan Scalkin, varlet de chambre, à maistre Jehan Hennekart et à Pierre Coustain paintres et aussi varletz de chambre d'icelui seigneur fair pluiseurs grans et solempueles paintures pour servir d'entremetz, de diverses façons, en plusieurs bancquets fais pour la feste et solempnite de la Thoison et des noepces de notre dit très redoubté et souverain seigneur et de madame Marguerite d'Engleterre, tenue en la ville de Bruges en juillet l'an LXVIII derrenier passé."

In the natural course of events these "ouvraiges de paintures qui ont esté fais, du commandement de mon devant dit très redoubté seigneur le duc pour aorner la feste de ses noepces," would include a large and imposing portrait of the Duke wearing his royal and knightly robes, more especially as he had but recently been "revetu de la dignité de chef et souverain de l'ordre de la Toison d'or." Charles would hardly, therefore, have been so portrayed before the summer of 1468; and the state of affairs at Liége later in the same year renders it unlikely that "Charles le Travailleur" could have found time to sit for his portrait again in that or the next year, if indeed ever again in his life. Another point in favour of "la feste de ses noepces" as the occasion of this painting is, that there is no reflected trace in the painting by Rubens of the Order of the Garter which was conferred on him by Edward IV. in 1470. Such an important decoration would hardly have been overlooked in a painting of a later date.

It is sufficiently clear, therefore, that some "Varlet de Chambre et paintre de MS le duc de Bourgogne" did execute such a State portrait on the occasion of the greatest of the State festivities of Charles's short reign. Soon after the death of Roger van der Weyden we find, under "Autres officiers de la Chambre" of Charles the Bold, the entry: "MdS vuelt que Pierre Coustain, paintre, soit toujours compté, lui estant toujours devers MdS à douze solz par jour."

The names of Jehan Hennekart and Pierre Coustain are nearly always found in connexion with any great artistic undertaking in that reign, and they frequently worked together. Nowhere is this more clearly emphasized than in the accounts of the festivities of July, 1468. On that occasion Pierre Coustain is remunerated on a higher scale than Jehan Hennekart, and this, together with other facts recorded in old documents, tends to show that Coustain, rather than Hennekart, was probably the artist commissioned to paint one or more imposing and national portraits of the Duke on that occasion. It is quite reasonable to assume that Rubens himself saw such a portrait some century and a half later, and used it as his model for two posthumous portraits.

Rubens seems to have been well acquainted with the magnificent robes that Charles had possessed. This is borne out by an entry in the 'Inventaire de Charles le Téméraire' in the Archives de Lille:—

"Item, une longue saincture de brodure garnye de semence de perles et de petits rubis avec une vieille bourse d'espoussé."

Again,

"une robe courte de velours sur velours cramoisy garnye par embas, au dessoubz du ploy de la saincture, de l'une des coustez, de douze gros balays, de huit gros dyamans à pointe, et de l'autre costés de xviii balays l'un moindre que l'autre et de pluseurs sortes, et au milieu a ung fermeillet garny d'une pointe de dyamant bleu, de quatre bonnes perles autour."

This is a sufficiently accurate description of the robe which Rubens painted some hundred and sixty years later. The "fermeillet" and the "dyamant bleu" accord with "le gros diamant enchassé dans un fermeillet que le duc portait habituellement à son cou," and which at Granson was "trouvé par terre dans une petite boite ornée de perles fines." They seem to be fairly accurately depicted in the newly found portrait.

Rubens would naturally have seen the magnificent tomb of Charles, which was erected in the cathedral at Bruges between 1558 and 1562 by Jacques Jongelinks from designs by Marc Gheraerds. He may well have been greatly impressed in his youth by the sight of such a tomb, and have been thus inspired about 1635 to paint a portrait of the Duke there buried.

It is abundantly proved that the triumphal entry in that year of the Cardinal Archduke Ferdinand called forth a considerable demand for patriotic portraits, and it was only natural that Rubens should then—if he had never done so before—execute the two portraits of such a famous historical character and national hero as Charles the Bold, although he had then been dead a hundred and fifty-eight years.

It does not appear from the 'Pompa Introitus Ferdinandi Austriaci Hispaniarum Infantis in Urbem Antverpiam' that any portrait of Charles was used in the decoration of the "Arcs de Triomphe" on that occasion. Nor is there any record, until after Rubens's death, of such portraits having even existed. Our artist, then at the height of his artistic career, may well have been ordered by Philip IV. to send one or more such portraits to Spain at the time that he ordered the pictures in 1636 for the decoration of the Torre de la Parada. Both of these portraits may have been left behind in 1638 by mistake, and overlooked during the remainder of the artist's life. They may, after passing through the 'Catalogue Mortuaire,' have still been taken to Spain to add to the decoration of the Torre de la Parada, and, when it was pillaged in 1710, have been taken to some other palace. One at least of them may have remained in Spain until one of Napoleon's notorious generals, perhaps, carried it off as loot to France. There seems to be, however, no trace in any document, civil or military, public or private, in any language, after 1641, of the newly discovered picture. No such painting appears to have been exhibited or engraved in France or England in the last hundred years.

Smith, in his 'Catalogue Raisonné,' refers to a portrait by Rubens, "Styled erroneously Charles Duke of Brabant," and measuring 54 in. by 44 in.—6 inches larger each way than the canvas just brought to light—as being sold in the sale of Sir Simon H. Clark in 1840 for 50 gs., and M. Max Rooses, in his standard work, states this to have been a copy. But of whichever picture it may be a copy, it cannot be, as Smith seems to suggest, the No. 96 of the 'Catalogue Mortuaire.'

It may be remarked that both portraits of Charles le Téméraire by Rubens very accurately agree with the description given by Chastellain :—

"Il avoit tournure de visage un peu plus ronde que le père, mais estoit de clair brun; avoit uns yeux vairs et rians et angeliquement clairs; avoit la bouche du père grossette et a vermeille; portoit un vif teint, clair brun, beau front et noire chevelure espesse et houssue."

De Barante also exactly describes him as

"de taille moyenne, d'une complexion robuste, d'une santé vigoureuse; ses cheveux étaient noir, et il tenait aussi d'Isabelle de Portugal sa mère un teint bon, l'œil noir et le regard vif."

We can form a fairly good idea of Charles's appearance about the year 1468 from a drawing of Philip the Good and his son in the museum at Arras. It appears to be an accurate and contemporary study of the last two dukes. Again, the coin struck on the occasion of Charles's third marriage in July, 1468, bears an admirable effigy of him, with his motto: "Je l'ay emprins: bien en vienne."

I may add that the opinion of experts on Rubens is in favour of the arguments here stated.

M. W. B.

'MUSEUMS, THEIR HISTORY AND THEIR USE.'

169, West George Street, Glasgow, July 24th, 1905.

My book on 'Museums' has many faults, and is no doubt inadequate; but a notice which deals with its errors should do so in accordance with its proposed object, and not with something outside its scope. Its subject is museums, not libraries, and any description "of the world-renowned Cotton Library of Manuscripts," "of the great new Reading-Room," "the labours and achievements of Panizzi," or "the comprehensive catalogue of MSS." of the British Museum, would have been as much out of place as an account of the National Gallery or the Zoological Gardens. In so far as regards history, the object of the book, as explained in the preface, is the history and development of museums as scientific institutions, not the history of individual museums. The chapter on the British Museum, as its title indicates, is an explanation of how it came into existence, and the ideas which those who formed its original collections had of what a museum should be. The list of museums in the United Kingdom, as mentioned in the note prefixed, is a reprint of a list prepared by a Committee of the British Association in 1887-88, and consequently is not up to date. Museum authorities will not make returns to private persons, and without these it is impossible to prepare a list. In dealing with the bibliography you have not observed that Part I. is a bibliography of bibliographies. There may be other works of this character relating to the British Museum, as a museum, besides the one I give, but the "thirteen years of busy output" you refer to have nothing to do with the subject. The Catalogue of the Zoological Department appears in this section, because it has a slight bibliography of museums. The new and improved Catalogue had not been issued when my book was printed. The catalogues of the libraries of the Society of Antiquaries and of the British Archæological Association are not included, because they do not contain the bibliography of museums as a separate subject. The Catalogue of the Entomological Society does. It is matter of opinion whether the list of books relating to the British Museum is chaotic. It does not pretend to be complete, and bears to be merely a selection. It would have been entirely inconsistent with the plan of the book to print long lists of the special publications of the various departments. The same rule is followed in the case of other large museums, such as Paris and Berlin.

I regret that Dr. Birch's Alnwick Castle Catalogue has dropped out. It seems to have disappeared in an alteration of the type. The cross-reference still stands.

DAVID MURRAY.

Fine-Art Gossip.

In the August number of *The Burlington Magazine* Mr. Roger Fry publishes the portrait of Aretino by Titian recently imported from Italy, with a short article on the picture and on the relations between the painter and his subject. Mr. Charles Ricketts writes on Dalou, and Mr. G. T. Clough on 'Some Florentine Woodcuts.' Mr. Lionel Cust and Mr. Herbert Horne contribute an article on a painting by Benozzo Gozzoli in the royal collection, which Mr. Horne identifies as a panel of the predella of an altarpiece painted by Gozzoli for the Confraternity of the Purification at Florence. Other panels of the predella are in the Brera Gallery at Milan and the Kann Collection at Paris, and the chief panel of the altarpiece itself is in the National Gallery. Mr. S. M. Peartree publishes an engraving prefixed to the Chatsworth copy of the 'Recuyell of Troye,' which, in his opinion, contains the portrait of Caxton himself, and is the earliest known instance of an engraving used as a book illustration. Sir J. C. Robinson continues his remarks on the painter known as the "Maître de Flemalle," who, in his opinion, was a Spaniard. Mr. Egerton Beck continues his learned series of articles on 'Ecclesiastical Dress in Art,' and Mr. R. S. Clouston concludes the series on 'Minor English Furniture Makers.' An editorial article on 'The Directors of our Public Galleries' refers to the rumour that the Government intends to dispense with a Director for the National Gallery, and strongly deprecates such a course. The writer of a short article on 'The Auctioneer as Dealer' maintains that the auctioneer is fast taking the place of the dealer in works of art, and discusses the results of this change. Other works of art published include a study in the possession of Mrs. Bischoffsheim for Romney's 'Egremont Family Piece,' and an interesting Flemish picture in the possession of Sir Richard Holmes, which was formerly used as an ikon by King Theodore of Abyssinia.

We regret to hear of the death of Jean Jacques Henner, who has been seriously ill for some months. Henner was born on March 5th, 1829, in the little Alsatian village Bernwiller, and studied art under Drolling. In 1858 he carried off the Prix de Rome with his 'Adam et Ève retrouvant le Corps d'Abel.' Whilst at Rome he sent to the Salon a portrait of M. Schnetz, the Director of the School, 1863. His principal works in public galleries include 'Madeleine Pénitente,' 'Le Christ en Prison,' 'Jeune Romaine,' 'Jeune Baigneur endormi' (the four are at the Colmar Museum); 'La Chaste Suzanne,' 1865, 'Femme Couchée,' 1869, and 'St. Sébastien' (the three are at the Luxembourg); 'Biblis changée en Source,' 1867, at Dijon; and 'Le Bon Samaritain,' 1874, at Montpellier. Henner had been an incessant worker for nearly half a century, and his output was enormous. For a long period of years he had enjoyed success, although in early life his poverty was great. He succeeded Cabanel at the Académie des Beaux-Arts in 1889.

This year, as last, the Paris Académie des Beaux-Arts has again withheld the first Grand Prix de Rome, so that there will be three such prizes available next year. Two second prizes have been awarded, one of which is taken by M. Aubry, pupil of Gérôme and of Gabriel Ferrier; and the other by M. Jonas, who studied under Bonnat and Maignan. Both MM. Aubry and Jonas are represented in this year's Salon. Honourable mention has been accorded to M. Rousseau.

The two vacancies at the Paris Académie des Beaux-Arts, caused by the deaths of the sculptor Dubois and Baron Alphonse de Rothschild (who was a "membre libre" of the Académie), were filled on Saturday last. M. René de Saint-Marceaux succeeded to the chair of Dubois by nineteen votes against twelve given to M. Tony-Noel. For the vacancy caused by the death of Baron A. de Rothschild five ballots were necessary—Dr. Paul Richer, of the Académie de Médecine and Professor of Anatomy at the École des Beaux-Arts, obtaining twenty-two votes against thirteen cast for M. C. Bellaique, six for M. Comte, and one for M. Mounet-Sully.

The St. Petersburg museum Empereur Alexandre III. has acquired, at a cost of 100,000 roubles, all the pictures and sketches made by Verestchagin on his last journey to the East.

At Messrs. Christie's on the 21st inst. the following pictures were sold: School of Raphael, Portrait of a Gentleman, in black gown and cap, 92*l*. Rembrandt, Head of a Young Man, 105*l*. Watteau, A Fête Champêtre, 105*l*.

In connexion with the forthcoming visit of the British Association to Rhodesia, the British South Africa Company have issued a special set of postage stamps, the design on which represents a view of the Victoria Falls. The design is effective, the mass of water being well shown against a dark ground on each side.

MUSIC

Musical Gossip.

THE season at Covent Garden, which ended on Tuesday evening with a fine performance of 'La Bohème,' in which Madame Melba and Signori Caruso and Scotti took part, will be specially remembered for the noble renderings of the 'Ring' under the direction of Dr. Richter, for excellent performances of Verdi operas, and for the successful production of 'Madama Butterfly.' Wagner and Verdi have become classics, while among modern Italian composers Puccini holds an exalted place. The difficulties in selecting novelties and in obtaining the right cast for them are no doubt great; still, we hope that the Grand Opera Syndicate will soon give us the opportunity of hearing one or two operas by French composers which have attracted considerable attention abroad. Covent Garden will reopen its doors in October with the San Carlo Opera company, as already announced.

THE list has just been issued of orchestral works to be performed for the first time in London during the season of Promenade Concerts at Queen's Hall, under the direction of Mr. Henry J. Wood. British music stands at the head, and all the names belong to the younger school of composers. Mr. Granville Bantock will be represented by some 'Helena' Variations; Mr. J. D. Davis by a suite entitled 'Miniatures'; Mr. A. von Ahn Carse by a symphonic poem entitled 'In a Balcony'; Mr. Cecil Forsyth by four studies after Victor Hugo—'Valjean,' 'Cosette,' 'Fantine,' and 'Gavroche'; Mr. Hamilton Harty by an 'Irish' Symphony; Mr. Frederick Delius by a symphonic poem, 'Paris'; and Mr. William Wallace by a symphonic poem, 'Sir William Wallace.' The name of Mr. Delius is of interest, for nothing of his, we believe, has been heard in London since the concert which he gave of his compositions in 1899. The programme of that concert included excerpts from 'Koanga,' an opera which was produced last year at Elberfeld. Among foreign composers, Tschaïkowsky is represented by his Ballade Symphonique, Op. 78, 'Le Voyode,' with which, when it was produced at Moscow in 1891, the composer was so displeased that he tore up his score; the orchestral parts, however, were most fortunately preserved. The Introduction to 'Der Opritschink,' and a Dance from it, are also included. Of this opera, produced at Moscow in 1874, Tschaïkowsky, by the way, declared that there was nothing good in it. The following works are also announced: Richard Strauss's early Symphony in F minor; a legend, 'Der Schwan von Tuonela,' by the Finnish composer Jean Sibelius; Gustav Mahler's Fourth Symphony; Siegmund von Hausegger's symphonic poem 'Barbarossa'; and a new Suite on Russian Folk-Melodies by Max Bruch. Purcell's name has curiously crept in by mistake among the foreign composers, and he will be represented by three pieces for strings. Then there is a list of "additions to the *répertoire* of the Queen's Hall Orchestra," including three symphonies by Haydn, Goldmark's new overture 'In Italien,' and works by Schubert, Liszt, Pierné, Sir E. Elgar, and Mr. Arthur Hervey.

THE death is announced, at the ripe age of seventy-eight, of Mr. Charles Boosey, head of the music-publishing firm in Regent Street, established by Thomas Boosey in 1816.

THE three performances at the Orange Ancient Theatre, under the patronage of the Société des Grandes Auditions Musicales de France, of which Countess Greffühle is President, will take place on August 5th, 6th, and 7th. On the first evening will be performed Berlioz's 'Les Troyens à Carthage,' with Madame Litvinne as Didon; on the second, Boito's 'Mefistofele,' with Mlle. Cavalieri as Marguerite and also Hélène; while on the third evening Shakespeare's 'Julius Cæsar,' translated by Victor Hugo, will be given with incidental music by M. Gabriel Fauré.

SIGNOR GUIDO-ALBERTO FANO, who has recently been appointed Director of the Padua Conservatorio, has composed vocal, orchestral, and chamber music; to his Sonata for Pianoforte and Violoncello was awarded a prize offered by the Milan Quartet Society. He is also the author of a book entitled 'Pensieri sulla Musica.' The new director is young; he was born at Padua in 1875, and studied there under Signori Orefice and Pollini, and afterwards at Bologna under Signor Giuseppe Martucci.

Le Ménestrel of July 23rd quotes from a German paper to the effect that the Beethoven Haus Society at Bonn, anticipating large receipts from the festival recently held in that city, had purchased manuscripts of great interest. The receipts, however, did not answer expectation, so three of the society's members have promised to give the sum required, amounting, it is said, to over 600*l*.

DRAMA

Dramatic Gossip.

LIKE its predecessor, the past week has witnessed not a single dramatic novelty at the theatres.

INSTEAD of returning, as was anticipated, to America at the close of his season at the Avenue, Mr. Charles Hawtrey has accepted an engagement to play at the Haymarket under Mr. Frederick Harrison. His appearance will presumably follow that of Mr. Gerald Du Maurier and Miss Ellis Jeffreys, who are to be seen in September in 'The Love Path.'

MR. CHARLES FROHMAN is seeking to arrange a series of performances by Sir Henry Irving in Paris. Among works he hopes to produce in London are 'La Massière' of M. Jules Lemaître, adapted by Mr. Jerome, and renderings of works by M. Francis de Croisset, M. Pierre Wolff, and other well-known authors.

THE 'Gay Lord Vergy' is the title of an adaptation by Mr. C. H. Brookfield of 'Le Sire de Vergy,' which is to be given at the Apollo with, as it is hoped, Mlle. Lavallière as the heroine.

IT speaks well for the service being rendered by the Academy of Dramatic Art that in the recent performance of 'Oliver Twist' at His Majesty's no fewer than seven of the students had speaking parts.

IT takes one back a long time to read in the Parisian papers of an accident to Madame Léa Félix, the sister of the famous Rachel who died in 1858. Her sister, whom we seem to recall in London under the management of her brother Raphael Félix, did not quit the Parisian stage until more than thirty years later.

AT the Bristol Festival in October Mr. Laurence Irving will recite the 'Œdipus at Colonus' of Sophocles, with an accompaniment of Mendelssohn's music.

TO CORRESPONDENTS.—R. B. J.—D. C.—received.
E. D. R.—Many thanks.
R. A.—Writing.
R. H.—More suited for *Notes and Queries*.
No notice can be taken of anonymous communications.

HENRY THE THIRD AND THE CHURCH.

A Study of his Ecclesiastical Policy, and of the Relations between England and Rome.

By the Right Rev. Abbot GASQUET, D.D. O.S.B.

"This substantial book is beyond doubt a valuable study .....Dr. Gasquet's endeavour has been to state the facts as far as possible in the actual language of the letters and documents of the time, or in the statements of such chroniclers as Matthew Paris. The result of this honest endeavour is a trustworthy contribution to the story of this long reign on the very points upon which most historians are either silent or provokingly brief."—*Athenæum.*

CHEAPER REISSUE. Crown 8vo, 6*s.* net.

THE EVE OF THE REFORMATION.

Studies in the Religious Life and Thought of the English People in the Period preceding the Rejection of the Romish Jurisdiction by Henry VIII.

By the Right Rev. Abbot GASQUET, D.D. O.S.B.

"Dr. Gasquet has produced a book which will set many men thinking. He has done an excellent piece of work, and has offered to students of history a highly interesting problem." *Athenæum.*

NOW READY.

A FIRST ALGEBRA. By W. M. BAKER, M.A., and A. H. BOURNE, M.A. Small crown 8vo, 1*s.* 6*d.*; or with Answers, 2*s.*

The range of this book, which includes Quadratic Equations and Fractions and Negative Indices, will be found specially suitable for the Local Examinations.

LITERATURE

Love's Cross-Currents: a Year's Letters. By Algernon Charles Swinburne. (Chatto & Windus.)

Some critics are fond of winnowing the wind. How much wind has been winnowed in connexion with this "buried bantling" of Mr. Swinburne's "literary youth" it would be hard to say; but it is amusing to note that enormous energy has been expended on the discussion of an irrelevant question—we mean the question of the policy or impolicy of giving to the world an early work of a great writer. If the early work exist only in manuscript, it may be an open question as to whether the author has done well or ill in publishing it with all the imperfections of youth. And, again, with regard to the rights of a dead author, there may be a question as to the policy or impolicy of bringing out an immature work which exists only in manuscript. But when, as in the case of Shelley's novels, 'Zastrozzi' and 'St. Irvyne,' and of this early story by Mr. Swinburne, the book has actually been already published, the question comes to an end.

We may refer to Macaulay's furious attack upon Vizetelly for having reprinted in an unauthorized volume the famous speeches. Macaulay, of course, was right as to the injustice done him by a pirated edition, but he was wrong in supposing that it was possible to keep the speeches from the public eye. The fact that his riper judgment could not approve of portions of his early work had no bearing on the point at issue. With regard to 'Love's Cross-Currents' the facts seem to be these. The book was not written, as newspapers have said, when Mr. Swinburne was forty years of age, but when he was twenty-four. It was then read in manuscript by his intimate friends. Years afterwards the novelist Mr. Robert Francillon, who knew Mr. Swinburne, started a quasi-literary organ called *The Tatler*, and he persuaded the poet to allow him to print the story in its pages. Mr. Swinburne made it a condition that it should be pseudonymous. Under the title 'A Year's Letters,' by Mrs. Horace Manners, the story began in *The Tatler* on August 25th, 1877, appearing in instalments week by week, and being advertised as one of the chief attractions of the paper. Brilliant as the writing is—and the prose is among the best that the poet has achieved—a story more unfit to appear in dislocated fragments it would be difficult to imagine. It proves, indeed, that Mr. Francillon's love of literature betrayed him, for there is no doubt that his journal suffered rather than gained by these clever letters. But the story having appeared in print, the only question was when it should be republished in book form. Republished it was bound to be, either during the poet's lifetime or afterwards. Moreover, there is the fact that some four years ago a pirated edition was issued in America. No question, therefore, as to republication has to be discussed, and the fact that it has been gravely debated displays only the muddle-headedness of the debaters.

With regard to the merits or demerits of the book, any critic who should say that its literary quality is not of a high order ought at once to abandon his profession. He has clearly mistaken his vocation. It would be hard to exaggerate the concision, the polish, and the perfect prose-rhythm of these letters. If the quality of the style is to be challenged at all, it must be on a very different ground—namely, on the ground that its uniform brilliance destroys dramatic truth. Macaulay, in his essay on Machiavelli, makes some very pregnant remarks on the excessive brilliance of the language put by Congreve and Sheridan into the mouths of all their characters. He says:—

"There are no delicate touches, no hues imperceptibly fading into each other: the whole is lighted up with an universal glare..... Every fop, every boor, every valet, is a man of wit. The very butts and dupes, Tattle, Witwould, Puff, Acres, outshine the whole Hotel of Rambouillet."

But this is a kind of stricture which it is very difficult to establish, especially when it is directed against such letters as those in 'Love's Cross-Currents,' which are written not by fops, boors, and valets, but by educated men and women of the world, moving in a cultured society. In such letters too many solecisms and ineptitudes would be as challengeable as too many graces and epigrams. In either case the author is able to disarm his critics, as Laclos disarmed his critics in the preface to 'Les Liaisons Dangereuses': "Ces raisons ne m'ont pas persuadé, et je les ai trouvées, comme je les trouve encore, plus facile à donner qu'à recevoir." Certainly it would seem that no great lady of the mid-Victorian period could have written letters like Lady Midhurst's, ablaze with cynical epigram and scintillating wit, sparkling with worldly humour, and flashing with wistful sympathy and tender sentiment. Hard it is to believe that any mid-Victorian bardling could write lyrical prose so splendid as Reginald's. But there the letters are, and it would be blasphemous to assert that Nature's creative imagination never did and never could rival the creative imagination of Mr. Swinburne. Whatever may be said about Lady Midhurst, Nature assuredly can claim some share in the making of the youthful Swinburne,[5] who, if we mistake not, put somewhat of his own vivid temperament into the portrait of Reginald.

More relevant than either of these questions is the old controversy that rages round the value of the epistolary form. Mr. Swinburne, in his dedication of the book to Mr. Watts-Dunton "as the person responsible for its revival," modestly urges that "a friend's judgment" is "liable to be coloured by the unconscious influence of friendship." We are bound, at any rate, to dissent from Mr. Swinburne's and Mr. Watts-Dunton's "favourable opinion" of the epistolary form. It seems to us to be a bastard form, which sacrifices the advantages of dramatic narrative and direct narrative without any commensurate gain in verisimilitude. It is a compromise between the story and the play. In art most compromises are bad. We do not like tinted sculpture, rhymeless lyrics, and illustrative music. Mrs. Barbauld contended that although the epistolary style of novel is the "least probable" it is the "most natural." It is, we think, the least natural as well as the least probable. It is also the most wearisome. In fact, it is a "sport" of literary evolution, and not a true species, begotten not by creative invention, but by an accident of an accident. It was a sheer accident that made the youthful Richardson write love-letters for amorous servant-girls. It was a sheer accident that led Rivington & Osborn to ask him to compile a complete letter-writer for "country readers who were unable to indite for themselves." These model letters suggested a story. "Hence sprung 'Pamela,'" as Richardson himself avouched, and 'Clarissa.' Laclos undoubtedly imitated 'Clarissa' in 'Les Liaisons Dangereuses.' De Valmont is merely a Gallic Lovelace. But the epistolary style has never become a real literary form, either in English or in French, although both Scott and Balzac experimented with it. We cannot regret that Scott did not pursue this fen-flame, and refrained from putting 'Redgauntlet' and 'The Fortunes of Nigel' into the form of epistles throughout. Scott was a story-teller, and wise enough, we think, to know that no story can be well told in elliptic letters.

Letters are really but a part of the machinery of the novel, and it is waste of energy to make one cog-wheel do the work of the whole engine. Mixed with direct narrative, letters can be used with enormous advantage. Although never very welcome to the reader, a letter produces an astonishing effect when judiciously spatchcocked into a story. One of the finest things in 'Don Juan,' that which takes the mock-heroic poet into the realm

XUM

of passionate imagination, is Donna Julia's letter in the first canto. It seems to bathe the whole burlesque in romance and passion. Only six stanzas, yet they humanize the whole personal epic. They contain some of Byron's best lines:—

> Man's love is of man's life a thing apart,
> 'Tis woman's whole existence.
>
> So shakes the needle, and so stands the pole,
> As vibrates my fond heart to my fix'd soul.

Perhaps a not less striking proof of the magical power of the letter when interjected into a narrative is to be found in Mr. Watts-Dunton's lyrical drama 'The Coming of Love,' where, by aid of two or three letters, Rhona lives as completely as if she had been elaborately painted in a novel.

But it is one thing to put letters into a story. It is another to put a story into letters. If Mr. Swinburne had tried to do so he would have failed. Why, then, is 'Love's Cross-Currents,' in spite of its fatal form, a literary success? Because the letters are everything and the story naught. Here is no story at all, but simply a brief group of letters, exhibiting a brief relationship between four lovers and their grandmother, and owing their vitality to their literary quality. Mr. Swinburne, great poet as he is, has never shown any special gift of direct narrative. 'Tristram of Lyonesse,' though in form it is a narrative poem in heroic verse, is really a series of superb lyrical comments upon the story of Tristram and Iseult. But if he cannot tell a tale, Mr. Swinburne can write a letter as few can write it in this age when the telegram, the telephone, the typewriter, and the penny post have made letter-writing the rarest of arts and most despised of pastimes. These letters are so "undulating and diverse" in mood, so brilliant in form, that they are sure to live as letters apart from their relation to each other and to the tenuous story in which they are set. Lady Midhurst's letters alone ought to be cherished by the busy connoisseurs who ransack two hemispheres for lost Lambs.

Some critics have nothing but abuse for these wonderful letters, and nothing but praise for the Prologue. Now the genealogical part of the Prologue seems to us to be the most serious mistake in the book. It is like building a Euston Station portico for a country cottage. We advise the reader to cut the lineage and come to the letters. We suspect that the Prologue is the result of a too deep study of the methods of Balzac. Even where an elaborate statement of family connexions and a laborious study of the family tree are followed by a complicated and subtle plot, we feel that these tedious and tiresome details are a wanton trial of our patience. The mistake is still more clearly seen in the opening chapters of several of Thackeray's stories, where there is no plot—only a sequence of brilliant chapters and scenes. But to clog these few airy letters, which develope hardly any story at all, with a brain-badgering essay in the art of Debrett and Burke, is a great artistic blunder. If we had our way we should cut out of the Prologue everything save the opening scene between the boys. We should restore the ironical letter from an anonymous Philistine to the author which prefaced the work as it appeared in *The Tatler*. It is a piece of satirical humour as gay as anything in 'Friendship's Garland,' Byron's letters, or Mr. Bernard Shaw's comedies. The domestic Pharisaism against which its irony is directed still flourishes.

Indeed, the letters as a whole are a pungent satire on British morality, its sensual sentiment, and its capacity for whitewashing the moral sepulchre. It would be hard to define the relations between Reginald and Clara, Francis and Amicia. To the end we are baffled and bamboozled. That, of course, is the game as it is played on this side of the Channel. We are left in doubtful certitude even as to the paternity of the posthumous child—"this totally idiotic fragment of flesh and fluff, which [writes Lady Midhurst] my daughter has the front and face to assert resembles its father's family." Of course, the doubt is not a real doubt. Lady Midhurst's inimitable letter to Lady Cheyne is explicitly implicit, and its subtlety is lucid to the subtle. If objections be raised on the score of verisimilitude, the rejoinder is obvious—these things happen every day. The art of averting a family scandal is admirably practised in this Christian country, and nowhere more deftly than in exalted circles.

A New English Dictionary on Historical Principles.—Ree — Reign. (Vol. VIII.) Edited by W. A. Craigie. (Oxford, Clarendon Press.)

A YEAR and three-quarters has passed in the advance from 'Reactive' to 'Reign,' which covers nearly two hundred pages, so that the residue of words beginning with "Re-" bids fair to occupy much space and time. Of such "main-words" there are over two thousand two hundred in the double section issued July 1st, 1904, and the single section, issued April 1st, before us; and about three thousand four hundred may be expected before "Rh-" is reached in 1907 or 1908. Compounds with the Latin preposition "re" meaning "again," "anew," from "re-ebullient" (Coleridge) to "re-identification," are numerous, yet we suspect—without regret—that many have escaped registration. Few of the examples for which no evidence of currency is given, such as "refall," "refeign," "reflee," are marked as obsolete, probably because any verb may be used with this prefix—at any rate, with an apologetic hyphen. The following unrecorded forms, if not to be found in existing books or journals, may appear at any time: "re-effervesce," "re-eject," "re-evict," "re-encircle," "re-enclose," "re-enfold," "re-gird," "re-glue," "re-grapple," "re-hoop," "re-idealize," "re-identify"; and many others might be added to these few specimens taken at random. The uninteresting character of these forms is compensated for to some extent by the articles on several important groups—those, for instance, on "reed," "reek," "reel," "refel" (obsolete), "refer," "reflect," "refract," "refuse" (vb., sub., adj.), "reform," "regale," "regard," "regenerate," "regiment," "rehearse."

The article on "refer" extends to 14 sections and 19 subsections, 17 of the 33 varieties of sense or usage being obsolete. Yet the reflexive use=take oneself back, quoted in another dictionary from 'The Testament of Creseide,' "that ye refer you to the blest planet here," is not noticed; while no instance is quoted for "to apply or appeal" to a person, for which Johnson quotes Bacon's essay 'Of Suitors'—"In suits which a man doth not well understand, it is good to refer to some friend of trust"—though this essay is quoted for "referendary" and "reglement." It appears that "refrigery"=cooling, from about 1450 to 1565, preceded "refrigerium"=a cool respite granted to the souls of the damned, a hymn or prayer for such a respite, a place of cooling. "Yee haue stepped," says Jewel as quoted, "from the place of Spiritual refrigery, into the frying pan of Schismes & Heresies." The useful and familiar verb "regulate" was preceded by "regolate," from Italian, in the sixteenth century, and by "regle" from French in the fifteenth. For the latter Caxton is the earliest authority quoted, as also for "re-enter," "re-establish," "refectory," "reflame," "reforce," "refraidour" (and "refroydour")=coolness, "regarnish," "regort" (Old French=a deep place in the sea, a gulf), "regracy" (vb.)=thank.

The obsolescence of words is generally involved in mystery. It is impossible to say, for instance, why the verbs "refection" and "refect" went out of use in the seventeenth century, the latter having been revived after more than two centuries of disuse as a back-formation from the substantive "refection," or why "refel"=refute, disprove, was shelved in the eighteenth century. The abandonment, however, of "refix"=annul, is intelligible, and the same applies to "regrade"=degrade, and to "regenerate"=degenerate, in which case ideas almost correlative were expressed by identical words.

The etymological element of this section cannot be called of special interest, the origin of the comparatively few uncompounded words being generally obscure or uncertain, or not found outside Teutonic. The "reef" group's

> "ultimate source is Old Norse *rif*.....(formerly identical with *rif*, rib, and perhaps only a transferred use of that word.....), but the precise manner in which the word passed into the other tongues is obscure."

The "reef" meaning "a narrow ridge or chain of rocks, shingle, or sand, lying at or near the surface of the water," &c., is said to be probably taken from Dutch or Low German into English. The Rev. S. Baring-Gould is quoted for a transferred use of this word, "The blackness which was falling reef on reef, over mind and soul." If the author meant anything definite by this metaphorical paraphrase of "gradually," he must have intended to suggest the idea of a sail gradually expanded by being unreefed, just as poets talk of clouds being furled and unfurled, and of the sail of night. Browning enthusiasts may, after discussion of the quotation "The special gold, whate'er the form it take, Head-work or heart-work, fined and thrice refined I' the crucible of life," decide that, since alcoholic liquors are "fined," and can be "refined," so in the quotation, as "fined" is archaic for "refined," "thrice refined" should

have the "re-" pronounced long or half-long, as archaic for "re-refined."

Only one quotation later than 1768 is given of "refute" with a person as object, and that is a reflexive use from *The Daily News*, dated 1869. Perhaps this construction is not very common, as the synonym "confute" is available, but we need not infer that it is becoming obsolete, as "the generation which fancied that Christ Church had refuted Bentley" (1841, Macaulay, 'Essay on Comic Dramatists of the Restoration') occurred to us at once.

It appears that "royal sway" is the earliest English sense of "reign," and "kingdom" comes next. The quotation in Messrs. Cassell's 'Encyclopædic Dictionary' for "once in a reign" = once in a way, might have been borrowed. A "referee" was originally "one appointed by Parliament to examine and report on applications for monopolies or letters patent." The verb "referee" seems to be exclusively journalistic and confined to sporting contests. The metallurgical sense of "refine" appears to be the earliest by a few years. The verbal substantive "refraining" has been found about a generation earlier than the verb, as is often the case in our borrowings from French and Latin. Mr. Craigie appears to have found it hard to express his views on railway-station "refreshment rooms," as he has ignored them. A slight preference for "referable" over "referrible" is suggested by the comparison of "preferable" and "inferable," but the quotations give no help, as Procter, 1879, is paired off against a divine, M. Dod, 1891; from "inferrible" we learn that "referrible" is a "mongrel" spelling. Under "regent" (adjective) we have "Princes Regents," 1690, quoted, but no instance of our "Prince Regent," afterwards George IV., *e.g.*, "I and you.....will then make merry As the Prince Regent did with Sherry" (Shelley, 'Peter Bell the Third,' Part VI.). We are disappointed at not seeing a notice of "Regency punch," which occurs to our memory, unfortunately without a reference. The omission of "reformly," ascribed to Milton in several dictionaries, is curious.

Under "reed" (sb.[1] I. 2), "*c* 700 'Corpus Gloss.' E 129, *carectum* hreod," should precede the earliest quotation, "*a* 800 'Erfurt Gloss.' 290." It might have been safely suggested as possible that "reed" is connected with the Sanskrit root *cru* ("hear"). For "reeve" (sb.[1]) the Corpus MS. glosses "*censores* geroefan, *commentariensis* geroefa," and more than these, "*proceres* geroefan," should have been quoted. The substantive "regale" is derived without reservation from the French *regale*, though it may be adopted from the earlier *regalo* (Spanish or Italian), like "reformade" from *reformado*. Under "regild" there should be a reference to "regloss."

What is sauce for the verb is surely sauce for the verbal substantive; yet quotations and mention of the use are given for "to 'refuse' a lover," while the "refusal" of a suitor is ignored. Mr. Craigie and his helpers would in a few minutes' glance over Goldsmith's 'Good-Natured Man' (1768) have found an instance — *e.g.*, Act II., Leontine says to Olivia, "I had every reason to expect Miss Richland's refusal, as I did everything in my power to deserve it."

It would be interesting to know if "refectioner" (from 1820, Scott), "refectorarian" (from 1886, *Athenæum*), "refectorary" (1844), "refectorer" (from 1794, W. Tindall), "refectorian" (from 1660), "refectuary" (seventeenth century), are all renderings of mediæval Latin *refectorarius* or *refectuarius*. The sign for obsolete should be transferred from sense 3b of "refine"—"to free or cleanse from moral imperfection; to raise to a higher spiritual state"—to sense 10, "to improve *on* or *upon* something by introducing refinements" (1662–1815).

For "regard" (vb.), 7c "As regards," Shelley wrote near the end of 'The Cenci,' five years earlier than the first quotation, "No difference has been made 'Twixt good and evil as regarded me." Under "register" (vb.) there is no quotation like "the fair oak, whose leafy dome affords A temple where the vows of happy love Are registered" (Shelley, 'Queen Mab'). Hence, too, should have been taken "happy regions of eternal hope." For "regular" (adj.), sense 6b = properly qualified, we find quoted "1755 Johnson, *s.v.*, A regular doctor. 1836 .....a regular trapper." Between these might have been inserted from Garrick's prologue to 'She Stoops to Conquer,' in reference to "the Doctor," namely, Goldsmith, "The College you, must his pretensions back, Pronounce him Regular or dub him Quack." Perhaps we should have been told that one modern equivalent of "regrate" (vb.[2]), = "to buy up.....in order to sell again at a profit," is "to make a corner in." We read, "The practice of [regrating or buying up on a comparatively small scale] was regarded as hurtful to the community, and was forbidden by various enactments." The modern development of regrating just mentioned is certainly injurious, and has at least in one instance been publicly condemned by a government. The petty "regrator" who goes round with a cart buying up from small producers has the justification of offering his customers a certain sale, and saving their time and trouble.

We incline to interpret Gabriel's "stern regard" as "stern look or gaze," rather than with Mr. Craigie "stern aspect or air" (Milton, 'P. L.,' iv. 877), but with this trifling exception find the admirable articles on "regard" (sb. and vb.) full of instruction and interest, and as worthy as many others to be selected as specimens of the unique excellence of this dictionary. The absence of words of special etymological interest and of such as require very long articles gives an opportunity for realizing how much that one ought to know about common words, such as "reflect," "register," "region," "regulate," can be learnt from the work we are considering, the only one which treats a national vocabulary exhaustively in every respect.

The College of St. Leonard. By John Herkless and Robert Kerr Hannay. (Blackwood & Sons.)

The girls' school of St. Leonard, almost the only green place, with its gardens and cricket ground, in the gritty St. Andrews of summer, exists on an ancient site. The oldest buildings are locally said to be haunted by George Buchanan: Sir David Brewster got many a fright when he lived there. There is a roofless chapel, with tombs of some antiquity and hideous wooden fences round the tombs. Prof. Herkless and Mr. Hannay have edited for the University of St. Andrews the documents about St. Leonard's, with historical notices. The results are workmanlike, but entirely free from popular interest. There was a hospitium at St. Andrews: the Culdees ran it on a stingy scale; Bishop Robert (1144) transferred it to the Augustinian canons, and enlarged it. This was the manner of the "blood-sucking" Church, which, according to an eminent Presbyterian authority, followed "the pure Culdee" of legend. The hospitium was associated with St. Leonard, and had an *ecclesia parochialis* as early as 1413. By 1513 pilgrims using the hospitium were scarce, because, miracles being no longer needed, the relics of St. Andrew did not work miracles. St. Leonard's became a kind of almshouse for old women who were "ither than gude anes." Archbishop Stewart, who fell at Flodden, turned the place into a College for Poor Clerks, which was mainly endowed by Prior John Hepburn, whose arms are still on several of the walls. In 1545 Cardinal Beaton confirmed the arrangement. Hepburn's plan was to educate young clerics, who promptly adopted the new ideas of the Reformation. In Knox's time, when he used to stroll about the grounds where the girls now play a very decent game of cricket, St. Leonard's was godly: not so the two other colleges. In the eighteenth century St. Leonard's was Jacobite. Long before Dr. Johnson came to St. Andrews the place went to rack and ruin; the very plate was cracked and broken, and St. Andrews was united with St. Salvator's. The Doctor was never allowed to see the chapel. "Where there is yet shame there may in time be virtue," says the Doctor. The University and colleges of St. Andrews were constantly robbed from within, till Dr. Chalmers refused his share of the spoils and caused an inquiry. The houses of the college were sold to private individuals; about 1860 they were used for St. Leonard's Hall, a place of residence for students since remarkable for their virtue, learning, and distinction in the legal profession. These were the palmy days of the ancient foundation, which has now reverted to the education of the fair sex. All these changes, with a clerical something which hung about the old walls — ministers of St. Leonard's Church being Principals—are traced (except, by the way, the most recent changes) by Messrs. Herkless and Hannay. Their materials for the history of Scottish education in the past are good, but they are only of interest to special students of that thorny theme. General interest would have lurked even in the roll of the students of old, but the roll is not given, to our regret. But the editors have done their work with much care: the Latin documents are fairly corrupt, but have been scrupulously emended and translated, and the secular clash of authorities, monastic, educational, lay, and clerical, affords

a curious study. They gave great trouble to James VI. in "that world's wolter," the year of the Armada, and he expressed himself with freedom about the confusions of St. Andrews in general. The legal perplexities about the parochial quality of St. Leonard's have perhaps not entirely ceased. As a parish it had a congregation, which was transferred to the chapel of St. Salvator's College, and the town tended to crowd out the gown. The St. Leonard's parish congregation has now a new kirk of its own, which decorates or deforms one of the entrances to St. Andrews. We notice Prof. Herkless's remark that Archbishop Hamilton died—was hanged, we believe—"for his creed and his crimes." Perhaps we should drop "creed." He had been in the murder of the Regent Moray, and no more died for his creed than that other murderer, the Regent Morton, died for his. James Guthrie, we regret to say, was a St. Leonard's man, and was hanged as "a martyr or a felon." He was a martyr to the idea that Charles II. should put down prelacy and erect presbytery in England at the Restoration. His exertions to renew the Civil War were neither felonious nor martyr-like, but slightly insane, and essentially Covenanting.

Main Currents in Nineteenth-Century Literature. By George Brandes. In 6 vols.—Vol. IV. *Naturalism in England.* (Heinemann.)

The respect which Dr. Brandes has won from English readers notoriously indifferent, if not hostile, to foreign criticism must always entitle his work to serious consideration. Judgments from without should be instructive; and Dr. Brandes is marvellously well read, illuminating in analysis, comprehensive and balanced in his historic outlook. Most of his work, however, is marred by limitations certainly conspicuous in the volume before us—an undue subservience to the scientific method, itself obscured by digressions of personal prejudice or bias. Always searching for the leading idea, he is guilty at times of reading into an author what he is determined to find; and, on the other hand, his own style is never continuously sustained. The transitions from outbursts of blame or praise, to dispassionate judgment are irregular and perplexing.

The dominating or original impulse of 'Naturalism in England' is stated with sufficient precision in the introduction, in chap. i. on 'The Universal Characteristics of the Period,' and in the brief 'Conclusion.' Its influence appears in several telling passages of analysis, from which one can trace more fully the basis of the argument, and—not without difficulty—discover a sequence governing the chapters. But the whole of this matter would have been more effectively presented in a single consecutive essay, concentrated on one thesis, and illustrated in groups or by suggestive allusions to the authors of the period. It suffers much in having to be painfully extracted from a series of critical and biographical essays on individual writers, which carry one backwards and forwards over the same period, confusing the historical and the artistic perspective, and containing irrelevant and controversial matter. It is possible, however, to appreciate both the central conception and the illustrative studies in criticism.

"It is my intention," writes Dr. Brandes,

"to trace in the poetry of England of the first decades of this century, the course of the strong, deep, pregnant current in the intellectual life of the country, which, sweeping away the classic forms and conventions, produces a Naturalism dominating the whole of literature, which from Naturalism leads to Radicalism, from revolt against traditional convention in literature to vigorous rebellion against religious and political reaction, and which bears in its bosom the germs of all the liberal ideas and emancipatory achievements of the later periods of European civilization."

We see at once that Dr. Brandes will study genius through its environment, its place in progress. He sees science and politics behind passion and art. He traces the development of naturalism in literature through two channels: the appeal to liberty leading from political unrest to free thought, and the piety towards nature transforming a "love of external phenomena" to the revelation of "such an Iris" as Byron has described in 'Childe Harold,' "a glorious rainbow, the emblem of freedom and peace."

The conversations of Coleridge and Wordsworth accomplished no less "than that *conscious* literary rupture with the spirit of the eighteenth century which, assuming different forms in different countries, took place at this time all over Europe." In Wordsworth it was exhibited by a "saving disposition" that was "genuinely human" and "national." His naturalism "began by carefully and economically providing itself with a store, a capital of impressions of nature," yet

"that meanest flower which gave him thoughts that often lay too deep for tears, he put into his button-hole as an ornament, and looked at sometimes in a calmly dignified manner, revolving a simile."

He had not the passion of Shelley, who

"calls animals and plants his beloved brothers and sisters, and compares himself, with his keen susceptibility and his trembling sensitiveness, to the chameleon and the sensitive plant."

In Byron's poetry

"the river boiled and foamed, and the roar of its waters made music that mounted up to heaven. In its seething fury it formed whirlpools, tore itself and whatever came in its way, and in the end undermined the very rocks."

Again, the poets of the Lake school "extolled a definite actually existing sum of liberties"—the Constitution of England. The true liberty conceived by the revolutionary poets was "so extremely ideal, that in practical matters they too often shot beyond the mark." It required

"a poet who was as personal as Shelley was universal, as passionate as Shelley was idealistic, as savagely satirical as Shelley was harmonious and graceful, to perform the Herculean task of clearing the political and religious atmosphere of Europe, awaking the slumberers, and plunging the mighty into the abyss of ridicule."

Byron recognized that "free thought is the first essential requisite of all spiritual life," that "grief widens into compassion for all the sufferings and sorrows of humanity." His Lucifer is

"really the bringer of light, the genius of science, the proud and defiant spirit of criticism, the best friend of man, overthrown because he would not cringe or lie, but inflexible, because, like his enemy, he is eternal."

In either direction it is Byron who "set the final and decisive stamp on the poetical literature of the age," with whom "Romantic sentimentality comes to an end, the modern spirit in poetry originates."

In most of us, we suspect, this extravagant eulogy of Byron will scarcely inspire confidence; and the judgments of Dr. Brandes must be approached with still more caution in view of an astounding perversity of vision that can detect no "ideal" in Scott, and dismisses that great novelist as "the favourite author of boys and girls of fourteen or thereabouts, an author whom all grown-up people have read, and no grown-up people read." However suggestive and inspiring, the man of such views must be a dangerous guide.

Minor Poets of the Caroline Period. Edited by George Saintsbury. (Oxford, Clarendon Press.)

By putting these rare poets of the seventeenth century within reach of the ordinary student Prof. Saintsbury has rendered an undoubted service to English letters. He insists, with good reason, on the necessity for knowledge of the minor authors who compose the rank and file of a literary period, and the misleading view of literary history which comes from the habit of noting only the writers who may more or less be considered classical. To redeem this neglect is the aim of the volumes which start with the present book. It is well and judiciously edited as a whole, the notes being sparing and adequate, while the prefaces—both the general preface and those to single authors—if one can stomach the editor's most unappetizing and contorted style, are excellent in substance, alike critical and informative. One might, perhaps, object to the massing of all the poets in a single cumbrous and double-columned volume. Some, also, will resent the happy mean which the editor considers he has struck in the modernization of spelling and punctuation. We are ourselves no sticklers for the retention of those amazing and illogical eccentricities in punctuation, most, if not all, of which surely issued from the printers', not the author's brains. We cannot believe that the most wilful author of the period knowingly set a full-stop for a comma (by way of example), or see the gain in its retention. Spelling is a more debatable matter, and purposed oddities of type or capitals, which, in a poet like Benlowes, are part of his temperamental oddity. Here we incline towards the purist.

Prof. Saintsbury, as becomes an editor, is fully persuaded of his authors' intrinsic no less than historic interest, and finds some enthusiasm for the obscurest of them. We cannot with a whole heart echo him. Historically they have an undeniable and curious interest. They represent the interval between the "metaphysical" school of Donne and the turn of the tide towards the poetry of manners which set in with Dryden, or rather, perhaps, between the school of Donne and Waller. In some of them the

turn of the tide is already evident; and through them we can see indicated the stages of the transformation. But as poets, speaking generally, one must own that they are a feeble set. The matchless Orinda is a Sappho beside Benlowes, even Benlowes a Crashaw by Patrick Hannay, and Hannay is rare in but one sense, which is not the sense wherein we speak of Jonson.

The finest poet, and the only one with any touch of imaginative fire, is easily Chamberlayne. But Chamberlayne, like Orinda, is comparatively a well-known poet. Prof. Saintsbury writes of him almost with ardour, and many excellent judges have shared his enthusiasm. It is an ill thing to approach a minor writer with inflamed expectations, and perhaps this may have something to do with our own disappointment in Chamberlayne. There are descriptive touches—not frequently of any length—which have a true vein of fancy, and even imagination; while his diction is touched with the richness, and sometimes the curious felicity, of the typical seventeenth-century poet. Above all, there is about him a certain atmosphere of imagination, that generous imagination which recks not in its giving; and this is subtly felt even when the exigences of his subject and plan allow no scope for its display. But 'Pharonnida' is a poem of a kind impossible in the hands of our English poets. It is the romantic epic, which in Italy produced Tasso's masterpiece, and after another kind Ariosto's, but in England such dullness as 'Gorboduc,' and other effusions the names of which one is happy to have the relief of forgetting. 'Pharonnida' is not dull—Chamberlayne is too sincerely a poet for that—but it is weary, how weary! Like many of its brethren, long drawn out, with the utmost verbosity of detail, it is also unimaginably intricate and tortuous. Prof. Saintsbury thinks it needful to furnish an elaborate analysis of the story, which otherwise he doubts that any reader would discover. For our part, we make an act of implicit faith in the Professor as Chamberlayne's prophet, which we trust is a substitute for comprehension of the story. Add to this the fact that Chamberlayne's style is at all times of a peculiar difficulty, which Prof. Saintsbury justly compares to the characteristic zigzag mannor of Browning's 'Sordello,' and it may be readily understood that 'Pharonnida' is no reading for an idle hour. The characters are naught, and though the theme is one of human love and vicissitudes, there is little of real human interest. One does not regret the rarity of the romantic epic in English poetry. And the necessities of this inhuman narrative, which we cannot believe interested Chamberlayne much more than it does the reader, clog and choke a genius that might (one thinks) have found its truer field in lyric poetry.

'Pharonnida,' over and above its own merits, has an adventitious renown from the often-recognized fact that it was doubtless among the several sources whence Keats drew the inspiration of 'Endymion.' The resemblance in certain features of style is often striking, more especially in metre. The interlocking of the lines—the carrying-over of the sense and the grammatical pause to the midst of the line, instead of allowing the grammatical pause to coincide as a rule with the end of the couplet—is common enough in writers of the sixteenth and seventeenth centuries, who exemplify both that and what (for brevity's sake) we may call the couplet form of Dryden and Pope. Marlowe's 'Hero and Leander' achieves a felicitous mean betwixt the two. When he wills, it is "regular" as Pope himself, while the general texture beautifully tempers the monotony of the rigid couplet; in a modern poet's phrase, inflecting it without infraction. By Chapman's Second Part the Marlowe half "sticks fiery off indeed"; for Chapman's rhyming heroics are a strong contrast, harshly interlocked, shattering the couplet. Not this, then, is the peculiar feature which Keats and Chamberlayne have in common—but the stressed rhyme. In both the accent falls incessantly, with the chop of an axe, on the rhyme:—

> Like a cheap and chippy chopper on a big, black block.

It is a feature (Prof. Saintsbury contends) inseparable from this mode of rhyming heroics. But the best Elizabethan use of interlocked versification does not show it to the same extent — though we admit a difficulty in avoiding it. Chamberlayne, however, not only has this heavy accentuation of the rhyming word, it is made yet more conspicuous by the frequent placing of the rhyme on weak words—connective particles and the like. It is doubtless meant to mitigate the flappingly emphatic rhyme; but the effect is to make it actually more emphatic, by the unnatural prominence thus conferred on insignificant vocables. Keats does not share this feature in an equal degree; yet he has it to some extent, and the total result is a very noticeable resemblance. Even the peculiar vagrancy of Chamberlayne's style, in which idea starts idea with seeming casualness, like circle on circle in pebble-splashed water, is not without some echo in Keats. What a suggestion of 'Endymion' is here, for instance!—

> And now raised from their lowly posture in
> Which fear had left them, the vast rout begin
> Their motion toward fair Gereza, where
> The varied scene did such proportion bear
> With joy's exalted harmony, which in
> Their rescued princess dwelt, all that had been
> Their sorrow's dismal character they now
> Obliterate, and her late clouded brow
> Crown with delights.

This loose beading and agglomeration of clause on clause, detail on detail, is familiar enough in 'Endymion.' No doubt the overseeding, the prodigal dissolution of order and form, attracted Keats as an extreme reaction from the formal trimness of Pope and the eighteenth century. In 'England's Jubilee' Chamberlayne himself begins to assume the bonds and the materialism of the new school that issued in Dryden and Pope—a curiously instructive transition.

Katharine Phillips we know, comparatively speaking; a woman of parts is "Orinda," with an occasional felicity in her briefer lyrics that femininely remembers Donne. Like him, too, she has a trick of fine beginnings and happy first lines with disappointing or weaker sequels. But what shall one say of Benlowes? The most licentious licence of the seventeenth century is sobriety beside him. All that in his models is an excess of impulsive fantasy he mechanically aims for. *Pace* Prof. Saintsbury, we can find in him no true fancy or imagination. That being so, his sins against taste (though the staple, not the accidents, of his style) become an accessory matter not worth discussion. A brief description of evening has some minor quality; the address to the Ancient of Days has some sublime ideas—which are Job's, and some clumsy expression—which is Benlowes's. The other passages which the editor admires we cannot. In a certain passage on morning, for example, the one outstanding trace of (seeming) originality is the phrase "opal-colour'd dawns"—and it is not Benlowes's. Patrick Hannay—last of the batch—has a pretty, if thin, tunefulness (we might rather say tuniness), but no power of any sort, nothing underived. His verse, frankly, is weak stuff, and unmercifully long. Chamberlayne and the lady immortalized by greater wits than herself as "Orinda" monopolize the not too rich poetry of this volume; the others, though many may read them with interest, few will read for pleasure. It needed Prof. Saintsbury to discern their historic value, and for that perception he deserves thanks.

A Grammar of the Somali Language, with Examples in Prose and Verse, and an Account of the Yibir and Midgan Dialects. By J. W. C. Kirk. (Cambridge, University Press.)

Mr. Kirk is undoubtedly correct in his opinion that

> "there are but few people who have made any serious study of the many and interesting tongues of that part of the African Continent in which the Somali race has grown up";

though in his list of authorities he omits the splendid volumes published by the Vienna Academy of Sciences in 1900 as a result of the South Arabian Expedition. These, the work of Prof. Reinisch, consist of a dictionary and a collection of texts, valuable as supplementing and completing those edited by the same scholar from the MSS. left by the late A. W. Schleicher. Mr. Kirk mentions these last as "a useful and important foundation to a Somali literature"; perhaps the larger work has in this and other cases escaped notice owing to the connexion with Asia rather than Africa misleadingly suggested by the title-page. It should be understood that, while very generous in acknowledging his obligations to his predecessors, Mr. Kirk has, in the main, worked from his own materials. His lengthened stay in the interior of the Somali country and intercourse with natives *in situ* gave him an advantage over previous scholars who did not penetrate beyond the coast, or were forced to avail themselves of the help of individual Somalis exiled from their own country.

Somali is reckoned in the Hamitic group (which is not without claims to be considered a "Hamitic family") of languages, and is most closely related to Galla and Danakil, with which are reckoned, in Dr. Cust's classification, Bishari, Agau, and several others, of which little is known. The hypothesis of Semitic relationship seems to be untenable, being based

on features which are either due to Arabic importation or common property, dating back before the division of Hamite and Semite. Of the latter, Prof. Meinhof enumerates the following points: Inflexion by internal vowel-change, as well as by prefix and suffix; distinction of gender in the first and second persons as well as the third; some of the formative elements and broken plurals. It should, however, be noticed, so far as Somali is concerned, that the broken plurals seem only to occur in words of Arabic origin (*sandukhi*, *sirkalki*, &c.), as set forth by Mr. Kirk on p. 24.

Somali can be written without difficulty by means of the Roman alphabet and two additional characters, ' and *'d*, representing respectively the Arabic ع and the "cerebral *d*." The system adopted by Mr. Kirk is useful in practice, and easy to remember, though no doubt, according to the strictest principles of scientific orthography, he is wrong in using two letters to express one sound, as in writing *ch* for خ or *hh* for ح. The vowels have each two or three sounds, which have to be discriminated from one another by diacritic marks. We cannot help wondering if the writer is correct in saying that "ă is pronounced like *a* in 'rat,' 'ham,'" or whether it is not rather the short sound of *à* (by which Mr. Kirk represents the *a* in "father"), as heard in the German words *hat*, *was*. We have frequently noticed a failure to discriminate between this and the English sound above referred to, which Germans try to render by *ä*, which, again, is slightly different. As, however, Mr. Kirk notes that *ă* "is not a common sound," it may really be our short *a*—*ae* in Vietor's 'Phonetik.'

The definite article, and the demonstrative, possessive, and interrogative adjectives are indicated in Somali by suffixes, mostly consisting either of a single vowel or a vowel followed by a consonant. Thus the definite article is *-i*, *-a*, or *-u*, the demonstrative *-an*, *-as*, or *-à*. This suffix is joined to the root by a "linking consonant," varying according to the gender of the noun—guttural for the masculine, dental for the feminine. Thus *nin* is man; *nàg*, woman; *nin-k-i*, the man; *nàg-t-i*, the woman; *nin-k-an*, this man, *nàg-t-an*, this woman, &c. It is exceedingly curious that the genders should be reversed in the plurals—*i.e.*, masculine nouns form their plural with the dental linking consonant, and feminine with the guttural, except in the case of masculine monosyllables, which, as a rule, retain their own, *niman-ki* being the plural of *ninki*. There are no fewer than six ways of forming the plural; but, in compensation, there is nothing corresponding to the declension of nouns.

Coming to the verb, we find there is no such thing as a passive voice; it is expressed either by the past participle and the verb "to be," or by the indefinite pronoun *la* used in the same way as the French *on*, or by the reflexive form. There are four kinds of "derivative verbs"—intensive, reflexive, causative, and attributive. This development of the verb is very well marked in the Bantu, as well as in the Semitic languages, and the first three are familiar to all students of the former. The "attributive," which expresses "becoming" in contradistinction to "being," is not, so far as we can recall, found in any of them, though perhaps a certain correspondence might be traced between it and some uses of the "applied" or "relative" form. It is formed from adjectives, as *'ado*, "to become white," from *'ad*, "white"; "to be white" would be *'ad aho*.

Mr. Kirk's appendixes contain a large amount of interesting matter. Besides the songs and stories, to which we shall refer presently, he has collected a quantity of linguistic and other information about the two "helot" tribes—the Yibir and Midgan. The dialects of these tribes have hitherto been kept secret from the rest of the world, and Mr. Kirk was obliged to promise that he would reveal nothing of what had been told him to their enemies, the Somali. With the help of a comparative vocabulary we see that, while resembling each other, Yibir and Midgan differ considerably from Somali.

The prose texts are of two kinds—folk-tales proper, and a narrative, dictated by a native officer, of some episodes in the late war. Among the former, 'The Girl without Legs' belongs to the 'Genoveva' type, where the calumniated heroine is supposed to be put to death, but escapes. 'The Dragon-killer' is, as Mr. Kirk points out, "a variant of the story of Perseus and Andromeda," but he makes no remark on the fact that the first half has no intelligible connexion with the rest, and is, indeed, as it stands, utterly pointless. The strange thing is that this apparently unmeaning episode strongly resembles a story which, according to Mr. A. C. Hollis ('The Masai, their Language and Folk-lore,' pp. 117–22), is told by the Masai to account for their "peculiar institution" of free love. Perhaps two stories have been confused by the Somali narrator, Mohammed Jibril; at any rate, the point is worth looking into. No. IX., 'The Camel and her Followers,' appears to be a sequence of 'The House that Jack Built' order.

The songs have a sort of rhythm, though no metre in the strict sense, and observe a principle of alliteration: each line must contain some word beginning with a particular letter; thus the first song given is in *s*, the second in *g*, and so on. There are three kinds of songs, known as *gerar*, *gabei*, and *hes*. The first is "sung on horseback, and usually relates to raiding and fighting." The second, generally sung round the fire in the evening, "is often a love-song."

> "The *Hes*.....always accompanies a dance. It is often in parts for men and women, and is usually of an amorous nature.....The songs usually consist of solo and chorus, often sung in parts. Besides these, there are certain well-known chants which are sung while watering or grazing animals, marching, loading, or unloading. Many of these are very old indeed. The watering chants vary for the different animals; camels, horses and sheep each have their special chants sung to them, which again vary in different tribes, and are adapted to the nature of the well in order to suit the action of drawing water."

The specimens here supplied are by no means devoid of poetical feeling, especially the addresses to horses on pp. 174, 176, the raiding song on p. 177, and the love-song on p. 181, which contains these lines:—

> Never yet have I seen the place of your abode, nor have I any knowledge of you.
> Last night, for half the night, in my heart I dreamed of you.

Altogether Mr. Kirk may be congratulated on the result of his labours, and undoubtedly has conferred a benefit on any whose vocation may lead them to the *Regio Aromatifera*, or, for that matter, to Aden. Only one complaint we have to make—the absence of any general rule for accentuation, for the words in which the accent is marked (see p. 2) are comparatively few, and we can nowhere discover directions what to do with the rest, except in one or two special cases, as in § 214, p. 112.

NEW NOVELS.

A Tragedy in Commonplace. By M. Urquhart. (Methuen & Co.)

"Sophia Smith married Brian O'Neill at the age of twenty-four." "But the tragedy lay rather in her life's work than in her death." Those are the first and the last sentences of the book, and between the two is worked out a very real and piteous tragedy. Ageing quickly, and quickly losing her beauty under the triple pressure of narrow means, a narrow mind, and an indifferent husband, the rector's wife brings into the world an ugly and red-headed changeling of a daughter (after several commonplace sons), and last of all a crippled boy. The girl Joan grows up as ugly as a gnome, but with a touch of wild genius about her, an adoration of her crippled brother, and a deep hatred of her mother. In all ways the two war against each other, till at last the salvation of Joan's soul as by fire, and the detestation of Joan's body, and the condemnation of all Joan's ways and works, make of the mother a mean and vicious schemer, always on the pounce for opportunity for a snarl or a snap or a scratch at naughty Joan. The mother parts Joan from crippled Angel at last, and when this only figure that made for peace is out of the house, she discovers the girl coming in from a midnight ramble and strikes her savagely. Joan leaves the house, and when she is gone the mother is stricken with some sort of fit and dies, unreconciled with any one, unaware that Joan has returned to see her die. A sad and stern book, which reads like a page of real life.

A Daughter of the Manse. By Sarah Tytler. (John Long.)

This is a story of "Disruption," and

> "the intrepid self-sacrificing march of the four hundred and seventy-four men of peace [*sic*] from St. Andrew's Church to the hall at Canonmills."

As Adam Pryde, the schoolmaster, says:—

> "So far as I am aware, none of my kind took to Conventicles when it was a breach of the peace and the troopers were about; but, as we have seen, it is never too late to begin."

As a matter of fact there was little material suffering on the side of the dissentient ministers, but the cleavage between neighbours and in families was out of all proportion to the grievance, which has since been removed. It takes a born Presbyterian

even to understand the state of mind which would make the event a cause of schism between two such good men and good brothers as the doctor and the commodore in the present story. But it is true to the time and to the national character, and a recrudescence of the same spirit is to be seen in our day. The author has not lost her knack of drawing Scottish types of several sorts, and Dr. Menzies's moorland parish is a picturesque background. There is rather too much prosing in proportion to the essentials of the novel, and the style wants bracing. Shorter sentences and better punctuation would have improved the book.

The Purple Head. By Edwin Pugh. (Hurst & Blackett.)

This story is a frankly sensational mixture of violent incident and rather transparent mystery. An amorphous object haunts, half kills with horror, and finally strangles a retired skipper, who lives with his daughter, the heroine, in a lonely cottage near a hamlet on the coast of the English Channel. A detective, to whose acumen satisfactory limitations are set, suspects a deformed villager of weak intellect, to whom the skipper, as autocrat of the village topers, had been habitually offensive in the inn parlour; but the mother of the Caliban and the wealthy squire's son establish an alibi at the inquest. The Caliban and the gentleman who thus befriends him both admire the heroine, engaged though she is to a stalwart Quaker charcoal-burner. The said gentleman truthfully and succinctly describes himself as "a rank bad lot," and he is correct in feeling "the incongruous absurdity of such a wild anachronism" as his conduct. But the author supplies reasons for suspecting that he is methodically mad, thus covering a multitude of improbabilities. The orphaned heroine burns for vengeance on her father's murderer; so her lover, by the detective's advice, goes up to London on a wild-goose chase in search of the Caliban, who had disappeared immediately after a futile attempt to arrest him hazarded by the detective. The amateur, by remarkable luck, finds the quarry's hiding-place, and incidentally enables the detective to arrest, after some revolver practice, the gang of scoundrels with whom the squire's wicked son is connected. This leads to the Quaker's laying the villain low for the third time, and eventually to another murder and the conviction of the skipper's gruesome assassin. Perhaps more should have been left to the imagination in the descriptions of killed and wounded.

A Lost Cause. By Guy Thorne. (John Long.)

Guy Thorne's novel is so frankly polemical that it is difficult to touch upon it. He has, however, saved us the trouble of explaining him by explaining himself in a preface. He tells us that "five or six bishops and many other dignitaries" preached on his last book, which had a "definite Catholic tone." This encouragement and the numerous letters he received induced him to write the present novel, which is designed as a defence of the Anglo-Catholic faith. The "lost cause" is Protestantism, which "is dying, and for just this reason the clamour is loudest, the misrepresentation more furious and envenomed." "The incident in the tale where the Archbishop of Canterbury compels a 'Protestant' publicist to give up the Blessed Sacrament, which he has stolen from a church for purposes of propaganda, is founded on fact." From all this it will be seen that Guy Thorne is an avowed partisan. He calls himself a *franc-tireur*. A novel conceived in this spirit, and with this design, is not likely to be worth much as a work of art. The author's work is negligible from that point of view. He informs us that "no single character in this tale is a portrait of any living person." But this is hard to credit when we are introduced to such people as Lord Huddersfield, the Anglo-Catholic enthusiast, and Samuel Hamlyn, editor of a local journal, and S. Hamlyn, Jun., representatives of the Protestant party, who open the story by public protests in church. This sort of parody is bad taste and bad art.

The Little Hills. By Nancy Huston Banks. (New York, the Macmillan Company.)

The first chapter of Mrs. Banks's story, which is sixteen pages in length, tells us nothing, except that a young American woman was sitting on the verandah of her house, earnestly hoping that no one would call upon her, for the reason that she was anxious to think. In the second chapter some one does call, and so far as the reader can ascertain, the young woman's singular desire to think was never carried into execution. Mr. W. D. Howells once wrote a long novel in which nothing happened except that a reformed drunkard drank too much wine at an evening party. Mrs. Banks's novel is equally devoid of incident, but it is not given to her, as it is to Mr. Howells, to write an interesting story about nothing. The various characters to which Mrs. Banks introduces us are not convincing. They are types baptized with names, rather than living men and women. The novel-reader who asks for incident or for character-painting will probably find 'The Little Hills' somewhat tedious, but there are undoubtedly many people to whom a quiet story, that cannot possibly excite either curiosity or emotion, is welcome, and to such 'The Little Hills' may successfully appeal. The book is enlivened by a mild humour, and is written in fairly good English, with an occasional Americanism which betrays the nationality of the author.

Jane Shore. By J. E. Muddock. (John Long.)

Mr. Muddock has approached a melodramatic success in his romance of 'Jane Shore.' The poor woman's real life had little romance in it, except in the sense used by the modern police-court reporter. But the author makes the most of the kindliness of heart which has been recorded as her characteristic. Also, by causing her connexion with the king to arise from an interview in which she seeks to save her Lancastrian husband's life, and by the old convention of her pardon by the latter after Edward's death and Gloucester's cruel revenge, he developes her into a very fair heroine. There is plenty of incident involved, and the story, such as it is, is not badly told. The split infinitive is one of its modern graces; for the rest, there is some attempt, not too much forced, to reproduce the speech of the period.

This Our Sister. By Mrs. Harold Gorst. (Digby, Long & Co.)

"One more unfortunate gone to her death." This is her sorry story. Nell Byrne's mother is beaten to death by her father, and Nell is left with a new-born baby on her hands. For a year or so, by incessant hard work, the girl manages to make both ends meet, but her little charge is weak and pining, and one day, when there is no money to pay the landlord or buy milk for 'Enery, Nell in her despair goes out to sell herself. Coming home with her wages in her hand, she finds the baby dead. Sitting as a model, she is seen and admired by a careless and dissolute artist, Sartin Dankworth, and falls deeply in love with him. The inevitable end arrives. Cast off by him in her hour of need, Nell drowns herself, and the sordid tale is over. It is unnecessarily sad and unnecessarily long, and Mrs. Gorst paints with but two pigments—black and white.

Prince and Tom. By George G. Brentforde. (John Long.)

This is the story of a cat and dog, related by the latter. The animals are supposed to understand what is said by the human creatures round them, whom they describe as "Two-legs," and go through various tricks and adventures. The book has an easy humour, which fits it for holiday reading, and though some of the jests are rather mild, the author shows genuine observation here and there—*e.g.*, of the sentiments and vocabulary of the servant class. The eight illustrations by Mr. Dudley Tennant are spirited.

Children of Earth. By Sidney Paternoster. (John Long.)

"Was it the Squire, for killing of his game, or Covetous Parson, for his tithes distraining?" Like the philanthropist in *The Anti-Jacobin*, Mr. Paternoster seems to think that rural troubles are the outcome of an unholy alliance between the laird and the Levite. Apart from the rather barefaced assumption underlying his work, his rough, even coarse, handling of certain phases of country life is marked by much power and by insight into character, especially of the baser sort. Who has not known the bluff, honest farmer, who grinds the faces of his labourers, and every year has an excuse or a leverage to obtain a reduction of rent? The clergyman of the story is a man of "staccato vulgarity" and "acrid oiliness" of speech and person, who has adopted the Church as a profession to enable him to forget the grocery of his boyhood. The tragedy accomplished by this ecclesiastic (who is represented as being able to impound a correspondence through his influence on the village postmistress) is pitiful indeed. Philip Grove, the village

freethinker and general representative of the unconventional, is goaded out of his employment for not sending his only child to Sunday school; and with him that child, who is the one object of affection to a man dull and hidebound against all tenderness, goes out to a hard life of vagrancy, ending with London and the loss of honour, love, and life. It is a lurid story, and no detail of misery is spared. Some peculiarities of grammar and phrase rather spoil its effect.

EDITIONS OF THE CLASSICS.

The Speeches of Isæus. With Critical and Explanatory Notes by William Wyse. (Cambridge, University Press.)—This is a book of prime importance. Isæus, the teacher of Demosthenes, not only is interesting as a master of simple Attic style, but also deals with a class of cases—those connected with inheritance—which throw a good deal of light on the social organization of Attica. The legal side of Isæus caught the attention of that able lawyer and brilliant scholar Sir William Jones, who translated the speeches into English; but since his day they have been neglected in this country, and not much studied abroad except by a few specialists. For text and commentary alike the world has depended on the edition of G. F. Schömann, which was first published in 1831. Since Schömann there have been other editions of the text, and a few studies in the periodicals, but virtually nothing has been done in England. Mr. Wyse's edition, which numbers nearly eight hundred pages, marks a distinct step in advance.

One feature in Mr. Wyse's commentary strikes us at once. We are apt somehow in reading the Greek orators—a habit got, perhaps, from the predominance of Demosthenes—to feel a prejudice in favour of the orator's side. He must be right, or at least he is on the right side. But Mr. Wyse takes a delight almost malicious in exposing the tricks of the trade. Again and again Isæus has a weak case or a bad case. He hides this fact, glozes over that difficulty, brings his strong arguments to the front, and encloses the doubtful ones in a kind of hollow square. This was all very well for the Athenian audience, who heard it all once, and were as much moved by the tears of a suppliant as by facts or reasoning. Mr. Wyse sits in his study, worms his way into the square, and pitilessly declares in a loud voice how weak is the resistance to be met within. We fear that Isæus was sometimes a slippery advocate, if we may regard law from the standpoint of equity. We cannot help feeling, however, that Mr. Wyse too often takes the place of counsel on the other side, when we wish him to be judge.

To take first the critical part of Mr. Wyse's work. In his introduction he deals with the manuscript sources, and concludes, with all modern scholars, that A or Crippsianus is the chief authority for the text—that from this all other existing MSS. are derived except Q, now in the Ambrosian Library at Milan. Q's independence is proved by the presence of words which are not found in A; it is inferior to A as a whole, but enables the editor to improve the text by restoring the right readings in a number of cases. The text is constructed with judgment, and an *apparatus criticus* records MS. variants and also conjectures of any importance. Conjectures are sometimes admitted into the text—as Valckenaer's brilliant ἐξ Ἄκης for ἐξάκις, iv. 7 (which, however, has nothing to confirm it); (ἄν) in iv. 11; ἐπιτρέπειν for ἐπιτροπεύειν, v. 31. The insertion of μὴ in vi. 47, in accordance with the text of the law otherwise known, is good. The famous crux of v. 26, τὴν ἀδελφὴν τὴν ἑαυτοῦ, the editor leaves as he found it, enumerating all the conjectures and refusing them all, but unable to offer a solution of his own. He is too ready, we think, to normalize, omitting ἄν in i. 28, v. 23, although ἄν with the future is well attested, if rare, and similarly in other cases. These matters should at least have been discussed; Mr. Wyse dismisses them curtly. This is the stranger because he gives ample space to questions of Attic syntax and usage as a rule, *e.g.*, the notes on πυνθάνεσθαι, i. 32; the aorist with ἄν in apposition to the present, i. 34; and others.

It is on the legal and exegetical side that Mr. Wyse is strongest. Our knowledge of Attic law has been increased, and the study of it made easier, by the publication of many inscriptions, and particularly by Reinach's admirable 'Recueil des Inscriptions Juridiques Grecques.' Mr. Wyse uses the inscriptions throughout, and also examines the quotations from laws preserved in the manuscripts of other orators; these need to be used with care, and he is not blind to the fact. To be tested, this part of his work needs long use and consideration. The problems are too many and too obscure to disclose themselves at a first reading; but our examination of these speeches is enough to show that Mr. Wyse has left nothing undone to perfect his work. He has, moreover, given so full and usually so clear an account of the views of his predecessors, and so completely stated the evidence on which he bases his own judgment, that the scholar is able to form an opinion of his own when he is not satisfied. The notes are full of collateral information, useful to illustrate or explain a point, and based on first-hand study of the authorities. We are satisfied that this book will take its place as the standard edition of Isæus.

Thucydides. Book VI. Edited, with Introduction and Notes, by A. W. Spratt. (Same publishers.)—Few scholars know their Thucydides as Mr. Spratt does: a happy pre-eminence which we may be right in ascribing to the influence of his great teacher Shilleto. The notes are full of Shilleto; and the more we see of him the greater does his scholarship appear. But we have a quarrel with Mr. Spratt. We do not want from him editions suitable for undergraduates and the sixth forms of schools. That he has this delectable audience in view we gather from such notes as "ὡς, ostensibly," "καθ' ἡσυχίαν, unmolested," "πλήρεις, manned," "οὐδέν, adverbial," which occur with some frequency in his pages. The longer and more serious notes, however, are generally admirable. In matters of interpretation and criticism our editor is at his best. Thus in xi. 2, ὥς γε νῦν ἔχουσι, he says: "To me it appears that the personal construction of δοκοῦσι has led to the assimilation of ἔχουσι, and that the expression simply = 'as matters now stand.'" See also the lucid summing-up of the problem in the notes on xi. 6, τὰς διανοίας; xviii. 2, ὅπως; xviii. 6, τοῖς νέοις; xxiv. 2, ὁ δὲ πολὺς ὅμιλος καὶ στρατιώτης; and many others. His note on θρᾷκας, lxxv. 2, is not so convincing as most; χάρακας is a good suggestion, but nothing given hitherto explains the reading, either as a reading or as a gloss. We cannot agree with the view expressed on ii. 2 that τὸ μὴ ἠπειροῦσθαι means "severed in point of not being mainland": it is rather one of the numerous offshoots of the consecutive infinitive. Hence the connexion implied by τὸ μὴ is not "less close" than that of τοῦ μὴ would be (as Goodwin thinks), but is different in kind. Such an idiom as διείργεται τοῦ μὴ ἠπειροῦσθαι can be paralleled in Thucydides, and is due to a confusion of the above with διείργεται τοῦ ἠπειροῦσθαι. On x. 3 Mr. Spratt says "Thuc. never writes ἐστὶν οἵ or ἐστὶν αἵ"; but neither do the other classical authors, who use the singular impersonally with the oblique cases only. We must mention some useful appendixes. The first discusses the speed of the galley (we note a misprint of 7,000 and 6,000 stades for fathoms on p. 371). A second, on the alleged uses of participle for infinitive, is a model of good sense, and ought to teach wisdom to some critics. Lastly, let us commend section iii. of the introduction, which deals with the order of words in Thucydides. Our last word to Mr. Spratt is *macte virtute esto*, but let us have an English edition of Thucydides which shall be all meat for men, and leave the babes to suck at the school-books.

Sexti Properti Opera Omnia. With a Commentary by H. E. Butler. (Constable & Co.)—It is somewhat strange that till the publication of Mr. Butler's work the only complete English commentary on Propertius in the market was that of Paley, which dates back to 1872. Select elegies had been edited, and well edited, by Profs. Postgate and G. G. Ramsay, but undoubtedly there was room for a book summing up the work of scholars like Plessis, Mr. Housman, Mr. Phillimore, and others who have laboured more or less obscurely in the classical journals to bring light into the many dark places of the text of Propertius. In textual matters a new era was begun for English readers by the publication of A. Palmer's text in 1880 (is not Mr. Butler wrong in assigning this issue to 1881?), and since then Prof. Postgate's text has been published in the 'Corpus Poetarum Latinorum' (1894), and Prof. Phillimore's Oxford text is as recent as 1901. For the purposes of this work, therefore, besides the older commentators, such as Beroaldus of Bologna, Passerat of Paris, Lachmann and Herzberg, both for text and interpretation, Mr. Butler naturally has recourse chiefly to Palmer, Prof. Postgate, and Mr. Housman. If Mr. Butler has managed to indicate clear views on the many crucial points in Propertius, and brought neatly together the suggestions of these three scholars, he undoubtedly deserves well of the readers of Propertius. A careful examination of his commentary convinces us that it will hold the field for many years to come.

We do not think, however, that this work will appeal to a large public, even among classical scholars. Propertius is very little read, we believe, at the universities, and at Oxford what attention is bestowed on him is secured largely by tacking him on to Catullus to make a subject for the schools. The explanation of this is not far to seek. In the first place, one of the best texts hitherto available—that of A. Palmer—was so restless with italics that it was impossible to read a page of the poet without being a hundred times interrupted by speculations of a textual order. And in the second place, Propertius is startlingly different from the more commanding geniuses of his time—a Virgil or Horace or Catullus. Propertius charms mainly by occasional expressions and single lines, by a modernity of sentiment which is almost decadent. His rhythm refuses to flow like that of Ovid; he cannot claim the natural grace of Catullus; he is deficient in the sustained majesty of Virgil. But he often achieves the grandiose, and occasionally grandeur; his best harmonies are something new to Latin and the restricted average student. A modern English reader could have forgiven him much had he not brought in to his aid a pedantic erudition which often obscures his meaning beyond all patience. And the pity of it is that, with so much of the muse in him, he could well have afforded not to entice to the Tiber that Callimachus whom he so wantonly revered.

But it is to the select circle of Propertian students that Mr. Butler's work is addressed. In his introduction he sets out all that is known on the name, birthplace, life, and works of his subject. There is little new to be said on the life of the poet. Crinitus's 'Life' is still mainly sound, and scarcely any new conclusions worth mentioning have been arrived at during the last ten years. Mr. Butler places the poet's birth between 50 and 48 B.C., thus drawing the old limits of 54-43 considerably closer. He also puts the infatuation for Cynthia at a slightly earlier date than has been usual. The old wide period for his death, 16 B.C. to 2 A.D., has still to be maintained. In these pages Mr. Butler is careless to hide the fact that he has no great enthusiasm for his author, either as man or poet. He writes in the curt, business-like style natural to a student who is summing up concisely a mass of collected material. He finds it extraordinary that classical authors should have given the Cynthia poems so much prominence:

"There are but few of the poems of Propertius addressed to Cynthia that to modern taste can be said to rise above the level of minor poetry. From the erotic standpoint the first book stands high above the rest, and yet it contains but one poem (El. 3) of those addressed to Cynthia that would deserve a place in a Latin anthology."

Our editor is content to dismiss Propertius with what he confesses is an inadequate account of his genius—we wish that he had expended a few more pages on such an analysis—and hurries on to what he is obviously more interested in, the manuscripts and the cruces of interpretation in the text. Some years ago the present reviewer gave considerable attention to an independent study of the text of Propertius, and consequently he speaks feelingly of the patience and skill with which the present editor wrestles with sometimes almost overwhelming difficulties. Here is the real significance of the book: Mr. Butler leaves others to supply illuminating literary criticism, and throws himself into the breach to grapple manfully with even the most hopeless passages. He gives us a good text (107 pp.) with *apparatus criticus* at the foot of the page, and a clear, if somewhat dry commentary (225 pp.). This is exhaustive; there is very little of any value that has not been adequately weighed, and mostly the editor helps the reader to make up his mind between two or three possibilities. Here we have space to mention only a few of the better-known problems. I. 8, 7, 8, the reading is as Palmer's, which is clearly right, especially when Prof. Postgate's explanation of *fulcire* (=press) is accepted. Again, Prof. Postgate's masterly explanation is wisely given on i. 20, 27, 30. In 52 of the same poem the attractive *rursus* is resisted, and *visus* adopted (as Palmer). II. 2, 11, 12, is a passage which well illustrates the rich fund of suggestion for settling the text. Here is a departure from Palmer: the suggestion of Turnebus (defended by Prof. Robinson Ellis)—Brimo—is sensibly adopted, and an *et* thrown in for connexion's sake. In ii. 3, 22, we prefer Palmer's simpler reading to the one adopted. II. 7, 15, *comitarem* (Beroaldus) is well adopted. II. 14, 29, 30, reads as Palmer. A suggestion by Mr. Housman is mentioned, but another by Mr. Wratislaw, which only alters the punctuation and interprets *an* as *sive*, is perhaps the best way of settling the text here. The obscure line ii. 21, 16, remains as in Palmer, and the rendering of Passerat is probably right. At ii. 22, 48, Mr. Butler breaks away from Palmer, who incorporated Lachmann's suggestion, which, however, involves considerable change from the MSS. The text adopted, that of Markland, necessitates a simple correction, and makes good sense. The reading adopted at ii. 25, 2, seems forced, and is not so good as Scaliger's reading adopted by Palmer. II. 30, 17-20, are lines which certainly ill suit their context. Prof. Housman's desperate remedy has been put in force, and the lines are now placed at the beginning of the poem, in which, it is contended, the poet is addressing himself, not Cynthia. At the famous crux ii. 34, 83, 84, Prof. Housman's reading and interpretation are very satisfactory; Palmer's text was unintelligible. We have no space to make mention of more passages, but enough has been said to show that Mr. Butler has done his work with sound judgment and great care.

LOCAL HISTORY AND GUIDE-BOOKS.

The Tyrol. By W. D. McCrackan. (Duckworth.)—Tyrol—we must at the outset repudiate the unnecessary article which Mr. McCrackan, following, no doubt, the usual practice of English writers, chooses to prefix to the name of the province—has never had literary justice done it so far as English is concerned. There are plenty of pleasant little gossipy books dealing with experiences on holiday trips, one or two more solid, but confined to special districts, or special subjects, such as sport. But a full account of the country, from the historical, social, topographical, ethnological points of view—and on all these points there are things to be said about Tyrol of greater interest than can be extracted from any equal area in Europe—such an account is still desiderated. The average Englishman's ignorance of the elementary facts relating to this remarkable little state, intersected as it is by two of the great highways of European traffic, is what he himself would call "phenomenal." He does not, as a rule, even know how to pronounce its name; he has vague notions as to its political relations; even the Tyrolese singers, who at least kept the name of their country before the eyes of the casual reader of a former generation, are probably unknown even by repute to the present. When we saw the announcement of a work on Tyrol by Mr. McCrackan, remembering what he has done in this way for Swiss history, we were inclined to hope that what was wanted was now about to be supplied. But we can hardly say that he carries us much further than some of the existing works. The book is nicely enough written, with only an Americanism here and there to remind the reader that, though appearing under the imprint of an English publisher, it really proceeds from Boston, Mass. So far as it goes it deserves to command the sale which it will doubtless have across the counter of Mr. Unterberger's shop, and will be found a pleasant and instructive companion by travellers through the Innthal and the Vinstgau, or by visitors to such familiar places as Trent or St. Ulrich. Mr. McCrackan is a man of intelligence, and writes accordingly. He is also a thorough enthusiast, and feels as keenly as any one that special, though hardly communicable charm which endears Tyrol, above all other Alpine lands, most to those who know it the best. This, indeed, is not what it was. Facilities of access have increased in the last generation; and to those who, like the present writer, made their first acquaintance with the "gefürstete Grafschaft" when the last century was not far past its middle point, much of the old amenity seems to have vanished. One ought not, perhaps, to grudge to the polite world a wider acquaintance with, for instance, the statues that surround Maximilian's cenotaph. We would even let them suppose that the shield which King Arthur holds is that of "Great Britain." But Innsbruck was undoubtedly a more reposeful spot before photographs of King Arthur and the rest ornamented post cards. It is the same even in the higher valleys. One could arrive at the little parsonage, or mountain farmhouse converted into a rough inn, at the end of the day's tramp over rocks and snow, with the comfortable certainty of finding lodging, food, and general welcome, and at most half a dozen cheery Austrian or Swabian tourists, whose company, aided by the good wine of the country—"immer noch Eins"—made the evening pass merrily enough. Now the chances are that, unless special notice has been given—a practice fatal to the happy irresponsible wandering which is the joy of the true mountain-lover—the traveller will find every hole and corner full, and no interest whatever taken in himself and his needs. Even if he does manage to squeeze himself in, the old freemasonry which bound together the few who penetrated to these remote quarters is gone; and instead of good Tyrolese wine, he will probably get inferior Hungarian, called *speciell*, and priced accordingly.

These last considerations, however, do not much concern Mr. McCrackan's book. He did, indeed, once go up the Ortler, and had on his descent an experience much like those we have indicated above. But for the most part he leaves the upper regions alone. Of the Oetzthal and its neighbour the Pitzthal, both leading up to some of the finest glacier scenery to be found in the entire Alpine chain, he seems to know nothing. Nor, though he takes his readers into the Zillerthal, has he anything to say about the great peaks which surround the head of that classic valley. He can enjoy the *alm*, but he is most at home among the "cities," as he, in American fashion, calls the little towns with which Tyrol is studded. In their historical and romantic memories he revels, and no less in the nobly placed castles which form such a feature, especially of South Tyrol. A good deal of the book is made up of magazine articles, which perhaps gives a certain want of proportion. At the same time the reader will be grateful for such chapters as that on the 'Sette Comuni,' that curious German island in an Italian district (which, by the way, is not in Tyrol at all), or that on Franz von Defregger. There is also a good account of Trent, though we should like to know the authority for the statement made here (and in Baedeker) that the Council was not held in the cathedral. Its first two sessions certainly seem to have been held there, and Father Paul, who is fairly precise about these things, does not mention any transference. Is it correct to say that Vorarlberg "is administered from Innsbruck"? We remember to have been "taken up" promptly by a Vorarlberger for a similar remark. "We do not go to Innsbruck for our laws," he said; "we make them for ourselves at Bregenz." Mr. McCrackan has a good deal to say about costume, and he has been to Windisch-Matrei. Did he not notice in that pleasant little "city"—it deserves the name almost as well as some places that receive it here—the curious evidence which the costumes there give of an intermixture of races? The German farmer comes to church in breeches and stockings with the usual gap at the knee; his Slavonic neighbour wears the short, loose trouser, intended to be tucked into long boots, but now, as a rule, revealing a couple of inches of sock above the ordinary lace-up footgear. We make him a present of this observation for his next edition.

We can also tell him that the "Maid of Spinges" is by no means anonymous. Her name is believed to have been Katharina Lanz, and she died not much over fifty years ago. Save for a few misspelt names, the book is commendably free from small blunders; we think American tourists are more careful in these matters than English. It might be wished that a common

XUM

misconception had not been fostered by the remark that "in the sixteenth century Trent lay on *Austrian* soil" (our italic). In any sense in which the word Austrian was then understood, people would as soon have thought of saying it was on Bohemian soil. We must protest against the slovenly modernism "Lake Garda." Garda is not a lake, but a village. It is not quite correct to say that the Dolomite group is bounded by the Etschthal on the west. Further west still are some of the grandest examples of that formation. If Mr. McCrackan has not yet seen the Bocca di Brenta, we advise him to make it an object of his next Tyrolese tour.

The series of "Little Guides" (Methuen) is not very attractive at first sight. The alphabetical arrangement by names of places is, however, thoroughly practical, and constant use has assured us that the little volumes contain in a very convenient and compact form a great deal that the traveller and tourist want to know. The latest 'Guide' is *Dorset*, by Frank R. Heath. This is very well informed in all that concerns archæology, the churches, traditions connected with Charles II., and the names which Mr. Hardy has made so real to most lovers of English. We note, as usual, a railway map at the beginning of the book, and a good general map of the county at the end.

It would be a convenience to know in which places there are comfortable inns, a feature about which the compilers of these thorough little guides have probably ample information. Occasionally, too, natural features of places do not seem sufficiently dwelt on, though they are as likely to give human pleasure as archæological associations. Thus it makes a great deal of difference to the average man whether a seaside place has a beach of pebbles or a good stretch of sand, and the point should be clearly indicated. However, we must not complain, as we find, for instance, the chestnuts and thatch of Milton Abbas noted no less than the local abbey. The pictures of places in the text are all good.

Cheshire, by Walter M. Gallichan, is another specimen of the "Little Guides." Its illustrations are good, but it is disappointing as "an adequate presentation of everything that is interesting in the natural features, history, archæology, and architecture of the town and district treated."

Mr. Gallichan is very uneven in his work. Some of the brief accounts which he gives of places of interest are excellent, but these are often immediately followed by wholly inadequate and in some instances misleading descriptions. Thus under Eccleston there is no mention of the handsome new church built by the late Duke of Westminster, the author only speaking of alterations made to a previous building in 1877. Saighton Grange, the reader is told, is "now used by a farmer," although it is more than thirty years since the late Earl Grosvenor restored and enlarged it, and it is still the seat of Countess Grosvenor and Mr. Wyndham. Thurstaston Church as it now is can by no stretch of the imagination be called a "plain building," nor does it "stand on the site of a Norman edifice," though such a description is accurate of the building taken down in 1885. Again, the oak panelling and pictures at Leasowe Castle, to which Mr. Gallichan directs the reader's attention, were dispersed in 1893 before the house was turned into an hotel, and the visitor will search in vain to-day for "the charming flower-garden near the sea."

Perhaps the weakest feature in the book is the historical section. The author does not seem at all at home when dealing with constitutional or Church history. His references to Palatine counties and the courts of "Earl Lupus," as Earl Hugh is called, are confused, while the information that "nunneries were suppressed in Chester in 1537," or that Norton Priory "was dissolved in 1536, to the indignation of the monks," does not give the reader confidence.

Surely Mr. Gallichan ought to know that inscribed stones with eleventh-century dates in arabic numerals are impossible. Most of the derivations of place-names show an absence of acquaintance with modern research on this subject. The tomb of a knight, clad in fifteenth-century armour, in Mottram Church is described as that of a Crusader of the time of Richard I., and we are told that "the Romans utilized the salt springs [of Northwich] before the Christian era." The curious inconsequential statement on p. 220 that Ptolemy's Bellissima Æsturarium (*sic*) was probably near Leasowe Castle makes one wonder whether Mr. Gallichan has any idea what Ptolemy's "Belisama" really was.

Perhaps the quaintest item of information is that at Port Sunlight is a soap factory where "several tons of soap" are produced "every week." If the author had written "several thousand tons every week" it would have only been an accurate statement of fact. That this is not merely a printer's error is shown by a further reference to this factory as a place where "soap is produced by the ton," as though it were the practice of soap manufacturers to produce it by the cake.

As often at this season, we get new copies of *A Guide to Zermatt* and *A Guide to Chamonix*, both by E. Whymper (Murray). They need no commendation by this time, being models of concise and accurate information, especially on the mountains accessible from the centres named.

In a few days fashionable people, from the peer to the pork-packer, will be rushing to the Highlands. If there be among them any humane and courteous spirits whose sport would seem the pleasanter for interchanging ideas with the natives who assist it, Mr. Lachlan Macbean's *Guide to Gaelic Conversation* (Stirling, Mackay) will be of much use in the matters of phraseology and pronunciation. We have found it correct and copious as a phrase-book for ordinary purposes. Many idiomatic sentences are placed in juxtaposition which illustrate the Gaelic corresponding with the numerous meanings of the same English word. Thus: "Dè'n othail a th'agam?" (What do I care?) "Thoir toigh oirre" (Take care of her), "Cha'n'eil curam orm" (I have no care), and other sentences, ring the changes on the English word "care."

The pronunciation of Gaelic is difficult, though the difficulty has been exaggerated. The gutturals look formidable in print, but none is so harsh as a Spanish *j* or German *ch*. They are mostly initial, and are often elided in other situations. The vowel sounds are numerous, and approximate generally to the French. *Aō*, such a bugbear to beginners, is very like French *eu*, though with a much longer intonation. For the rest, let the Saxon learner abjure the growing heresy, learnt from plebeian governesses, of substituting an indefinite diphthong for the round *o* and broad *a* of English undefiled. We remember a fine lady to whom another fashionable vulgarity proved a stumbling-block in learning Gaelic. She had a good musical ear, but the word "mór" (great), pronounced "mōre," was too much for her. She would call it "măw," and could not even perceive her error. Like the French is the nasal sound produced in certain words by the collocation of *mh* or *n* with the vowel. With regard to nasal orthoepy, we are not convinced that the termination *ing* should have been adopted as the equivalent of the Gaelic terminal *inn*. It roughly represents the vernacular sound, but Fr. *ign* is perhaps more classical. An opposite leaning is shown in the equivalents given for words involving *mn* and *cn*. "Mnathan" and "cnòc" are in most districts pronounced "mrathan" and "cròc," but here Mr. Macbean renders the vocables more austerely, retaining the *n* as spelt. Of course the great difficulty lies in the variety of dialects, though their number may be reduced to two, or at most three, if mere local corruptions be set aside. It is Mr. Macbean's great merit that, on the whole, his compilation will enable the Gaelic speaker, Highlander or Lowlander, to make himself intelligible almost everywhere. Many of Mr. Macbean's equivalents would be strange perhaps in Sutherland, and the late Neil Macalpine would turn in his grave over "is *toigh* leam," and other spellings he condemned in his Argyllshire dictionary; but we may be thankful for a book on the whole so accurate and useful.

The "Homeland Handbooks," published by the Homeland Association (22, Bride Lane, Fleet Street), are sensible little guide-books, and one of the latest, *Lynton, Lynmouth, and the Lorna Doone Country*, by Joseph E. Morris, will be decidedly useful to tourists. There is a capital map attached on a scale of an inch to the mile, reproduced from the Ordnance Survey. The illustrations are attractive, and the writer has gone to better authorities than usual for his varied lore of the country. There is a section on 'Fishing,' but we think the 'Local Notanda' might be added to by a page or two on the flora of the district. Finally, we may say that these books are agreeably slim, and will go into an ordinary pocket without taking much room.

OUR LIBRARY TABLE.

Lord Brooke publishes through Mr. Eveleigh Nash *An Eye-Witness in Manchuria*, which covers much the same ground as the recent book of Mr. Maurice Baring. It is, however, an independent work, and is not killed by his fellow-traveller's volume. In his last chapters our author deals with events which his courage and devotion to his work gave him excellent opportunities of witnessing, and his account is vivid. Most stories of modern battles are confused—but so are the encounters which they relate. Lord Brooke's point of view is one extremely friendly to the Russians, but he governs all his statements by his slowly formed opinion "that the war had failed to produce a single Russian general equal to handling successfully such large bodies of men as were now in the field." One of the facts which come out most clearly is the extraordinary failure of the Russian cavalry raids, the details of which have been carefully studied by Lord Brooke. In the wars of the early part of the nineteenth century the Cossacks were remarkable, among all European cavalry, for every kind of cavalry work except charging in the field. It appears from Lord Brooke's pages that they are now trained exclusively to the latter end, and that they have become inferior cavalry without becoming modern mounted infantry. Their great raid was compared by some English newspapers with Stuart's during the American Civil War; but there was clearly no ground for the comparison. It was followed by a Japanese raid, and, although the Japanese themselves had expected their own cavalry to be bad, their raid was superior to that of their opponents. The view, which has long been expressed by competent students of our Indian native cavalry and of the Russian cavalry, that the Indians were immeasurably better in every respect, is confirmed by the experience of the war. Another new fact is brought out by Lord Brooke—namely, the superiority of the

Siberian militia over the regular European troops of Russia. The men are good in both, though inferior to the Japanese; but the slackness of the European officers caused the fighting of the Siberian army corps to stand out in "the highest place." Lord Brooke confirms the statement, which we noticed in another recent volume upon Manchuria, that

"the Hunhutzes have a regular office at Mukden, where intending travellers can learn the tariff for insurance against robbery, and, on payment of the requisite sum, receive from the brigand clerk in charge of the bureau a pass which will free them from molestation should his companions 'at the front' hold them up."

Lord Brooke appears to be a competent observer, though we do not agree with him that the plain between Moscow and the Ural consists of fine agricultural land, and forms one of the great wheat-producing areas of Russia. The fact is that it is extraordinarily inferior to the black-earth country of the south. The author's style is not always to be commended, and his use of foreign words should have been the subject of revision. Little mistakes in French may be set down to the printer; but the transliteration of Russian words shows curious ignorance of the pronunciation of the language, as, for instance, "barshlick" for *not* "a hood of sheepskin," but "a hood." The summer decorative-hood of many crack Russian European regiments was called by this term before the word was applied to the older Central Asian and Siberian native hood of history.

The Diary of a Girl in France in 1821. By Mary Browne. Edited by Commander the Hon. H. N. Shore, R.N. (Murray.).—There is no need to insist on the manifest genuineness of this delightfully priggish little book. It is a kind of mirror, in which all schoolroom diarists who ever set themselves to record their first impressions of continental travel, and their unbiased views of foreign manners and morals, may see their own youthful features reflected. Accompanied by her parents and a numerous flock of brothers and sisters, Mary Browne, aged fourteen, went in 1821 to France. During her stay of five months in that country she kept a journal, in which she did not scruple to set down in plain terms her unfavourable opinion of the land of her sojourning. The climate, of which she had heard favourable reports, bitterly disappointed her; in other respects she expected to find France inferior to England, and her anticipations were amply fulfilled. Scenery, inhabitants, customs across the Channel, all incur the condemnation of a young lady who measures everything by a British standard. Even the cathedral at Amiens, though grudgingly allowed to be "a very pretty thing," is not "altogether near so grand as York Minster." As for the pictures in the Louvre, she finds them quite without merit. The readiness of French children to enter into conversation with strangers strikes Miss Browne as unseemly; and she expresses herself forcibly on the discomfort of French houses—perhaps the fact that, it being "an exceedingly rainy day, we found ten toadstools in Catherine's room," affords her some ground for indignation on this head—as well as on the "inconsistency" of French workmen, who promise to come and mend things and fail to keep their word. French dancing is most ungraceful, French fruit generally uneatable, French politeness a myth. It is characteristic of little Miss Browne that, while she comments severely on the ill-bred conduct of foreign persons who fail to apologize when they brush by you in the street, she records with evident satisfaction the frankness of her English brothers in informing a French *commissaire* that they "detested" his country. Poor France is even found lacking in a proper supply of moths; in five months the diarist, an enthusiastic collector, met with but one solitary specimen. For the furniture of the different dwellings successively occupied by her family Mary Browne has a proper British contempt, although even her severity relaxes a little in contemplation of a table "with fourteen secret drawers." We feel pleasantly persuaded that the young Brownes must have experienced a pang of regret in leaving behind them those secret drawers, even to return to a country where, in the eyes of the patriotic Mary, "there seemed to be no poverty," and "it was delightful to see the green fields full of sheep and cows, all looking so happy." The drawings, of more than primitive quaintness, that accompany these naïve records, are as humorous in their solemnity as the text they illustrate.

Lady Knight's Letters from France and Italy, 1776-1795. Edited by Lady Eliott-Drake. (Humphreys.)—The writer of these artless epistles was Phillipina Deane, daughter of a gentleman of Harwich, and second wife of Admiral Sir Joseph Knight, who served his country with some distinction during the reigns of the second and third Georges. Left a widow in 1775, and refused a pension by the Government then in office, Lady Knight, moved chiefly by motives of economy, went abroad in 1776 with her only child Cornelia—author in later years of books which had a certain reputation in their day—and continued to reside on the Continent, first at Toulouse, and subsequently in Italy, until her death in 1799. During the greater part of her twenty-three years of exile—an exile which, on the whole, she seems to have supported very cheerfully—Lady Knight maintained a correspondence, more or less regular, with the wife of Admiral Francis William Drake (brother of that Sir Samuel Drake who led the van in Rodney's victory off the West Indies), and it is the almost complete series of her letters to this lady which is now given to the world. Considering the period which they cover, the place from which they were for the most part written, and the boasted intimacy of their author with the leading personages, Italian, French, and English, of the Roman society in the midst of which she had her abode for nearly a generation, we cannot say that Lady Knight made good use of her opportunities. We have sought in vain in her letters for a single passage reflecting the general impression produced on the minds of her contemporaries by such events as the acknowledgment of American Independence or the early triumphs in arms of Napoleon. To judge by the sheets sent at intervals to the Admiral's lady at Hillingdon or Deal, the mental attitude of the Knights' acquaintance towards these things must have been one of practical indifference. Even the world-shaking cataclysm of the French Revolution produces here little more than a few platitudes about French lack of morals and expressions of concern for the uncomfortable situation of Cardinal de Bernis, who has lost his salary as Ambassador, and of the Dames de France. Empires crumble at her feet, yet Lady Knight continues to fill her blameless pages with descriptions of her daughter's last pencil-drawing and overflowings of innocent, if somewhat undignified satisfaction in the length of her visiting list. Social and domestic details are often the daintiest morsels in the epistolary pie; but they must be skilfully served. Lady Knight's skill in serving them is small; the saving salt of humour but rarely seasons the dishes of her compounding. It is true that she has some strokes of humour of an unconscious kind, as when she laments the early death of the Marquise du Puy Montbrun: "The high rank she lived in and her particular attachment to us made her loss to us inexpressible." The social habits of the Rome of Pius VI. and Cardinal de Bernis are carefully recorded, but no new light is thrown upon them; of insight into character, or independent observation of life and manners, the letters show not a trace. They have been far too tenderly edited. Admitting the editor's opinion that "Lady Knight deserves a volume to herself"—an opinion we should doubtfully endorse—we may regret her sparing use of the blue pencil. The letters abound in repetitions; and Lady Knight's style has not the charm which can reconcile us to repetitions, especially when these are chiefly concerned with the shortcomings of the pension system in the navy, or such purely personal matters as the health of her correspondent's daughters, and the perfections of her own Cornelia. She was, doubtless, an amiable woman and a devoted mother. But mere absence of ill-nature in a correspondence does not render it amusing, and in literature, as in life, a heartless public easily becomes impatient of parental raptures.

Harvard Lectures on the Revival of Learning. By John Edwin Sandys, Litt.D. (Cambridge, University Press.)—It was a happy inspiration on the part of those responsible for the administration of the Lane Fund for the endowment of special courses of Classical Lectures at Harvard to invite Dr. Sandys to lecture on "some subject connected with Latin literature" last spring. In his official capacity as Public Orator in the University, Dr. Sandys has had the opportunity of welcoming many representatives of American scholarship to the old Cambridge, and no doubt that welcome was handsomely returned when the lecturer performed his "Vacation Exercise" at the new Cambridge at Boston. The subject chosen was 'The Revival of Learning.' Within the necessary limits of some half-dozen lectures that subject is almost ideally treated in the little volume before us. Dr. Sandys combines with a profound knowledge of books a light touch and an appreciation of the spirit of place, so that he knows the literary value not only of tracing the course of the revival of learning, but also of recalling to his readers the physical aspects of the homes of humanism. He starts with Petrarch as the obvious link between the mediæval and the modern world. There were other stars in the sky before the star of Petrarch shone forth, but of the precursors of the Renaissance the author finds no space to treat here. Nor are all the successors of Petrarch even mentioned. We do not find any reference, for instance, to Giovanni Malpaghino, Petrarch's disciple and scribe, whom Symonds thought worthy to be honoured as the link between the age of Petrarch and the age of Poggio, as the vessel chosen for communicating the sacred fire of humanism to the courts and republics of Italy. Many will share the disappointment we felt when we found that the present volume did not deal with the 'Revival of Learning' on the same scale as Dr. Sandys dealt, not long ago, in an erudite and full book, with the 'History of Classical Scholarship' to the end of the Middle Ages. But we are glad to gather from the preface that these lectures are not to be regarded merely as a hyphen between the former and a third volume on a later period, but rather as the earnest of a second and fuller work dealing with the history of scholarship from the dawn of the revival of learning. That welcome announcement silences our complaints. For otherwise, when we found but five short pages devoted to one of the most interesting passages in the history of scholarship, the introduction of Greek into England, we should have been inclined to fear that our author, unlike Petrarch, who urged Boccaccio to learn Greek, was in the camp of that Pomponius Lætus who refused to learn it for fear that it might spoil his Latin style. The same cri-

ticism, silenced by the same promise, arises when we notice that the revival of learning in France and Germany secures but the barest mention. The fact is that these lectures would have been better described by the title 'The Latin Humanists in Italy,' for the rest receive scant treatment. From Petrarch Dr. Sandys passes to Boccaccio, and then deals in turn with the ago of discoveries, the theory and practice of education (following the path which Creighton and Prof. Woodward have so well prepared), the Italian academies, the homes of humanism, and the history of Ciceronianism. His sketches of the Italian humanists are admirable; they are drawn with art, and strengthened, not overweighted, by the learning that inspires them. A sketchy and less satisfactory chapter on the study of Greek is added. A reference to Isaac D'Israeli's 'Curiosities of Literature' which Dr. Sandys makes when speaking of one of the later Roman academies, the Arcadians, who each took a Greek name with a title derived from a farm in Arcadia, leads us to wonder whether the younger Disraeli took a hint from them when, in 'Vivian Grey,' he introduced those German bacchanalian barons, who were called in their drinking bouts, each of them after his favourite vintage. Two sentences quoted from writers on education at the beginning of the fifteenth century strike us as of interest to moderns. The first is Bruni's dictum that "poetry is a subject with which every educated lady must show herself thoroughly familiar." The second is Æneas Sylvius's recommendation that lessons should be diversified by games of skill, and that rest from work should be regarded as a needful condition of further work. Between that wise advice and the rules of the mediæval founders of colleges there lies the whole difference between the Mediæval and the Renaissance point of view.

The Complete Works of Count Leo N. Tolstoy. Edited and translated by Prof. Leo Wiener, Assistant-Professor of Slavic Languages at Harvard University. Vols. I.-XIII. (Dent.)—There are already several editions of English translations of Tolstoy in the field. Mrs. Garnett, who has been so successful with her versions of Tourguénief, is now in the course of publishing a translation. Mr. and Mrs. Aylmer Maude have already issued several volumes of another, which has, indeed, as it were, the imprimatur of Tolstoy. We may here mention the thoughtful little book on Tolstoy published in 1888 by the late C. E. Turner, Lector of English in the University of St. Petersburg. And now Prof. Wiener, of Harvard, is providing a fresh version. The books are virtually American, being not merely translated but also printed there. We are reminded of this by occasional expressions which are not current in the English spoken in this country; to take one example at random, "I flunked," the title of a chapter. Prof Wiener is, however, well qualified to translate the works of the great novelist; in his 'Anthology of Russian Literature' (2 vols.) he has shown his familiarity with the language and his capacity of rendering it into English. The first volumes contain some of Tolstoy's most characteristic writing. A particular interest attaches to 'Childhood, Boyhood, and Youth,' besides the intrinsic beauty of the sketches, from the fact that this was the first production of the author's ever translated into English. It appeared in Russian about 1852, and was rendered into English more than forty years ago by Basil Popov, son of the Russian priest in London at that time, if we remember rightly. But verily "habent sua fata libelli"; the book produced no sensation whatever. People knew nothing about Tolstoy and wished to know nothing. Both 'Voina i Mir' and 'Anna Karenina' had appeared a considerable time before the faintest echo of their merits was heard in England. We remember reading the first of these works in a Russian country house in the early seventies. In the second volume of Prof. Wiener's translation we have such favourites as 'The Cossacks' and 'Sevastopol,' which in their way have never been surpassed by Tolstoy. The third volume contains the immortal 'Polikushka,' to say nothing of other pieces. The fourth presents some of the views of Tolstoy on education, and its contents are not so familiar as those of the other three. We wish success to this new version, which is illustrated with very characteristic pictures taken from Russian artists, like the fine realistic touches of those of Pasternak in 'Resurrection.' The whole edition ought to be popular.

'Anna Karénin' occupies three further volumes of the series. Readers can now possess a masterpiece at a very moderate price, clearly printed on good paper and with some spirited illustrations in which Russian costumes and other accessories are accurately observed. As regards the novel itself, it needs no further criticism, as it has taken its place as a classic. Matthew Arnold, certainly no mean critic, spoke of it as the greatest of novels. We are all familiar with the incidents, including the fate of Anna. That scene is too terribly realistic. Tolstoy is always overpowering in these death scenes, as in that of the man who is mortally wounded at Sebastopol, and feels death creeping over him. We observe that Prof. Wiener has preferred the form Karénin; of course, the *a* usually given at the end is the feminine form of the family name. The version, as far as we have tested it, is accurate.

The story of 'War and Peace' is unfolded like a gorgeous panorama, and the military heroes are made small in comparison with the great agonies of the less important sufferers in the background. The incidents of this masterpiece are so well known that to eulogize it is like recommending 'Hamlet' or 'Othello' to a reader's notice. The plates in the present edition are taken from various sources; those said to be borrowed from George Cruikshank, we suppose on adequate grounds, have nothing of the artist's well-known manner, in which the grotesque is always blended with the horrible. Verestchagin seems to have entered more into the subject and is more accurate in detail, as his two illustrations show. It was a good idea of Prof. Wiener to accentuate the names of the *dramatis personæ*, thus avoiding the many blunders one hears in English daily discourse, but surely the name Leo in Russian should be Lyof, and not Lev, and Dou, the painter of the portrait of Benigsen, is the Englishman Dawe.

'The Four Gospels Harmonized and Translated' occupy two volumes. Prof. Wiener, to make his edition complete, must needs give us what may be called the hermeneutic portion of the works of Tolstoy. This book on the four Gospels, although it contains much that is valuable in matter and eloquent in expression, shows but too frequently that Tolstoy is inadequately equipped as a translator of the New Testament. We live in days of minute criticism; the text has been carefully sifted and annotated by writers of all shades of religious opinion. Many of the translations of Tolstoy would certainly be rejected by scholars, but there is no question of the depth and spirituality of his remarks. He omits some passages, and emends others at will. His version has a very modern ring, and occasionally reminds us of Sir John Cheke's translation of "proselyte" by the good Anglo-Saxon "freshman." It is impossible in a general article like the present to go into points of minute criticism. Many of the Greek words are rendered in a very free fashion, but expressively. "Baptism" becomes "bathing"; "he was an hungered" is translated "he grew thin"; and the Pharisees are the "orthodox." So also the brook Kedron is rendered "Dark River." The text "Make not My Father's house a house of merchandise" becomes "Do not imagine that a market can be the house of My Father." "Woe unto you that are full!" is ingeniously rendered "Pitiable are you that are full." The whole book abounds with these strange renderings, which frequently bring out the meaning in a wonderful way. Perhaps one of the strangest is the rendering of the verse "But when ye pray, use not vain repetitions as the heathen do: for they think that they shall be heard for their much speaking." This passage is thus translated by Tolstoy: "When you pray, do not wag your tongues as the comedians do: they think that their prattling will be heard." We do not see how he gets "comedians" out of ἐθνικοὶ. These specimens of strange versions must suffice, but the remarks of Tolstoy appended to the various sections are full of originality, and cannot be read without profit.

Vol. xii. contains 'Fables for Children,' 'Stories for Children,' and 'Moral Tales'; vol. xiii. 'My Confession,' &c. The stories in the former volume have been frequently translated and widely read in England; among the author's own countrymen they have been sown broadcast, and are very familiar in their pictured covers. The marvellous power of Tolstoy in simple and vigorous narration is seen to great advantage in these tales. Who has not been thrilled by such a story as 'God sees the truth, but does not tell at once,' one of the most pathetic in all literature? Tolstoy appears as a controversial theologian in 'My Confession,' a remarkable document of the human heart and a criticism of dogmatic theology. These works have been long before the public, and need not be subjected to fresh criticism. They will be read with renewed interest in the faithful version of Prof. Leo Wiener, and we find an additional charm in the clearly printed pages in which they appear.

Ueber Lesen und Bildung, von Anton E. Schönbach (Graz, Leuschner & Lubinsky), is a book we have long valued for its thoughtful comments on modern life and literature, and we welcome its appearance in a seventh and enlarged edition. It is gratifying to find that a volume of this sober sort maintains so steady a popularity, for it is now some seventeen years since the earlier essays were first given to the world. Dr. Schönbach, who is unusually learned even for a German scholar, seems, like Teufelsdröckh, to be familiar with all reading and literature in most tongues, and this gives him an exceptional breadth of outlook and enables him to apply the surest standards of criticism. This appears, for example, in his eminently sensible essay on Ibsen, which is equally free from the over-praise and depreciation one generally finds in judgments upon that author. The three introductory essays in the volume deal with the relations between reading and culture, discuss the conditions of the intellectual life in modern times, and give counsel as to the best means of fostering it. The others, with the exception of a sympathetic account of Emerson and his circle, are mainly concerned with the later developments of German literature.

There appears in this edition a new and valuable essay entitled 'Ausblicke,' in which the writer attempts to gather his impressions regarding German literature in its most recent manifestations. It is interesting to see that though he does not rate its achievement at all highly, he is still hopeful of the future, and thinks that a new and healthier form of expression will yet be found for the changed conditions of modern life. The book-lists appended to the volume do not strike us as altogether satisfactory, several examples of the 'Erzählungslitteratur'—in the English section anyway—being pretty worthless productions. We note also a

good many small inaccuracies: 'Idle Thoughts of an Idle Man,' for instance, is incorrect; and Henry Kingsley should not be placed among American authors.

Mr. Frowde has published in the "Oxford Edition" the Grimms' *Popular Stories*, with twenty-two illustrations by George Cruikshank, and Lamb's *Tales from Shakespeare*, with sixteen illustrations. These volumes are sure of wide success, for they are excellently printed, with a comely blue binding which we much prefer to the prevalent red.

Mr. Frowde has also sent us in the "Oxford Bijou Edition" *The Order for Morning and Evening Prayer, with the Collects and Psalms*, and *The Communion Service, with Collects, Epistles, and Gospels*. These wonderful shilling booklets are elegantly bound, and, in spite of their minute size, offer quite readable print.

Messrs. Blackwood's new reprints include the fourth volume of Burton's *History of Scotland* and *The Lost Pibroch, and other Sheiling Stories*, by Neil Munro, a capital collection, which will well bear re-reading. It has reached a fifth edition, and can be now had at a very moderate price in good type.

We are glad to see a second edition of James Mason's *Chess Openings* (Horace Cox). It is decidedly cheap, and a good specimen of the author's lively and effective style. His proficiency in this respect makes us regret that he did not live to enlarge his book by including the rarer and more venturesome openings, which will always have an attraction for amateurs.

Messrs. Hutchinson send us in their series of "Classic Novels" Smollett's *Count Fathom*, which is both handy and tastefully bound, with illustrations by Thomas Stothard, that master of eighteenth-century elegance. We do not see how books can be cheaper than this series.

To Messrs. Newnes's "Pocket Classics," *Songs and Lyrics from the Dramatists, 1533-1777*, is an attractive addition. Some of the poetry it contains is familiar, but it will be the means, we hope, of bringing much that is charming and little known before a wide public. The collection begins with Udal and ends with Sheridan, including work by Anthony Munday, Thomas Goffe, Peter Hausted, Barten Holiday, and Tom D'Urfey among the lesser lights.

Mr. Lane has added *Coningsby* to his "New Pocket Library," an attractive little series which is just the thing for the tourist.

Book-Auction Records, edited by Frank Karslake (Karslake & Co.), Vol. II. Part III., contains 5,615 items, from April 1st to June 30th. Besides its solid value as a book of reference, it offers some lively and interesting comments by the editor, who goes into reminiscences of Sotheby's and its typical figures, as presented in *The Graphic* of 1888—Bernard Quaritch, Robert Walford, James Toovey, James Roche, and others. Mr. Karslake remarks that

"in Quaritch's early days Mr. Bohn produced what was known as his 'guinea-pig' catalogue, the largest booksellers' list ever issued at that date, and for which he charged a guinea, and Quaritch said then, before he left Bohn's, that some day he would produce a greater."

Mr. Karslake also offers some corrections for cataloguers, *inter alia* the fact that Pierce Egan did not write 'Real Life in London,' as Messrs. Methuen's reprint implies, which we followed in our notice of the book.

We have on our table *The Infancy and Youth of Jesus*, by A. Morris Stewart (Melrose),—*Man considered in Relation to God and a Church*, by W. Carew Hazlitt (Reeves & Turner),—*How the Bible came to Us*, by F. S. Herne (S.S.U.),—*Communion with God*, by Rev. J. Dawson (Thynne),—*The Bible and Babylon*, by Eduard König, translated from the German by Rev. W. T. Pilter (R.T.S.),—*Job and his Comforters*, by Rev. J. T. Marshall (Clarke),—*Modern Criticism and the Book of Genesis*, by H. A. Redpath (S.P.C.K.),—*Preachers from the Pew*, edited by Rev. W. H. Hunt (Lord),—*The Maintenance of Denominational Teaching*, by Hakluyt Egerton (Allen),—*The Religion of a Gentleman*, by Charles F. Dole (Allenson),—*Catholicity and Progress in Ireland*, by Rev. M. O'Riordan (Kegan Paul),—*The Meaning of the Mass*, by Stewart D. Headlam (Brown & Langham),—*The Souls of Black Folk*, by W. E. Burghardt du Bois (Constable),—*Evidence in Athenian Courts*, by R. J. Bonner (Chicago, University of Chicago Press),—*The Calvert Scientific Exploring Expedition*, compiled by J. G. Hill (Philip),—*Memories of Madras*, by Sir Charles Lawson (Sonnenschein),—*The Life of Nelson*, by W. Clark Russell (S.P.C.K.),—*The Life of Mary, Queen of Scots*, by Hilda T. Skae (Maclaren),—*The Seven Weeks' War*, by Col. Sir H. M. Hozier, K.C.B. (Macmillan),—*The Commonwealth of Man*, by R. A. Holland (Putnam),—*Woolwich Mathematical Papers*, edited by E. J. Brooksmith (Macmillan),—*How to deal with your Broker*, by Henry Warren (Sonnenschein),—*How to know Wild Fruits*, by Maude G. Peterson (Macmillan),—*Pictures in Umbria*, by Katharine S. Macquoid (Laurie),—*Phases of Modern Music*, by Lawrence Gilman (Lane),—*The Sayings of Muhammad*, edited by Abdullah Al-Mâmûn Al-Suhrawardy (Constable),—*Two Friends of Old England, being Mirabeau and Gambetta*, by Saxo-Norman (Wilson),—*The Privilege of Motherhood*, by Lucie Simpson (Greening),—*Daniel Defoe*, by Albinia Wherry (Bell),—*Shakspere's Master-Passages*, selected by John Hogben (Melrose),—*Europe and the Mediterranean Region*, by J. B. Reynolds (A. & C. Black),—*Easy Stories from English History*, by E. M. Wilmot-Buxton (Methuen),—*A Biographical History Reader*, arranged by Beatrice A. Lees (A. & C. Black),—*Intermediate Arithmetic*, by G. H. Bradford (Jack),—*Persephone*, by Lilian F. Purdon (Burleigh),—*Violin Verses*, by Marion M. Scott (Walter Scott),—*Nyssia*, by M. C. O'Byrne (Toronto, Ellis),—*The Valley of Dreams*, by H. Hayden Sands (Foulis),—*Stories of King Arthur's Knights*, by Mary MacGregor (Jack),—*Shelburne Essays*, by P. E. More (Putnam),—and *The Japanese Spirit*, by Okaura-Yoshisaburo, with an Introduction by George Meredith (Constable). Among New Editions we have *The Luck of the Eardleys*, by Sheila E. Braine (Blackie),—*The Labor Movement in America*, by R. T. Ely (Macmillan),—*Village Life in Palestine*, by C. Robinson Lees (Longman),—*The Redemption of the Body*, by W. Fitzhugh Whitehouse (Stock),—*Moral Education*, by E. H. Griggs (New York, Huebsch),—*A History of the Siege of Gibraltar, 1779-1783*, by John Drinkwater (Murray),—*An Enquiry into and an Explanation of Decimal Coinage and the Metric System of Weights and Measures*, by Edwyn Anthony (Routledge),—and *The Coal-Fields of Great Britain*, by Edward Hull (Rees).

MR. JOSEPH FOSTER.

Mr. Joseph Foster, antiquary, genealogist, and amateur herald, died on Saturday last at his residence, 21, Boundary Road, N.W. Born of a Quaker family on March 9th, 1844, at Sunderland, he was educated at North Shields and Newcastle-on-Tyne. From an early time he displayed zeal for genealogical pursuits. Coming into possession of some of the numerous collections of Col. (Joseph Lemuel) Chester, he edited the 'Alumni Oxonienses, 1500-1886,' in eight volumes, and 'London Marriage Licences, 1521-1869.' 'The British Peerage and Baronetage,' reproduced in 1903 as Lodge's 'Peerage,' contained a section entitled 'Chaos,' which caused some stir. He was responsible also for 'The King of Arms'; 'Some Feudal Coats of Arms'; 'Men of Coat Armour, their Badges and Bearings'; 'Our Noble and Gentle Families of Royal Descent'; 'Noble and Gentle Families entitled to quarter Royal Arms'; 'Ancestral Families and their Paternal Coat Armour'; 'Lancashire County Families'; 'Men at the Bar,' 1885; 'Scots M.P.s, 1357-1882'; 'Gray's Inn Admission Register, 1521-1889'; 'Index Ecclesiasticus, 1800-40'; and many volumes of Heralds' Visitations and family genealogies. In 1892, in consideration of his services, Oxford University, which had conferred on his

predecessor, Col. Chester, the degree of honorary D.C.L., made him honorary M.A. Mr. Foster was a nephew of Myles Birket Foster, the well-known water-colour painter.

CANTERBURY AND YORK SOCIETY.

A criticism abounding in such terms as "outrageous," "foolish," "sheer laziness," "wantonly careless," "hopeless muddle," I would not ask space from you to deal with were it not that such a review may injure a society yet in its infancy. The "outrageous" title Cantuareboracensis was the suggestion of a very distinguished classical scholar holding high university office, and whether it be "foolish" to have both Latin and English on the cover is a matter of opinion. Your reviewer states that twenty-eight of the corrigenda occur in the English abstracts. This is not so. He fails to distinguish corrigenda and addenda. Your reviewer is annoyed at the Society's intention to print post-Reformation registers. We are not all mere mediævalists. The member, a registrar, who wished for eighteenth-century records doubtless knew what he would find useful.

May I deal with some of the reviewer's specific complaints? Pickworth, Buckden, and Sudbrook are certainly ascribed to the wrong counties, and as to them I can only say *peccavi*. Holcot may be in Northamptonshire, as your reviewer says, but I wrote "Holcott," which is in Bedfordshire. My qualified suggestion that Essewella is Ashwell in Herts, made independently of the county historians, may be wrong; but if so, I err with them. The MS. mentions a vicarage at Essewella, and Ashwell in Herts was formally constituted a vicarage by Pope Honorius. Your reviewer has not proved his statement that it is Ashwell, a rectory in Rutland. Even if Askeby be not Asgarby, it is little use for your reviewer to tell us that it is "probably" Ashby, when there are eleven villages of that name in Lincolnshire and Leicestershire.

Then as to the complaint of variant forms for the rendering of English place-names. For over twenty years I lived in a place with two recognized variants, and now I live in a town with two officially accepted forms of spelling besides others in common use, and I do not view the question of variants from the same standpoint as your reviewer. Take Pattishall. I have rendered it Pattishall in one place, Pateshill in another, which your reviewer calls a "new and false form," but he fails to note that the text gives Pateshille. His spelling is the "new and false form" of Patteshall. The complaint as to the omission of *e* from Hockliffe in one place is mere pedantry.

When your reviewer states that near Chancery Lane there are scores of competent record agents who could set the county list right in a morning's work, at the cost of a few shillings, he indulges in Eastern hyperbole.

With regard to the disparaging remark about "amateur" work, I would remind your reviewer that I was once styled "one of those amateur antiquaries"; but it was a professional official holding high position who, having been paid a fee to consider my objections to certain forgeries, proceeded to certify that they were genuine. We have as yet no paid editor, and my own work has been wholly gratuitous. I have sought advice from others, and it has been given generously and ungrudgingly, but I accept all responsibility. Your reviewer thinks that the whole management and editing must be recast. It may be so. It is not for me to say. But this is the fourth society for whose existence I am answerable. Is it too much to hope that the Canterbury and York Society may be as successful as the others? After all, construction, even by an amateur, may be better than destruction. W. P. W. Phillimore.

WILLIAM OF WYKEHAM AND THE RECTORY OF IRSTEAD, NORFOLK.

The idea that William of Wykeham, the great bishop, was at one time, early in his career, rector of Irstead, on the Norfolk Broads, is a curious instance of successive modern blundering. The late Dr. Ridding, Bishop of Southwell, when Master of Winchester College, was never tired of urging those of literary gifts to verify their quotations. Had modern scholars, including several distinguished Wykehamists, been content to follow that advice a whole string of imaginary statements and vain repetitions would have been avoided.

The notion of Bishop Wykeham having held the rectory of Irstead was well worked, some years ago, in order to fill a window with a stained-glass effigy to his memory. Quite recently an eloquent appeal has been made by a hasty antiquary, who has moved from Hampshire to Norfolk, to Wykehamists to find the funds for a new roof to this Norfolk church in honour of their founder. Quite a touching picture was drawn by this enthusiast of "the tall, gaunt Hampshire priest" taking up his residence on the fringe of the Barton Broad in the Great Plague year of 1349, of his being initiated into the art of pike fishing, and of his saying mass at the Irstead altar five and a half centuries ago.

Had this been true, it would have completely upset the real record of Wykeham's life, and had he even accepted this living at the time alleged without residing, it would have marked his life with falsity even in those days of pluralisms and the beneficing of those in minor orders. It may, then, be well once for all to stamp out this fable—even if the very interesting fabric of Irstead church, with its fine screen and valuable old oak fittings, should in consequence suffer.

The fable originated half a century ago with that prolific and usually careful writer Prebendary Mackenzie Walcott. In his 'Wykeham and his Colleges,' published in 1853, the statement is made that the first benefices held by Wykeham were those of St. Michael's, Irstead, and the chapel of Bridgnorth. He gives as his reference to the Irstead statement Harl. MS. 6959, f. 276, which is one of the well-known books of extracts from the national records made by Dr. Matthew Hutton in the seventeenth century. This was the beginning of the mischief. On looking at Hutton's transcript from the Patent Rolls and comparing it with the original in the Public Record Office, it is found that Hutton gave this entry of July 12th, 1349, correctly, in a somewhat abbreviated form, wherein it is stated (Pat. Rot., 23 Edward III., pt. ii. m. 27) that the king on that day presented "Willielmus de Wykham capellanus" to the then vacant church of Irstead, being in the gift of the Crown, owing to the vacancy in the Abbey of St. Benedict of Hulme.

Edward III. was at that time at his palace of Clarendon, Wilts, and the presentations made by the king on that one day, in the midst of the fearful Black Death, were very numerous; the very next entry was the presentation of one Roger de Wikham, chaplain, to the church of North Walsham.

Meeting with the name William of Wykham, Prebendary Walcott jumped to the hasty conclusion that this must be the one who was afterwards the great bishop. He forgot how particularly common the place-name Wykham was, and how very prevalent was the calling of people after their birthplace or residence in the fourteenth century. There were at least a score of parishes or hamlets bearing the name Wykham in slightly different orthography, as there are at the present day. As a personal title, the name used to be particularly common in East Anglia. William, too, was one of the most usual of Christian names; a William of Wykham was prior for some years of the Austin house of Blythburgh, and perhaps some rash person will assert that the prior of Blythburgh as well as the rector of Irstead were both identical with the founder of the colleges of Winchester and Oxford.

In 1887 the late Rev. G. H. Moberly brought out a critical 'Life of William of Wykeham,' of which a second edition was issued in 1893. In both editions Mr. Moberly, whilst writing strongly as to "the utmost inaccuracy" of his predecessor Mr. Walcott's work as a biographer, was evidently content to copy sometimes without verifying references, and to read new matter into Mr. Walcott's statements. The reference to Irstead occurs on p. 18, and a foot-note says that it is taken from Walcott, citing Harl. MS. 6959; but a wrong folio is given. Mr. Moberly improves the statement by saying that the king presented "*his* chaplain William de Wykeham" to Irstead, adding, "It is the king thus calling him his chaplain which seems to prove that he was (1349) at least in the first tonsure." But neither Patent Roll nor Dr. Hutton's transcript ever styled this particular William of Wykham king's chaplain. The entry simply states that this William, like scores of others instituted about the same time, was a chaplain; the term usually meant a parochial chaplain, or, in other words, the unbeneficed assistant priest of some rector or vicar. Moreover, it is quite certain that the word "chaplain" would not then be used of any one in minor orders save by a *lapsus calami*. Upon this supposed fact of his own invention Mr. Moberly wasted a good deal of writing, and made vain attempts to explain the anomaly and abuse of this youthful Wykham—supposed at the most to be in first tonsure—being content to be admitted to a benefice with cure of souls in 1349. He was not ordained acolyte until 1361, and the preferments he then accepted were sinecures. This careless assumption is a great blemish in what is otherwise by far the best life of the bishop.

The statement made with such circumstance by Mr. Moberly as to Wykeham, a royal chaplain, being preferred to Irstead in the Plague year, has since been accepted as a matter of course by Mr. Arthur Leach in his 'History of Winchester College,' published in 1899, and later by the Rev. Dr. Cox in the second volume of the 'Victoria County History of Hants.'

If any one is still inclined to fancy that the great Wykeham, who died in 1404, was identical with the rector of Irstead, it may be mentioned that the William of Wykeham who was parson of the Norfolk living had his will proved at Norwich on March 8th, 1376/7. The institution entry of this rector of Irstead at Norwich (Episc. Reg. iv.) corresponds with that on the Patent Rolls, whilst the appointment of his successor occurs in the sixth register of the same see. M. N.

'THE BON GAULTIER BALLADS.'

Hassendean, Eastfield, Joppa, July 27th, 1905.

Your correspondent Mr. Young, in your issue of the 22nd inst., has furnished a very interesting and mainly accurate account of the various editions of 'The Bon Gaultier Ballads,' by Sir Theodore Martin and the late Prof. Aytoun. He, however, has evidently not seen the last edition (the seventeenth), published in 1904, otherwise he would not have made the statement that "no bibliography of the English editions of this still popular book has been published." At p. xxviii of this 1904 volume will be found a list of all the editions, from the first, published in 1845, to the seventeenth, in 1904. The list forestalls, of course, the bibliography now furnished by your correspondent; yet, in this age of hurry and slipshod work, it is refreshing to note the evident care and labour which have been bestowed by Mr. Young on its compilation. One or two slight errors have been made, as that the fourth edition was the first to contain the new border round the pages with the

elf figures in the four corners, whereas it was the third edition in which this border first appeared. In the sixteenth edition the elf border appears for the *third* time, but in a slightly altered form. JAMES SINTON.

CWEN SEA OR WHITE SEA.

July 29, 1905.

IN to-day's *Athenæum* (p. 148) Mr. David Owen, quoting from memory, refers to my "translation of Cwen here into white." My statement is that the Cwen Sea, the present White Sea, was so called in King Alfred's time ('Orosius,' i. 11) from the Cwenas (Finns) who roamed round its shores. I nowhere suggest that white is a "translation" of Cwen, or that Cwen has any connexion with the Welsh *gwén*.

A. H. KEANE.

THE LOST EIGHTH-CENTURY GREGORIANUM OF THE ROMAN CHURCH.

I.

IN a communication to No. 3989 of *The Athenæum* (April 9th, 1904) on the liturgical Libellus current eleven hundred years ago in the Frankish kingdom I invited attention to a series of omissions in the copies at present known to us, and to the fact that their places and textual values coincide with those of items common to two classes of sacramentary which are in other respects divergent, the "Gelasian" and the "Gregorian." I also adduced the authority of the 'Micrologus' for believing those items to have been expunged from the book because of this double attribution, and the book itself to have been compiled by Alcuin. Hence, then, the question whether, besides the items thus expunged, there may not have been others which had *ab initio* been excluded from the book. To this question I am now in a position to give an unhesitating answer, and to say that we have it in our power to reconstruct with close, if not final, accuracy the Liber Sacramentorum whence Alcuin deduced his Libellus; to identify it as the long-lost missal of the Roman Church in the eighth century; to retrace its evolution, through an intermediate redaction, back to the irreducible minimum of a nucleus or primary scheme; and to inform ourselves whether or not such nucleus may or can have been elaborated by Gregory the Great.

The special characteristics of Alcuin's little book may be classed under the three heads of defect, excess, and textual variation. 1. Scholars have observed that it overlooks some six-and-thirty Sundays of the annual cycle, but not, so far as I am aware, the curious fact that its menology, as compared with that of other and contemporaneous mass-books, betrays a like deficiency; or that it neglects the Saturday after Quinquagesima. Now, since these anniversaries are recognized by so old and distinctly Roman a book as the Queen of Sweden's Gelasianum on the one hand, and on the other by the St. Gallen hybrid of Carolingian date, but with the noteworthy peculiarity that in respect of them the St. Gallen hybrid drops its hybridism, I infer that the masses assigned to them in the "Gregorian" source of the hybrid resembled those assigned to them in its "Gelasian" source, and that Alcuin for that reason conceived them to be older than St. Gregory and therefore prætermitted them. Can this inference be justified? 2. It contains an immense number of seemingly needless prayers, and two masses (Mur. Greg. 15, 95) which, since they reappear in the Appendix (*ib.* 158, 165), had on Alcuin's own hypothesis no right to a place in it. For which of all these, if for any, may Alcuin be held responsible? 3. The instances of textual variation are few but significant, as in Whitsun week and on June 28th, when, rather than abrogate the summer ember days and the vigil of the patronal feast of the Roman Church because their masses were wholly or in part "Gelasian," some reviser would seem to have taken the only alternative course, and replaced the offending constituents by others. Can such reviser have been Alcuin?

My theory concerning these peculiarities is that some of them result from the application to a much earlier document than the Libellus of a criterion which I claim to have detected, and that the rest were not inherent to that much earlier document. I propose, therefore, to use this theory as an instrument wherewith to reconstruct what it presupposes, and, aided by the generosity of the Editor of *The Athenæum*, to invite the verdict of scholars upon the issue. The issue shall be set forth under the form of numerical summaries so drawn up as to make no unfair demand on the trained literary imagination of the jury I address.

Division A.—Of two days, on one or other of which to enter on the *circulus anni*, Gregory the Great may with some confidence be said to have chosen Advent Sunday; Christmas Eve being affected by "Gelasian" books, by hybrids, by Alcuin's Libellus, and by missals derived from, or materially influenced by, one or more of these. Hence the safer of two alternative hypotheses is that which assumes that any Gregorianum whence Alcuin may have drawn his materials began with the earlier day. I find, then, that, a slight allowance made for ornamentation, the first nine masses of a series beginning with Advent Sunday might have occupied three sheets, each of whose twelve pages had the textual value of 380 letters and a fraction. Thus:—

Ornamentation	38
Three Sundays: 345, 378, 335	1058
Ember days: 485, 325, 872	1682
Fourth Sunday	319
Christmas Eve and Night: 382, 1047	1429
From the following	7
	$12\times380\frac{1}{4}=4563$

On the assumption, which will soon be verified, that the document I wish to reconstruct had a paginal unit of some 380 letters, I now pursue my course through a copy of Muratori's edition of the Libellus (MS. Vatican. Regin. 337), taking up as I go such masses as my theory assumes Alcuin to have discarded, and neglecting whatever it assumes him to have introduced.

Division B.—My second list, for the interval including Christmas morning and the Vigil of the Epiphany, recognizes two Sunday masses, one of Gregorian attestation, the other of post-Gregorian co-option into the Roman liturgy, † both of which I believe Alcuin to have discarded on the score of double allotment, and which I, therefore, print in italics; and besides these, another—I mark it with a bracketed "N.B."—which, as explained in my communication to No. 3989, though admitted for a time, was subsequently expunged. On the other hand, it of necessity overlooks the *alicæ* (see Mur. Greg. 10–12 *et seqq.*) which on my hypothesis Alcuin introduced into his Libellus. Besides the post-Gregorian mass just mentioned there is a group of prayers in honour of St. John, which, though seemingly intrinsic to the earlier document, and therefore *ex hypothesi* not Alcuin's, it would yet be unsafe to regard as Gregory's. For that reason I note their values, together with that of the mass to which they seem to be analogous, in a second column; and while doing this I invite the attention of experts to the fact that, but for those values, the Feast of the Epiphany, which leads off the next ensuing list, could not have been distinguished by a fresh page and a fresh fasciculus; for only by combining the two groups of totals do we get a multiple of 380 letters or thereabout:—

Christmas, Dawn and Day: 973, 697	1670	
St. Stephen	348	
St. John	341	344
Holy Innocents	415	
First Sunday	432	
St. Silvester*	304	
Second Sunday		324
Vigil of Epiphany [N.B.]	376	
From the following	15	
	$12\times380\frac{3}{4}=4569=3901,$	668

Division C.—The next group, distributed, like the preceding, in paired columns, has the value of twelve pages of three hundred and eighty letters and a fraction, thus giving, as will be seen presently, the Purification of St. Mary a fresh page and doubtless a fresh fasciculus. Its three Sunday masses, though recognized, as Berno of Reichnau assures us, by St. Gregory, were not owned by Alcuin. I therefore print them in italics. On the other hand, two of its saints' *missæ*—those for St. Felix of Nola and St. Vincent—cannot in prudence be regarded as Gregorian, nor yet the last, which is by general consent referred to the dedication of a church in or after the year 625. Hence its contributory items are of three diverse categories. Some are of Gregorian antiquity and recognition, some are either presumably or certainly post-Gregorian, while of the former group some are in the extant Libellus, some are not. And yet by the collocation of these diverse classes of items we get what none by itself could give, a multiple—and, indeed, as twice before, a quadrupled multiple—of 380 letters and a fraction. Thus:—

Epiphany	663	
First Sunday	301	
St. Felix		346
Second Sunday	318	
St. Marcellus*	361	
St. Prisca	343	
St. Fabian	360	
St. Sebastian*	453	
St. Agnes*	396	
St. Vincent		351
Third Sunday	298	
St. Agnes ii°		380
	$12\times380\frac{5}{6}=4570=3493$	1077

Division D.—Beginning at the point just reached, and ending with Maundy Thursday, I find that the textual value for anniversaries of Gregorian attestation is 17,185, which is not a multiple of 380; but that if we add to those anniversaries the two most probable claimants next after them to a place in the primary scheme of the book I am trying to reconstruct—St. Agatha's Day † and the Fourth Sunday after Epiphany ‡—and, besides these, the next in precedence of claim, St. Valentine's Day, referable, like St. Agnes ii° in Division C, to some year in the pontificate of Honorius I. (A.D. 625–638), we get a total of 18,275 ($=48\times380\frac{25}{76}$) letters; and thus, for a fourth time, a quadrupled multiple of 380 letters and a fraction. By this arrangement the Septuagesima mass would begin on the first line of the fourth page. But for this arrangement neither Good Friday, Holy Saturday, nor Easter could, without damage to the artistic integrity of the volume, have begun on the recto or even the verso of a leaf. The several values of the anniversaries just specified are, in analogy with previous lists, set down in the paired columns marked "I." in the subjoined synopsis, and I relegate the rest to a third and a fourth column, marked "II." and

† See Berno, 'De Celebratione Aduentus,' § 3, Migne, cxlii. 1034B.

* In these tables asterisks denote, besides the Chair of St. Peter in the cemetery of Ostrianus, the saints in whose honour lamps are known to have burned as far back as the time of Gregory the Great. See Marini, 'I Papiri Diplomatici,' p. 208.

† Her church near the amphitheatre of Titus was re-dedicated by St. Gregory.

‡ See Berno, *ut supra*, and Canterbury Missal, p. 157.

"III." As to my successive totals, α denotes the numerical result of what by my hypothesis was the primary scheme of this division of the document; β that of the primary scheme as developed under a second redaction, with which I shall deal presently; and γ that of the completed work. Here, as before, I adopt and italicize items which my theory assumes Alcuin to have discarded from his Libellus, and neglect supernumerary prayers which it assumes him to have introduced into it. I also note the mass for the day before Palm Sunday—*Sabbatum quando eleemosyna datur;* but, warned by the Præfatiuncula, do not compute its value.

If, as we have seen to be probable, the primary nucleus was compiled in or after the pontificate of Honorius I. (A.D. 625–638), two human generations, at the least, may have passed away before the book as known to Alcuin received its final development, for the Thursday masses before Holy Week were instituted after the accession of Gregory II. in the year 715. Now, it will have been remarked in my synopsis that the items which by my theory are adventitious to the nucleus range themselves vertically into two groups, one of which has the value of eighteen, the other of twelve pages of, as nearly as need be, 380 letters each, for $18\times380=6840$ and $12\times380=4560$; and, since a like dualism recurs from time to time throughout the work, I see in this phenomenon unquestionable evidence of the two successive amplifications at which I hinted just now. But this is not all. Such are the values, and such the distribution, of these adventitious items that there comes into view a transverse subdivision so contrived as to set more prominent masses, such as those for St. Peter's Chair, the Annunciation, an exceptional Wednesday, Passion Sunday, Palm Sunday, and Maundy Thursday, each at the head of a page. And as like phenomena recur again and again throughout the document, I see in them evidence of a carefully sustained bibliographical tradition and of the ἦθος that inspired it.

Sergius I. (A.D. 687–701), as we learn from the Liber Pontificalis, ordained that on the four feasts of St. Mary the mass should be preceded by a litany sung in procession from the church of St. Adrian to the basilica of S. Maria Major. Hence the inference that any Collecta which he might thereupon appoint to precede the procession on any one of those days would be written in a margin of the volume used on the occasion, there awaiting incorporation into the missal itself by the compiler of the next redaction. Who the next editor was to be, there can be little doubt. Gregory II. (A.D. 715–731) was a born bibliographer. Educated from childhood at the Lateran, he was made custodian of the papal library while yet a subdeacon; and when, some years after the death of Sergius, he attended a later patron, Constantine, whom he was destined to succeed as Pope, on a visit of state to the imperial Court at Constantinople, he won the admiration of Justinian II. by solving a series of literary puzzles which would seem to have baffled the sagacity of that prince's librarians. It may have been then that he was first styled ὁ διάλογος, an appellation appended to his name even on the title-pages of books destined for the altars of the Eastern Church. Be this as it may, one of the best-remembered acts of his more public career was the assignment of masses to the Thursdays in Lent before Palm Sunday; and we may fairly infer that he, if any one, would thereupon superintend a new redaction of the Gregorianum of the Roman Church.

Now, at the beginning of the present division there is a redundancy which serves to prove that the Collecta for the Purification was brought into use after the institution of the feast, but before the redaction which I conceive Gregory II. to have superintended; and further, that the book on which Alcuin worked was an uncorrected copy, and thus a presumably first-hand copy, of such redaction. Its major rubrics for the Purification are "Yppapanti," "ad sc'am mariam," "o'io ad collectam ad sc'um adrianum," "missa ad sc'am mariam maiorem"; where the second of them, though now superfluous and wrongly placed, seems to recall a time when, the third and fourth being as yet non-existent, it was where and what it should have been. For this reason I set the total value of the first two rubrics and the mass under "II.," and that of the Collecta and its accessories under "III." This done, I make an analogous distribution of the totals for the Annunciation, when I at once perceive that the Collecta for the Annunciation conspires with the six Thursday masses to give us [4555—1522=] 3033 [$=8\times379\frac{1}{8}$] letters, the value of eight pages or two membranes, while that for the Purification and the three saints' masses least likely to have been introduced at an early date yield 1522 [$=4\times380\frac{1}{2}$] letters, the value of four pages or one membrane.

These, then, are the additions which would seem to have been made in or after the year 715. Meanwhile, and at some date later than 625 at the very earliest, a second or intermediate redaction had introduced, besides the two feasts of St. Mary, the Wednesday, Friday, and Saturday after Quinquagesima; the fifth and sixth Sundays after Epiphany; the feast of St. Soteris, in whose honour a lamp burned in the catacombs as far back as the age of Gregory the Great, and that of the *cathedra sc'i Petri apostoli* in the cemetery of Ostrianus, before which another lamp burned at the same period; and, besides these, the Blessing of the Oils on Maundy Thursday.

The logical subdivisions of the final redaction, and in a less degree those of the second, are manifestly the outcome of design, and thus attest my theory of the evolution of the document. Thus, but for the inordinate length of the mass for the Thursday in Passion Week, that for Palm Sunday could not any longer have begun at the head of a page; but for the same characteristic on St. Juliana's Day, St. Peter's Chair would not have gained its proper place of honour; but for the 854 letters devoted to two other festivals the Annunciation would have lost the distinction already given to it.

Such, then, for so much of the liturgical year as lay between Advent Sunday and Maundy Thursday, was the document from which, if my inductive reconstruction of it has been happily inspired, Alcuin deduced the main portions of his Libellus. I hope in a second communication to show that the technical characteristics of that curious little compilation were of such a sort as to demonstrate the general accuracy of my reconstruction.

MARTIN RULE.

† This and the remaining numbers of the column are for the Thursdays of Lent introduced by Gregory II. (A.D. 715–731).

TENTH INTERNATIONAL CONGRESS OF THE PRESS.

PART I.—WORK.

THE Tenth International Congress of the Press was opened at Liége on July 25th in the Palace of the Prince Bishops, Herr Wilhelm Singer (*Neues Wiener Tagblatt*) in the presidential chair, to which he has been faithful ever since the first Congress, held at Antwerp in 1894.

In his inaugural address Herr Singer reminded his audience that to Belgian initiative was due much of the force which set in working the International Press movement, and he paid a graceful tribute to two distinguished Antwerp journalists, the late M. Gomaere de Keyser, and M. Heintzmann Savino, still, happily, a member of the Central Committee.

To the enthusiasm of colleagues such as these the Congress owed its birth on Belgian soil and much of the vigour of its later growth. Enumerating the work of past Congresses, the President reminded his hearers that, though the statutes of their organization confined their discussions within the limits of professional topics, they were still able by mutual sympathy and brotherly union to lift their profession into the realms of the ideal.

M. Péty de Thozée, governor of the province, answering Herr Singer and welcoming the members of the Congress, said that he had a special advantage in belonging to a neutral nation, in that he could espouse the interests and share the sympathies of everybody, and this pleasant sentiment has, throughout the meeting, been the key-note of Belgian friendliness.

The Walloon Minister (who apologized for the unavoidable absence of the Ministers of Public Instruction and of Public Industry, detained in Brussels by parliamentary duties) concluded with "Long live the Sovereigns of all other nations, and long live the Sovereign Press,

monarch of the world!" The Congress then adjourned to the Exhibition "Salle des Fêtes," where the business sittings were held during Tuesday, Wednesday, and Thursday of last week.

A complimentary "Président d'honneur" chosen from each national delegation occupied the chair of the meetings in turn. Alderman Campion, late proprietor of *The Northampton Mercury*, represented the British International Association of Journalists, of which he was recently re-elected President.

Among the questions which occupied the Congress I may cite the maintenance of professional secrecy under legal pressure, the conditions of contract between editors and correspondents, and the press duel.

The loyalty of editors to correspondents and their published opinions was ably urged by M. Taunay (Paris), seconded by representative speakers of at least seven different nationalities. After comparing varying press methods, a resolution was passed exempting correspondents of a paper from entering the witness-box in cases affecting editorial information, in which their evidence might violate professional secrecy; and enforcing their right to support in the event of such refusal resulting in legal proceedings.

Increased responsibility, both in the editorial department and in the individual reporter, could but raise the tone of the profession. Mr. Arthur à Beckett (London) mentioned that editors of English newspapers never revealed the names of their informants, but were very careful to use no information from which they might later have to draw back.

In the discussion on the press duel M. Janzon (Sweden) took as his motto the clever words of a captain of Charles V.: "There is nothing so foolish as a duel, for the man who insults another, not the man who is insulted, is dishonoured"; he stated that many Parisian journalistic clubs were anxious to put down duelling, but that the real solution of the difficulty would be to suppress the notoriety given to such meetings in the press. M. Raqueni (Portugal) submitted that press duels were very frequently merely the outcome of personal vanity and self-advertisement, and demanded that the law should be invoked to stop not only the duels themselves, but also all press notices of them.

These two questions, and that of the regulation of contracts between editors and reporters, are of less pressing interest to British journalists than to their foreign colleagues, as the custom and usage of British procedure have crystallized into a code which is seldom infringed; but the consideration of such matters in different national lights is always desirable, as leading to wider mutual understanding. The General Committee was requested to draw up a report on this subject, to which Mr. A. à Beckett promised all the possible assistance of English experience.

Mr. D. A. Louis (London) was chosen as British representative in the International Tribunal for the settlement of press disputes. It remains to be seen whether members will submit to this peaceful arbitration in preference to the duel; but it is certainly suggestive that such a discussion should have taken place in an assembly wherein the Latin race predominated, and that a German, Dr. Schweitzer (Berlin), should state that England, Holland, and Russia held the duel in ridicule and contempt.

It was resolved to form an international register of accredited members willing to contribute to foreign papers, and an international newspaper library. The conclusion of the three days' business sittings, which had been singularly concentrated and workmanlike—as became a meeting in such a business city as Liége—left the members of the Congress free to enjoy the hospitality of the town, the delights of the Exhibition, and an extension of their tour to Brussels, Antwerp, and other places.

Of their reception by the King of the Belgians, and of the special commemorative meeting held under the presidency of M. Auguste Beernaert (who as Minister and President of the Chamber of Representatives welcomed the first Congress in 1894), I must give a short notice next week. G. B. Stuart.

A VILLAGE LIBRARY.

In an interesting account of the library contained in the church of Langley Marish, which appears in your issue of July 29th (p. 146), it is stated that "J. C. Werndly was never either vicar or curate of the parish."

According to Dr. Lipscomb's 'History of Bucks,' the Rev. John Conradus Werndly was presented to the living of Wyrardisbury with Langley as vicar on November 8th, 1690, and died in 1724.

Some further information concerning him will be found in Gill's 'History of Wraysbury,' p. 107, wherefrom it appears that he was inducted in 1689. Richard Bentley.

BASQUE MSS. IN THE BODLEIAN.

Students of Basque will remember the unearthing by Prof. Rhys at Shirburn of Pierre D'Urte's grammar. This interesting fragment was examined by Prince Lucien Bonaparte, and a good many years later copied out by Canon Llewelyn Thomas. After his death in 1897 it was presented to the Bodleian (MS. Basque C 2). Recently the library has received a further gift in the shape of an exhaustive analysis of the said grammar (MS. Basque C 2) by another Basquophile, the Rev. Andrew Clark, of Lincoln College. As there is no immediate prospect of either MS. being printed, scholars may be glad of this hint as to their whereabouts.

HENRY SOTHERAN.

Another link with bookselling of the past was broken when on Sunday last Henry Sotheran passed away at his residence on Beulah Hill, Upper Norwood, at the age of eighty-five. His father, Thomas Sotheran, whom we remember well, was born at Ampleforth, in the vale of York, and many of the family had been booksellers in the city of York since the earlier half of the eighteenth century. Thomas Sotheran came to London, and was apprenticed to the Quaker booksellers John and Arthur Arch in Cornhill, and they had such regard for him that when he married, in 1812, they made him a present of the stationery business they had in Little Tower Street. In 1816 he founded the present bookselling firm. His son Henry was born on May 29th, 1820, and received his education at the Pestalozzian School at Stockwell, but had to return home, owing to ill-health; and in 1832, when he was only twelve, he took an active part in his father's business. So rapidly did it grow that Thomas Sotheran decided to relinquish the stationery business in favour of a former *employé*, Mr. John Draper.

In 1841 Thomas Sotheran took his son into partnership. In 1851 Mr. Stibbs, whose shop faced Somerset House, was retiring from business. Henry Sotheran secured this, and purchased the stock and goodwill. In 1856 Messrs. Smith & Son were removing from 136, Strand to their present premises, and Sotheran secured from them the lease of this handsome house, with its splendid frontage, for the display of books. Sotheran then entered into partnership with Mr. George Willis, the well-known bookseller, whose shop under the Piazza in Covent Garden was always a source of attraction to book-lovers—it was a bad day for sellers of books, for previously the rival firms would bid against each other, prices thus advancing considerably. The partnership lasted only ten years, and the business again became the sole property of Henry Sotheran. In 1872 the business in Piccadilly was added, and the entire building, with the exception of the top floor, was soon crowded with books. This he kept for his own use, and from the windows, with the aid of a field-glass, he could see, he has told us, his home on Beulah Hill. At the end of June, 1893, he retired from business, being succeeded by his son Henry Cecil, and Charles Buckland and Alexander Balderston Railton, both of whom predeceased him. An obituary notice of the last appeared in No. 4012.

Although Mr. Sotheran had long retired from the firm, he took an active interest in it to the last. He will be long remembered by those who knew him for his kind, genial disposition. It was always a pleasure to meet him and to see his cheerful smile of greeting; while to business men he leaves an example of great activity and integrity.

No record of Sotheran can be complete without reference to his enterprise in securing the copyright of the ornithological works of John Gould. For these he gave, including the plant and lithographic stones, 5,000*l.*; and he at the same time secured the services of Gould's staff of colourists, and was in this way able to complete under the direction of Dr. Bowdler Sharpe the works left unpublished.

SALES.

Messrs. Puttick & Simpson concluded their season on Thursday week last with the sale of the library of the late Prebendary Blomfield Jackson, and other private properties. High prices ruled throughout, the following being some of the chief items: Ackermann's Histories of Oxford and Cambridge Universities and the Colleges, 5 vols., large paper, 69*l.* Grote's Greece, 12 vols., 3*l.* 17*s.* 6*d.* Philobiblon Society, 15 vols., 4*l.* 13*s.* Evans's Essays on America, 1755, 12*l.* Dictionary of National Biography, complete set, 48*l.* Froude's England, 12 vols., 4*l.* Walpole's Royal and Noble Authors, 5 vols., morocco, 5*l.* 2*s.* 6*d.* Proof impressions of the woodcuts to Bewick's Water Birds, 7*l.* 7*s.* Calendar of State Papers, 34 vols., 7*l.* 15*s.* An example of Seventeenth-Century Embroidered Binding, 15*l.* Armstrong's Gainsborough, 1898, 6*l.* 2*s.* 6*d.* Adam's Architecture, 3 vols. (reprint), 5*l.* Newgate Calendar, 6 vols., 4*l.* Eight Autograph Letters relating to America at the time of the War of Independence, 41*l.* Bohn's Libraries, 108 vols., 6*l.* 7*s.* 6*d.* Kingsley's Works, 19 vols., 5*l.* Haddon Hall Library, 9 vols., 5*l.* A'Kempis, L'Imitation de Jésus Christ, Paris, 1858, 7*l.* 5*s.* Jesse's London, extra illustrated, 5*l.* 17*s.* 6*d.* Tour of Dr. Syntax through London, uncut, 3*l.* 17*s.* 6*d.* Thirteen Autograph Letters of Ruskin, 9*l.* Last Essays of Elia, uncut, 1835, 10*l.* 2*s.* 6*d.* Ackermann's University of Cambridge, 8*l.* 10*s.* New Century Dictionary, 6*l.* 10*s.* Punch, 64 vols., 10*l.* Williamson's Portrait Miniatures, 7*l.* 5*s.* Four Autograph Letters of Horace Walpole, 24*l.* 5*s.* Two Letters of Dr. Johnson, 17*l.* 5*s.* The total for the two days was 1,063*l.*

Messrs. Sotheby, Wilkinson & Hodge sold in their last book sale of the season, 28th and 29th ult., the following important items: The Civile Conversation of Stephen Guazzo (an important Shakspeare book), thirteen editions in various languages, 1586-1628, 50*l.* Smith's Catalogue Raisonné of Painters and their Works, 9 vols., 1829-42, 23*l.* The Ibis, Series I.-III., 18 vols., 1859-75, 30*l.* Elliot's Monograph of the Pheasant Family, 53*l.* Loggan's Oxonia Illustrata, 1675, 12*l.* 5*s.* Autograph Letters, &c., of P. B. Shelley (8), 155*l.* Rembrandt's Complete Works, by Bode and De Groot, 7 vols., 1897-1902, 23*l.* Smith's Military Costumes (36), 1812, 19*l.* 5*s.* Nash's Mansions, coloured like drawings, 4 vols., 1839, 35*l.* Chronicles of England to the end of Henry V., English MS. on vellum, *c.* 1450, 39*l.* Longfellow's Song of Hiawatha, 1855, with proof-sheets and corrections by the poet, 27*l.* Tennyson's Poems by Two Brothers, large paper, 1827, 17*l.* 5*s.* Ackermann's Microcosm of London and Histories of Cambridge and Oxford, 7 vols., 1812-15, 42*l.* 10*s.* Hardwicke's Original Collections of Pedigrees, &c., of the Heralds' Visitations of Shropshire, 3 vols., folio, 32*l.* Gould's Humming Birds, 5 vols., 1861,

25*l*. Purchas his Pilgrims, 5 vols. (slightly defective), 1625-6, 50*l*. Shakspeare's Fourth Folio, the tallest copy known, 1685, 110*l*. Santarem's Atlas de Mappemondes, Paris, 1849, 37*l*. Bartolomeo da li Sonnetti, Isolario, Venet., 1480, 24*l*. Nine MS. Italian Portulans of the seventeenth century on vellum, 52*l*. Horæ on vellum, Sæc. XV., 32*l*. Ackermann's Colleges of Winchester, &c., 1816, 18*l*. Horace Walpole's copy of Pennant's London, with numerous MS. notes by him, 1799, 36*l*. 10*s*. Pennant's London, extra illustrated, 66*l*.

Included in the same sale were the following quarto editions of Shakspeare's Plays, all slightly defective: The Merchant of Venice, 1652, 200*l*.; King Richard III., 1605, 250*l*.; History of Henry IV., 1608, 1,000*l*.; Second Part of King Henry IV., 1605, 500*l*.; History of King Lear, 1608, 900*l*.

Literary Gossip.

Mr. Fisher Unwin has arranged to publish a translation by Miss A. Linden of 'The Red Laugh,' by Leonidas Andreieff, one of the best-known Russian writers of the younger school. The story, which has attracted much attention in Russia, has now been translated. It purports to be fragments from the diary of a young officer who is sent home from the front cruelly wounded and with his mind affected by the horrors he has witnessed. The diary is continued after his death by his brother, who is likewise driven to madness, partly by his brother's tragic fate, partly by the terrible news which is constantly arriving from the front.

Messrs. MacLehose & Sons will publish early in the autumn a new work by Mr. William Law Mathieson, entitled 'Scotland and the Union: a History of Scotland from 1695 to 1747.' In continuing the history of Scotland already dealt with in his 'Politics and Religion in Scotland, 1550-1695,' Mr. Mathieson has emphasized the connexion of Scottish with English and British politics; he has traced the evolution of parties, and the character and policy of their leaders, and has devoted particular attention to the growth of moderation in the Church as being significant of the liberal and progressive spirit in which the Union took its rise. Some unpublished sources have been utilized, but the work is primarily an attempt to make adequate use of the great mass of existing material, particularly of the collection of pamphlets in the Advocates' Library.

We regret to announce the death of Dr. John Davidson, late Professor of Philosophy and Political Economy in the University of New Brunswick, in his thirty-sixth year. Prof. Davidson, who was educated at Edinburgh University and Berlin, wrote on 'The Bargain Theory of Wages' and 'Commercial Federation and Colonial Trade Policy.' He was busy with researches for a history of Scottish commerce at the time of his death.

The late F. G. Kitton had what was probably a unique collection of Dickensiana of the most varied kind. The Dickens Fellowship has appointed a committee to examine this collection, and they have suggested to the Library Committee of the Corporation of London the formation of a National Dickens Library. The Library Committee have expressed their readiness to accept the collection, and make it accessible to the public; and the Council of the Fellowship now appeal for the funds necessary for the purchase. Any contributions will be acknowledged in the monthly organ of the Fellowship—*The Dickensian*.

The London correspondent of *The Birmingham Daily Post* included the following interesting announcement in his notes of last Monday:—

"The British Museum building at Hendon which is to serve as a repository for the storage of newspapers and other printed matter is now completed, and ready to receive the volumes. The book-presses and other fittings are practically all in place, so that within the next month or two a commencement, I am told, will be made with the work of removing the bound volumes of newspapers from their present abode in Bloomsbury to Hendon. That this will be no light task may be believed when it is stated that a calculation shows that about 48,000 volumes will thus be transplanted, the work of transference taking probably three months to accomplish. It is intended, so I gather, that most of the provincial, Scottish, Welsh, and Irish papers shall in future be kept at Hendon, but the files will, of course, remain available for reference by readers at the British Museum on giving a day's notice of a wish to consult them."

The Advocates' Library, Edinburgh, will be closed during the month of August.

The Rev. Dugald Butler, minister of the Tron Church, Edinburgh, has in preparation a 'History of the Old Tron Kirk of Edinburgh and the Congregation from 1560.' Mr. Butler has written a history of his old parish of Abernethy, in Perthshire, and a life of Archbishop Leighton, and has also published sermons.

The very interesting library of the late Mr. James Roberts Brown (whose death was announced in *The Athenæum* of April 29th) has been acquired by private treaty by Mr. T. Thorp, of 100, St. Martin's Lane, W.C., and he has just issued a catalogue of the collection, which extends to 849 numbers. Mr. Brown made a special feature of Kentish topography and of books relating to London, but those which will appeal most to the average collector will be found among the miscellaneous section. Very few are rare, but nearly all are of the class which every lover of *belles-lettres* wants as a matter of course. In almost every case the books carry the late owner's book-plate, which was designed by H. S. Marks, R.A.

The Napoleon cult has probably never been more popular than it is at the present time, and now we are promised in October an elaborate catalogue of the collection of autographs, documents, broadsides, drawings, maps, music, portraits, military costumes and scenes, views, and so forth, formed by Mr. A. M. Broadley, barrister-at-law, of the Knapp, Bradpole, Dorset. The title will be 'Collectanea Napoleonica,' the compiler being Mr. Walter V. Daniell, the well-known book and print dealer. Mr. Broadley will himself contribute an explanatory preface and a catalogue of his Napoleonic library. The catalogue will form a systematic index of about 6,000 entries, and the impression will be limited to 500 copies.

At University College, London, Mr. Frederick Mackarness, Advocate to the Cape Supreme Court, has been appointed to the new Chair of Roman Dutch Law, and will begin his courses in October next. Dr. Shuckburgh has been reappointed Lecturer in Ancient History. The report of the Dean shows that the students in the Faculties of Arts, Laws, and Science increased from 947 to 1,054 in the session just concluded, and that the post-graduate and research students increased from 102 to 107.

The Nottingham Daily Guardian for July 26th announces the discovery of a sack crammed with papers and parchments at Clifton Hall, which has been in the possession of the Clifton family since the days of Henry III. The documents include letters of 1555 and 1583; a series of letters from the Earl of Strafford during the time he was Lord Deputy of Ireland; and two communications from Charles I., one of which concerns the proposed marriage of Suckling, the poet, to Anne, daughter of Sir Henry Willoughby.

Mr. W. S. Caldecott writes:—

"Your adequate review of my little book on 'The Tabernacle' in last week's *Athenæum* is one with which no writer could quarrel. It contains, however, one illogical statement, on which I should like to break a lance with your reviewer. After stating the two main propositions of the book to be (*a*) a claim to have discovered the cubit of the Bible, and (*b*) the identification of *Ramet el-Khalîl* with the enclosure built by Samuel to surround the altar built by him at Ramah, your reviewer's words are, 'It is possible that the second proposition may stand, even if the first should have to be largely modified.' I do not see how this can be, as the only evidence I find to support the theory of Samuel's altar having stood within the present enclosure near Hebron is drawn from its dimensions being measurable by the building cubit of one foot and a fifth. If the length given to the cubit be wrong, the whole evidence falls to the ground. I fear that your reviewer, in making his distinction, did not note the Assyriologist's foot-notes on pp. 137 and 139, and has not himself mastered the obverse of the Senkereh tablet. It strikes me as a little singular that in America the length of the cubit is looked upon as established, and some other portions of the book to require further evidence, whereas in England the converse of this seems to be shaping itself. Are we under the spell of some great name?"

By a recent decision of the Mannheim Corporation an international exhibition will be held in that town in 1907, and a permanent gallery is to be erected for this purpose.

The Mayence correspondent of the Paris *Rappel* announces the death recently of the elder of the last descendants of Gutenberg, Baron Adolphe Molsberg, who for many years lived a solitary life in the Isle of Langenau on the Rhine. He was at one time a traveller in the East, and wrote some philosophical studies. His wife and children predeceased him some years ago. His younger brother, a retired general, is unmarried, and with him, apparently, will disappear the last of Gutenberg's descendants.

In addition to three Parliamentary Papers noted under 'Science Gossip,' we have to mention the publication of a Report of the Intermediate Education Board for Ireland, for 1904 (3*d*.); an Ordinance of the University of Edinburgh on the Inclusion of Geography among the Subjects qualifying for Graduation in Arts (½*d*.);

and a Report of the Historical Manuscripts Commission on the MSS. of the Marquess of Lothian at Blickling Hall, Norfolk (*2s. 2d.*).

SCIENCE

GEOGRAPHY AND GEOLOGY.

The volume published under the rather romantic title of *Breaking the Wilderness* (Putnam's Sons) deals with the exploration and opening up of the vast region lying to the west of the Mississippi, from the earliest incursions made by the Spaniards to the driving of the last spike on the Union Pacific Railway in 1869. The author, Mr. F. S. Dellenbaugh, is well qualified for the task he undertook, for whilst still a young man he accompanied Major Powell during his memorable expedition down the Colorado, and since that time he has spent many years in the West, and acquired a personal knowledge of nearly every part of it. In the early chapters of the book he presents interesting accounts of the physical features of the country dealt with; of the beaver and buffalo, which at one time constituted the principal wealth of the districts; and of the native tribes, or "Amerinds," popularly known as American Indians. He then plunges *in medias res*, and tells his readers the story of explorers, trappers, traders, and fur companies. The explorers of the Far West and of the Rocky Mountains have at no time enjoyed the popularity of their African compeers of a later generation; still, names like Lewis and Clark, Pike, Bonneville, and Fremont are sufficiently well known, even outside the United States, to cause an account of their achievements to be read with interest. As to trappers and traders, like Jim Bridger and Kit Carson, a halo of romance has gathered around them; and no doubt they had their virtues. They endured hardships with fortitude, were fair and honourable in their dealings with their fellows, and cheerfully risked their lives for others, yet in their dealings with the Indians "conscience was paralyzed." As to the traders,

"they hesitated at nothing that would bring them money.....One could fill a library with volumes detailing the murderous brutality of the white race."

There were, of course, individual exceptions:—

"As a rule the French were the most humane, the most just; they treated the natives more as if they might be human beings with sensitiveness and intelligence. William Penn and his followers among the English, and the Hudson Bay Company, also dealt justly with them, but in the eyes of the others the Amerind was a beast of the forest to be exterminated."

The great fur companies, in their dealings with the natives, seem to have been no more honourable than the private traders. Here, again, the author makes an exception in favour of the British Company, which maintained almost complete control of the Oregon region after the war of 1812, and for many years later, in spite of which the whole of this territory, up to 49° North, and including Puget Sound, was surrendered to the United States in 1846 "by right of discovery and exploration."

It is only natural that in a volume dealing with such a multitude of facts there should be found a few statements to which exception may be taken. It is doubtful, for instance, whether the Rio de Spiritu Santo of Pineda was really the Mississippi, and certain that the Greek adventurer who went by the name of Juan de Fuca never discovered the strait which now bears his name. The statement that Cartier "discovered" the island of Newfoundland, whilst Cabot's name is not mentioned, is, of course, an oversight, rather surprising in an author so well versed in the history of his country. What the author says, however, of Coronado's march in search of the seven treasure cities of Cibola deserves attention.

The volume is well illustrated, yet a general map indicating the old forts and trading posts, and showing the principal routes of the explorers, would have proved more useful than many of these attractive process-pictures.

Under the collective title of *Great American Explorers*, Mr. David Nutt has begun the publication of a series of reprints or translations of the narratives of "Trailmakers," from the earliest times to the close of the eighteenth century. The first two volumes issued deal with De Soto's adventurous march through Florida and the valley of the Lower Mississippi. The three most important contemporary accounts of the expedition are presented to the reader, namely, those by a "gentleman of Elvas," by Biedma, the royal factor, and by Rodrigo Rangel, the private secretary of De Soto. The "romantically coloured imaginary" account by Garcilaso de la Vega, based upon statements made by a survivor of the expedition, whom the editor supposes to have been Gonzalo Silvestre, is not included. The editor, Prof. Edward Gaylord Bourne, of Yale University, furnishes a literary introduction and a few foot-notes, for the most part correcting palpable errors of dates, whilst Mr. Buckingham Smith's well-known 'Life of De Soto' is reprinted as an appendix. There is a poor little map, and readers desirous of following the route of the expedition in greater detail are referred to Lowery's 'Spanish Settlements.'

Three more volumes of the same series contain a complete reprint of Nicholas Biddle and Paul Allen's 'History of the Expedition of Captains Lewis and Clark,' first published in 1814. It is preceded by a short account of the 'Louisiana Purchase,' by Prof. John Bach McMaster, and there are a few notes upon the route. Portraits of the explorers and the original maps are included.

Structural and Field Geology for Students of Pure and Applied Science. By James Geikie. (Edinburgh, Oliver & Boyd.)—To many professional men a little knowledge of geology is essential, and it is largely to meet their wants that Prof. Geikie has prepared this work. The mining engineer, the architect, the civil engineer, the agriculturist, and the public health officer, all stand in need of an acquaintance with the elements of the science. Their wants vary, it is true, in extent and character, but in no case do they desire to dwell on the technical details of palæontology or the theoretical aspect of geology. Yet, if their knowledge is to be sound, they must apply themselves to such parts of the science as interest them just as seriously and systematically as though they were learning the science for its own sake, not merely for the sake of its application in a special direction. Hence Prof. Geikie's new volume appeals to "students of pure and applied science." It is not a work on practical geology for practical men; it is a work on structural geology written on broad general lines, but emphasizing such subjects as the nature of ore-deposits, the characters of soils, the geological conditions of water-supply, and the methods of map-making. The author explains that it represents the summer course of Geology in the University of Edinburgh, which is taken by a mixed body of students, some interested in pure and some in applied geology, but all requiring a wider acquaintance with the science in its practical aspect than can be obtained from the general course of winter lectures. Written with the knowledge and authority of a professor of wide experience, the work is likely to be of much use far beyond the range of University classes. Since the rocks build up the crust of the earth, and the crust of the earth is the essential object of all geological study, a sketch of the present state of petrology forms an appropriate introduction to any work on general geology. Such a sketch occupies a large part of Prof. Geikie's volume. Students not aspiring to be petrologists may grow impatient with technical details, but they may rest assured that a sound knowledge of rocks is well worth the labour involved in its acquisition, though this knowledge can never be obtained from books alone. Perhaps the most valuable part of Prof. Geikie's work is that devoted to geological surveying, a subject on which he writes with the authority of one who was for many years professionally connected with the State Survey. The illustrations in the volume are exceptionally good, including a large number of views of Scottish scenery reproduced from photographs officially taken by the Geological Surveyors.

MEDICAL RECORDS.

A Treatise on Plague, dealing with the Historical, Epidemiological, Clinical, Therapeutic, and Preventive Aspects of the Disease. By W. J. Simpson. (Cambridge, University Press.)—The literature of plague is enormous, because since the beginning of history it has been one of the most deadly diseases which have affected mankind. But large as is the literature, we would not willingly be without this treatise by Prof. Simpson. He has summed up in it most of what has already been written upon the history and distribution of the plague. He tells about the nature of the infection and of the means by which it is disseminated, both locally and generally. He has made his book a storehouse of information upon the signs and symptoms of the disease, and he derives his information at first hand, for he was the medical adviser to the Government of Cape Colony during the outbreak of plague in 1901, and he was a commissioner for the Colonial Office to inquire into the causes of the continuance of plague in Hong Kong. Lastly, the treatise deals with the all-important questions of prophylaxis and suppression. We are so accustomed to think of plague as an alien disease which has run its course in this country that it is startling to learn that other countries have had a longer immunity than we have had, and that plague has reappeared in them and proved as great a scourge as of old. For two hundred years there had been no plague in India; in 1896 it broke out in Bombay, and last year it caused more than a million deaths, for even with the resources of modern medicine the mortality has only been reduced from 90 to 70 per cent., and at present there seems to be no likelihood of stamping out the disease until it has run its course. The present classification recognizes three great forms of it—the pneumonic, which strikes through the lungs, and is the most deadly and easily communicable; the septicæmic; and the bubonic. Bacteriology has discovered the cause in a micro-organism, which is as deadly to rodents as to man, whilst epidemiologists have traced an intimate connexion between epidemics of plague and epizootics, affecting chiefly rats and mice. It is probable that the rats, being first affected, soon begin to transmit the affection to man, partly by contaminating food left unprotected, partly, perhaps, by their parasites, such as fleas. At any rate, rats lie under such strong suspicion that it seems possible to render a district or ship immune by ridding it of them, and this is best done by the use of the Clayton system of fumigation with sulphur, which chokes the rats, and causes them to come out of their holes to die. Prof. Simpson's book affords the most interesting reading. It is well illustrated with maps, charts, and drawings of patients suffering from plague. It abounds in points of practical importance, and should, therefore, prove a most serviceable text-book to all whose duty brings them into contact with plague either directly or indirectly.

XUM

The Royal Medical and Chirurgical Society of London—Centenary, 1805-1905. Written at the request of the President and Council by Norman Moore, M.D., F.R.C.P., Hon. Librarian, and Stephen Paget, F.R.C.S., Hon. Secretary. (Aberdeen, University Press.)—The Royal Medical and Chirurgical Society justly looks upon itself, and is generally regarded by others, as the premier medical society in England, though it was not founded until 1805, and its venerable parent, the Medical Society of London, is still hale and hearty. The first meeting of the Medical and Chirurgical Society was held at 2, Verulam Buildings, Gray's Inn; in 1810 the Society moved to 3, Lincoln's Inn Fields; in 1835 to 53, Berners Street, and in 1889 to its present premises in Hanover Square, where it accommodates various allied societies so satisfactorily that a movement is on foot to merge them all into a single Academy or Society of Medicine.

The book issued to Fellows of the Royal Medical and Chirurgical Society in commemoration of its centenary contains the chronicles and a short account of the Presidents. The Society is fortunate in possessing two honorary officers who were not only willing to devote the time to the preparation of the work, but also able to carry it to a most successful issue. The chronicles compiled by Mr. Stephen Paget from the Society's records give in outline a history of the times through which it has passed during the last hundred years—times which were often troublous and rarely prosperous. Year by year the chief work done by the Society is noted, and there is a record of the average attendance at the meetings of the Fellows and visitors. The outlines display such skill, both of selection and style, as to afford the reader in a very pleasant form a knowledge of all that he need know.

The second part of the work is devoted to an account of the Presidents, "drawn," as the authors say modestly, "from the usual sources of such biographies." But this is only a half truth, for there is introduced into the account of each President some extract from his writings which is characteristic either of the man or of the knowledge prevalent in his day. Only those who have had experience in compiling similar notices know how difficult it is to select a characteristic passage from the books of forty or fifty men, mostly voluminous writers, and only those who know the history of medicine during the last hundred years will be able to estimate the success which, in this case, has attended the experiment. The book is provided with a good index, and is sufficiently illustrated.

'BIRD LIFE GLIMPSES.'

Downderry, Cornwall, August 1st, 1905.

The reviewer of my 'Bird Life Glimpses' says that I do not answer the problem of the several nests built by the wren. I do, however, attempt an answer to the more general problem of why so many birds build extra nests, and I think I allude to the wren, so as to include him in it. The mystery, in my view, is but imaginary, and I attribute the habit, as well as that other one which often accompanies it, of making constant additions to the nest in which the eggs are finally laid, during the whole period of incubation and the rearing of the young, not to any particular object on the part of the bird, but to the strength of the nest-building instinct. Further, I speculate on the likelihood of natural selection having, in some cases, seized on the opportunity thus afforded of turning one or other of the supernumerary nests to account. For instance, I suggest that the bower of the bower-birds has been developed from the nest owing to the ancestral habit in this family of using the nest proper for other purposes than that of incubation—as is done by many living species, the rook amongst them—and also that the process of differentiation may have been facilitated through this tendency to multiply nests. Some time ago, in *The Zoologist*, I gave an account of the crested grebe's nest-building habits, and expressed the view that a sort of raft or platform which I saw the male make was, in its origin, one of the many quite useless nests which the pair I watched built, one after the other, with every appearance of being urged by an imperative instinct. To this, also, I think I allude.

As to my little apostrophe, with its informal breaking off, I confess myself to be a naturalist in style, too; but I cannot allow that what comes to one spontaneously is a "wilful and wanton lapse," or, indeed, any lapse, except, perhaps, from something more laboured. Yes, I did call the long-tailed tit "birdikins"—"dear little birdikins"—after watching all his pretty little ways for some time. Well, and is he not a "dear little birdikins"? I appeal to all who have watched him, too, and can let their dignity go sometimes, when it would be rather in the way than otherwise. Let them confess: the long-tailed tit only—nothing more stately. Marry! I would not have addressed an eagle so. "Monsieur Jourdain sait son monde."

Edmund Selous.

*** The point is that instinct suggests the right thing to do, and does not foster superfluous activities. This is the mystery, that it does not in this case tell the wren where to stop. Mr. Selous is free to retain his views of style, though his arguments on the subject, so far as we understand them, will hardly carry weight with any student of it.

Science Gossip.

Major L. A. Forbes, of the Indian Army, has been appointed secretary of the Royal Scottish Geographical Society, in succession to Lieut. Ernest Shackleton, R.N.

Recent Parliamentary Papers include the Report on the Government Laboratory for the Year ended March 31st (3*d.*); the Preliminary Report of the Departmental Committee on the Royal College of Science, including the Royal School of Mines, and Questions connected Therewith (1½*d.*); and Part II. of the Report on the Sea and Inland Fisheries of Ireland, this part being entitled 'Scientific Investigations' (8*s.* 7*d.*).

Prof. Perrine, of the Lick Observatory, has a note in vol. xvii. No. 102 of the *Publications* of the Astronomical Society of the Pacific on the orbits of the sixth and seventh satellites of Jupiter. The former was under observation from December 3rd, 1904, to March 22nd, 1905, and the latter from January 2nd to March 9th, 1905. He was obliged to discontinue his calculations of their orbits on account of the necessary preparations for the solar eclipse this month, but Dr. F. E. Ross, now attached to the Carnegie Institution at Washington, has taken up the work under the direction of Prof. Newcomb. His result for the sixth satellite is that it is revolving round the planet in the same general direction as the Galilean four and the small inner fifth, but at a mean distance from Jupiter of about seven million miles, in a period of 242 days, with an eccentricity amounting to 0·16, and an inclination to the plane of Jupiter's equator of about 30°. For the seventh satellite his work is not yet finished. Prof. Perrine's preliminary calculations make it probable that its mean distance from the planet is about six millions of miles, the period about 200 days, eccentricity of orbit 0·36 (nearly equal to that of Holmes's comet of 1892), inclination nearly the same as the other, about 30°, but motion apparently in the reverse direction, which, if confirmed, will render it a specially interesting body. The disturbing action of the sun on these two satellites must be very great.

Dr. A. Wilkens, of Ottakring, Vienna, has an elaborate paper in No. 4036 of the *Astronomische Nachrichten* on the possible effects of the disturbances produced by the small planets considered as a ring on the motions of some of those bodies and of comets. Remarking that Encke's comet is out of that ring (within it) during only about one year of its 3⅓ years' period, he considers it very likely that its anomalous motions may thus be explained.

FINE ARTS

A Grammar of Greek Art. By Percy Gardner, Litt.D. (Macmillan & Co.)

Much has been written on Greek art for specialists, but the popular books on the subject are mostly poor things. Unfortunately archæology, like folk-lore, is capable of being misused by the ignorant. Some ten years ago the publishers of school-books suddenly became aware of the existence of archæology, and something put it into their heads to issue annotated school-books illustrated with pictures. By thoughtfully choosing their editors from as many different schools as possible they secured a foothold for their series in the schools of those editors who naturally felt that their own books were the best. But the publishers did not by this means secure that their editors, knew anything about archæology. Most of them did not, but chose their pictures by the aid of friendly advice or the useful works of Baumeister and others. A certain uniformity is observable in these books, the pictures and the notes being of much the same value. Prof. Gardner alludes, with just reprobation, to the pictures. It is for this worthy class of persons—editors and teachers who, with the best intentions, have not the necessary knowledge—that Prof. Gardner writes this book. If it does not tell them all that can be said of Greek art, it does show them how much there is for them to learn, and it sets forth the principles of the subject clearly and well. It sketches the history of the arts in Greece, and shows how the history explains the conventions—a very necessary thing if we are to understand, for example, how the vase-painters combined a wonderful mastery of the line with a rudimentary sense of colour and an ignorance of perspective; how the figures on a bas-relief appear to differ in size according as they stand or sit. The book also deals with the principles of interpretation. It shows the lines on which personification went, the rules which guided the artist's choice of his subject. It insists on the essentially ideal character of Greek art. It distinguishes idealism from symbolism, and shows how the appeal of Greek art is to the intellect first, and not to the emotions.

It is impossible for us to follow Prof. Gardner through all the subjects dealt with in his book. They are painting, sculpture, architecture, and coins, the relations of art to literature, and a number of collateral matters, such as the treatment of myths in art and the idealizing of historical events in art and poetry. In all his treatment is suggestive, not exhaustive. Information he supplies, but his aim is rather to teach how

to understand. He tells us something of origins, but warns us not to confuse origin with meaning. Not least of his services is to show in each case how the art was affected by its conditions: sculpture by its material, vase-painting by the space to be filled, and so forth. We carry away with us the conviction that the essence of good art is to be restrained within limits. The limits of the Greek artist brought out his best skill, and when they were removed the art died. Take architecture, for instance—how narrow the limits of variety in a Doric temple! At a glance, all look alike, as a flock of sheep look all alike to a townsman. Yet before a Doric temple can satisfy the eye and the mind, countless experiments in proportion and arrangement had to be made; and a study of the Parthenon discloses the most amazing subtleties of curve in every part where the superficial observer sees only straight lines. So with the filling of metopes or the inside of a cylix. The great artists filled these with groups which look natural and graceful. What a unity this gives to a whole design, what a feeling of the reign of law and order!

But is this kind of thing of any use to us? some one is sure to ask. Actually it is. How many architects know that the decoration of the members of a building ought to be in inverse proportion to their usefulness structurally? If they did, how much the sensitive eye would be spared! Think of a Greek in presence of a dining-room table, with its legs carved in bulges, the thinnest part close to the top, and not one-third of the diameter of the thickest. But, apart from the ridiculous and meaningless ornament of to-day, and our utilitarian blindness to the beautiful, Prof. Gardner has a much-needed warning on the moral danger of ugliness. We are beset by a plague of ugliness and dullness, which is gradually deadening our sense of the beautiful altogether. We are at the same time losing our ideals. The only hope is a return in some measure to the ideals of Greece.

We are so convinced of the value of this book that we have no wish to seek out its faults; but one or two may be indicated. Now and then Prof. Gardner is a little far-fetched in his explanations. Thus the many-breasted "Diana of the Ephesians" is supposed to indicate "the rich and abundant life of the valley of the Cayster" (p. 105, cp. 97, 117). He omits a very instructive topic, and one which he has already made his own, the Greek sepulchral monuments; a page or two might have been given to the contrast between the Ceramicus and Kensal Green. Something might have been said of the relation of art to Aristophanes; there are a few traces in vase-paintings of the representation of comic scenes, and most people will remember the chorus of birds. Lastly, the English style leaves something to be desired. These things, however, are trifles in comparison with the sterling worth of the book.

Classical Myths in Art. By Julia Addison. (Werner Laurie.)—Greek mythology played so important a part in the imaginative development of the Renaissance, it appealed with such special force to those artists who are most sympathetic to the modern mind, that the idea of grouping the representations of Greek myths in Renaissance art might have had fruitful and delightful results. We might have had resumed all that recent research has brought to light as to the literary sources whence the artists drew their inspiration, and together with this an analysis of their mental attitude to Greek religion—an attitude which varied constantly throughout the great period of later mediæval and Renaissance art. Unfortunately the present work shows little sense of the great opportunities of the subject. We have a short narrative of the various incidents in Greek mythology which lend themselves to pictorial composition, followed by a list of the pictures which illustrate them. There is but little sense of the relative importance of these examples, and there is no adequate discussion of the literary sources of the various compositions. Nor are the lists complete; no mention is made of Cima's delightful pictures of 'Endymion' and 'Pan' at Parma; Bellini's 'Bacchanals' at Alnwick is left out, while his allegory at Venice, which the late Dr. Ludwig has shown to be illustrative of mediæval theology, is mentioned as a Bacchus in his car, and the picture, which is undoubtedly a late work by Bellini, is doubtfully ascribed to his early years.

No mention is made of Piero di Cosimo's 'Battle of Centaurs and Lapiths,' a most important work for its indication of the attitude of the early Renaissance mind towards classical mythology. Nor can we find any discussion of Wickhoff's theories about the meaning of Giorgione's and Titian's "poesies." Altogether the book must be considered a disappointing treatment of an interesting subject.

The Church Plate of Pembrokeshire. By J. T. Evans. (W. H. Roberts.)—This handsome volume gives careful and well-illustrated accounts of all the church plate of Pembrokeshire, as well as the chantry certificates for the county of 1548, and extracts from the Church Goods Returns of 1552–3. The introductory chapter sets out clearly the now oft-told tale of the early history of ecclesiastical vessels in the Christian Church, and their later history in these islands. Mr. Evans has, however, fallen into one rather deep pitfall. On pp. xv and xvi of the introduction he deals with the commission in the time of Queen Mary, stating that "the final *coup* [of church spoliation] was reserved for Queen Mary, the Pope, and Cardinal Pole." Mr. Evans distinctly commits himself to the notion that the queen was working in this direction for her own aggrandizement, like her father and her brother, adding: "It is interesting to note that the 'sweepings' which Mary now seized and appropriated amounted to a considerable sum." Mary Tudor has enough sins of her own to answer for, without being pilloried by the side of her royal relatives as a pillager of churches. Mr. Evans is apparently unaware of the royal warrants of that reign for the restoration of church goods, and of the money value sent to the different parishes where the goods had been melted down. The returns for Hampshire are extant, showing that the money compensations from the Royal Treasury in 1556 to the different parishes varied from 26*l.* 8*s.* to 3*s.* 4*d.* Mary's commission of inquiry as to church goods of the year 1555 was clearly undertaken as a pious work of compensation.

There is no mediæval plate now left in Pembrokeshire. The Elizabethan chalices number fifty-nine, and their paten-covers thirty-seven. They vary in date from 1568 to 1599; the majority, as in other counties, are of the years 1574 and 1575. A single silversmith, whose mark consists of four small ovals conjoined, but whose name is unknown, made all the Elizabethan plate—thirteen pieces. The same mark is common throughout the diocese of St. Davids.

Pembrokeshire affords many examples of plate of secular origin being afterwards utilized for church purposes. There are four instances of the seventeenth century, ten of the eighteenth, and one of the nineteenth. The best of these is the beautiful beaker-cup at Castle Bigh; though dated 1630, it was not given to the church until seventy years later. The instance of last century occurs at St. Issell's, Saundersfoot. It is described as "an uninteresting secular cup with arm-shaped bowl resting on a baluster stem"; on the base is inscribed, "The gift of the Mercers' Company to commemorate the Jubilee of Queen Victoria, 1887"; and again, "Presented to the Church of St. Issell by H. A. J. Totton, A.D. 1900."

The recently revived interest in pewter gives additional importance to the work in that metal discovered by Mr. Evans. It is stated that the Pembrokeshire church pewter includes eight chalices, eight flagons, seven credence-patens, eight font-bowls or basins, a pair of candlesticks, a small dish, and about sixty-one plates. The oldest dated pewter is the chalice and cover at Clarbeston, which is of the year 1709; but much of the remainder is probably seventeenth century. We feel some doubt as to the correctness of the term "font-bowls" as applied to the small circular pewter basins. May they not have been alms-basins? The use of basins instead of fonts was ordered by the Commonwealth, and it is possible that some of these are survivals of the days of the Directory. Font-bowls are occasionally mentioned in mediæval inventories and wills; in those cases they were used for holding under the child's head during baptism by affusion. It is strange to find that in three parishes and in one chapelry the communion plate consists solely of pewter vessels.

Mr. Evans notices "the somewhat dispiriting fact" that the Pembrokeshire churches possess only a single piece of plate with an inscription in the Welsh tongue; he attributes this to the Anglicizing spirit that has prevailed in high places throughout the thirteen counties since the Tudor period. The solitary instance is an inscription on a silver alms-dish, of the year 1858, at Cilgerran, and even this contains an error.

The Jain Stūpa and other Antiquities of Mathurā. By V. A. Smith. (Archæological Survey of India, Imperial Series, XX.)—The thanks of scholars and archæologists are due to the Indian Government for entrusting to Mr. Vincent Smith the publication of the fine series of plates prepared under the *régime* of Dr. Führer. Some years ago the late Dr. Bühler pointed out in detail the importance of the successive discoveries now illustrated for the history of the Jain Church, one of the oldest and least altered of the existing religious communities of India. Mr. Smith has reprinted Dr. Bühler's notes and readings of inscriptions, adding brief comments of his own. But investigators in many different fields will find new matter in this book. For example, at p. 13 we notice an account of a building which may well be one of the oldest in India of which remains exist. Students of design and of symbolism will find abundant matter in the illustrations, and, above all, fresh material will be found for religious iconography. The supplementary portion of the book containing some Buddhistic fragments has been already so used by M. Foucher (author of 'L'Iconographie Bouddhique') in his paper on the Græco-Buddhist sculptures at Sikri. It is much to be desired that the present and similar sculptures of various ages should be worked up into an authoritative book on Jain iconography.

COINS AND MEDALS.

Oxford Silver Pennies from A.D. *925–*A.D. *1272.* By C. L. Stainer. (Oxford Historical Society.)—This work has been issued, as will be seen

from its title, under the auspices of the Oxford Historical Society, which, during its somewhat short existence, has published a considerable series of volumes on the history, registers, records, and topography of Oxford and its colleges. It is a society which is fulfilling the object of its foundation in a most exemplary manner, and deserves every support. The last volume which it has issued deals with the early coinage of Oxford, and is an interesting contribution to the series. It is often said that the activity of a mint is a mark of the increased importance of the town or place in which it was situated, and this seems to be illustrated by the coinage of Oxford.

The coins here described are of the so-called silver-period of English numismatics, consisting of silver pennies only, and extending from the time of the Anglo-Saxon king Athelstan, A.D. 925–40, to the reign of Henry III. The mint seems to have ceased operations soon after 1248, when considerable reforms took place, and a few years before an attempt was made to introduce a gold currency in this country. To judge from its coinage, Oxford would appear at first not to have been a place of much note, since from Athelstan to Ethelred II. the issue of money there was not only very limited, but somewhat intermittent, several reigns not being represented. Under Ethelred II. the supply increased, and from that time till virtually the middle of the reign of Henry III. the output was very considerable, especially under Canute, Harold I., Hardicanute, and Edward the Confessor. Even of Matilda, whose coins are excessively rare, Oxford can boast an example. The various types of the coins are the same as occurred at other mints, most of the dies, at least from the time of Ethelred II., being supplied from a common centre, probably at first from Winchester, and later from London. In this respect Oxford does not differ from other mints in England.

In his preface Mr. Stainer gives some interesting particulars as to the status of Oxford as shown by the activity of its mint, the evidence of finds, the making of the dies, the manner of conducting the assays, the position of the moneyers who were appointed to superintend the issue of the coins, the earliest coins to be attributed to Oxford, and the nature of the mints, whether royal or otherwise. Much interesting information has been collected, but Mr. Stainer has expressed views in several instances which will not, we think, be accepted by English specialists who have paid some attention to this particular branch or section of British numismatics. As regards the expression a "royal" or "private" mint, the writer says that there has been "a great deal of loose writing and guesswork" in recent years; and that there was no such thing as a "private" mint, except in the lawless times of King Stephen. Some strong arguments have lately been adduced to show that at least for a short period after the Conquest there existed in England two classes of mints: one under the immediate control of the king, which has been termed "royal"; the other granted by the king, but arising out of special grants of lands to a lord of the manor, which has been called "private." The expression "private" is not happy; we would rather suggest "feudal," since the lords of the manors were feudatories of the king. This would bring the English coinage into lines similar to those which existed at the same time in France. The arguments in favour of this classification, or rather division, are certainly not to be lightly treated; but those who originated the idea have rather spoilt their case by attempting to prove too much. There certainly existed two classes of mints in Anglo-Saxon times, as well as after the Norman Conquest, for we have those which were under the immediate control of the king and those which were under the control of abbots, bishops, and archbishops, who, however, received their rights of coinage from the king, and from him only. It is this theory, which has been extended, which Mr. Stainer dismisses in a few words, but, in our opinion, it deserves some consideration.

The next point is that of the "Orsnaforda" coins which bear the name of Alfred, and which have hitherto been attributed to Oxford. On account of the difficulty of connecting the mint-name "Orsnaforda" with that of Oxford, Mr. Stainer has excluded a description of these coins from his lists, and, apparently on the evidence of the Cuerdale hoard, which was found near Preston in Lancashire in 1840, he declares this not to be a West-Saxon coinage; therefore it can only be Norse. This find consisted of about 7,000 coins, mostly Anglo-Saxon of the time of Alfred and Northumbrian, and about 990 foreign deniers and a few Oriental pieces which had found their way from the East through Russia to the Baltic. The portion not Northumbrian had evidently been collected by the Danes in their raids in North Germany, France, and the south of England. In his 'Early History of Oxford' Mr. Parker has produced strong evidence to show that the river at Oxford was originally called the Ouse, and that it was from that river that the island of Ouseney received its name. The earliest mention of Oxford as "Oxenaforda" occurs in the Anglo-Saxon Chronicle under the year 912, which is probably nearly thirty years after the coins in question were struck. It seems, therefore, not at all improbable that the land contiguous to Ouseney island may have received the name of Ousnaforda, which was converted, possibly by the die-engraver, into "Orsnaforda," and which some years later was changed into "Oxnaford." This has been the view held by numismatists—perhaps a little speculative—but Mr. Parker has shown that similar changes occurred in the names of other places.

As an assistance to his argument that these "Orsnaforda" coins are not Anglo-Saxon, Mr. Stainer also draws attention to their similarity in type to an uncertain and probably unique Norse penny bearing the name of Sihtric, but he leaves out altogether the stronger evidence that the type—*i.e.*, of the obverse—is precisely similar to undoubted coins of Alfred struck at Exeter and Winchester. The fact is that the so-called coin of Sihtric was an imitation of Alfred coins, and not *vice versâ*.

Not content with attributing the "Orsnaforda" pieces to a Danish source, Mr. Stainer goes much further and pronounces the so-called "pall" or "pallium" coins bearing the name of Alfred, and also those struck at Canterbury with the legend "Rex Doro," to be Danish. He thus robs Alfred of his main coins, and supposes them to be Danish, on the plea that "their style alone should have been sufficient to show this." Two things are very evident: one is that Mr. Stainer does not appear to be able to distinguish between original coins and their imitations; nor is he sufficiently acquainted with early English coins to tell what are of Anglo-Saxon fabric and what of Northumbrian. He has in consequence been guilty of at least one of the faults he has found in others, that is of "guesswork." And he has done it to such an extent that we are sure no numismatist who has worked at this section of English coins will endorse his views.

We have said more about this work than we originally intended; but we must note one more point. In mentioning the assay which took place in the reign of Henry III., Mr. Stainer says that it was held in the twenty-seventh year of that reign, *i.e.*, 1242-3, and he gives as his authority 'The Red Book of the Exchequer,' ed. H. Hall. In the original account given of that assay four Oxford moneyers are mentioned, and of these we have coins, but as they are of the "long-cross" type they could not have been issued before 1247-8. The discrepancy between these two dates, 1242 and 1248, should have been noticed, the more so since the document in question tells us that the assay was held "for the examination of the new as well as the old money." There is plainly a mistake, and it has arisen from the circumstance that a wrong reading of the document has been given. The date in the original is the "thirty-second year" of Henry III., *i.e.*, 1247-8, which is the year in which the new coinage was first issued and the four moneyers worked.

Medallic Illustrations of the History of Great Britain and Ireland. Plates XXI.–XXX. Printed by Order of the Trustees of the British Museum. (Longmans & Co.)—This set of ten fine plates of the historical medals of the British Museum deals comprehensively with the reign of Charles I., beginning in 1630 and ending with the time of his execution. The number illustrated on these plates amounts to one hundred and sixty, and in the great majority of cases impressions are given both of the obverse and reverse.

It is surprising to notice how thoroughly the medals follow and throw light on the multiplicity of incidents connected with this reign, and how they also form a portrait gallery of most of the distinguished men of the day. The brief mention of the subjects of a few of these medals may tend to show the exceeding interest pertaining to the whole collection.

The first was struck by Nicholas Briot in gold, silver, and copper. It was issued in assertion of England's claim to the rule of the sea, as maintained by Selden, and in accordance with Charles's instructions to his Minister at the Hague:—

"We hold it a principle not to be denied that the King of Great Britain is a monarch at sea and land to the full extent of his dominions. His Majesty finds it necessary for his own defence and safety to reassume and keep his ancient and undoubted rights in the dominion of the seas."

The medals issued in silver, bronze, and lead in 1636 to commemorate the treaty between the English and Dutch, whereby the latter were to pay 30,000*l.* for permission to fish in British waters, are excellent of their kind. The destruction of the Spanish fleet off Dover by the Dutch in 1639 gave rise not only to a special medal commemorating the event, but also to another, cast by Nicholas Briot, reasserting Charles's claim to the dominion of the sea.

Both the birth and baptism of Prince James, Duke of York, in 1633 gave rise to silver medals. The inscription on the obverse of the former intimates that a thousand cohorts were not so capable of strengthening the succession to the throne as the birth of a second son to the king. In the light of the Duke of York's eventual conduct as James II., this high-flown expectation can scarcely be said to have been realized.

The suppression of the Scotch rebellion of 1639; the visit of Henrietta Maria to Holland in 1642; the declaration of Parliament, the erection of the Royal Standard, and the battle of Edgehill in the same year, are among the more striking events commemorated by medals. The memorial medals of the death of Charles I. are numerous and varied.

Among the more interesting specimens of an individual character, one of 1634, in silver, said to be unique, commemorates William Blake, of Bridgewater, a younger brother of the celebrated admiral. He was a Fellow of Wadham, and a man of considerable learning, holding a doctor's degree of the University of Padua. His features are singularly fine and intellectual. Very different is the presentment of the handsome but coarse features of Endymion Porter, a favourite of both James I. and Charles I., on a medal struck in 1635. There are several memorial medals of the execution of William Laud, Archbishop of

Canterbury, in 1645. The most interesting of these, though not a portrait, is the unique gold piece (of which the British Museum has an electrotype), engraved upon a flat piece of gold, the produce of "eighteen ten-shilling pieces and eight five-shilling pieces," given by Laud upon the scaffold to John Herne, the son of his counsel at his trial.

Some of the other persons commemorated by these medals are (in order of date) William Seymour, Earl of Hertford; Cecil, Lord Baltimore, and his wife, Anne Arundel; Frederick and Elizabeth of Bohemia, who were aided by British troops; Thomas and Margaret Cary; John Stewart, Earl of Traquair; Richard Weston, Earl of Portland; Sir William Ducy, Bart.; Henry, Duc de Rohan, one of Charles I.'s godfathers; Bishop Juxon; Thomas Wentworth, Earl of Strafford; Robert Devereux, Earl of Essex; Ferdinand, Lord Fairfax; Sir William Waller; John Hampden; Edward Montagu, Earl of Manchester; Sir John Hotham; Sir Thomas Fairfax; Prince Rupert; Murrough O'Brien, Lord Inchiquin; Sir Sidenham Pointz; Charles Seton, Earl of Dunfermline; John Maitland, Earl of Lauderdale; Col. Charles Fleetwood; Giles Strangways; and Charles Louis, Elector Palatine.

Catalogue of the Greek Coins of Cyprus. By George Francis Hill. With one Map, a Table of the Cypriote Syllabary, and twenty-six Plates. Printed and published by Order of the Trustees of the British Museum.—The coins of Cyprus are among the most difficult series which numismatists have to study. Besides the ordinary problems of numismatics, we have the syllabary to deal with on the one hand, and on the other an admixture of Oriental cults and strange customs, whilst the division of the island into a number of small kingdoms from the earliest times of coins is another source of difficulty. Cyprus seems to have long kept traces of the age which preceded the invention of coins, when articles were used for barter, or rings of gold, silver, and bronze were current, their value being estimated by weight. A large number of these rings have been found, and their use, as here indicated, can hardly be doubted in the face of the practice in other parts of the world; but the editor does not find that they conform to any standard of weight. The titles πέλεκυς and ἄγκυρα for coins or weights, attested by inscriptions and Hesychius, are evidence for an earlier currency in axes and hooks. The reader will remember the axe of Tenedos, and the numerous miniature or dummy axes from Olympia, Mycenæ, Crete, and elsewhere.

The Cypriote coins come nearest to the Persic standard. In the fourth century a new standard was introduced under the influence of Rhodes. There is hardly any trace of Attic influence. As regards interpretation of the types, that eternal battleground, it is worth noting that no trace is found on coins of Amathus, and hardly any at Citium, of the cult of Aphrodite, although she was important in both places. It is fanciful to see a reference to her in the astragalus (p. xxx). Herakles-Melcarth is commonly represented on the reverse, with a lion on the obverse; indeed he is a favourite in other parts of the island. Aphrodite, however, appears often enough at Paphos, Salamis, Citium, and elsewhere.

Among the noteworthy types are the lotus flower (or rose?), sphinx, star, thunderbolt; there may be some reference to ancient articles of barter in the vase, tripod, wheel, possibly in the bow-case, the ram and goat, and mare with foal. But most of the birds and animals—bull, crocodile (?), dove, eagle, goat, hawk, lion (very common)—are more likely to refer to some divinity with which they are connected. A very interesting type is that of the temple, on coins struck under the Roman empire; the shrine discloses a conical pillar or stone, and several of these cones have actually been found in the excavations.

The introduction contains a brief sketch of the history of each city, with a general account of its coins. The catalogue follows the usual system, which is now too well known to need description. At the end are indexes of places, types, emperors, symbols and adjuncts, countermarks, eras, kings and rulers, magistrates' names, remarkable inscriptions, and a general index of subjects. We must not omit to mention a table of the Cypriote syllabary, clearly printed from a new fount of type.

The plates are excellent, and include specimens of coins which are not in the Museum, but are necessary for the student; these are reproduced from casts.

The work has been done with the thoroughness and accuracy for which these catalogues are famous. We are glad to see that Mr. Hill is cautious; he does his best to classify all his coins, but he is not led astray by conjectures, however brilliant, from the plain path of fact.

SIXTEENTH-CENTURY VIEWS OF ROME.

Ty-Gwyn, Caerwent, Chepstow, July 24th, 1905.

Among the most interesting views of Rome in the sixteenth century which are known to us are four panoramas in pen-and-ink with sepia wash, executed by Anton van den Wyngaerde in 1558-61, which are preserved in the Sutherland Collection in the Bodleian Library. Three of these have been already published—the first by Prof. Lanciani in the *Bullettino Comunale*, 1895, 81, and pl. vi.-xiii.; the second by myself in the same periodical, 1900, 28, and pl. iv.-ix.; and the third, taken from the Janiculum, also by me, in the *Mélanges de l'École Française*, 1901, 47, and pl. ii. Mr. St. Clair Baddeley has recently acquired a fine drawing which is, I have no doubt, the original of the third of these. Like them, it is executed in pen-and-ink, with sepia wash, and, though about five centimètres shorter, corresponds in other respects almost absolutely with the panorama in the Bodleian; the details are, however, more carefully and clearly indicated in it than in the latter, in which there are small errors in the representation of several buildings. Both drawings appear, however, to be by the same hand, and I am therefore inclined to conjecture that Mr. Baddeley's drawing, which is made upon five separate leaves, taken probably from a sketch-book measuring about 284 by 210 millimètres (the total length is 1,225 millimètres, but one leaf has been cut shorter than the rest), is the original panorama made on the spot, while the Bodleian drawing is a copy made subsequently by Wyngaerde himself, to the order, perhaps, of one of his patrons. I can only regret that the original did not come to my notice earlier, as the slight inaccuracy of the copy has in some cases led me into erroneous identifications.

Thomas Ashby, Jun.

A LOST LETTER BY REMBRANDT.

Heeregraft 5, the Hague, July 31st, 1905.

Of the seven letters which Rembrandt wrote to Constantijn Huygens, the private secretary of Prince Frederik Hendrik of Orange, six are known to belong to public and private collections in Holland, England, and Germany.

The fate of the seventh, however, is unknown. It belonged to the famous collection of Baron Verstolk, which was publicly sold in 1867. A few years later, in 1871, the firm of Martinus Nijhoff at the Hague sold it to Messrs. Ellis & Green, of New Bond Street, London, and since then all traces of it have been lost.

The writer is preparing a fresh publication of all the existing documents concerning Rembrandt, and is very anxious to be informed where this letter is, and also to have a transcription of it made. The letter is dated February, 1636.

In this letter Rembrandt informs Huygens that he is hard at work on the three pictures, of the Entombment, the Resurrection, and the Ascension, which the Prince in person has ordered. The Ascension is nearly ready; of the others more than half of the work is done. Rembrandt asks whether the Prince wishes to receive all three at the same time, or first the finished one. Rembrandt offers at the same time some of his last etchings to Huygens, and says that his address is next to the Lyonese office in the New Doelenstraat, Amsterdam.

If there should be among your readers anybody who can give me information about the fate of this letter, I hope to be favoured by his kind report. Dr. C. Hofstede de Groot.

Fine-Art Gossip.

At Leighton House the following works by G. F. Watts are being exhibited for the first time: 'Humanity in the Lap of Earth,' study of figure for 'Chaos,' 'Peace and War,' a group of heads painted in miniature on ivory, and portraits of the late Hon. William Owen Stanley, Mrs. Hugh Smith, and Sir Baldwin Leighton, seventh baronet.

Mr. M. H. Spielmann has written a work on Kate Greenaway, which will be published before long by Messrs. Putnam. The book, which is to be illustrated in colour from material mostly unpublished, will contain many letters from Ruskin to Miss Greenaway and her replies, the latter accompanied by pen-and-ink sketches.

The exhibitions recently held by the International Society of Sculptors, Painters, and Gravers at Manchester and Burnley have been so successful that the city of Bradford has arranged to hold an exhibition of the works of the members of the Society in the Cartwright Memorial Hall. This exhibition will remain open for three months from October 1st.

The National Galleries of Scotland Bill has just been brought in by the Government. It probably has no chance of passing this session; but it establishes a Board for the purpose of managing the National Galleries of Scotland, and for such other purposes connected with the promotion of the fine arts in Scotland as may be prescribed.

Mr. E. Alfred Jones is at present engaged in preparing for publication by Messrs. Bemrose & Sons a volume on 'Old English Gold Plate,' with numerous illustrations of all the existing specimens in the possession of His Majesty the King, the Dukes of Devonshire, Norfolk, Portland, Newcastle, and Rutland, and other noblemen, and the colleges of Oxford and Cambridge. He is also writing for the same publishers volumes on 'The Church Plate of the Diocese of Bangor' and 'The Church Plate of the Isle of Man.'

The excavations at Caerwent, the site of the Romano-British city of Venta Silurum, which have now been in progress for five seasons, were reopened last week under the supervision of Mr. Ashby. Attention is now being directed to the South Gate, which forms an interesting parallel to the North Gate, though it is in an even better state of preservation, almost half of the archway being still in existence. The entrance in both cases was blocked, probably in Roman times when the natives were hard pressed by the attacks of hostile tribes. When the exploration of the gateway is completed work will be resumed in the fields adjoining the North Gate and the Amphitheatre. The excavations are entirely dependent on the support of the public, and subscriptions and donations will be gratefully received by the hon. treasurer, Mr. Gerald Grey, Collina, Bathwick Hill, Bath; or the hon. secretary, Mr. A. Trice Martin, Bath College, Bath.

Lord Curzon has commissioned an Italian "mosaicista" from Florence to go out to India to restore the panels of inlaid black and coloured

marbles in the wall behind the great throne in the Diwan-i-Am at Delhi. These marbles in pietra dura were the work of Florentine artificers, under the superintendence of Austin de Bordeaux, employed by the Mogul emperors Jehangir and Shah Jehan. Many of these panels fell to pieces through neglect, but the majority of them were picked out during the Mutiny. Some of these were identified at the South Kensington Museum, and recovered at the instance of Lord Curzon, who had them replaced in the wall of the audience chamber. There are now over one hundred panels to be restored, and the work will take at least two years.

MUSIC

SONGS AND HYMNS.

Ten Songs with Piano Accompaniment (Posthumous). By Ottokar Novácek. Edited by Hermann Hans Wetzler. (New York, G. Schirmer; Leipsic, Fr. Hofmeister.)—These songs testify to the composer's emotional nature, also to his great skill. He makes you feel that he has caught the spirit of the words, and that he is trying by the aid of tones to intensify them. Poems of ardent, strongly impassioned character seem to have special attraction for him; for these he has found rhythms and harmonies in perfect keeping. In some of the songs—as, for instance, in 'Du späte Rose,' which has a vague affinity with Schubert's 'Trockne Blumen,' or in 'Ich will dich flieh'n'—effects are produced by comparatively simple means, whereas in other numbers there is a certain obviousness; the means by which the results are obtained are too evident. But everything is so ably carried out—we note such rhythmical variety, such impressive harmonic colouring, such absence of all that is commonplace—that, even if the art be not always properly concealed, the songs are of no ordinary kind. If composers take old masters as models they are most apt to become cold and formal; on the other hand, if they follow modern masters they are apt to attach too much attention to harmonic colouring, a branch of the art which has been highly developed from Schumann down to the present day. Most of the words of these ten songs are by Josef Huggenberger, and the excellent English versions are by Henry G. Chapman.

Songs of Syon. Edited by the Rev. G. R. Woodward. (Schott & Co.)—The author in his brief preface states that this collection, which has engaged his attention for a period of over thirty years, is "an honest endeavour to raise the standard of English taste, by rescuing from oblivion some of the finest melodies of the greatest musicians of the sixteenth, seventeenth, and eighteenth centuries." Among the composers from whom examples are taken are to be found Heinrich Isaak, Claude Goudimel, Seth Calvisius, J. Hermann Schein, J. S. Bach, Tallis, Tye, Dowland, and Richard Wagner, whose two chorales from 'Die Meistersinger' are here given by permission of Messrs. Schott & Co. The utmost pains have been taken to provide suitable words, and these have been published simultaneously and in the same order by the Plainsong and Mediæval Music Society, 44, Russell Street, London. This collection of hymn tunes is one of special value and interest.

Worship Song with Accompanying Tunes. Edited by W. Garrett Horder. (Novello & Co.)—In preparing this musical edition of 'Worship Song' the editor has retained the old familiar tunes to well-known hymns, while for newer hymns, associated with tunes which appeared to him unsatisfactory, fresh music has been composed by "the most gifted tune-writers of the day," among whom we find Dr. W. D. Maclagan, the Rev. A. Havergal Shaw and the Rev. R. F. Dale, and Messrs. E. D. Rendall, M. Southgate, and Donald F. Tovey. The volume has been carefully prepared, and certainly seems fitted, as the editor believes, "to give expression to the thoughts and feelings of Christian people in this new century."

Musical Gossip.

The programme of the opening night of the Promenade Concerts at Queen's Hall on Saturday, the 19th inst., contains no novelties, but many old favourites, such as Hérold's Overture to 'Zampa'; Mendelssohn's Scherzo from 'Midsummer Night's Dream'; Schubert's Ballet Music in G from 'Rosamunde'; and Berlioz's vigorous 'Hungarian March' from 'Faust.' The vocalists will be Miss Lillie Wormald and Messrs. Lloyd Chandos and W. A. Peterkin.

We shall be able next week to announce the winner in the Rubinstein Competition, which was to take place on August 3rd, at the Salle Erard in Paris, under the presidency of Herr Leopold Auer, Director of the Conservatoire of St. Petersburg.

M. Charles Lecocq, composer of the once popular 'Fille de Madame Angot,' has just successfully undergone a severe operation. The composer last month celebrated the seventy-third anniversary of his birth.

The Amsterdam Wagner Society intends to give a yearly performance of 'Parsifal'; also one of 'Tristan und Isolde' during the coming autumn.

'Ramuntcho,' libretto in four acts by MM. Pierre Loti and Guiard, music by M. Gabriel Pierné, will be produced at the Odéon, Paris, during the forthcoming season.

On July 21st the seventy-fifth anniversary of the independence of Belgium was celebrated at Brussels. Two works were specially written for the occasion: a choral 'Marche Triomphale,' by M. Gilson (poem by M. Vierset), and 'Jubelgalm,' by M. Jan Blockx, Flemish words by M. De Tière. These were performed on a stage erected in the Place Poelaert. A solemn 'Te Deum' for chorus, organ, and orchestra, also written expressly for the occasion by M. Tinel, composer of the oratorio 'St. Franciscus,' given at the Cardiff Festival of 1895 under his direction, was previously performed at St. Gudule. To-morrow there is to be a monster concert in the Grand' Place, the programme of which will include M. Jan Blockx's revised 'Gloria Patriæ,' and the cantata composed by M. Paul Gilson for the inauguration of the Exhibition of 1880.

Herr Fritz Steinbach has been invited by the Philharmonic Society of New York to conduct their concert on March 24th, 1906. This will be the Cologne conductor's first visit to the United States.

DRAMA

Dramatic Gossip.

In reopening on September 11th the Court Theatre Messrs. Vedrenne and Barker, the new lessees, count greatly upon Mr. Bernard Shaw. 'John Bull's Other Island,' with Mr. J. H. Barnes as the Priest and Mr. A. E. George as Mat Haffigan, will be given for six weeks, after which it will be replaced by 'Man and Superman,' in which also Mr. Barnes will appear. 'The Philanderer' of the same author is to be given at afternoon entertainments; and a new play, the heroine of which is a Salvation lass, is to be subsequently produced. In addition to these entertainments, 'The Return of the Prodigal,' by Mr. St. John Hankin, is to be produced also on afternoons, while 'The Voysey Inheritance,' by Mr. Granville Barker, is also promised.

It will not be with Shakspeare, as has often been stated, that Mr. Forbes Robertson will open the Scala Theatre in Tottenham Street, but with a romantic play in blank verse, the work of an untried dramatist. He will be supported by Miss Gertrude Elliott. The first production is fixed for September 16th. Introductory music is being supplied by Mr. Edward German.

Mr. Willard's purpose of appearing in London in September has been abandoned, and he will return to America.

Previous to its appearance in London next spring, Mr. W. L. Courtney's rendering of 'Le Dédale' will be given by Miss Olga Nethersole in Washington and other American cities. Alteration does not, it is stated, extend far beyond compression, one act being excised.

The production at the St. James's by Mr. and Mrs. Kendal of 'Dick Hope,' by Mr. Ernest Hendrie, will, it is anticipated, take place on September 9th. The piece was first given in Manchester on November 20th, 1903, and in the following month at the Coronet Theatre, Notting Hill. Mr. and Mrs. Kendal will be supported by the author, Mr. Bassett Roe, Miss Mary Jerrold, and Miss Jessie Moore.

In the production on the 21st inst. at the Comedy of Mr. Weedon Grossmith's 'The Duffer,' Miss Gertrude Kingston, Miss Annie Hill, and Mr. Henry Ainley will appear.

In the representation of 'The Merchant of Venice,' which will succeed at the Garrick 'The Walls of Jericho,' Mr. Bourchier will be Shylock; Miss Violet Vanbrugh, Portia; Miss Muriel Beaumont, Nerissa; Miss Elfrida Clement, Jessica; Mr. Norman Forbes, Launcelot Gobbo; Mr. Jerrold Robertshaw, Antonio; Mr. E. Harcourt Williams, Gratiano; and Mr. Julian L'Estrange, Bassanio. This, the first Shakspearean performance at the Garrick, promises well and inspires much interest.

During the temporary absence of Mr. and Mrs. Bourchier, their parts in 'The Walls of Jericho' have been assumed by Mr. Sydney Valentine and Miss Dorothy Thomas.

At the Duke of York's 'Peter Pan' is to be revived on December 12th as a Christmas entertainment.

Madame Bartet (Jeanne-Julia Regnault), of the Comédie Française, is the first actress to receive, as such, the Cross of the Legion of Honour, that previously awarded to Madame Marie Laurent being avowedly given for her services to the Orphelinat des Arts. Born in Paris, October 28th, 1851, Madame Bartet entered in 1872 the class of Regnier at the Conservatoire, and made her *début* at the Vaudeville, September, 1873, as Vivette in 'L'Arlésienne.' At the Comédie, where on her first appearance she was, February 16th, 1880, the original Léa in 'Daniel Rochat,' she has played leading parts for many years. Among well-known performances of hers are the heroines in 'Ruy Blas,' 'Le Gendre de M. Poirier,' 'Mlle. de Belle-Isle,' 'On ne badine pas,' 'Adrienne Lecouvreur,' 'Griselidis,' 'Iphigénie,' 'Antigone,' 'Francillon,' 'Diane de Lys,' and 'Le Duel.'

To Correspondents.—R. N. B.—W. B.—G. W.—E. J. F.—received.

A. P. (Rome).—We cannot do this.

E. G.—H. M. F.—Many thanks.

No notice can be taken of anonymous communications.

SATURDAY, AUGUST 12, 1905.

LITERATURE

In Remotest Barotseland: being an Account of a Journey of over 8,000 Miles through the Wildest and Remotest Parts of Lewanika's Empire. By Col. Colin Harding, C.M.G., F.R.G.S. (Hurst & Blackett.)

It appears to be a growing fashion among amateur authors, especially of travel-books, to take pride in the slipshod nature of their work. This shows lack of self-respect as well as of respect for the reader, who is expected to beg, borrow, or steal, if he will not buy a volume priced at half a guinea or so. Col. Harding, for instance, who frankly admits that he has thrown together "simply the disjointed notes of an ill-kept diary," much of it written at the end of a day's travelling, when he was "supperless and hungry," is content to add, "It is small wonder if the phrases are not always well turned or the sentences grammatical." In his case the clumsy and ungrammatical sentences are few, but some of the notes, if they do not contradict one another, are confusingly discordant. His frequent omission of dates and other important details, moreover, seriously lessens the value of the book to any one not familiar enough with the subject to be able to edit it for himself as he goes along. This is all the more to be regretted, since the book is interesting and instructive, with all its faults, and the information Col. Harding has to give was well worth scholarly presentment.

The principal journey undertaken by Col. Harding in Barotseland, which he was sent out "to explore and report upon," by way of strengthening the British South Africa Company's hold upon it after ten years of little more than nominal control, was in the first half of 1900. First visiting Victoria Falls, and taking over temporary charge from Mr. Coryndon, the Administrator of North-West Rhodesia, he paid his respects to King Lewanika at Lului, the royal capital, and communicated to him a phonographic message from Sir Arthur Lawley. The phonograph is proving to be of notable use in the overawing or propitiating of backward races, and the one into which Lewanika spoke instructions to his subordinates as regards the hospitality and obedience they were to show to Col. Harding made it a more precious article to the latter than any dispatch-box filled with documents, or perhaps a Maxim gun, could have been. It was also an unfailing toy, always astounding and generally alarming those who first heard it. Thus, at Nyakatoro,

"an old man, by name Mangombi, whose only property consisted of a Kaffir piano, came to the house to hear 'the boy in the box.' The phonograph was produced, and he was persuaded, after much hesitation and nervousness, to sing, accompanied by his piano, into the instrument. He began by singing the praises of Mr. Schindler (it appeared he was in want of salt), and then launched into a venomous attack against the Portuguese, who had some time before kept him in irons at the fort on his failing to find carriers to fetch goods from the coast. When he had finished, his song was reproduced for his benefit. He was horror-stricken. Gazing with despair in his eyes from one to another, he gasped out: 'I am dead, my spirit is in that box. Mangombi is no longer Mangombi. My song is finished; it is in the box; I am about to die.' With this grand climax he immediately fled, quavering out terrified and disconnected remarks as he ran. Having no wish to make out that the phonograph was either fetish or witchcraft, I sent for the trembling Mangombi to come and hear the voice the following day. He arrived looking wan and disconsolate, having without doubt passed a night of misery, scarcely hoping to see the light of another day. I hoped to reassure him by letting him hear his voice again, but instead, he waxed exceedingly wroth, and angrily said his voice mocked him."

After leaving Nyakatoro the intruding party entered a disturbed and angry Balunda district:—

"We were absolutely powerless in the hands of Lutambwe and his people, and had he chosen to murder us—which was as likely a contingency as any—our fate would never have been known; we had no arms, nor any possible mode of communication with the outer world. On hearing Lewanika's voice in the phonograph, Lutambwe showed great astonishment, and then after a pause put down the whole thing as a fulfilment of a prophecy uttered by his father years ago. 'When I was a boy,' he announced, solemnly, 'and did wrong, my father thrashed me and said: "You will not listen to my voice, and I am old. You are young, but some day voices will come to you and fill your heart with wonder." My father's words are true, for these are the voices of which he spoke, and I thank the white chief for his words.' With this triumph of the occult we departed from Lutambwe's."

Most of the country between Lului and Nyakatoro, and all to the west of it, was in 1900 still in the "disputed territory" since given up to Great Britain by Portugal, partly in consequence of Col. Harding's visit to it. He found that, although the few Portuguese forts at Kakengi, Nyakatoro, Mosiko, and elsewhere were feebly held by more or less amiable governors and their small detachments of sleepy officials, the sole outcome of Portuguese control was the assistance given by it to the systematic and wholesale slave trade still carried on, as it has been for generations. Mambari or half-caste travelling merchants from Bihe and other markets in Angola each year lead out their caravans along the old track between the Angola and Mozambique coasts, bartering their guns and gunpowder, rum, calico, and other wares for the slaves brought to meet them at their halting-places. A few devoted missionaries and their wives, chiefly of the Garenganze organization started by Mr. F. S. Arnot, do all the little that they can for the luckless natives whom they aim at befriending, and Col. Harding testifies to the self-sacrificing labours of Dr. and Mrs. Fisher and Mr. and Mrs. Schindler in particular. It would seem, moreover, that the Balunda, Balumba, and other natives of these parts, as well as the dominant Barotse, who are ruled in the north, from the encampment that bears her name, by Nyakatoro, a kinswoman and vassal of Lewanika, are peacefully inclined. But the Mambari have allies in such tribes as the Valovale, who find their profit in catering for the slave collectors from Bihe, as do other turbulent natives in the more easterly districts of Kasai and Katanga, who are tolerated or patronized by King Leopold's agents in the southern part of the Congo State.

Probably the best justification for the taking over of Barotseland by the British South Africa Company is its promise to put down the slave raiding and slave trading on its northern frontiers, and there is ground for hoping that this promise is not being broken; but reforms in the Congo State have yet to be begun. Col. Harding gives gruesome accounts of the traffic in regions through which he passed, of which this one instance, referring to the country west of Mosiko, may suffice:—

"Every day I am seeing traces of the slave trade. The wayside trees are simply hung with disused shackles, some to hold one, some two, three, and even six slaves; skulls and bones bleached by the sun lie where the victims fell, and gape with helpless grin on those who pass, a damning evidence of a horrible traffic. Some are buried and surrounded and covered with wood, marked by a piece of linen or calico tied to a pole stuck in the ground, which shows that the dead man was more than an ordinary slave. Yesterday we met two caravans, and to-day one, all proceeding to the Lunda country for their living merchandise. Some of them were carrying spare guns, some calico, others powder. Small boys and young girls were alike loaded with trading material, whilst the half-caste or Bihèan trader walked in the rear attired in a startling costume, rascality written on every line of his face. The Mambari do their marching by easy stages; they travel with their women, and regard the whole game as a picnic. Time is no object, as under no circumstances would they return to Bihè till December or January."

There is pleasanter reading in the traveller's reports as to his very plucky and successful tracking of the Zambesi to its source, near the south-easternmost corner of the Congo State, and his no less adventurous hunting of other river-heads. He was similarly engaged, along with other duties, in a later expedition, past the Vic-

toria Falls, to what, with characteristic disregard of verbal accuracy, he twice calls "the Zambesi and Junction of Kafue Rivers," instead of "the junction of the Zambesi and Kafue Rivers." He and the brother who accompanied him, and who, unfortunately, was taken off by a fever caught on one of his errands, had to use both hands and wits in all sorts of ways. His overcoming of Lutambwe by phonograph, already cited, was prefaced by the following breach of a stockade:—

"In a few minutes we found ourselves hurrying through the small aperture that guarded its entrance on our hands and knees. It was a most undignified posture to assume on entering a native kraal, and had a single shot been fired down the entrance, it would have neatly finished off one and all of our respective careers. Once inside, we each rushed to grasp the hand of the nearest native. I found myself *tête à tête* with a man carrying a blood-curdling axe. I was trying to grasp his hand, assuring him with a torrent of incoherent words that my intentions were excellent, and that he must not be afraid (which he was not, every movement on his part proving it). My brother was more fortunate with his antagonist, for half a dozen children, seeing his advance, rushed to their parent and clung to him in great terror, and with such persistence that, friendly or not, he was a fast prisoner in the hands of his offspring and could not shoot, however strongly disposed.....After some moments of this doubtful waiting the induna at last stepped haughtily out, with an expression of calm contempt for the two white men who stood before him wondering what was going to happen next."

Here is an illustration of the straits to which the explorers were sometimes reduced in their struggles to "pay their way" after they had exhausted their stock of trading commodities:—

"With the exception of three shirts, five knives, and two spoons we had absolutely nothing with us with which to trade. The shirts I knew must be used to pay guides, so this left us with only the spoons and knives wherewith to purchase food for at least ten days. One of my carriers, 'stung by the splendour of a sudden thought,' and also by want of food, struck out a brilliant idea for himself. Quite unprompted he began to carry out his idea. To begin with, he was by nature a clown, and much sought after in Barotse as a wit of the first water. On arrival at a village, once assured of their friendliness—and not before—he would tie some red calico over his forehead, leaving two ends to hang loosely down his back, and striking an attitude started his native dance. It was a weird and surprising performance, consisting of tying himself into knots, and cutting curious evolutions in mid-air, which always resulted in his being shortly surrounded by all the women of the kraal. After his performance he made a collection, and by amusing some, frightening others, and making love to the rest he generally got enough food for himself, Peter, Tom and the rest for two or three meals. In a more dignified way I achieved some success in providing food for my own personal larder by using the medicine cabinet, filled at my directions by Messrs. Smart & Copley, of Bulawayo; it contained every imaginable medicine of any use. I consider that in a case of malarial fever my remedies are far more potent, and my experience more varied, than all Harley Street put together!"

Col. Harding's closing chapter furnishes a brief and amusing report of his experiences as "bear-walker" to Lewanika on the occasion of the latter's visit to England in 1902. That visit, we are asked to suppose, and especially the interviews with King Edward and Mr. Chamberlain, were of inestimable service to the dusky potentate, over whom suzerainty is now deputed to the Chartered Company. Formerly

"he was a tyrant, but circumstances compelled him to be one, and his cruelties were only those his early surroundings forced him to commit. He is now emphatically a statesman, and a far-seeing one, and has at heart the welfare of his country and people to an extent surprising in one brought up as he was in his youth."

Edward FitzGerald. By Arthur Christopher Benson. "English Men of Letters" Series. (Macmillan & Co.)

Mr. Benson unites qualities not always, nor often, met together in one writer. He is a poet having (at his best) that nowadays not common quality, real distinction of thought; he is a critic possessing, in right of poetry, imaginative insight, possessing also sane, discriminative, and—what is not invariably a poetic gift—in large measure catholic judgment; and he is a prose-writer of manly and cultivated style. His thoughtful sanity brings with it a sense of measure and proportion. All these qualities are no less excellent than needful in the biography of a poet and *littérateur* like FitzGerald. Combining them, Mr. Benson has perhaps made of the brief biography required by the scheme of this series all that could be made of it. But in truth it is a case of, "Story, God bless you? I have none to tell, sir!" The story of FitzGerald's life is very near the venerable case of the snakes in Iceland: it would make a respectable article in a biographical dictionary, with the aid of critical and collateral matter and a little verbosity. The man himself is unsurpassably set forth in his own letters, and to select from or abridge those letters is much like abridging Boswell's 'Johnson.' Yet to this complexion has Mr. Benson inevitably come. What is over and above is valuation or criticism—FitzGerald as the friend of greater men, FitzGerald as poet, FitzGerald as translator, miscellany-monger, and so forth. It is done with much judgment, with good handling, with interest to such as know not their FitzGerald at first hand, with pleasantness even to such as do. But it was, after all, otiose, except as a volume in a series.

FitzGerald's is surely a curious, though far from unprecedented place in letters. He lives for what he was, for what he was to others, and for one thing that he did. For a time he was merely a pinnace towed in the wake of the ship Tennyson, the ship Thackeray, the ship Carlyle, and other craft of full sail. He ran the risk of being, like Spedding (despite the dubious immortality of the good James's 'Bacon'), little else. Then the "one song sung divinely well" began its career of triumph, culminating in an agnostic generation. Lastly, trumpeted and heralded by the 'Omar,' the letters gained a hearing which they will surely retain on their own merits. For the letters are FitzGerald.

The 'Omar,' one may venture, was a splendid accident. FitzGerald was the half part of a blessed poet, made to be finished by its male complement. He was too feminine, too dependent on more creative minds (as the story of his friendships shows), to be a poet in the entire sense of the word. He felt that his need was an original, a model, and tended instinctively towards translation. Yet he did not succeed at first, or but dubiously; for there was overmuch of the poet in him to keep the drill-step with any original, there was a FitzGerald that demanded to utter himself. And his first efforts were ill directed. Calderon the mystic was too remote from agnostic Ned, though FitzGerald chose the more rhetorical plays, except in one or two cases. His Calderon is not all failure; it interests if you do not know the original; there are even bits which attain poetry. But as a whole it misses the poet, and presents only the master of rhetoric and situation. The very best is 'The Mayor of Zalamea,' which is really rather Lope than Calderon. Throughout the personality of the man intervenes, and alters Calderon to Calderon's loss. Then FitzGerald found a poet who, by a lucky mistake—lucky for FitzGerald's self—seemed at one with him fundamentally, and not too far from him in style. The melancholy, the languor of Omar appealed to the melancholy and languor of the sad agnostic, for whom all things were vanity. The brevity of Omar appealed to the instinct which was allured by the rhetorical point of Calderon, in the plays which FitzGerald translated, and by the pithy sayings collected in his 'Polonius'—an instinct itself born of the temperamental defect in energy which sought refuge in brief flights. Finally, since he rejected the notion of any underlying meaning, Omar appeared to him a Persian agnostic, whose gospel was one with his own. This, to our mind an error, was at any rate a *felix culpa* for FitzGerald. All that remained for him was to rearrange the quatrains according to his own idea of Omar's meaning, and compress them in accordance with his own love of brevity. He had just sufficient model and just sufficient play for his own subordinate individuality. The result was a masterpiece—the one conscious masterpiece that he achieved.

Or was it a conscious masterpiece? It is among the tragedies of literature that FitzGerald never knew himself to have achieved a masterpiece, and died unselfishly revering the immortals into whose company he was as unaware of having entered as they were of his having entered it. To Tennyson and the rest he was poor, good, dear Fitz., who (with all his merits) was made of a different clay from themselves; and that posterity should rank him also among the poets would have seemed to them a curious absurdity.

Of course, admirers will dispute our description of him as feminine, confusing it with effeminate, and not perceiving that we employ the word relatively, by comparison with the creative and dominating spirits of his day. Also, it will be said that our description of him as comparatively feminine, lacking in energy, and dependent on stronger natures, is contradicted by his constantly proclaimed love and admiration for masculine strength. But it was precisely the love of the weak for the strong,

of temperamental lack of energy for the possession of energy, which drew him towards the gruff and masterful Tennyson, the shaggy and grumpy Carlyle, the strong and simple seaman Posh—despite Posh's woeful tendency to get (as the unromantic term it) uncommonly drunk. Thus, despite Thackeray's stature, his superficial John Bull qualities and outward strength, the sentimentalism and central weakness which underlay these things caused FitzGerald to compare him unfavourably with the elemental strong man Posh.

So his letters display him, tired of the sophisticated qualities marring the strength of genius, falling back upon the elemental strength of rude fishermen. In that elemental strength and simplicity he found a certain feminine repose, while at the same time he had the gratification of undisputed intellectual supremacy denied him in intercourse with genius. As to his own mental qualities, we think considerable exaggeration prevails. He certainly was not a man of original thought. Not one independent idea is credited to him in matters of intellect. In regard to æsthetic taste, on the other hand, his sympathetic criticism was of considerable value. He appreciated Tennyson when few appreciated him. He declared Tennyson's later work disappointing by comparison with his earlier; and the best modern criticism upholds that judgment. But he could see no merit in Browning, he uttered crass misjudgment of Rossetti, and generally, where he did not chance to sympathize, showed himself densely unappreciative. He was, in a word, a man of fine and independent, but limited judgment. On the whole, "old Fitz." was very much an amateur, a sane *dilettante* in life and letters. His great quality was that he was always sane; he loved, even when mistakenly, the primal verities. Where he failed to sympathize it was usually, we think, because a writer seemed to him to outrage sense and simplicity. For he lacked, perhaps, the highest imagination. To this there are some curious exceptions. He was cold towards Jane Austen. He was cold towards her, obviously, because she lacked all but the most realistic imagination. For, though FitzGerald was without the supreme imagination, he was after all a poet in grain. Therefore he was the author of a splendid poem, his version of the 'Rubaiyat,' and for all time a singer, however posterity may revise the present enthusiastic estimate of him.

Evangelion da-Mepharreshe: the Curetonian Version of the Four Gospels, with the Readings of the Sinai Palimpsest and the Early Syriac Patristic Evidence. Edited, collected, and arranged by F. Crawford Burkitt. (Cambridge, University Press.)

In his new work Mr. Burkitt reaches a very high level of critical scholarship. Accuracy of detail, which is one of the main characteristics of the Cambridge school of learning, is here combined with a wide outlook and a felicitous, if occasionally somewhat hazardous, power of combination. We are particularly glad to find that textual and philological studies are in the present case associated with that legitimate kind of historical imagination which tries to connect the painstaking literary efforts of the past with the stirring evolutionary events in the midst of which they were produced. The problem is, indeed, an intricate one. The most popular form of the Gospel history in vogue in the early Syrian Church was a harmony composed, or rather compiled, about A.D. 170, by Tatian, the disciple of Justin Martyr. Side by side with it also existed Syriac Gospels of the four Evangelists in their separate forms. Of these Gospels two MSS. only, both belonging to the earlier part of the fifth century, have, so far, come down to us; but there are besides distinct references to such a version in the writings of the early Syrian Fathers. A third form of the Syriac Gospels is that known as the Peshitta, a term which may conveniently be translated by "Vulgate." The question then is in what relation these three stood to each other. The earliest MSS. in which the Peshitta has come down to us are not much later in date than the two MSS. of the Gospels that bear the title of the "separate," and there would, therefore, so far, be nothing to show which was the earlier. Again, did the Syrians at first use a Harmony of the Gospels only, or was this Harmony the successor of a form of the Four Gospels separately written out? If the latter hypothesis be adopted, were these separate Gospels identical with the version preserved in the two MSS. referred to, or were they different? The problem becomes more complicated still by the fact that the two MSS. now in our possession are by no means in full agreement; in fact, sometimes show divergences of a rather marked type.

After surveying and classifying all the available evidence, Mr. Burkitt arrives at the following results. Down to about A.D. 170 the Syrian Church that was grouped round Edessa as its centre had no New Testament at all, but was content with the sacred writings which the Church took over from the Jews. The earliest form in which a written Gospel history circulated among the Syrians of that region was the Diatessaron compiled by Tatian about A.D. 170. The Greek text of the Four Gospels used by Tatian as the basis of his Harmony had very much in common with the Codex Bezæ and the various forms of the Old Latin version. The translation of the Greek Diatessaron into Syriac was undertaken immediately after its compilation. About the year 200 a great change came over the Church of Edessa. Aggai, the disciple of the famous Addai, having—according to tradition—been martyred before he was able to ordain his successor, the new ruler of the Edessene Church, Palut by name, had to go for his consecration to Serapion of Antioch. Here, then, was a new starting-point with which the first Syrian version of the Four Gospels in their separate form should be associated. This was the version which is now, for convenience' sake, called the "separate," and which must be regarded as having been substantially identical with the text of the two surviving MSS. to which reference has already been made. Tatian's Harmony, however, kept the field, and the new Syriac translation had to be content with at best a secondary place in the estimation of the Syrians. Early in the fifth century a new departure was taken. Rabbula, who was Bishop of Edessa from 411 to 435, set himself the task of suppressing the Gospel of the "mixed," as Tatian's Harmony came to be called in contradistinction to the four separate Gospels. With this object in view, he undertook a version of the translation supposed to have been made by Palut. This was the true genesis of the Syriac version which is known as the Peshitta. As a result of Rabbula's efforts the Syriac Diatessaron disappeared entirely; of the version of A.D. 200 only two MSS. remain, analogous—as Mr. Burkitt imaginatively suggests—to the great twin columns which dominate the citadel of Edessa; but the Peshitta, or Syriac Vulgate, has remained the authoritative version of the New Testament Scriptures among the Syrians of both the Nestorian and the Jacobite denominations.

Mr. Burkitt has, of course, much more to tell us than has been hinted at in the brief outline just sketched. For our present purpose, however, it will suffice to fix attention on the points mentioned. It will be granted on all hands, we believe, that Rabbula was the real author or promulgator of the Peshitta. It may also be regarded as certain that the Diatessaron — as, indeed, the name itself shows—was originally compiled in Greek, and thence translated into Syriac. But when one is asked for any evidence bearing on the supposed translation of the Gospels in the time of Palut, the frank answer must be given that there is none. On the contrary, the "argumentum a silentio" goes decidedly against the supposition. If such a version was really made in the time of Palut, why is there no mention of it? The Edessene Church was at that time emerging into the full light of history; and if the composition of a Harmony undertaken thirty years earlier has not been left without a record, why should a version of the Gospels in their separate form be passed over in silence? If, on the other hand, the version in question was made very early in the history of the Syrian Church, or if it was a translation prepared even later than 200 A.D. by some obscure heretical sect, the absence of a record bearing on its origin could be easily explained. Heretical scribes had often to labour in unrecorded solitude, and no one knows better than Mr. Burkitt how dimly the light of history shines in the first few generations of the Edessene Church; but when Palut was consecrated bishop by Serapion of Antioch the darkness had disappeared, and clear history began. Why, then, should there not be a record of such an important event as the translation of the Gospels into Syriac, if a translation was really made at that time?

Another stumbling-block meets us at the outset of Mr. Burkitt's theory. It is difficult to believe that the Syrian Church had no New Testament at all prior to A.D. 170. Considering that parts, at any rate, of the Gospel history were, as is generally acknowledged, originally written in Aramaic, we think it only reasonable to suppose that some of these writings should have been brought very early into a neighbourhood where they could be easily understood. Cureton's idea that the Old Syriac St. Matthew

XUM

retained to a great extent "the identical terms and expressions which the Apostle himself employed" was from this point of view not quite so wild as is generally supposed. The Palestinian Aramaic of the early Christian documents could, without much substantial alteration, have been easily changed into the cognate Aramaic of Edessa. Cureton's theory has, indeed, been found untenable on grounds of textual criticism, but the independent possibility of an Aramaic Gospel of St. Matthew or some similar Aramaic document having found its way to Edessa in very early times is by no means excluded. Its disappearance later might be accounted for by a desire on the part of the Syrians to range themselves more into line with the rest of Christendom in a matter that so vitally affected the essence of Christian teaching. With regard to translations from the Greek, the matter stands different again. Mr. Burkitt himself admits the bare possibility of such a translation or translations having existed prior to A.D. 170, but other scholars regard it as highly probable that the separate Gospels were rendered into Syriac before Tatian's Harmony made its appearance; and it cannot at present be affirmed that Mr. Burkitt's view stands a greater chance of final acceptance than the opposite theory.

Our conclusion, therefore, is that in the work before us a very great advance has been made in the study of this interesting and intricate subject, but that the problem is at best only half solved as yet. Mr. Burkitt's edition, translation, and introduction will be generally admired as so far the best and most attractive survey of the whole matter, but the final word will not be spoken before further discoveries of ancient Eastern documents have helped us to reconstruct with greater certainty than is at present possible the early history of the Edessene Church.

Thomas Cranmer. By A. F. Pollard. "Heroes of the Reformation." (Putnam's Sons.)

Prof. Pollard is one of the younger generation of scholars, with whom, whether they like it or not, their elders have to reckon. His in-and-out acquaintance with sixteenth-century life, his unrivalled command both of his material and the means of expression, his certainty of judgment, and his acute criticism should always ensure him a hearing in spite of a tone of contempt for others and an acrid sarcasm which by no means tend to endear him to the reader. The present work reaches, we think, the high-water mark of his achievement. It will form, and rightly form, the standard life of Cranmer for some time to come. The author's chapters in the 'Cambridge History' were well and vigorously written, but they showed little of that independent investigation which enabled both Dr. Stubbs and Mr. Armstrong to present of Charles V. a portrait not only different from the conventional Prussian picture, but also more lifelike and noble. His work on Henry VIII., in the opinion of an eminent authority, "out-Froudes Froude." We do not say that this book is altogether without a similar tendency. It was not Froude's ignorance, but his misuse of documents, to which his critics objected. The kind of use he made of them was most completely illustrated in Lecky's 'History of Ireland.' The mere perusal of a manuscript does not of itself put an historian in the first rank, if his judgment be so marred by prejudice that he is incapable of appreciating the force of evidence—a state of mind by no means uncommon. Mr. Pollard in this book is certainly not without a bias. Of Mr. James Gairdner he speaks in a tone which is not likely to do any damage to any one's reputation but that of the critic. At the same time we think that his book has certain great qualities, and that it makes truths popular which otherwise might long remain the property of specialists.

Against those who regard the Reformation movement as an uprising of the religious spirit against the worldly-minded, Mr. Pollard declares with emphasis the largely political and still more the essentially laicizing character of the European development. He lays the ghost of the notion that the era of Philip of Hesse, Maurice of Saxony, Catharine dei Medici, was an era markedly and fundamentally religious.

> "Religion, in fact, was not so dominant in the sixteenth as it had been in the twelfth century, and the age was really one of secularization."

Nobody who fails to perceive this truth can ever hope properly to understand the turbid struggles of that strange century. The apprehension of this fact is, indeed, the key to the character of Cranmer. Mr. Pollard rightly points out that much that seems least admirable in his career was due to his genuine belief in the divinely given authority of the ruler: "It was the lack of authority from a Christian king that compelled the Apostles to appoint ministers of God's word." The influence of Marsiglio of Padua, ever the bugbear of Ultramontanes, is, probably rightly, regarded by Mr. Pollard as having importance in the formation of Cranmer's views, and he justly lays stress on the fact that in Catholic no less than in Protestant countries the State secured its paramount position during this period. And while a markedly Protestant tone pervades the book, the author is rightly severe on the ring of swindlers who exploited Protestantism in their own interests:—

> "Never did Henry VIII. or Charles I. or James II. aim such blows at English liberties as the men who controlled the fate of the Reformation in the latter days of Edward VI."

On the debt which Englishmen owe to Cranmer in the Prayer-Book, Mr. Pollard writes eloquently:—

> "The Prayer-Book is not a creed nor a battle-cry, and it provokes the spirit of devotion rather than that of debate; it is religion and not theology. To it the Anglican Church owes the hold she retains on the English people. They are not attracted merely by the fact that the Church is established by law; it may be doubted whether her Catholicity allures the bulk of the laity, and assuredly her standard of preaching is not the force which keeps men from joining other communions. But the Book of Common Prayer is unique, a κτῆμα ἐς ἀεί."

In regard to the alleged dissimulation of Cranmer, Mr. Pollard rightly urges that we have no ground for supposing that he had the first and second Prayer-Books all planned out in 1535; and he points out, as has been pointed out before, that it was not the lack, but the possession, of a conscience which made Cranmer so valuable an asset to Henry VIII. He had the temper of an English statesman, which always proceeds by the logic of fact rather than of theory; and he had, in addition, that open-mindedness which is always the foe of martyrdom. Hence his tergiversations.

> "A man who sees only one side of truth is proof against doubt; but the man of broader intellect, who knows that truth is relative and feels the force of hostile arguments, is inevitably less dogmatic and less absolutely sure of the impregnability of his position. Cranmer was much nearer this modern position than his contemporaries. This distressing dilemma between a conscience which bade him renounce the Pope and a conscience which bade him obey his sovereign opened a breach through which doubts rushed in and submerged him."

This is, we think, the best thing that can be said for his conduct in a situation easier to condemn than to understand.

Probably the point in Mr. Pollard's book which will seem newest is the stress he lays on the direct influence of Wycliffe on the English Reformation. We are not sure that he is right here. In the general policy of secularization, in hostility to the monastic ideal, in his belief in the right of the civil power to enforce reform, Wycliffe's views were much the same as those of Luther and other of the reformers of the sixteenth century. But we confess that to his logical, doctrinaire, and anti-mediæval temperament the English Reformation would have seemed a poor thing. Wycliffe wanted a cleaner sweep with the past than was at all sympathetic to the English mind. It has been said recently that he was the true intellectual ancestor of Puritanism. To us this view seems far truer than that of Mr. Pollard. The destruction of images and smashing of glass would doubtless have pleased him; but we cannot think that the Church of Hooker and of Herbert, to say nothing of Andrewes and of Ken, would have been at all to his mind. It seems to us that he had most of the characteristics of the narrower Puritanism, and none of that reverence for established order, that sense of the beauty of holiness and of the binding tie with the past, which inspires the Prayer-Book of Cranmer, and is the distinctive note of England and the Reformed Churches. Indeed, we think that of all reformed Churches the Church of England is the furthest removed from Wycliffe's ideal, except, of course, in the one point of its being largely the work of the civil power; but that was the case elsewhere also. What was distinctive here is just what would have displeased Wycliffe. Of course his ideas had influence, but we think it not proven that they really made the English Church as reformed what it was, or differentiated it from Luther's or even Knox's work.

NEW NOVELS.

The Day's Journey. By Netta Syrett. (Chapman & Hall.)

Miss Syrett has a charming style and a dramatic faculty for keeping what Besant called the "flat times" of her characters out of the reader's knowledge. Her limitations, so far at least as the present novel is concerned, are chiefly those of environment. A social circle where the highest form of "self-realization" lies in having written a novel "discussed at length in the quarterlies," and an independent income of seventy pounds a year represents the direst depth of poverty attainable by an unprotected female, does not, plainly, offer artistic possibilities on a really large scale. Subject to these conditions, however, Miss Syrett shows a considerable power of characterization. The much-wronged heroine, her faithful woman friend, and the female villain are all excellent; the last-named especially, an art-student of very doubtful vocation, appeals to us so much by her shrewdness and practical sense that, in spite of her worthlessness, we cannot help feeling rather kindly towards her. The other sex is less generously dealt with. The heroine's unworthy husband is a pitiable creature indeed, whose adventure with the art-student seems a mere trifle compared with his utter lack of any single respectable quality, moral or intellectual. The blameless lover of earlier days strikes us as a mere concession to that conventional rule which demands that in the unhappy marriages of fiction "the other man" should always be at hand. The story is sad, and ends sadly, but the author, though half under protest, is throughout faithful to old-fashioned ideals of duty.

Glenanaar. By Canon P. F. Sheehan, D.D. (Longmans & Co.)

The Irish priest, in all his varied phases, would seem to be the subject in which Canon Sheehan is really at home, and in departing from it he almost inevitably courts disaster. We find no trace here of the qualities which gave success to 'My New Curate,' except it be in the character of the clerical narrator, a kindly old humourist of whom we see too little. The novel is in part historical, its theme being the "Doneraile murder conspiracy," a *cause célèbre* noted for the dramatic intervention of Daniel O'Connell, and here represented as an infernal manœuvre of the governing classes. Mr. MacDonagh, however, the recent biographer of O'Connell, whose testimony, as that of a Nationalist and Roman Catholic, should carry weight with Canon Sheehan, gives it as his opinion that the men accused were almost certainly guilty, and owed their acquittal only to the "Liberator's" skill in making the worse appear the better cause. The terrible description of the national vendetta unto the third and fourth generation against informers is certainly founded in fact. We have personally known some remarkable examples, but we hesitate to believe that it was ever carried to the length, here suggested as possible, of casting out a helpless infant to perish in expiation of its father's sin. There is little of Irish humour in the book, but of Irish declamation more than enough.

Rose of Lone Farm. By Eleanor G. Hayden. (Smith, Elder & Co.)

Two dissimilar purposes seem to have influenced the composition of this novel. In the main it may be classed as a study of agricultural life in the district called by novelists "Wessex," and from this point of view its merit, if not extraordinary, is appreciable. There is nothing absolutely new about either the quaint human types introduced to us or the homely landscape which serves as their background; but both convey a soothing impression of truthful and sympathetic representation. Mingled with this peaceful undercurrent, however, is a flood of improbable and highly melodramatic incident, affecting chiefly the fortunes of the heroine, a lovely rustic maiden, who, proving to be not the farmer's daughter she appears, but a lady of birth and fortune, goes in search of her real parents, and after sundry marvellous adventures among gipsies, tramps, and such-like children of nature, is rewarded by finding her aristocratic mother dead in a workhouse, and her equally aristocratic father practising the profession of mendicancy. The blend is not, in our opinion, a success; but a reviewer's taste is perhaps over-sophisticated in such matters.

Mrs. Alemere's Elopement. By Charles Marriott. (Nash.)

Mr. Marriott has gone far in 'Mrs. Alemere's Elopement' towards the fulfilment of the high expectations raised by his former novels. His style is less laboured, his manner of narration stronger, his touch in character-drawing more sure. What is not so welcome is the cynicism that pervades the book. Evelyn Alemere, beautiful, refined, and passionate, leaves her husband's roof with Richard Feddon, a young musician with something of the knightly temperament, who is as certain of her purity as her loveliness. There is nothing in their relations to disturb his idealistic admiration of her; but she induces him to allow the divorce proceedings brought by her husband to go undefended, and secretly marries a former lover immediately she is free. Mrs. Alemere is a very clever and interesting study, though here and there it is somewhat marred by a lack of consistency. That this siren-like creature should be treated in a cynical mood is not unnatural; but, unfortunately, there is scarcely one character in the book that is drawn sympathetically. Mrs. Feddon, who looks with haughty disapproval upon the escapades of her quixotic son, is made to cut an undignified figure in a particularly cruel scene; and Rose Archdale, the only woman in the story who has escaped the contempt of the author, is rather too cold and reserved to be really attractive. Mr. Marriott's male creations do not fare much better at his hands than do the women; they are nearly all foolish, meddlesome, and vain.

Behind the Throne. By William Le Queux. (Methuen & Co.)

Mr. Le Queux would appear to be bent on illustrating in his own person the truth of the Preacher's saying as to the endlessness of the making of books. If the rate at which he produces his sensational novels grows much more rapid, the panting reviewer will toil after him in vain. His ingenuity seems to be almost as inexhaustible as his assiduity, and his audacity—there is no other word for the way in which he airily deals with the political affairs of other nations—is equal to either. The foremost character in 'Behind the Throne'—one of the most interesting of the many exciting stories he has written—is an Italian statesman, and the plot, in which an Italian version of the Dreyfus case plays a considerable part, is largely concerned with the corruption and intrigue which, according to Mr. Le Queux, degraded every section of public life in Italy under the *régime* of King Humbert. One does not read Mr. Le Queux for niceties of style or characterization. What one looks for is an exciting narrative, in which the incidents follow in such quick succession that there is scarcely time to consider their probability, and this is exactly the kind of pleasure to be derived in abundance from 'Behind the Throne.'

The Maid of the River. By Mrs. Campbell Praed. (John Long.)

This is another of the prolific author's Australian tales, and one of the best she has produced. It has none of the improbability of her 'Fugitive Anne,' and is more carefully and sincerely written than her last English story. Indeed, it is a genuine and very painstaking piece of work, the realism of which will at once be admitted by all who know anything of Australian life. We are chiefly concerned here, not with the hazards and simple pleasures of the bush life which Mrs. Campbell Praed has often portrayed in the past, but with the life of a young girl who, after a childhood spent in pleasant circumstances upon her father's station up country, is taken to live in the colony's capital, as the immediate result of the bank's foreclosure upon her father's station. The father obtains an inferior government clerkship in the capital, and thus our heroine, after a youth spent amongst all the generous freedom of a squatter's homestead, is introduced to the somewhat squalid realities of life on an inadequate income, in the poor quarter of a colonial city. The author's picture of this phase of Australian life is especially deserving of commendation. Life as she here depicts it is actually being lived in single-storied weather-board villas in all the poorer suburbs of Melbourne and Sydney. It is a less squalid life, perhaps, than that led by equally needy people in England, because it is somewhat less cramped and confined. But it is squalid, petty, and unlovely. The heroine is a commonplace character enough, though not unpleasing. While she is little more than a child, her vanity and simplicity, combined with her unusual prettiness, mark her out as a

victim of the unoriginal wiles of a handsome blackguard, who boasts that he has royal blood in his veins. The girl's downfall is a stereotyped piece of fiction, but, as a young mother, she adopts a course which is certainly unusual among heroines, and successfully sues her betrayer for breach of promise. All this is rather deftly managed, and without serious disregard of the probabilities we are enabled to reach the sort of *dénouement* which the majority of novel-readers have long ago pronounced to be the most fitting.

Mrs. Lygon's Husband. By Adeline Sergeant. (Methuen & Co.)

The title-character is such an unmitigated villain that he would be uninteresting but for the mystery in which he has wrapped himself during his wife's detention in the madhouse to which his malice and violence had consigned her. The story opens with her release and her efforts to find her husband and little daughter. In chap. iv. her husband makes it abundantly clear to her that he intends neither himself nor his daughter to have anything more to do with her; but yet she does not despair of recovering his affection until chap. xv., although she had said "his family was better than mine, and I know he came to think our marriage was something of a mistake." Her unexpected cure compromises his position as the impersonator of a wealthy bachelor, and as the suitor of the younger of the author's usual pair of heroines. His clumsy efforts to bury his past might have achieved some success but for a run of coincidences so improbable that one is tempted to pity their victim. However, the author's practised skill contrived to found on a poor plot a passable story.

Fortune's Favourite. By Katharine Tynan. (White & Co.)

The author has for once forsaken her native Irish soil, but not her characteristic optimism. There is a cloying sweetness about the history of the eight young ladies who all marry for love and live happy ever after, while to one of them, Fortune's peculiar favourite, rank and wealth are awarded into the bargain. One or two bad illnesses are permitted to break the smooth current of affairs, and also one or two lovers' misunderstandings of a nature too transparent to cause the most tender-hearted or the most unsophisticated reader a single moment's uneasiness. The best part of the book is that describing the feud maintained between a large family of children, abetted by a blindly devoted nurse, and an irascible country neighbour with strong views concerning the iniquity of trespassing; but this welcome gleam of humour is speedily lost in a smother of Dickensian sentiment.

The Valley of Inheritance. By V. Langbridge and C. Harold Bourne. (Methuen & Co.)

Stories written with a dual motive are seldom entirely satisfactory, and of this rule the novel now before us appears, perhaps unconsciously, to furnish an instance. The authors seem at first to aim at the presentation of nothing more complex than the wayward development of genius amongst uncongenial surroundings, and although this has been often done before, their method has sufficient charm and originality to make it worth doing once again. But later we find genius complicated by the problem of heredity treated according to that prevailing literary fashion which constructs ghost-stories on a quasi-scientific basis. That the appeal to science does not convince us is, from the artistic standpoint, a much less serious matter than the failure of the supernatural element to compel belief by its own power. Yet the story is clever, and on the whole well written. Nearly all the characters are interesting and original. The cockney girl especially, whom the hero, from a truly quixotic impulse, makes his wife, is drawn with remarkable sympathy.

John Henry Smith. By Frederick Upham Adams. (Hutchinson & Co.)

Any audience should speedily become amused if justice be done to this excellent American golfing romance, though it must be admitted that the combination of Yankeeisms and misprints provides innumerable hazards for the unwary reader. Devotees will revel in the delights of Woodvale links, and will appreciate the vividness with which are depicted many types of players, most of whom they will doubtless recognize among the members of their respective clubs. Even the countless host of golf martyrs, habitual reservoirs of uninvited golfing anecdote, will forgive the author for repeating the old, old story in this guise by reason of the entertaining method of his telling. Mr. Adams has other qualities besides humour and characterization; he thrills one with apprehension at the oncoming of a tornado, the account of which is one of the best things in the book.

The Premier's Daughter. By Alice and Claude Askew. (White & Co.)

The presumptive evidence of the title notwithstanding, this is no political novel or *roman à clef*. The methods are those of melodrama pure and simple, the themes guiltless of any disquieting aspiration after originality. Once more our sympathies are appealed to on behalf of the escaped convict and the bigamous wife; once more the brilliant society beauty, instigated by her haughty father, goes near to breaking the heart of the blameless and self-made hero. There are other characters and complications, all of a nature strictly similar to those just indicated, and no lack of exciting episodes. Altogether the story is of the kind which may fail to please critics, but seldom wants for readers.

The Lady of Hirta. By W. C. Mackenzie. (Paisley, Alexander Gardner.)

This is a semi-historical novel of that particular brand which for several years past has enjoyed an extraordinary and unaccountable favour. It is narrated, in English of various periods, by an unheroic hero, and is concerned with the strange story of the abduction of Lady Grange, otherwise the Lady of Hirta. The subject is good, but nothing in the author's handling of it calls for any special remark.

A Village Chronicle. By Katharine S. Macquoid. (Digby, Long & Co.)

All save one of the stories which compose this chronicle of Saybourne village are concerned with love, and are tenderly and delicately told, but more remarkable for the pretty phrase in which they are enshrined than for any special strength or depth in the matter itself. A touch of pathos here and there, with just a suggestion of the tragic, somewhat relieves the pervading atmosphere of emotional sentiment which seems to have become Mrs. Macquoid's natural medium of expression.

The King's Messenger. By Louis Tracy. (White & Co.)

The king's messenger is a conventional, but far from unacceptable, specimen of that type of hero which predominates in modern romance—gay, kindhearted, chivalrous, and prepared to face every contingency, from pitch-and-toss, represented by Stock Exchange operations, to manslaughter in self-defence against innumerable public and private enemies. Whether conducting diplomatic negotiations with royalties, real and fictitious, quelling Mohammedan rebels, or outwitting Italian anarchists and South African conspirators, he shows equal resourcefulness and audacity, and his achievements are finally rewarded, in the grand old style, by a good appointment and marriage with a beautiful lady-in-waiting. The story, though frankly a tissue of impossibilities, is by no means bad of its kind.

THEOLOGICAL LITERATURE.

The Original Poem of Job. Translated from the Restored Text by E. J. Dillon: to which is appended the Book of Job according to the Authorized Version. (Fisher Unwin.)—The restored text is that of Prof. Bickell, omitting the speech of Elihu, and altering and curtailing considerable portions in what are held to be the genuine chapters. Restoring an ancient poem is not unlike restoring an ancient cathedral. The modern architect may succeed in reproducing much of the original design, but he may also—as, in fact, he often does—produce an architectural patchwork which is neither truly ancient nor truly modern; and some scholars think that Prof. Bickell's restorations of Job are very largely of the patchwork order rather than the higher type of true reproduction. At the base of his emendations lies a metrical theory which has so far not met with widespread acceptance; and it is clear that if the premises are insecure, the results arising from them cannot be regarded as quite secure either. Apart, however, from this uncertainty of text, Prof. Dillon has done his work as well as one has a right to expect. The translation is clear, and often refined and expressive as well. It is only a truism to say that it is difficult to make a poetic translation of poetry. As an instance of unrefined translation, Job viii. 11 in both the Authorized and the Revised Versions may be quoted. It is difficult to see poetry in the question, "Can the rush grow up without mire?" The word "mire" is clearly in bad taste

here, and it is hardly correct besides. The true meaning of the original is: "Can the papyrus grow except on marshy ground?" and Prof. Dillon is, indeed, not without predecessors in rendering: "Can the papyrus grow without marsh?" It would, however, be too much to expect a perfect translation from even a scholar with good literary taste. Only a poet can properly translate poetry. If Tennyson had carried out his plan of writing a translation of Job, he would probably have given us a Tennyson's Job in the same sense in which Pope produced a Homer of his own; but such a rendering would have been of great value. The old cry of scepticism and pain would have sounded true and fresh in modern poetic phrase; the old philosophy would have loomed great in the guise of something similar to 'In Memoriam'; and the descriptions of nature would have been brought before us in much of their original charm, modified though they would have been by the poet's temperament and his modern surroundings. The greatest service, of course, that could be rendered to Biblical literature as such would be not a modern paraphrase, but a close translation of the original poem of Job by a true poet of our own days. Such a rendering would reproduce, so far as it can be done at all, the ancient thoughts in their true poetic old-world force. Up to the present, however, no approximation to such a work has been produced.

The Oxyrhynchus Sayings of Jesus found in 1903, with the Sayings called Logia found in 1897. A Lecture by the Rev. Charles Taylor, D.D., LL.D. (Oxford, Clarendon Press.)—Dr. Taylor's lecture deals with the two sets of the sayings of Jesus found in 1897 and 1903. In treating of the earlier he has to handle a subject which has been discussed by every one who had anything new to say on it, and by many who might have remained silent with advantage. The second set of sayings has not received very much attention. There are two reasons for this. The first is that the original editors did their work so well that they left few gleanings for their successors; and the second reason is that the five new sayings are in such a defective condition that they repel all who are not inclined to indulge in daring conjecture. In the fifth saying, for instance, one of the lines consists of two letters, and another of four, and there is scarcely a complete word in the whole passage, except pronouns and particles. The original editors remark in regard to it: "Though this saying is broken beyond hope of recovery, its general drift may be caught."

Perhaps the most interesting of the sayings is the second, on account of the following letters: "καὶ ἡ βασ..... ἐντὸς ὑμῶν .στι." Here we seem to have words corresponding to those in St. Luke xvii. 21 which are translated in the Authorized Version, "The kingdom of God is within you." But the context of St. Luke renders it likely that the meaning is not "The kingdom is within you," but "The kingdom is in your midst," the reference being to the Messianic kingdom. It appears as if in this saying the meaning is that the kingdom is in the heart, in the thoughts and affections of the man—a much grander idea than that involved in a mere reference to the Messianic kingdom. But, unfortunately, the saying is so defective that light can be thrown on the question only by conjecture. The original editors say:—

"The reconstruction of this, the longest and most important of the sayings, is extremely difficult. Beyond the supplements in l. 15—which are based on the parallel in Luke xvii. 21, with the substitution of 'kingdom of Heaven,' St. Matthew's phrase, for St. Luke's 'kingdom of God,' which is too short for the lacuna—and those in ll. 12-13, 16, 18, the general accuracy of which is guaranteed by the context, it is impossible to proceed, without venturing into the region of pure conjecture."

We are inclined to think that all the supplements are doubtful. Dr. Taylor is of the opposite opinion. He says: "In the main successfully restored by the Editors, the Second Saying lacked little but illustration, although they show some want of confidence in their reconstruction." There will always be such difference of opinion among those who study the subject, because there is nothing like a basis for certainty.

Dr. Taylor's commentary on the sayings deserves high praise. He has searched in every kind of book where light might be found, and he has adduced many passages out of his own reading which illustrate well what he supposes to be the text. But he labours under the tendency, prevalent amongst those enamoured of this subject, to believe that the reconstructions are the actual sayings, and afford material for determining the sources from which the sayings came and the date of their production. Dr. Taylor has a special section on these points, and comes to the conclusion that the two sets of sayings, and what the original editors called 'Fragments of a Lost Gospel,' belong to the same work, and that it is hard to fix a more precise date for the collection than 150-200 A.D.

Dr. Taylor's illustrations of the sayings in the 'Lost Gospel,' which he refuses to recognize as a Gospel, appear to us the most valuable part of the work. They are exceedingly good, and show, as all his books do, wide research and excellent scholarship.

Grammar of New Testament Greek. By Friedrich Blass. Translated by Henry St. John Thackeray. Second Revised and Enlarged Edition. (Macmillan & Co.)—This edition has been carefully revised. We observe marks of this throughout the book. The translator informs us that

"owing to the plates of the first English edition having been stereotyped, it has been found necessary to adhere, except at the end of the volume, to the original pagination."

Occasionally, however, important alterations have been introduced into the text by relegating some of the old notes to the appendixes. The additions consist, for the most part, of references to papyri or new works on grammatical points confirming and extending the statements in the text. But sometimes they deal with the interpretation of difficult passages or with various readings. Prof. Blass treats the New Testament as he would an ancient Greek classic, and has no hesitation in pronouncing a passage an interpolation on purely subjective grounds. Some of the slight inaccuracies of the first edition have not been corrected. Thus, on p. 23, it is said χθές is not found, but only ἐχθές, though in one of the passages referred to, Acts vii. 28, several good MSS. read χθές. Apparently the new matter in the appendixes has not been embodied in the indexes except in a very few instances.

The new edition deserves hearty commendation. Prof. Blass's name is a sufficient guarantee that advantage has been taken of the most recent researches, and that the references to classical and modern Greek are accurate.

The Statutes of the Apostles; or, Canones Ecclesiastici. Edited, with Translation and Collation, from Ethiopic and Arabic MSS.; also a Translation of the Saidic and Collation of the Bohairic Versions; and Saidic Fragments, by the Rev. G. Horner. (Williams & Norgate.) — The author thinks it now unnecessary to insert the word "so-called" which appeared in the title of Prof. Harnack's work on 'The Sources of the Apostolic Canons.' Though we read,

"Said Petros: Men and brethren, as for all the rest of the doctrine, the holy Scriptures suffice to teach you, but let us indeed say to them the things which have been commanded to us,"

we are to understand that St. Peter never said so, but that some ecclesiastic in the third or fourth century represented the Apostles as expressly enjoining the laws and regulations for Church worship here described. Whatever be their connexion with the Apostles, the Statutes claim regard on their own merits. They show us the Church in a phase of joyous acquiescence in cardinal doctrines, and of enthusiastic confidence in its power to overcome the world. They contain suggestions which might still be considered, *e.g.*, that nursing sisterhoods might be composed of widows. Mr. Horner has furnished us with the eighth book of the Apostolic Constitutions, as it appears in Ethiopic, in Arabic, and in Saidic. Much labour must have been expended on his preparation of the Ethiopic and Arabic texts, which are well printed. The translations of both we have tested, and they are accurate and sufficiently close for critical purposes. A translation of the Saidic as well as fragments of texts in that language is also given. Thus we are enabled to see the Statutes at work in Abyssinia and in Lower Egypt. It appears that St. Peter's instructions vary considerably for different localities, and a comparison of the documents throws light on the process by which such codes of law arise. Mr. Horner has made a careful list of variations between the Arabic, Ethiopic, and Saidic, but beyond noting Judaistic features in the Ethiopic, he gives no satisfactory synthesis of results. In the translation of Saidic, the response to the *Sursum Corda* gives the equivalent of *ekhomen*, though the text has *eukhōmen*:—

"And he says: Lift up your hearts (anō ymōn tas kartias). And the people say: We have them with the Lord (eukbōmen pros ton kū)."—P. 307.

The value of this work consists in its making available to the Church historian information otherwise inaccessible. Few in Britain can read these languages for themselves, but with Mr. Horner as interpreter all may study at first hand the Egyptian type of Apostolic tradition.

The Canons of Athanasius of Alexandria: the Arabic and Coptic Versions. Edited and translated, with Introductions, Notes, and Appendices, by Wilhelm Riedel and W. E. Crum. (Published for the Text and Translation Society by Williams & Norgate.)

"This holy Canon of Saint Athanasius, the great teacher of the land of the Egyptians, was *one* canon. But I, poor Michael, who am not worthy to be bishop of Tinnis, held it right, when copying (or translating) it, to examine it and divide it into 107 sections, so that each section should clearly show its contents, and that all who seek (therein) anything should easily and conveniently find it."—Introd., p. ix.

To this modest Michael, whose date was about 1080 A.D., we owe the Arabic text prepared by Prof. Riedel from four MSS. Michael appears to have translated from Coptic, and Mr. Crum provides about fifty sections of a Coptic text which must have resembled Michael's exemplar. The London papyrus of the Coptic is assigned to the sixth or seventh century. This is still a good way off from Athanasius; but in a clearly written and carefully reasoned introduction Prof. Riedel makes out a fair case for the genuineness of the work:—

"To me, then, it appears not impossible that these canons are, as a whole, derived from a work of Athanasius. Not, of course, that every phrase of the Arabic version is to be claimed as Athanasian; a comparison with the Coptic fragments shows how great is the freedom of much of the Arabic translation. Moreover the impression is often given of confusion in the text; and the conclusion, from § 105 onwards, has almost the appearance of a subsequent addition."—Introd., p. xxvi.

The Canons show us Athanasius against the flesh and the devil from the point of view of

Church officials; and if the Churchman's privilege is exalted ("And thou, O priest, hast received the office of the Son of God upon earth," § 88) his responsibility is rigidly enforced. The proof-reader has overlooked "unquenshable," p. 11; "graneries," p. 44; "adultress," p. 47; "did chose," p. 67; "occassional," p. 82; "councel" and "imporities," p. 144.

Völkerkunde, Bibel und Christentum. Von Dr. Friedrich Maurer.—I. Teil. *Völkerkundliches aus dem Alten Testament.* (Leipsic, G. Böhme.)—The author of this book deals with the family life and the political and spiritual life of the people of Israel; and to the student of the Bible the book ought to be most helpful. Information is supplied on such subjects as the dwellings, business, and clothing of the people, and the clothing and support of the priests. Totemism and magic are not neglected, nor are the marriage customs. In connexion with the laws which governed the people there is a contrast of the codes of Moses and Hammurabi. The book is not large, though it contains a multitude of informative details; and its small size may account for statements which have few or no arguments in their favour. We have, for instance, the assertion:—"Die Beschneidung ist ferner eine Ablösungsform des Menschenopfers"; but there is no justification of the assertion, beyond a reference in a foot-note to the practices of the worship of Moloch. Dr. Maurer tells us, however, when speaking of the popular religion, that "das vornehmste Opfer, das der Mensch seinen Göttern darbringen kann, ist er selbst"; and points out that the offering of the first-born was of less importance to a nomadic than to an agricultural people. He indicates the passages in the Old Testament which seem to point to human sacrifices; but he makes no attempt to account for these references, or to determine the extent of such sacrifices, after the people had passed from the primitive stage of civilization.

Dr. Maurer also discusses the subject of ancestor-worship among the Jews; and while readers will be interested in the evidence in favour of such worship, there will be some to whom the evidence will not carry conviction. The first proof set forth is "Die Tatsache, dass der Hausvater als Priester der Familie opfert"; and there is this, "Nur bei Ahnenkult kann die Kinderlosigkeit als grösstes Unglück gelten."

Der Glaube an Gott und die Wissenschaft unserer Zeit. Von W. Herrmann.—*Wahrheit und Dichtung in unserer Religion.* Von D. P. Lobstein. (Williams & Norgate.)—These short pamphlets or essays, which are reprints from the *Zeitschrift für Theologie und Kirche*, are religious tracts for thoughtful men. Prof. Herrmann is not concerned with the supposed quarrel of science and religion in the form in which it disturbed a former generation. He admits, however, that the science of the present time is dangerous to the faith of many, and he asks how this danger is to be averted. He points out that if science is able to recognize only that which is an evidence of law, then it is separated from that which is alone actual to faith—viz., a God who is helpful to man. He sees the limitation of science, the bounds of its sphere, and finds that because it does not and cannot take as its own the content of faith, it does not therefore make faith impossible. In an interesting passage, which illustrates the religious tone of the essay, he points to the need to learn from the "Word of God." He sees that Protestants and Catholics are not agreed regarding that Word, and admits that they may, both sects alike, be right in their conception of it—only

"es muss uns ein Erlebnis geworden sein, aus dem wir tatsächlich den zu uns redenden Gott vernehmen. Wenn evangelische und katholische Christen überhaupt Religion wollen, müssen sie ihre confessionellen Grundsätze in solcher Weise vertiefen."

Prof. Lobstein, in a preface to the thirty-five pages of his tract, sets forth eight important theses. Thus, for instance, it is stated that there is need, in opposition to abstract dogmatic orthodoxy and unhistorical rationalism, for a demonstration of the psychological and historical necessity lying in the facts of religion. The presentation of these theses shows the care with which the subject of the tract is examined. As the title indicates, Prof. Lobstein examines religion under the conceptions of *Wahrheit* and *Dichtung*, and by them accounts for the differences found in the New Testament writings. Truth is ever the same, but the form or setting differs. It may not be difficult to agree with Prof. Lobstein that thinkers, such as St. Paul and St. John, may make use of forms or expressions peculiarly their own; but it is not easy to look on the facts of a narrative as merely elements in the representation of an idea. The events of the Fall have been interpreted as details of a picture of a spiritual process; but can the facts set forth as historical in the Gospels be treated in the same way? We are told, for example, that the idea of the writer of Hebrews that the death of Jesus as the High Priest secures a freer approach to God,

"verdichtete sich zu einem sinnlich wahrnehmbaren Ereignis und wurde in der christlichen Ueberlieferung so ausgedrückt, dass im Augenblick des Todes Jesu der Vorhang des Tempels in zwei Stücke von oben her bis unten hin zerriss (Mark xv. 18)."

The relation of *Wahrheit* and *Dichtung* in our religion demands attention, but suggests danger to the faith of the ordinary Christian, who is accustomed to think, for example, that the rending of the veil of the Temple was a fact before the author of Hebrews wrote of Jesus as the High Priest who had opened a way to the presence of God.

BOOKS FOR SCHOOLS AND STUDENTS.

Outlines from Plato: an Introduction to Greek Metaphysics, by F. P. Long (Oxford, Blackwell), adequately serves its primary purpose, which is to provide the Oxford Greatsman with a compendious selection of passages containing the pith of the logical and epistemological doctrine of Plato. Sixty-four extracts, averaging something under ten lines apiece, cannot, of course, include all that is important, but the bare essentials seem to be there, whilst little or nothing is off the point. Further, the selections are presented in an intelligible order, having a certain pedagogic value. The tiro in philosophy can scarcely be expected to study Plato objectively. If he try to think for himself in Platonic terms, borrowing here and adapting there, he is doing very well. Mr. Long's ordering of his extracts seems especially designed to suit the student brought up on the philosophy of T. H. Green. Is not that philosophy somewhat obsolescent by this time, even at Oxford, where so many of Green's old pupils still teach? For the rest, the requirements of the Oxford Final School make it necessary that the passages should group themselves more especially round the 'Republic,' a scheme which cannot but interfere with any attempt to expound their genetic relations to each other. Mr. Long appears to have no decided views as to the historical order of the dialogues. In any case, a book of the kind is expected to provide 'The Student's Plato,' a most useful fiction, but not to be confounded with the real Plato, or even with the problematic Plato of critical *Philosophiegeschichte*.

Sources for Roman History, B.C. 133-70. Collected and arranged by A. H. J. Greenidge and A. M. Clay. (Oxford, Clarendon Press.)—English teachers and students of Roman history and constitutions who have a genuine desire to get at the original authorities and to form a personal estimate of their values—in other words, to exercise the critical faculty as well as the memory—have laboured hitherto under a certain disadvantage, in the lack of English books tabulating and quoting the authorities to be considered. Englishmen who read German have less to complain of; but they are few and far between, and, after all, it is proper that the necessary equipment for historical study should be supplied through the medium of the mother-tongue. This work, therefore, deserves a hearty welcome, as a distinct contribution towards the attainment of such an end.

In the preface the editors amply justify their work on another ground, by referring to

"the absence of any single guide, of reasonable fullness and authority, for the story of the sixty-three years which form the subject."

A chronological arrangement (probably the most satisfactory and least confusing in the long run) is adopted: under each year is given a series of references to, and citations from, texts and inscriptions, bearing on (1) the internal, (2) the external history, and grouped under summary headings which serve as a guide to the eye and the memory, and, with the indexes of subjects and authors, make the book easy to handle. We can affirm from actual use of the book that the student will find in it not only a valuable lesson in method, but also an incentive to similar efforts on his own part. It is sincerely to be hoped that what this book does for one period of Roman history may soon be done as well for the others usually studied, for a better knowledge of sources cannot fail to increase the interest and the capacity alike of teachers and learners.

Murray's Handy Classical Maps: Mare Ægæum, &c. Edited by G. B. Grundy. (Murray.) — In this sheet there are a dozen maps of different sizes, all excellent in their way. Undoubtedly the coloured contour map of the Ægæan Sea will be the most used, but we are grateful for the clear and comprehensive view of the Propontis, for the three plates of Rome at three stages of its growth, and for the small pictures contrasting the extent of ancient and modern Rome. There is also an up-to-date plan of the environs of the Forum Romanum. Maps of Egypt, Athens, the Piræus, and the Acropolis of Athens complete the contents of this very handy sheet.

A Brief Survey of British History, by C. E. Snowden (Methuen), is a superior date-book of British history, with a number of interesting notes and tables. To quote the author's preface, it

"does not aspire to be more than a guide and companion, complementary and suggestive, and very far from exhaustive. It aims at presenting a clear and easily graspable analysis of the course of events to students who are reading, and at refreshing, at a minimum cost of time and trouble, the memories of those who have read."

What the author promises he in the main performs. There is no great novelty in the work. The perpendicular divisions of the analysis into government, parliament, home, foreign—a somewhat illogical division, though a useful one for all that—reflect Messrs. Acland and Ransome. The subject divisions of the reigns are often what we have been accustomed to find in Prof. Tout's excellent analysis. We have found the notes appended to reigns the most useful part of the book, and the appendixes are very handy. The author professes to find difficulty in assigning dates to many events. Would it not be more correct to put Sir Humphrey Gilbert's attempt to found colonies

in North America in 1583 than in 1573, and the Uxbridge negotiations in January and February, 1645, than in 1643?

Oxford Modern French Series.—*Mémoires d'un Touriste.* By Stendhal (Henri Beyle). Edited by H. J. Chaytor.—*Histoire de la Révolution Française.* By François A. M. Mignet. Edited by A. Dupuis. (Oxford, Clarendon Press.)—The name of Stendhal, like that of his great disciple Balzac, is scarcely suggestive of reading "suitable for the young," but the selections here presented have been edited with a caution erring, if anything, on the side of over-stringency, as, *e.g.*, in the note on Aspasia, described as "a Milesian girl who became the wife of Pericles." Even under these conditions, however, the 'Mémoires d'un Touriste' make lively reading, and they are supplemented by several illustrations and a helpful introduction.—As a school reading-book we do not entirely approve of Mignet's 'Histoire de la Révolution Française' (a portion extending from the opening of the States-General to the execution of Louis XVI.). Mignet's style is a marvel of terseness and compression, but these very qualities are likely to render his work less interesting to the class of readers for whom this series is intended. The editor's notes besides do not always furnish desirable examples of English as it should be written.

Two further volumes in the same series are *Une Ténébreuse Affaire*, by Honoré de Balzac, edited by Marie A. Péchinet, and *Voyage aux Pyrénées*, by H. Taine, edited by William Robertson. We have nothing but approval for these additions, especially as regards the choice of subjects. 'Une Ténébreuse Affaire,' a story of the Revolution and the First Empire, abounding in mysteries, conspiracies, and police machinations, is well adapted to arouse the schoolgirl's—possibly even the schoolboy's—interest, and the treasure of useful idioms which it contains is adequately dealt with in Mlle. Péchinet's notes. It is, indeed, only open to the objection, if objection it be, of conveying an entirely erroneous idea of Balzac's attitude towards moral questions.—Special praise is merited by the introduction to Taine's charming 'Voyage aux Pyrénées,' that gem amongst guide-books. Mr. Robertson has evidently taken his work as a labour of love, and shows an intimate and appreciative knowledge of Taine. His historical and geographical notes, though good, err rather on the side of over-copiousness, and hence are calculated to inspire some dismay in the youthful student.

Little Library of French Classics.—*Lettres choisies de Madame de Sévigné.* 2 vols. (Treherne & Co.)—One shilling and fourpence is not an exorbitant price for a hundred and thirty-one letters of Madame de Sévigné, and it would be, perhaps, unreasonable to complain that the pretty little volumes containing them leave something to be desired in respect of type and paper. The selection has been well enough made, as indeed it is not easy to choose amiss where this queen of letter-writers is concerned. The notes, based mainly on those of former editions, are useful so far as they go, though naturally insufficient for the needs of a serious student of French literature, or the baser purposes of an examination candidate.

In the same series we have the *Voyage autour de ma Chambre* and two other little pieces by Xavier de Maistre. The booklet is wonderful for eightpence, though we cannot praise its print, which is the work of the Imprimerie Nouvelle (Association Ouvrière) of Paris. The last note on the last page shows that the book is a reprint from the French.

Qu'est-ce que cela veut dire? Par H. P. Sligo de Pothonier. (Sands & Co.)—This is a collection of idiomatic French phrases intended for the guidance of advanced students, and from its comprehensiveness and the essentially modern character of the language employed it seems well adapted to that end, although, as no translations are given, its use will probably in most cases entail a good deal of dictionary work. The author's suggestion that it ought to be studied in the intervals of actual conversation with French people is sound, and should lead to good results.

We have received from Messrs. Ginn & Co., of Boston, three recent additions to their "International Modern Language Series," viz., Goethe's *Hermann und Dorothea*, edited by Philip Schuyler Allen; Freytag's *Die Journalisten*, edited by Leigh R. Gregor; and Theodor Storm's *In St. Jürgen*, edited by J. H. Beckmann. The former two are familiar school-texts in this country; Storm's charming little tale has not, so far as we know, been presented for study to the youth of England. The editorial work in all cases, though not noticeably fresh or independent, is sufficiently careful, and the volumes are well printed and serviceably bound.

Greek Reader. Vol. I. By E. C. Marchant. (Oxford, Clarendon Press.)—Mr. Marchant exhibits his usual skill in this somewhat novel Greek reading-book. He has selected some passages from the 'Griechisches Lesebuch' of Wilamowitz-Moellendorf, adapted the sympathetic little introductions, and used freely the notes of Dr. Ewald Bruhn, which are rich in allusions to Greek life and manners. There are sixty pages of text and introductions, and twenty-five of notes. On the whole, it is a fresh book. Such passages as 'The Hunter' from Dion Chrysostom, and Hiero's 'Galleon,' will certainly be far more intelligible to a young student than hard casuistical speeches from Euripides, or dull details of parasangs from Xenophon. And, as scholars are beginning to recognize, what matter if it is not pure Attic Greek throughout? As Mr. Marchant truly says, "It is very good Greek for all that; and.....the notes supply a warning that will preserve our budding Atticists from harm." The fact is, if these capital passages, full of action and life, manage to stretch the imaginations of our boys, we will gladly make 90 per cent. of them a present of their stilted Greek prose, which will at the best be pseudo-Attic. We welcome Mr. Marchant's book as a sign that a more lucid air is likely to pervade the Greek scholarship of the next generation.

It speaks well for the zeal with which Spanish is now being studied in the United States that a second edition of the *Practical Spanish Grammar* (Heath & Co.), by Mr. E. C. Hills and Mr. J. D. M. Ford, should be required within eight months of its first issue. On the whole, the book deserves its success: it is workmanlike, clear, and scholarly. The verb-section is unusually full and sound in treatment, though surely *hé* should be omitted from the paradigm of *haber*; the theory of Diez (wrongly attributed to Cuervo on p. 209) that *hé* is a phonetic variant of *vé*—the imperative of *ver*—is contested by Ascoli; but the Spanish Academy is alone in maintaining that *haber* and *hé* are formally related. The true imperative singular is *habe*, and, though now obsolete, it should have been mentioned as a form frequently used by the best writers. Mr. Hills and Mr. Ford follow Cuervo in rejecting the usual derivation of *repuse* from *reponer*, and in referring it to *responder*; so, also, in almost the same terms as Cuervo, they indicate the baffling pronunciation of the Spanish *b* and *v*; and, as they clearly profit by the work of the great Colombian philologist in other particulars, it would have been graceful to acknowledge this indebtedness in the preface. Is it, by the way, a fact that "even in the days of ancient Rome a Latin wit said that for the Spaniards *vivere* was the same as *bibere*" (p. 16)? If so, we have a case of unconscious reminiscence in Scaliger's epigram:—

> Haud temere antiquas mutat Vasconia voces
> Cui nihil est aliud vivere quam bibere.

The list of idiomatic expressions might be revised with advantage. In what sense are such phrases as "es temprano" (p. 71) and "va á llover" (p. 145) idiomatic? The name of the island in the Antilles is "San Tómas," not "San Tomás"; the English pronunciation is preserved as regards stress. These small blemishes do not affect the substance of the grammar, which will be found useful even by advanced students.

OUR LIBRARY TABLE.

Mr. John Fyvie's volume, *Some Famous Women of Wit and Beauty* (Constable & Co.), bears the somewhat misleading sub-title of 'A Georgian Galaxy.' Two of his subjects, Lady Eastlake and Mrs. Grote, were essentially Victorian, while the great crisis in Mrs. Norton's life, the unsuccessful action for divorce brought against her and Lord Melbourne by her wrong-headed husband, occurred in the reign of William IV. As a whole, Mr. Fyvie's sketches are agreeably and discreetly written, but they contain little evidence of original research. Thus, in dealing with such a well-known character as Mrs. Montagu, the "Queen of the Blue-stockings," he has neglected an obvious source of information in her correspondence with Beattie, wherein she appears as a most kind-hearted, if officious friend. He tells us nothing about Mrs. Fitzherbert or Lady Hamilton that we did not know before, admitting, honestly enough, his obligations to Cordy Jeaffreson, Prof. Laughton, and the Morrison MSS. for the ascertained facts in the career of the ebullient and mendacious Emma. Mr. Fyvie leans to the side of charity in his description of the Blessington *ménage* at Gore House, though the separation of Count d'Orsay from his handsome wife is rather a difficult matter to get over. We notice but few actual mistakes, unless the adoption of the sententious and highly improbable remarks attributed by the late Mr. Torrens to Lord Melbourne in reply to Disraeli's audacious assertion, "I want to be Prime Minister," is to count as such. But Delane, not Barnes, who was dead, sat in the editorial chair of *The Times* when that journal made the sensational announcement that Sir Robert Peel and his Cabinet had determined to repeal the Corn Laws. Mr. Fyvie duly acquits Mrs. Norton of having divulged that secret of State, and, while he was about it, he might have alluded to Greville's indisputable evidence that the real informant was Lord Aberdeen. Of the essays on Mrs. Grote and Lady Eastlake it is sufficient to remark that they are skilfully put together, and that the trouncing of Ruskin's 'Modern Painters' by the second of those ladies, even when given in summary, is a most entertaining specimen of the old downright style of criticism.

The Regency of Marie de Médicis. By Arthur Power Lord. (Bell & Sons.)—This small book is a conscientious, but not highly illuminating piece of work. It reads like the thesis for a degree, and has the merits of minute carefulness and scrupulous adherence to authorities. But we fear that neither its subject nor treatment will commend it to the attention of any but a small circle of specialists. The period between the death of Henri Quatre and the assumption of royal authority by Louis XIII. is one of small men and petty intrigues, and can only become of interest when treated in connexion with preceding events or with what followed. Unfortunately, Mr. Lord has almost completely lost himself in its small details, and has handled

it rather as an isolated episode than as a sequel to the religious wars or a foretaste of the Fronde. Instead of pointing out the real significance of the Regency as a symptom of the weakness of the royal power in France when not directed by a Henry of Navarre or served by a Sully, and emphasizing the corruption of the great nobles, he devotes himself to unravelling the plots of Marie de Médicis's ministers and the nobles, who grudged them their influence, and her own "consummate skill" in setting them all by the ears. True, he has been at pains to investigate the way in which Sully's fall was brought about, and to give a clear account of the death of the Regent's favourite, Concini, Maréchal d'Ancre. But he has not known how to invest his narrative with that halo of attraction which we might have expected from one steeped in the French memoirs. Even the chapter on the States-General of 1614, which will be found by far the most interesting by general readers, might have been made more of had it been brought into due historical perspective. The writer, moreover, sometimes lacks precision and clearness even when keeping within his own restricted plot of ground. One never gets a clear notion of the real nature of the influence exercised by Concini over the Queen Regent, and one finds it difficult to understand the sudden appearance of the Guises in company with their recent opponents the Bourbon princes. The description of the Tiers État as the "lower chamber" and the use of the term "Austrian Empire" are scarcely severely accurate. Mr. Lord makes Condé misquote or misspell the Vulgate ("*Errat* autem Barrabas latro"). His ladylike use of italics is also somewhat annoying. But he has manifestly taken great pains to make his study of six years of French history complete, and the care with which his index has been compiled is so laudable that we could wish to see it imitated in quarters where such a help would be more valuable. The five portraits—of Marie de Médicis, Sully, the Comte de Soissons, the Duc de Longueville, and Concini—are admirably reproduced, and form the most attractive feature of the work.

The Origin of Thought and Speech. By M. Moncalm. Translated by G. S. Whitmarsh. (Kegan Paul & Co.)—The resuscitation of Max Müller's theories on the origin of thought and language and of his mythological speculations is astonishing. Great as Max Müller's services to mythology and philology were through his translations of the Vedic hymns, his writings on language, thought, mythology, and religion have their value seriously impaired by numerous assumptions either disputable or positively fallacious. His conclusions were vitiated by the notion that the student of Sanskrit held a key which would unlock all the secrets concerning the origin of human thought and speech—secrets which had been fastened up securely by mental development and by immeasurable change in the material and methods of speech centuries before the oldest Sanskrit hymn was composed. The common speech of our Aryan ancestors, many forms and words of which comparative philology has been able to reconstruct, was not an infant language, but adolescent or adult. The fact that a considerable percentage of Aryan words, of which the etymology has been ascertained, are appellatives formed from "conceptual roots," does not prove or imply that all our words were originally appellatives, still less that the Aryans' ancestors who first used speech had appellatives or verbs in their vocabulary. It has been suggested by one of Max Müller's opponents that the earliest words were sounds uttered upon the perception of identical individual examples of one species, a distinct sound being associated with each species; that mistakes in the use of such a sound led to the appreciation of identity and difference, which is the basis of classification, so that the associated sound became a name. On this ingenious hypothesis man at first differed from beast and bird by giving distinct vocal expression to particular emotions, *e.g.*, to the emotion or fugitive impression excited by a particular kind of nut or fruit, instead of giving indiscriminate expression to the emotion excited by any kind of food. If such an expression be called a conceptual word, a limited sense is given to "conceptual," "concept," "conception," which is not implied by philologists, who hold that the earliest words were verbal roots, and the earliest names appellative or descriptive. If thought was caused by the several sounds associated with particular emotions, we cannot hold with Max Müller that "language and thought are one and indivisible." Geiger is right in contending that language produced reason, if by "language" interjectional or ejaculatory language be understood. An expression of emotion which indicated the source of the emotion would be a "word" in a higher sense than a grammatical interjection. The translator has occasionally obscured the meaning of the original, and has made several mistakes in the form of Greek and Sanskrit words, while Tacitus's German Tuisco figures as "Tuisto"; but on the whole his task has been commendably performed.

Though the author adds nothing to our ideas on the earliest speech and thought, and presents much that is worthless or misleading for our acceptance as sound philosophy, his pains are not altogether wasted. He gives in a pleasant style sketches of the theories on the subject which have been held by various thinkers, from Plato to Noiré and Darwin. His main object appears to be to trace the birth and history of the human concepts of God and of religion, and much that he quotes and says on these ideas is interesting, while sympathy is attracted by the spirit of reverent tolerance in which divers philosophical and religious systems are discussed.

The Essentials of Composition and Rhetoric. By A. H. Espenshade. (Heath & Co.)—Thousands of persons who have no natural bent towards literary composition of the simplest kind are now obliged to make speeches or to write formal letters, reports, paragraphs, articles, and even books as best they may. Many of these unfortunates might be raised up to, or nearly up to, mediocrity, and might get rid of their worst faults, by the study of such a text-book as Mr. Espenshade has compiled. Better-equipped students and aspirants—who have acquired "a considerable body of general information," and have "clearly defined thoughts" on a variety of topics, "a fair-sized working vocabulary," and "a familiarity with English idiom"—may attain to excellence by its aid, especially if they write as nature prompts them and then criticize their productions according to the principles of composition. We are inclined to extend to all composers the maxim that nature, not art or practice, makes poets; but it must be remembered that even poets cannot influence their fellow-men without some technical training, which moulds and developes individual tastes and methods into conformity with the predilections of the many.

The author's style is clear and concise; his point of view is strictly practical; his precepts are unimpeachable, most of them having been handed down from Aristotle by a coterie of eminent authorities; and his arrangement is judicious. Some of the examples of excellence strike us as unsatisfactory. For instance, the opening sentence of a theme on the industries of a town merely enumerates four manufactures, without giving any idea whether a fraction per cent. or 30 per cent. or more of the population is employed in them. The following sentence in the useful chapter on 'Correctness' is puzzling:—"The nouns *sheep*, *deer*, *trout*, *shad*, *heathen*, *yoke*, *pair*, and *cannon* have the same form for both singular and plural." Yet we could hardly write, "Do snipes fly and salmons swim in pair?" In Appendix D, on 'Good Use,' the typical Americanism "cute" is condemned as a barbarism, while the use of "none" as plural, = not any, is pronounced to be correct, and 'The Worth of Words,' by Dr. R. H. Bell, is recommended to all students of composition. We cordially endorse the recommendation of "the habit of looking up all new words in the dictionary." Persons who do not ascertain the exact meaning of every unfamiliar word or usage of a word as they read not only retain a deficient vocabulary, and are likely to misuse words, but also impair their mental faculties seriously. Such readers may accumulate much worthless information, but the more they read, the less educated and rational do they become. The dictionary used should be "unabridged." Collections of synonyms and antonyms, such as Crabbe's, Roget's, and Fernald's, are styled "good teachers for every student of English composition." They may be useful for refreshing the memory of mature scholars, but are dangerous for tiros, who might, for instance, avoid the commonplace by substituting "a voluminous numerosity" for "a great number." The preface and the character of the work suggest that the author has had a considerable amount of practice as a teacher of composition in Pennsylvania State College. Those who do not intend to write more than is absolutely necessary will find this treatise a help towards reading profitably and talking intelligently.

Drych y Prif Oesoedd. By Theophilus Evans. Reprinted from the Revised Second Edition of 1740. Edited by S. J. Evans. (Bangor, Jarvis & Foster; London, Dent.)—The Guild of Graduates of the University of Wales have done wisely in issuing this well-known classic comparatively early in their series of reprints of Welsh prose works. For no writer, excepting Vicar Prichard, has ever been so great a favourite with the Welsh people as Theophilus Evans, nor has any work been more generally recommended during the last fifty years as a model for students of Welsh style than his 'Drych' or 'Mirror of the Primitive Ages.' "In his felicity of word, phrase, and quotation," he ranks, as his latest editor observes, with the best of literary craftsmen,

> "while in his wonderful similes, and his skill in telling his story well, he [is] the consummate artist whom generations of his fellow-countrymen have proclaimed to be without a peer among Welsh writers."

In "scrupulous attention to the details of an event as one of the chief conditions of verisimilitude" he is aptly compared with Defoe, while as an historian he may be said to belong to the school of Geoffrey of Monmouth. For it is from such eponymous heroes as Gomer and Brutus of Troy that he traces the descent of the Cymry or Britons, and he boldly begins his narrative with the dispersion of Babel. "And who then, do you think," asks he, "spoke Welsh at Babel? Why, most assuredly Gomer, the eldest son of Japhet ap Noah." In the same spirit he embellishes his chapters with letters ascribed to Julius Cæsar and King Arthur, and with speeches by Boadicea and Caractacus. Nevertheless, he now and then affects a severely critical attitude, rejecting an occasional legend as unhistorical; and he cites "authorities" almost continually, though "these are often not more tangible than 'MS. Vet.,' which does duty when other sources fail him." At any rate, for nearly

two centuries the great majority of monoglot Welshmen have known no other history of their race, and in these pages some of the best-known and most widely accepted of their national myths, such as the 'Treachery of the Long Knives' and the 'Alleluia Victory of St. Garmon over the Picts,' were enshrined for them in definitive form of classic beauty. But while the reign of Theophilus Evans as an historian has at last come to an end, his pre-eminence as a stylist and a realistic writer remains unchallenged.

In the present reprint the text of the second edition of 1740 is reproduced with a fidelity that borders on the servile. In fact, the reprint is made to serve the purpose of a facsimile, for not only is the original given letter for letter, line for line, and spacing for spacing, but even its obvious misprints have been reproduced. As an annotated edition of this same text has also been issued for the use of schools, the perpetuation of these misprints creates wholly unnecessary difficulties for students.

By drawing upon parochial and diocesan records the editor has brought to light, in his introductory matter, several new facts relating to the author. A few errors have, however, crept into his work. Thus Ebensburgh, not Edensburgh, is the name of the town in Pennsylvania where the English translation of the 'Drych' was first published. The date suggested for the author's marriage (1728) is too late by at least seven years, as his son Charles matriculated at Oxford in 1738, being then seventeen years of age. We are surprised that the editor does not once refer to the account of the author given by his grandson, Theophilus Jones, in his 'History of Brecknockshire,' nor to the further notes thereon by Miss Gwenllian Morgan in the recent reprint of that work. Had he consulted this authority he would not have omitted one of the author's chief preferments, namely, that of Llanlleonfel; and, what is of more importance, he would have found much to explain Evans's antagonism to the Methodist revival of his day. The author was domestic chaplain to the Gwynnes of Garth, in the parish of Llanlleonfel, and here the Wesleys always stayed on their visits to Breconshire, "preaching daily" to the family "while seeking repose amid the liberal hospitality" of the place. Charles Wesley eventually married one of the daughters of the house. All this must have been very galling to the dignified student, the orthodox chaplain. So much, at least, may be inferred from his 'History of Modern Enthusiasm,' which is a bitter attack on "zealots," Fifth Monarchy men, French prophets, and Methodists, including the Wesleys and Whitefield. That 'History' has long since fallen into that merciful oblivion which it deserved; but the author's other history—the 'Drych'—will remain a "joy for ever" to all who value Welsh literature at its best.

The Ancren Riwle or Nuns' Rule. Modernized by James Morton, with Introduction by Abbot Gasquet. (De La More Press.)—More than fifty years ago the Rev. J. Morton edited for the Camden Society a semi-Saxon tract on the life of female recluses, termed the 'Ancren Riwle' or rule of ancresses. This translation of a thirteenth-century document is now reproduced, with a few slight changes, and a good introduction by Dr. Gasquet. Several copies of the text are extant, including five at the British Museum, one at Corpus College, Cambridge, and another at Magdalen College, Oxford. Dr. Gasquet agrees with Mr. Morton in thinking that the author was probably Bishop Richard Poore, who held the see of Salisbury from 1217 to 1229, and that the Rule was written by him for the use of the nuns of Tarrent, Dorsetshire. In later times the Tarrent sisters embraced the Cistercian rule, but in Bishop Poore's days they followed the life of "Ancresses," or "Recluses," without joining any of the monastic orders. In the case of Tarrent there were three sisters living in the house at the same time, and served by out-sisters. The house was situated close to the church, with a window commanding a view of the high altar. The whole book is full of details with regard to one of the most interesting phases of religious life in England. The bishop strictly forbade such sisters or recluses to keep any animal except the domestic cat. It is somewhat curious to note that an exactly similar rule may be found on the printed regulations hung up in the picturesque almshouse or hospital of sixteenth-century foundation near the barracks at Canterbury.

An English Church History for Children. By Mary E. Shipley. (Methuen & Co.)—These 250 pages of large, clear print, notwithstanding a commendatory preface by the Bishop of Gibraltar, do not at all commend themselves to us as suitable for children. They purport to be a child's history of the advance of the Christian religion in England from 597 to 1066. In some places the language and sentiments seem intended for a child of five, whilst elsewhere it is doubtful if a youth or maiden of fifteen could grasp the phraseology. Not a little of the baby talk is done in 'Alice in Wonderland' style. Thus:

"And what is Dunwich now?
"Shall we in imagination take a drive and see?
"But why not go by train?
"Because the railway does not go so far.
"But where is the river?
"There is none."

With regard to Dunwich, interesting as are its present associations and past history, Miss Shipley has been far too credulous of mere traditions as to its former extent and greatness. The achæology of the book is not above suspicion. Is there any authority on forest trees who believes that the elm flourished in Britain in pre-Roman days?

In *The Courtships of Catherine the Great* (Lawrie) Mr. P. W. Sergeant has compiled, from various more or less authentic sources, a plain and vivacious account of what may be called "the goings-on" of Catherine II. of Russia. We cannot honestly say that it has very much historical value, for Mr. Sergeant generally accepts the statements of his authorities without question, and not a few of them are extremely questionable. Like most people who have made the acquaintance—even at second hand—of the Semiramis of the North, he is undoubtedly fascinated by the winning personality of that extraordinary woman, and is, therefore (unconsciously, of course), hardly fair to her rivals or victims. For instance, it has now been established, *pace* M. Waliszewski, that Peter III. was no drunkard, and that the Empress Elizabeth, if she inherited some of the grosser vices, also inherited not a few of the great qualities of her illustrious father. But it is unfair to criticize too rigorously a book which is written ostensibly for amusement, and is, with all its shortcomings, amusing enough.

Few recent travellers in the Peninsula have been better equipped than M. E. Martinenche, whose *Propos d'Espagne* (Hachette) includes several brilliant studies which have already appeared in *La Revue Latine*. M. Martinenche takes a romantic interest in gamblers, watchmen, beggars, and other decadent survivals of the picaroon type; he abounds in information about Spanish history, painting, and music; he is a stimulating guide through the rarely visited libraries of Valladolid and Salamanca; and he is an agreeable companion at the theatre, where he introduces us to the brothers Alvarez Quintero, who have so speedily won for themselves a prominent place among modern Spanish dramatists. All these matters are treated with judgment and ample knowledge, though we doubt if Cervantes really wrote 'La Ilustre Fregona' at the Sangre de Cristo in Toledo (p. 103); moreover, the well-known poem 'A las Ruinas de Itálica' is by Rodrigo Caro, not by Rioja (p. 28). But these are trifles. M. Martinenche seems inclined to agree with Zorrilla that the English are "los más antipáticos individuos de la raza humana," and he returns too often to this rather irrelevant point. Of England and the English he apparently knows little at first hand; of Spain he knows a great deal, and he writes so vivaciously that his book may be read with pleasure.

The Funk & Wagnalls Company publish Mr. Berkeley Smith's *Parisians out of Doors*, an illustrated volume which, though it cannot be praised for style, is readable for its gossip.

Mory & Cie., 1804-1904: Notice Historique. (Paris, H. Bouillant.)—The firm of Mory & Co. has now been in existence a hundred years, and the great-grandson of the founder, Henri Mory, has taken advantage of the centenary to write its history. This he has done in a modest and interesting way, and this book, of only fifty pages, deserves to circulate among all concerned in the progress of French commerce. The founder of the firm, Nicolas Toussaint Mory, born at Calais on the 2nd of November, 1774, was the correspondence clerk of the English Post Office, and had the exclusive appointment for the transport of English journals to the Continent and of all foreign journals to England. When, on the 25th of November, 1815, the Treaty of Peace appeared in the *Moniteur*, he at once started a courier with copies to England. On the following day he reached Calais, and arrived in London on the morning of the 28th, having accomplished the entire journey in thirty-three hours. On the same day the Treaty appeared in the whole of the London papers. This enterprise must have pleased newspaper proprietors, for the official news of the signing of the Treaty was only received in Calais the same morning, and the French ambassador in London read the text of the Treaty for the first time in the English press. In 1817 Mory added to his business that of Commissioner of Customs. He died on the 9th of March, 1824, at the early age of forty-nine, and was succeeded by his son, to whom he had given the advantage of acquiring a knowledge of English by a residence at Canterbury. Like his father, he was full of energy; and, at the age of thirty-one, was made a *Juge Suppléant*, and four years later Judge of the Tribunal of Commerce at Calais. In 1839 he established the headquarters of the firm at Boulogne. He has been succeeded by his two sons and grandsons. Two years ago the firm had the honour of starting from Boulogne the first French merchant steamship. The book contains many illustrations, including some characteristic portraits.

Messrs. Macmillan send us reprints of the first and second editions of FitzGerald's version of the *Rubaiyat of Omar Khayyám*. These booklets are cheap at sixpence, being well printed and neatly bound.

Messrs. Routledge have sent us a number of interesting volumes in "The New Universal Library," which is certainly cheap, in its neat green cloth binding, and covers a wide range of subject. Among the volumes before us are the charming idylls of *Sylvia's Lovers* and *Cranford*; vol. i. of Peacock's works, including *Headlong Hall*, *Nightmare Abbey*, *Melincourt*, and *Maid Marian*; Arnold's *On Translating Homer*, with F. W. Newman's *Reply* to his strictures, and Arnold's *Last Words*, in rejoinder, which end with a delightful tribute to Clough; Maine's *Ancient Law*;

Lowell's *My Study Windows*, a book of rare charm and scholarship; and the vivid *Records of Shelley, Byron, and the Author*, by E. J. Trelawny. It is a varied list, but we should have no hesitation in advising the addition of the books, without exception, to any set of shelves which does not contain them. Some of them no doubt imply learning and scholarship, but it could not be conveyed in a more palatable form than the humour of Peacock, the lucid mastery of Maine, or the grace of Arnold.

We have on our table *The Epistle to the Philippians*, by the Rev. F. B. Meyer (R.T.S.), — *The Appellate Jurisdiction of the House of Lords and of the Full Parliament*, by J. W. Gordon (Murray), — *The Transactions of the Honourable Society of Cymmrodorion* (issued by the Society), — *The Estate Nursery*, by John Simpson (Country Gentlemen's Association), — *Truths Leaf by Leaf*, by the Rev. Prof. David Swing (Chicago, Kimball), — *Nature Study Lessons*, by Lida B. McMurry (Macmillan), — *Socrates*, by the Rev. J. T. Forbes (Edinburgh, Clark), — *Maria Sophia, Queen of Naples*, by Clara Tschudi (Sonnenschein), — *A Memorial of Horatio, Lord Nelson*, by S. Baring-Gould (Skeffington), — *Lord Nelson's Letters to Lady Hamilton*, with an Introduction by Douglas Sladen (Library Press), — *Letters on the Simple Life*, reprinted from *The Daily Graphic* (Partridge), — *Our Industrial Outcasts*, edited by Will Reason (Melrose), — *Military Surgery in its Relation to the Science and Art of War*, by Miles (Drane), — *The Pleasant Art of Photography Made Easy*, by Camera (Pitman), — *The Poetry of the Future*, by Laurence Owen (Simpkin & Marshall), — *Rhymes of the East and Re-collected Verses*, by Dum-Dum (Constable), — *The Shadows of Silence and the Songs of Yesterday*, by Cyril Scott (Liverpool, Lyceum Press), — *Isidro*, by Mary Austin (Constable), — *Marraquitta: a Romance of Monte Carlo*, by C. Wales-Almy (Drane), — *For Love and Loyalty*, by Paul Seaton (Edinburgh, Morton), — *Mrs. Darrell*, by Foxcroft Davis (Macmillan), — *Mademoiselle Ixe*, &c., new edition, by Lanoe Falconer (Unwin), — *The Outlet*, by Andy Adams (Constable), — *The Candidate*, by J. A. Altsheler (Harper), — *The Reapers*, by Douglas Marryat (Pitman), — *My Lady Laughter*, by Dwight Tilton (Dean), — *When a Girl's Engaged*, by Hope Merrick (Chatto & Windus), — *Wissen, Glaube und Ahndung*, by Jakob Friedrich Fries (Williams & Norgate), — *Le Secret de la Franc-Maçonnerie* (Paris, Perrin), — *Die geistlichen Ubungen des Ignatius von Loyola*, by D. Karl Holl (Williams & Norgate), — *L'Expansion des Boers au XIXe Siècle*, by Henri Dehérain (Paris, Hachette), — *La Nature et la Vie*, by Henry de Varigny (Paris, Colin), — *Autorität und Staatsgewalt*, by Robert Piloty (Williams & Norgate), — *Le Roman d'un Jeune Homme Pauvre*, by Octave Feuillet (Dent), — *Études de Littérature et de Morale Contemporaines*, by Georges Pellissier (Paris, Édouard Cornély), — *Der Wortschatz des Apostels Paulus*, by Theodor Nägeli (Williams & Norgate), — and *Uirsgeulan Gaidhealach*, by A' Chomuinn Ghaidhealaich (Stirling, Eneas Mackay).

DRYDEN'S 'ART OF PAINTING.'

In all the puzzling bibliography of Dryden there is no unit more obscure than the original edition—the sole one published in his lifetime—of his paraphrase of Du Fresnoy's 'De Arte Graphica.' That it existed has always been known, for it was published on the 27th of June, 1695; but no recent editor of Dryden has, so far as I am aware, been able to refer to it. The text, as given in the current editions of the poet, is invariably printed from the edition of 1716; this was revised and corrected, with the encouragement of Pope, by the portrait-painter Charles Jervas. Sir Walter Scott used the 1716 text, and, although he does not positively say so, he had evidently been unable to collate it with that of 1695, for in a note he attributes to Dryden a remark which we now find to have been interpolated by Jervas. Mr. Saintsbury, in the course of preparing that admirable edition of Dryden for which all students of English literature owe him gratitude, came in 1892 to 'The Art of Painting.' But he was unable to find Dryden's 1695 text in any of our public libraries. His publisher failed to procure him one, and a diligent search, extended over a long period, left him unable to light on it. He hoped to come across it in time for the appendix of his eighteenth and last volume, but when he reached that, in the autumn of 1893, his researches were as unsuccessful as ever.

Of this work, certainly one of the rarest in the literature of its time, I have at length been fortunate enough to examine a copy. Mr. Saintsbury, with the pardonable vexation of a foiled commentator, observed, in dismissing the matter, that no doubt, when the true text was discovered, the differences would prove to be "of infinitesimal interest." His grapes were sour, but mine are sweet; the differences prove to be of very substantial interest. But I will first describe the volume. It is a handsome quarto (of lxiv+355 pp.+errata). It is headed by a symbolical frontispiece of Minerva directing the Infant Arts, designed by Henry Cooke (or Cook), and engraved by Simon Gribelin. (These two artists had been engaged together on the Cartoons of Raffaelle.) The title-page is as follows:—

De Arte Graphica.
The
Art of Painting,
By
C. A. Du Fresnoy.
With
Remarks.
Translated into English,
Together with an *Original Preface* containing
A *Parallel* betwixt *Painting* and *Poetry.*
By Mr. Dryden.

As also a *Short Account* of the most Eminent *Painters,* | both *Ancient* and *Modern,* continu'd down to the | *Present Times,* according to the *Order* of their *Succession.*

By another Hand.
Vt Pictura Poesis erit.....Hor. de Arte Poetica.
London,
Printed by J. Heptinstall for W. Rogers, at the Sun | against St. Dunstan's Church in Fleetstreet. MDCXCV.

The words given above in italics are printed in red.

The fact that this original text fell so soon and so entirely into obscurity, no doubt was connected with the dissatisfaction which practical artists, for whose use the treatise was intended, felt with Dryden's treatment of the theme. Jervas, a painter by profession, corrected what he considered Dryden's technical mistakes, and his version became that which was accepted by all English artists down to Reynolds, and through the eighteenth century was frequently reprinted. But Jervas had no respect for Dryden's nervous prose, which has now grown to be of far greater importance to us than the rhetorical æsthetics of either connoisseur. When, therefore, we come to compare the 1695 text with what has hitherto been printed in editions of Dryden, it is startling to find with what freedom Jervas has treated his magnificent precursor.

For instance, this is how one passage stands in our accepted texts:—

"The parts must be drawn with flowing, gliding outlines, large and smooth, rising gradually, not swelling suddenly, but which may be just felt in the statues, or cause a little relievo in painting. Let the muscles have their origin and insertion, according to the rules of anatomy; let them not be subdivided into small sections, but kept as entire as possible, in imitation of the Greek forms, and expressing only the principal muscles."

But what Dryden really wrote was this:—

"The Parts must have their out-lines in waves resembling flames, or the gliding of a Snake upon the ground: They must be smooth, they must be great, they must be almost imperceptible to the touch, and even, without either Eminences or Cavities. They must be drawn from far, and without breaks, to avoid the multiplicity of lines. Let the Muscles be well inserted and bound together according to the knowledge of them which is given us by Anatomy. Let them be design'd after the manner of the Grecians."

When it is added that there is hardly a page on which some sentence does not occur which Jervas thought himself justified in completely rewriting, the addition which the examination of the 1695 edition makes to our knowledge of Dryden's prose is seen to be considerable. Sometimes the object of Jervas in making his alteration can with difficulty be conjectured. When Dryden speaks of "that grave Majesty, that soft silence and repose, which give beauty to the piece," it is hard to see why Jervas thought he improved the sentence by printing "that solemn majesty and agreeable repose."

One more example may be given of the mode in which Jervas manipulated, and made almost unrecognizable, the language of Dryden. This is how the well-known passage about Correggio appears in all our editions:—

"The shining eminence of Correggio consists in his laying on ample broad lights encompassed with friendly shadows, and in a grand style of painting, with a delicacy in the management of colours."

But this is from Jervas. What Dryden really wrote was:—

"Correggio has made his Memory immortal by the Strength and Vigour he has given to his Figures, and by sweetning his Lights and Shadows, and melting them into each other so happily, that they are even imperceptible. He is also almost single in the great manner of his Painting, and the Facility he had in the managing of his Colours."

May we not say of Dryden himself that he was "almost single in the great manner of his" prose, and certainly not to be tinkered in this light-hearted way by any irresponsible Jervas?

With the other parts of the volume fewer liberties have been taken. Dryden's original 'Parallel of Poetry and Painting' has a few corrections, mainly of grammar. 'A Table of the Precepts,' which followed the preface in 1695, Jervas seems to have omitted. With the extensive 'Observations on the Art of Painting' I cannot see that he has tampered at all. But he has actively revised 'The Judgment of C. A. du Fresnoy,' with which Dryden's part of the volume closes. Wherever Dryden says "scholar" Jervas has altered it to "disciple"; another curious touch is that where Dryden wrote "landtschape," Jervas, printing twenty years later, gives the modern spelling "landscape." It is difficult to understand why, when Dryden printed correctly such names as Augustino Carracci, Ghirlandajo, and Lawrence the Fleming, Jervas should alter them to Augustine Carrache, Chirlandajo, and Denis Calvert. These, however, are trifles. What makes the recovery of the text of 1695 really of some importance is the frequency with which passages of very characteristic Dryden prose can now be restored to the paraphrase of the poem.

Edmund Gosse.

OLD MIDDLESEX RECORDS.

August 2nd, 1905.

All who are interested in the ancient county of Middlesex should be deeply grateful to the ratepayers of suburban and rural Middlesex for spending their money in calendaring and printing parts of the old records, nine-tenths of which relate to places or events in the metropolitan part of the county. It is much as if the rates of Allhallows the Less were spent in printing the records of the City of London. The act is the more heroic, since the first four volumes were printed by private subscription.

It is important to bear in mind that there is no sort of continuity between the new Local Government area called Middlesex and the old county of that name. New Middlesex is not a county, but an administrative county. The real successors of old Middlesex are the Quarter Sessions and County Council of the county of London. It is, of course, highly anomalous that records relating to London should be in the hands of a new local body not representing London. This, however, has been held to be the law by one of the judges, and the London County Council, who fought the question, had not the courage to carry the case further.

Edw. Wm. Beal,
late joint Hon. Sec. of the
Middlesex County Records Society.

JANE, THE QUEEN'S FOOL.

The only woman in this country recorded to have filled the peculiarly masculine office of the Royal Fool was a person named Jane, whose paternal name is as yet only a matter of inference. It is not insignificant that she flourished in the time of our first queen regnant, 1537–58, coming to the household of the princess, and sharing the days of the adversity, as well as of the prosperity, of her royal mistress. It is possible that Mary, with her modest nature, considered that it would be more decorous that her quiet household should be amused by a humourist of her own sex than by such jesters as awakened by their broad witticisms roars of laughter in her father's Court. But it is more likely that, from motives of kindness at first, she had extended her protection to Jane as a young girl left under some peculiar need of help, and afterwards appointed her to this office. No book of Jane's witticisms has come down to us, as in the case of her predecessor Scogan and of her contemporary William Sommers, so that it is probable her sayings were neither very broad nor very brilliant, and that she was rather one that warmed and illumined life by a genial humour than one who flashed upon it startling coruscations of wit. Dr. Doran, in his 'History of Court Fools,' does not allude to her, though he might have done so had he studied Sir Frederic Madden's published transcript of the expenses of the Princess Mary, as Miss Strickland has done.

Little is known of her except through the story of her garments, and yet, through the language of clothes, in this case we find a good deal of information on Court customs and expenditure, and on the character of the Queen who determined both. In many ways Mary showed herself liberal, but nowhere more markedly so than in the clothing of her Court Fools. Besides the girl Fool of her youth, the Queen, on coming to the throne, "entertained" her father's Fool, William Sommers, doubtless on account of his well-known kindly and charitable disposition. Arnim, in his 'Nest of Ninnies,' says of him :—

> He was a poor man's friend
> And helped the widow often in her end.
> The King would ever grant what he did crave,
> For well he knew Will no exacting knave,
> But wished the King to do good deeds great store,
> Which caused the Court to love him more and more.

But though Henry VIII. granted his Fool's requests, he did not array Sommers anything like so handsomely as Mary did. So it does not seem surprising that she liked to deck her woman Fool almost gorgeously at times. One can only wonder how Jane could wear out all the shoes that were made for her, unless she had some poor relatives to assist her! The limited gifts of Mary's early days were doubtless eked out by home-made "translations," and certainly aided by grants from the King. The earliest entry (Royal MSS. Brit. Mus., 17 B. xxviii.), December, 1537, runs :—

"Payd for housen and shewes to Jane the Foole xx*d*."

In 1538 :—

"Payd for a yerde and a halfe Damaske for Jane the Fole vii*s*.

"Item, payed to Mrs. Saundres for stuff by hir bought for Jane the Fole xv*s*."

In 1542 appears :—

"Item, for a payr of shews for Jane the Fole vi*s*."

In April, 1543 :—

"Item, paid for iij elles clothe to make Jane the Fole smocks iij*s*."

In July, 1543 :—

"Item, payd for Jane the Fole for the tyme of her seckness xxii*s*. vi*d*."

In September of that year :—

"Payd for a kirtle for Jane Foole xv*s*.

"Item, for nedles for Jane i*d*.

"Item, for vi elles of cloth to make Jane a peyre of sheets v*s*."

In June, 1544 :—

"Item, for a coffer for Jane the Foole iij*s*. iiij*d*."

In January, 1543, had appeared also :—

"Payed for shaving of Jane Fole's head viii*d*."

An expense again incurred in July, 1544, in August, and in September of that year, as if some weakness in the hair had followed her severe sickness.

In 1540 there had been a warrant issued by Henry VIII. to Sir Anthony Denny, Master of the Great Wardrobe, to deliver certain quantities of silks and stuffs to

"the nurse of Prince Edward, to Catharine Champernoone, to Ann Basset, and to Jane the Fool."—Add. MS. 7100 Brit. Mus.

In the autumn after Mary's accession she allowed William Sommers

"A gowne of blue satten, the ground yellow stripped with a slight gold, a jerkin furred, with sleeves of same, furred with conie."—427 (4) Exchequ. Acc. P.R.O.

Mary's warrants to Sir Edward Waldegrave, Keeper of the Great Wardrobe, were generally in favour of an individual or group of individuals of the same class, as the ladies of her chamber or ushers of her Court. So much was to be "delivered," either on the occasion or annually. I have not yet found a notice of Jane so early as the others, but this may arise from the fact that her expenses were always included with those of the Queen, and were apparently sometimes retrospective. Mary's special warrants included her own personal wants, with occasional references to King Philip; those of one lady, probably the chief of her "women," at first Lady Margaret Clifford, afterwards Lady Jane Seymour; but *always* those of her two fools, William and Jane, sometimes in strange juxtaposition. The earliest after her accession which has been preserved is that of April 27th, 1 Mary (427 (11) Exchequ. Acc. P.R.O.), in which is included :—

"Item, for thre yerdes of black satten geuen to Mr. Herte, being Jane our Foole's Valantyne, *all of our great Guardrobe*.*

"Item, for making of a Douche gowne for Jane our Foole of striped purple satten, the pleites lyned with frise and buckram, the bodyes lyned with fustian.

"Item, for making of a kirtle for her of striped silk lyned with cotton, the bodyes and placket lyned with lynnen cloth.

"Item, for making of a Douche gowne for her of crimson satten striped with golde, the bodyes lyned with fustian, the pleites lyned with freize of buckram.

"Item, for making of a kyrtle for her of blew silk frenged over, the bodyes lyned with lynnen cloth, the skirtes with cotton.

"Item, for making of a Dowche gowne for her of crimson striped satten, the bodyse lyned with fustyan, the plate with frieze and buckram, and for sewing silk to the same.

"Item, for making a kirtle of like crymson striped satten for her, the bodyes lyned with lynnen cloth, and the skirtes with cotton.

"Item, for making of a cloak for her of yellow cloth garded with grene clothe layde on with yellow whippe lase, and for pillow silk to stitch it on.

"Item, for making of a douche gowne for her of blew damaske chequered, the bodyes lyned with fustyan, the pleight lyned with cotton and buckram.

"Item, for making of a kirtle for her all of white satten fringed with copper silver, the bodyes lyned with lynnen clothe, and the skertes with cotton.

"Item, for making of a kirtle for her of red vared sylke, lyned with lynnen and cotton cloth.

"Item, for making of a peticoate for her all of red cloth, all out of our great Guardrobe.

"Item, for making of a Frenche gowne for the Ladye Margaret Clifford," &c.

It is a pity that the cost of the items is not given in these papers, but it is evident that there is no distinction of quality between the dress of Jane and that of the great ladies of Court, though there is sometimes in the colours or combinations, and generally in the shape. Jane seems to wear "Dutch gowns," and the courtiers "French gowns," but the material seems as good for Jane, and the number of garments greater.

The gentleman alluded to as Jane's Valentine was probably one of the sons of Sir Percival Hart, who are recorded as performing before the Queen at Court then in a device of their own. This fact seems to suggest that Jane mingled with the other courtiers on a somewhat equal footing. As to what a Valentine really implied, we cannot be sure, but it seems to have been normally conducted by an annual casting of lots. In Mary's privy purse expenses there is an illustrative entry :—

"Item geven to George Mountjoye drawing my Lady grace to his Valentyne."

And in the list of the Princess's jewels is another :—

"Item, a Broche of golde enamyled blacke with an agaite of the story of Abraham with four small rockt rubies,"

* This is repeated after every item.

while at the side is added :—

"Geven to Sir Antony Browne drawing her grace to his Valentyne."

At the foot of each page is the signature "Marye," showing that the Princess had passed the entries.

In the autumn of the same year (427, 11 Excheq. Acc.), October 17th, 1 & 2 Philip & Mary, the Queen, being at Westminster, gives her warrants :—

"Item, to the said Marie Wilkenson our Silkewoman for one riche robe lace of purple silke and golde for his saide Majestie, wrought very richly with tapheta."

Then appears an item for "trauncelating" some gowns for Lady Margaret Clifford; then—

"Item, to the saide Edward Jones, tailor, for making of a douche gowne of fustian of Naples striped for Jane our foole, lyned with buckram and freize, the bodyes lyned with fustyan.

"Item, for making of a kirtle for her of yellowe Turquey Satten, lyned in cotton, the bodyes and placarde lyned with lynnen clothe.

"Item, for making of a douche gowne for her of grene satten tyncelled with copper gold frenges, the plaites lyned with cotton and Buckram, the bodyes lyned with white Fustyan and paste Buckram.

"Item, for making of a petycoat for her of red, upperbodyed with Turquie Satten, lyned with Lynnen cloth.

"Item, for making of a Dowche gowne of cloth for Beden the foole, frenged, the plaites lined with friese and buckram, and the bodyes lined with fustyan.

"Item, for making of a kirtle for her of yellowe Turquey Satten lyned with cotton.

"Item, for making of a pettecoat for her of red, upperbodyed with yellow Turquie satten, lyned with lynnen cloth.

"Item, to the saide Marie Wilkenson, sylkewoman, for nine peire of blak knit hose for the saide Jane our foole, thirteene ounce and a haulfe of fine slaine silke employed upon two gownes and two cappes for her, and for making of the same.

"Item, for twelve handkerchevers of Holland for William Sommers our Fole, thre peyre of lynnen hosen for him, two peyre of knit hose, two ounce and a haulf of grene sylk, employed upon a grene coate for hym, and thre dossen of grene buttons.

"Item, more for him, haulfe an ounce of blew silke employed upon a coate of blew damaske, one quarter of an ounce of silke for a doublet of canvas, two dossen white buttons for the same doublet, and one ounce and a haulfe of blew and yellow silke employed upon a coat of Blew damaske garded with yellow Vellat.

"Item, for sixe and thre quarters ounce of fine slayne silke frenge of divers cullors employed by the said Edward Jones upon a gowne for the said Beden the foole.

"Item, to John Bridges, Taylor, for making of a gown of purple Damaske, for the said William Sommer our foole, with thre gardes of yellow Vellat.

"Item, for making of a gowne for the said William of Cloth and for making of a gowne of purple damaske for the said William Somer our fool with thre guardes of yellow Vellat.

"Item, for making of a jerkin for him of purple damask plaine, four caps of cloth, two russett, two of them garded with Vellat and stitched with silk.

"Item, more to the saide Henry Arnolde, our shewmaker, for seven peire of shewes to the saide Jane our fole."

This paper gives us two or three suggestive points. It shows that the knitted silk stockings, supposed to be a new experience of Elizabeth as Queen, were liberally given to the Court Fool in the previous reign. It also introduces a new word, "Beden," evidently a proper name, which can only mean one of two things: either that there was a second female Fool, and a third Court Fool nowhere else referred to, or that "Beden" was the other name of "Jane," which latter I take to be the case. I looked carefully through all the household lists of earlier years for a resembling name, and find a "John Bedon" mentioned three times as yeoman of the chamber to Henry VIII. in 1525, 1531, and 1533, who would have been a suitable enough father for her. There were also a John Beddon, master of the vessel sailing to Bordeaux for the king's wine in 1526, and a Richard Bedon on the commission of the peace for Surrey, 1541. I cannot connect "Jane" with any of these, but thought it wise to note the names, as they may later yield some clue to her parentage.

The accounts here fail us at the Record Office, but, fortunately, they have strayed no further than the Bodleian Library, whither they may be followed. Only six months later than the above list were more garments for Jane ordered ('Calendar of Charters and Rolls in the Bodleian,' W. H. Turner; see also p. xviii). In the account for 1 & 2 Philip & Mary, April 10th, at Hampton Court, we find :—

"Item, for furring of a gowne (for William Sommer our foole) with gray jennets tayles, with a peere of sleves and a caape of jennettes tailes to the same gowne, and fourtie white lambskynnes.

"Item, for furring of a gowne of grene figured vellat (for hym) with sixtene white hare skynnes and fourtie and sixe white lamb skynnes.

"Item, for furring of a jerken (for hym) of the same vellat, with seven white hare skennes and twentie white lamb skynnes.

"Item, for furring of a gowne of the same vellat with sixe white hare skynnes for Jane our foole.

"Item, for thirteene dosen and a haulf of round silke buttons of sundrie collours (for the saide William Somner), two loupe buttons of silke, and two dossen buttons of grene silke and silver, five ounces of blacke stitching silke, sixe peire of Lemon hoosen, twelve shirts of Holland Cloth, and twelve handkerchevers of Holland Cloth.

"Item, for eight peire of black knit hoosen (for the said Jane), seventeene ounces and a haulfe of Frenge of divers collors of fine Spanishe silke, for the frenging of a gowne and a cappe of divers collors, one peece* of green poynting Ribande for a gowne of grene satten and striped with golde, and for the making of two cappes, the oone with frenge, the other with Armions.

"Item, for thre yerdes of red clothe to make him a coate, and two yerdes of vellat to garde the same for lining, making and embroidering of our Letters.

"Item, for 12 peire of shewes for the said Jane."

The account of six months later, also preserved in the Bodleian, continues the story ("1st October, Philip & Mary 2 & 3, Greenwich") :—

"Item, for making of a loose gowne of greene vellat for Jane our foole tyncelled with golde of our store, lined with blacke cotton, the fore sleeves lined with friese, and bagges and staye for the same.

"Item, for making of a Douche gowne of Fustian of Naples, edged with frenge, the plaites lined with buckram and cotton, the bodyes and sleves lined with fustian, the upper sleeves lined with frise, the collor lyned with stiff buckram.

"Item, for making of a kirtle (for her) of striped unwatered Chamblet with bodyes, the nether parte lyned with blacke cotton, and the bodyes and placarde lyned with Lennen clothe.

"Item, for twelve peire of shewes for the said Jane.

"Item, for making of two grene cotes for the saide William Somner, the one garded with vellat, the other playne and lyned with cotton."

Some other accounts appear to have vanished altogether. Jane seems to have been in trouble again, as among the lists of New Year's gifts for 1556 are two,—

"Geven to a woman dwellyng at Burye for healing Jane the Foole her eye, oone guilt salt with cover.

"To Maistres Ager for keping the saide Jane during the time of the healing of her eye, two guilt saltes."

The handsomeness of these presents seems to show somewhat of Mary's appreciation of her woman fool.

A later account at the Record Office (427, (18) Exchequer Acc.), 27 March, 5 Mary, Greenwich, shows continued liberality :—

"Item, thre yerdes of blacke satten geven to Mr. Barnes, being Jane Foole her Valantyne.

"Item, for making of a petycoat for Lady Jane Seymour of scarlet.....

"Item, for making of a Douche gowne for Jane our foole of blew fustyan of Naples, the pleights lined with cotton and buckram, the bodyes and sleeves with fustian, the upper sleeves with fryse, and for making of a kyrtle for her of striped mockado, lyned with cotton, the bodyes and placard with lynnen clothe. And for making of another douche gown for her of wrought fustian of Naples, the pleights lined with cotton and buckram, the bodyes and sleeves with fustian, the upper sleeves with frise and the collor with paste buckram, and also for making of a kirtle for her of striped Russet lyned with cotton, the bodyes and placarde lyned with lynnen cloth.

"Item, for three yerdes of Russett clothe to make a gowne for William Sommers his sister.....

"Item, delivered to the saide Lady Jane Seymour six peces of blak Jeane poynting ribande, four peces of hollowe lase, one pece of girdling, and thre ownce of crimson silk in grain.

"Item, delivered for the said William Somer eyght dossen of round silke buttons, thre ounce thre quarters of sylke, twelve shirtes of holland cloth, twelve handkerchers of holland, fowre peyre of woollen hose, sixe peyre of lynnen hose, also two peyre of black buckram hose.

"Item, delivered for the said Jane foole thirty one ounce thre quarters of frenge in collours and frenging of the said two gownes and cappes of fustian of Naples, and for making of the same cappes. And for thirteene peyre of black knit hoose."

The next item is a long list of velvet shoes for the Lady Jane Seymour—so long, indeed, that one would think she had to supply the other ladies of the chamber.

"Item, for twelve peire of shewes for the saide Jane Foole.....

"Item, for the said Thomas Perrye for furring of a gowne of clothe for the saide William Somer with thre tymber of Callake [?] and thyrty and eighte white lambe skynnes.

"Item, to the said Mary Wilkenson for four elles of Holland delivered to the said William Somer," &c.

The special feature of handkerchiefs in the wardrobe of William Sommers is noticeable. Other retainers do not seem to have had similar grants. He had apparently had this year a visit from his sister, whose relatively humble position is implied by the material of her garment. It may be remembered that Arnim, in his 'Nest of Ninnies,' gives a delightful account of the visit of William Sommers's uncle to Court in Henry's days. But we hear nothing further of the sister. It is difficult to decide which "Mr. Barnes" was Jane's Valentine this year.

Then comes the last account of all, which becomes touching when we remember how Mary, crushed with ill health, and the neglect of the husband for whom she had risked so much, with the loss of Calais, with the disaffection of her subjects, with long-continued "evil weather" and the shrinking of her income, gave up gaiety and expense. Yet Mary, about to die, does not limit her expenditure more than necessary upon her Court fools, faithful among many faithless (427, (18) Excheq. Acc., 31 Oct., 6 Mary, St. James) :—

"Item, for furring of a gown of red fustian of Naples for Jane, our fole, with a newe collored furre.....

"Item, for William Somer our fole, seven ounce and a haulf of silke, one gross of buttons with stawlkes, eyght tassels of grene and yellow silke, two elles of Holland cloth, tenne peyre of Lennen hoose, fyve peire of Buckram hoose, haulfe a dossen of Handkercheivers and thre dossen of round buttons.

"Item, for the said Jane our foole, thirteen ounce and a haulfe of silk frenge to frenge a gowne and two cappes, for making of the saide two cappes, and for thre ounce of grene silke for another gowne of grene damaske, one pece of crimson ribande and twelve peire of woollen hose.....

"Item, for making of twelve peire of lether shewes for the said Jane our foole.....

"Item, to Richard Tysdale, Taylor, for making of two grene coates for William Somer our foole, thone garded with vellat, and thother plaine, both lined with cotton, for making of two canvas doublets for him lyned with Lockram, and for making of a gowne of grene damaske garded with yellow vellat, and for making of a jerkin of same damaske, lykewise garded with yellow vellat."

And then the end came. Doubtless her two fools, after the way of their kind, knew more of the heart of their liberal mistress than many of her retainers. They do not seem to have offered their services to, or to have been invited to the Court of, her successor. William Sommers apparently gravitated eastward from the Court, to the neighbourhood afterwards so famous for

* "A piece" is not indefinite, but a known quantity of each manufacture, sometimes 6, 12, 18, or 36 yards.

players and jesters, and he was buried in St. Leonard's, Shoreditch, in 1560.

I did not know of the name of Beden when I went through the registers there, and though I have looked up the lists of the printed London registers, I have as yet seen no burial of Jane Beden, or of "Jane, a woman," as was sometimes a clerk's way of expressing the identity of the defunct. But it is possible that, through the suggestion of a patronymic, some future worker may find further details about the life of Jane, Queen Mary's female Fool.

Charlotte Carmichael Stopes.

RAMET EL-KHALIL.

August 5th, 1905.

In saying that his cubit theory is the only evidence he finds "to support the theory of Samuel's altar having stood within the present enclosure near Hebron," Mr. W. S. Caldecott is doing an injustice to several parts of his interesting book. On pp. 40-48 he, for example, appeals to "contemporary evidence of unimpeachable authority" for the purpose of showing that the site of Ramet el-Khalil answers to certain topographical features of Samuel's Ramah mentioned in the Biblical narrative. These and other corroborative details fully justify the opinion expressed in *The Athenæum* for July 29th that the identification of Ramet el-Khalil with Samuel's sacred enclosure may possibly stand, even if the new cubit theory had to be largely modified. If the independent evidence in favour of the proposed identification should receive some further weighty topographical and historical support, the measurements would no doubt in any case be found to fit in with the requirements of the case. The remarks made by Mr. Caldecott at the end of his communication do not touch the point at issue, and there is, therefore, no need to discuss them here. The Reviewer.

MR. JOSEPH FOSTER'S 'INDEX ECCLESIASTICUS.'

Thornton Vicarage, Horncastle, August 7th, 1905.

In the obituary notice of the late Mr. Joseph Foster in *The Times* of July 29th last it is stated that his "greatest work, comprised in eight volumes," was his alphabetical list of the 150,000 institutions to livings since the Reformation, taken from the Bishops' Certificates in the P.R.O. Did Mr. Foster ever actually complete this work? In 1890 he published through Messrs. Parker & Co., Oxford, and Messrs. Macmillan & Bowes, Cambridge, his 'Index Ecclesiasticus'; but this volume only comprises the institutions of the beneficed clergy from 1800 to 1840.

In this volume, however, he gives two specimen pages, one of clergy alphabetized, Abadam-Abell, the other of index of parishes, Abbas Combe-Abinger. If he completed his work, where is the MS. of the alleged seven unpublished volumes to be seen?

J. Clare Hudson.

TENTH INTERNATIONAL CONGRESS OF THE PRESS.

Part II.—Past and Present.

I reported last week most of the technical work of the Tenth Congress of the Press, held at Liége; to-day I shall try to catch some of the side-lights significant of the importance of this great meeting, with which Belgium's creative energy has been, from the first, closely connected.

"To the hardest worker and the best friend in the kingdom, His Majesty the King of the Belgians!" was one of the toasts which the visitors drank with enthusiasm. They had an opportunity of judging how thoroughly King Leopold does all that he undertakes as they watched him standing for more than two hours at his reception of three hundred journalists at Brussels on July 28th. Endurance is one of the characteristics of his Majesty's striking personality. I remember how he impressed me as he stood towering above his guests of the press at Laeken at the inception of the Congress movement in 1894. In the years that have followed King Leopold (whose seventieth birthday is dawning as these lines go to press) has gained in personal force, especially in that quality of sincerity of interest for the small details of large issues with which he inspires all those who come in contact with him. Not a journalist of all the party assembled at Brussels last week but felt that he had received an individual welcome and recognition.

Before closing my account of the Liége celebration (from which the royal reception has caused me to diverge), it is worth remarking that the opening of the Congress in the palace of the prince-bishops drew from M. Demarteau (*doyen* of the Liége press) an interesting *résumé* of the connexion which for centuries existed between that splendid building and the local press. In the eighteenth century already fifteen printing presses were at work there, and when, in 1830, the national union of Belgium was achieved, it was a Bishop of Liége who, with his purse and his influence, upheld and established the pioneers of Belgian press freedom.

The visit to Antwerp was naturally reminiscent of the first Congress, and it is pleasant to record the names of many eminent men who assisted at the inaugural welcome at the Cercle Littéraire et Artistique in 1894, and again found themselves the guests of the city and the local press in 1905. The veteran President of the Federated Associations, Herr Wilhelm Singer (Vienna), is still surrounded by a number of valued colleagues: Victor Taunay of ever-ready help and nimble tongue, Schweitzer the exact, Janzon the humourist, Hébrard an orator of France, where all men are eloquent, and Hugh Gilzean-Reid, whose old boast that broad Scotch spoken heartily enough is always understanded of the people of Flanders has lost none of its weight!

Among Belgian men of renown M. de Beernaert, M. de Mey, M. Heintzmann-Savino, are still here to welcome us; if we miss from our ranks the dear and familiar faces of such colleagues as Goemaere de Keyser, Torelli-Viollier, P. W. Clayden, Alonso de Berasa, Albert Bataille, we realize that their work lives after them in the completed organization, the wide sympathies, the growing usefulness, of this annual Press Congress. As year by year this movement grows and spreads, let me recall these words of M. Hébrard, spoken to a little band of earnest men and women in 1894:—

"N'oublions pas qu'avec notre force grandit notre responsabilité; faisons notre possible que la paix soit un jour apportée au monde par des journalistes de bonne volonté!"

Several invitations for the Congress of 1906 are before the General Committee; the choice probably lies between Marseilles and Bucharest.

G. B. Stuart.

THE CROWN OF ANNE BOLEYN.

44, Via degli Alfani, Florence.

Among the papers in the State Archives in Milan (Pot. Est. Inghilt. dal.....al 1550) mentioned in my communication to *The Athenæum*, No. 3806, there are also some lines in Italian, without date, but from internal evidence written in 1533, of which I think your readers may like to have a translation. The title is 'Avisi di Londra e di Vienna,' the sub-title, 'Aviso III. di Londra.' The information preceding this, and that probably following it, I could not find.

"An account is given of the great rejoicings made by the King of England in celebration of this marriage with the new bride. He gave 300,000 golden ducats—100,000 out of his own purse—and 700,000 were given by the City of London. He had summoned the 'old' queen to plead and say what case she would offer in opposition to the divorce upon which the three bishops had decided, but she answered that these were not her recognized judges, that the cause was being tried in Rome, and that the sentence was to come from there. She was again summoned before the Parliament by the Duke of Hereford and by the brother of the 'new' queen, under penalty of losing her property and life. She answered that she did not fear such a command, his Majesty being the lord of her life and of all that she possessed, and she did not appear. The king, full of anger, sent for the gentleman who keeps the crown of the queen, and is called Mr. Saddock (or Sabbock), and is a great man in the island, and told him that he wanted the crown to crown the new queen. But this gentleman decided that he could not give it, because of the oath which he had sworn to the said queen, to be faithful in keeping for her the said crown. And the king became angry and threatened him; so the gentleman, who is a person of an advanced age, took his cap and threw it on the ground, without saying a word. The king, seeing this, said that he would compel him to do it, and the said Mr. Sabbock (or Saddock) answered that, rather than give him that crown, he would suffer his own head to be thrown where his cap had been. And he being a great personage, and having a son who is very valiant and has a great many followers in the island, the king did not say anything further, but had another crown made, with which the new queen will be crowned—she is expecting her confinement in four months. And for this divorce, the emperor's ambassador in residence with the said king has left in great dissatisfaction."

Eugenia Levi.

VOYAGE TO THE EAST INDIES.

I picked up lately, in Calcutta, a delightful little book of travel, describing the voyage of a certain Capt. Symson to East India. Here is the title with the contents:—

A New | Voyage | to the | East-Indies | viz.

I. To *Suratte*, and the Coast of *Arabia*, containing a compleat Description of the *Maldivy*-Islands, their Product, Trade, *etc.*

II. The Religion, Manners, and Customs of the Inhabitants, never before related by any *English* Author.

III. Many curious Observations concerning *Arabia* and *India*, not to be found in any other Books of this Nature; with Directions for Travellers.

By Capt. William Symson.

To which is added, | A peculiar Account of the *French* Factories in those Parts, and of the general Trade throughout all *India*. With many Excellent Remarks by the Sieur Luillier. | Adorned with Cuts. | London, | Printed by *H. Meere*, for *A. Bettesworth* at the *Red Lyon* in *Pater-Noster-Row*, and *E. Curll* at the *Dial* and *Bible* against St. *Dunstan's* Church in *Fleet-street*, 1715. Price 13*s.* 6*d.*

I can find no trace of this book in any library catalogue. Apparently there is no copy in the British Museum. Perhaps some reader of *The Athenæum* may be able to give information on the subject.

E. D. Ross.

Literary Gossip.

Messrs. Hodges, Figgis & Co., of Dublin, will publish shortly Mrs. Dickinson's history of her brother, Charles Stewart Parnell. The truth of every word being guaranteed by the author (who is now revising her book on the Anglesey coast), the book is likely to be of great interest. Mrs. Dickinson's Conservatism in politics adds piquancy to the history.

Messrs. Routledge & Co. are about to publish, as a volume of their "New Universal Library," James Thomson's translations of the prose works of Leopardi. Their publication has long been desired by all those who were aware of their existence. Some of them were printed as long ago as

1867-70 in Mr. Bradlaugh's *National Reformer*, but the greater part of them have remained in manuscript up to the present time. The volume is edited by Mr. Bertram Dobell; it is more complete than any previous English translation of Leopardi. It comprises a memoir of the author, the whole of the 'Operette Morali,' a complete rendering of the 'Pensieri' (of which only some selections have hitherto appeared), and several minor pieces, of which there are no other translations.

Mr. Fisher Unwin will publish this month a novel by Mrs. Dorothy Summers, entitled 'Renunciation.' It is a love story of the present day.

'A History of Abberley Manor, Worcestershire,' is being written by the Rev. J. Lewis Moillet, and will be published by Mr. Elliot Stock during the coming autumn. It will contain interesting notes on the history of the parish, and the families connected with it, from early times to the present day. There will also be many illustrations of local buildings and objects.

It is hoped that the memorial of John Knox by Mr. Pittendrigh Macgillivray will be erected in St. Giles's Cathedral, Edinburgh, this autumn. The monument will be eighteen feet high. The statue is a little over six feet, and is cast in bronze, finished with a green patina. The estimated cost is 1,400*l.*, which is borne by public subscription.

We hope to publish shortly some fresh notes on the Doone traditions, made at first hand by an old resident in the country which Blackmore made famous.

There is no doubt that William Laidlaw, the friend, factor, and amanuensis of Sir Walter Scott, had great opportunities for journalizing and note-taking in connexion with the actual writing of some of the Waverley Novels, as also in connexion with the guests at Abbotsford when it went like an hotel. A delicate sense of what was due to his friend and patron and his own sensitive feelings prevented him from making copy out of distinguished visitors, who did not in turn show the same regard for the feelings of their host. Laidlaw, however, kept a journal of the visit which Scott and Leyden paid to his home at Blackhouse in Yarrow in search of material for the 'Minstrelsy,' as also the visit to James Hogg in Ettrick. Robert Carruthers made partial use of Laidlaw's journal in two magazine articles which he wrote about him after his death, as also in his 'Abbotsford Notanda.' The manuscript of the journal, which lies in Edinburgh University Library, has been copied and edited by Mr. James Sinton, and will be printed entire shortly in the *Transactions* of the Hawick Archæological Society.

The papers to be read, or taken as read, at the meeting of the Library Association at Cambridge on August 22nd, 23rd, and 24th, include: 'After Fifty Years,' by Mr. John Pink, librarian of the Free Library at Cambridge; 'Organization and Methods of the Cambridge University Library,' by Mr. H. G. Aldis, its secretary; 'A Central Cataloguing Bureau,' by Mr. J. Y. W. Mac Alister; 'Sunday Opening of Libraries,' by Mr. A. C. Shaw, with discussion for and against; and, under the heading 'Joint Conference on Library Planning,' papers by Mr. H. T. Hare and Mr. F. J. Burgoyne, representing the views of the architect and the librarian respectively.

Mr. J. Hamilton Wylie writes:—

"From an account in the June number of *The York Diocesan Magazine* relating to the five-hundredth anniversary of the execution of Archbishop Scrope, I find that an inscription has been placed in the great hall of the palace at Bishopthorpe, stating that it was here that the archbishop was 'a rege suo Henrico Quarto *iniquissime* damnatus.' But the superlative adverb seems to indicate that the author of the inscription has overlooked the fact that the archbishop was taken in red-handed rebellion against the king whom he had helped to crown and whose authority he had recognized from the first. Fortunately, the matter is merely one of historical interest, and not likely to stir political passion nowadays, but the question is certainly begged when we are asked to believe that the condemnation was 'most iniquitous,' without any further word of comment."

Mr. Eneas Mackay, of Stirling, is about to publish a monthly Gaelic magazine at threepence, *An Deo-Ghréine* (*The Sunbeam*). The first number is to appear about the time of the Annual Mod, which is to be held in Dingwall in September next. The Gaelic body which is responsible for the magazine has been in existence for fourteen years, and during that time the want of an organ through which to report its doings has been much felt. It has now resolved to overcome this want by the publication of a bilingual magazine—Gaelic and English—in which subjects of interest to the Gaelic people and others friendly to their cause will find a place. The management and editing of the magazine have been entrusted to Mr. Malcolm Mac Farlane, 1, Macfarlane Place, Elderslie, by Johnstone.

Mr. Lionel G. Robinson writes concerning the recent edition of 'Lady Fanshawe's Memoirs':—

"I have no wish to find fault with Miss Beatrice Marshall's reprint of these memoirs, but it would have been courteous, as well as satisfactory, if she had stated more clearly her indebtedness to the volume edited by Sir N. Harris Nicolas in 1829, of which 'a new edition,' published by Colburn & Bentley, appeared in 1830. So far as appears from a careful collation of Miss Marshall's edition with that of Sir Harris Nicolas, the text, the notes, and the introductory memoir are reproduced verbatim, and without any acknowledgment of the labour bestowed on them by the original editor. It is true that Mr. Allan Fea, to whom the illustrations are due, does mention Sir H. Nicolas by name, but not in a way which would suggest that it was his work which Miss Marshall has reprinted. The writer (in your issue of July 15th) of the notice of the discovery of a lost portrait of Lady Fanshawe was apparently aware of the editions of both 1829 and 1830, but he makes no mention of the editor."

A course of weekly lectures, commencing on October 11th, is to be given this autumn in New York on 'How to Print and Publish.' Each subject is to be treated by a competent expert; and we notice that Mr. Frank Doubleday, of the house of Doubleday, Page & Co., has consented to set forth his ideas upon the comprehensive theme 'What to Publish, and how to Merchandise It.'

The Parsi for July contains, among other interesting matter, some curious documents taken from the Portuguese records of Goa, showing how Parsi volunteers fought for the Portuguese against the Marathas at Bassein and Damaun in 1738–9, and gained a considerable reputation for courage and loyalty.

Scribner's Magazine will publish a selection from the letters and diaries of Bancroft, the historian, beginning in the September number, in which an account appears of his conversations with Goethe.

M. Henry Maret makes out a very strong case in *Le Rappel* for the erection of a suitable monument to Camille Desmoulins. Desmoulins fell a victim to the people whom he served, and whatever may be thought of the part which he played in the French Revolution, there can be no doubt that many less deserving men than he have been honoured with public monuments. M. Maret suggests that the most suitable place for such a memorial would be in the Palais Royal Garden, the scene of one of Desmoulins's most impassioned orations. *Le Rappel* has opened a subscription list.

French misprints are often a source of joy, on account of their peculiar gaiety. We have seldom met with a more complete and more obscure printer's error than one to be found in a strong political article by M. de Pressensé in the current number of *L'Européen*. Among the few distinguished British politicians who are mentioned in it is "M. Grilles." It is only after some labour at the context that we are able to form the unhesitating opinion that it is the late Speaker of the House of Commons who is intended.

The only Parliamentary Papers likely to be of interest to our readers this week are one containing Suggestions for the Consideration of Teachers and others concerned in the Work of Public Elementary Schools (8*d.*); and the Annual Report of the Postmaster-General (5½*d.*).

SCIENCE

BOOKS ON BIRDS.

The Geese of Europe and Asia. By Sergius Alphéraky. With Twenty-four Coloured Plates by F. W. Frohawk. (Rowland Ward.)—The present folio, as we are informed in the preface, is a translation, by Mr. John Marshall, of Mr. Alphéraky's 'Gussi Rossii,' which was published in 1904. Inasmuch as it is a history of nearly all the geese of the Palæarctic region, a change to the present title became expedient; but the author modestly says that there are so many defects in our knowledge, and so many questions left open, that he does not yet venture to consider it as a complete monograph. Whatever may be its title, we have no hesitation in considering the book worthy of high — and perhaps the highest — rank as regards the specific distinctions, geographical distribution, and life-history of a group of birds about which, from the scientific point of view, comparatively little is known. Should this statement cause surprise, the reader may be reminded that wild geese breed in extensive open areas, usually in the north of the Old World, and consequently

to reach their haunts the student must start while the soil of the tundras is still frost-bound, for during the spring thaw locomotion is impossible. Again, geese are excessively wary, and, as the author observes,

"In some places one may see them in hundreds of thousands for several weeks at a stretch without the possibility of securing a single specimen."

And even after success, the bird is often in such urgent request for food that there is scant time for making a skin, and it is much if the head with the bill is preserved. Now the adult colouring of the "soft parts," namely, the bill, legs, and feet, is not assumed till the bird's third or fourth year—the colour being probably influenced by food—and the bill is more vivid, as well as larger, in the adult than in the immature, while it is upon the colour and the size of the bill that several so-called species are based. Of course there are characteristics in plumage which amount to valid specific distinctions, but, for the reasons mentioned, there is a great want of specimens with records of date and sex. Even our own Natural History Museum was very poor in this respect only ten years ago, though richer now. In these circumstances there need be no surprise that differences of opinion exist between the "splitters" and the "lumpers" with regard to the number of "species" deemed worthy of that name. Hence the great value of the present work, written by a naturalist of wide experience, with the aid of many excellent ornithologists — and one ōologist — who have explored the breeding-grounds of the geese as no Englishman could hope to do. For himself, Mr. Alphéraky is the least dogmatic of men. Be the species indisputably distinct, or be it, according to some writers, merely a sub-species, the author tells us all about its life-history, migrations, and characteristics, after which he sums up judicially, and asks us to form our own opinion upon the facts adduced. This is not the place for the discussion of such technicalities as the nomenclature of genera and species, but room may be found for a few remarks on some of the geese which occur more or less every year in the United Kingdom.

The only species of goose which still breeds in the north of Great Britain is *Anser ferus*, which formerly nested in the fens of Cambridgeshire and Lincolnshire, and is often spoken of as the "grey-lag goose" or the "grey lag-goose," according to the position of the hyphen. To unite "grey" with "lag" seems meaningless—for "lag" cannot really be a corruption of "leg," though it is true that Montagu lent his sanction to this — since the legs are certainly not grey. Some years ago Prof. Skeat suggested that the name arose from the fact that this species "lagged" behind, to breed in our fens, after the other species had passed northward; but this, although ingenious, did not carry conviction with it. Reading Dr. William Turner (1544) 'On Birds,' recently translated by Mr. A. H. Evans, we find the following (p. 195), which seems suggestive:—

"The Britons of old, as also the Scots, called all the geese—whether of the sea, marshes, or lakes—'Clakes,' though at the present day we corruptly say Fenlakes and Fenlagges, when we should say Fenclakes."

That is to say, "Clak" (corrupted to "lag") was simply "goose," and Fenclakes were the grey clakes as distinguished from the black "sea-clakes" which we now term brent-geese.

But to return from names to the birds themselves. The foregoing species and the white-fronted goose have a characteristic white nail at the tip of the bill, and are, therefore, easily distinguished from the members of the section which have a black nail on the bill. These are, in the main, the bean-goose and the pink-footed goose, but they have several offshoots, and to the discussion of these a considerable portion of this work is devoted. The arrangement of colour in the respective bills of these birds is admirably shown in Mr. Frohawk's plates, and from the same hand we have full-page coloured illustrations of all the geese which are recognized as species, twenty-one in number. Reproduced in Moscow by chromolithography, the outlines in these seem rather hard, and the same must be said of the frontispiece after Dr. P. Sushkin, illustrative of an assemblage of geese on the Kairan Lake. The index is ample, and the bibliography is especially valuable as regards Russian authorities. A good map would have been of great service; but, on the whole, very high praise must be bestowed upon this work, and not only is it essential to the general student of ornithology, but it can also be recommended to the sportsman and country gentleman.

Home Life in Bird-land, by Oliver G. Pike (Religious Tract Society), is, we are informed on the paper cover, "a fascinating book" by "an enthusiastic naturalist," and contains "over eight charming illustrations (four of them coloured)." At the price of six shillings this photographic scrap-book is certainly cheap, and it is with pleasure that we confirm, in the main, the good opinion of the publishers respecting their wares. As a series, the illustrations of the dabchick and nest deserve special mention, owing to the difficulties to be overcome by the photographer, and also to the fact that the pictures have reference to the accompanying text. This is not always the case; for instance, in a chapter entitled 'The Partridge at Home' not one of the three cuts has the remotest connexion with the bird in question. Mr. Pike is unmistakably a lover of birds, and we do not suppose that he would willingly do harm; but it could be wished that he had been less explicit, with pen as well as with camera, respecting the kite. The fact that a remnant frequented some of the valleys of Wales had been long known to a few discreet ornithologists; but ever since attention was drawn to the fact and the locality in print, there has been a rush to worry the birds. The trees in which the nests were situated have been climbed again and again, the eggs handled and also damaged, and the neighbouring trees disturbed in the search for a convenient place for photographing. And, strange to say, in one case the birds did not hatch the only sound egg of the two! Some of Mr. Pike's experiences of kites and buzzards were acquired in the company of Mr. Walpole-Bond, whose 'Bird Life in Wild Wales' was noticed in our columns for January 23rd, 1904. In both works appears the photograph of three eggs of the merlin in an old nest of a crow, and this Mr. Pike considers "a unique place," which it certainly is not. Later, he modifies the expression to "rather unique," and after that it is not surprising to find Pope misquoted as to the danger of a little "knowledge." There is no index; but in the place where it might be expected is an advertisement of Mr. Pike's "popular lectures" and the address of his agent.

British Bird Life, by W. Percival Westell (Fisher Unwin), is another of the cheap illustrated books which are now so much in vogue, but many of the cuts are of poor quality, though the photogravures are fair. The work purports to be "popular sketches of every species of bird now regularly nesting in the British Isles," and it is on the plan of a dictionary, like that adopted by Montagu. The personal experiences of the author form, very properly, a considerable portion of the volume; but signs of weakness are perceptible with regard to unfamiliar species and especially respecting migrants. For instance, to give "India and Ethiopia" as the winter quarters of the swallow—a bird found all over Africa—is very feeble. The account of some experiments made with young cuckoos is distinctly interesting, as exemplifying the tender mercies of a certain class of observers, and although the details are spread over several pages we will attempt an abstract. In a nest of the meadow-pipit were two eggs of the cuckoo with three of the fosterers'; but inasmuch as these were not allowed to hatch they may be disregarded. Soon after the two cuckoos emerged from the shell a severe struggle took place, and subsequently one of the cuckoos was found outside the nest. Thereupon a young pipit was procured and placed with the cuckoo which was "in possession," and the latter made many efforts to hoist out the pipit, which "always got jammed near the top" of the nest. Then the expelled cuckoo was replaced in the nest, whereupon round after round took place, "the birds fighting at such a terrible rate" that the plates of the many snapshots were "blurred." The failure to secure photographs was sad, but we are not told the fate of the nestling pipit. Subsequently the weaker cuckoo was again found outside, and, having been duly replaced, it was again ejected; so, in order to give it a chance, the stronger cuckoo was taken out of the nest and the weaker was put in for about an hour. Then the stronger bird was put back, and more rounds were fought. On the fifth day the weaker cuckoo had disappeared; but, in order that these *scientific* experiments should not languish, a nestling yellow bunting was placed in the nest with the strong cuckoo, and was, of course, ejected over and over again. Six snapshots of these performances were taken, "two of them most successful," and after that the nestling bunting died! No index is required for a work which is on the plan of a dictionary, but at the end there is an advertisement of Mr. Westell's terms for lectures, prices of books, &c.

RESEARCH NOTES.

So far as I have seen, neither Mr. Butler Burke nor C. W. S. has attempted to answer the questions put to them in these Notes (*The Athenæum*, No. 4056), although the first-named has written to a contemporary that he was not aware of M. Raphaël Dubois's previous discovery of the effect of radium on gelatine at the time he made his own announcement. I think, therefore, we may fairly take it that neither he nor C. W. S. had then heard of M. Stéphane Leduc's experiments, and that there is no essential difference between the "radiobes" and M. Leduc's gelatine cells. It is human to err, and much may be forgiven to one who for the first time fancies himself to have hit upon an original discovery; but it is a little awkward for our national reputation for sobriety that one or other of these gentlemen did not look into the history of the subject before the appearance of the sensational articles for which they are more or less responsible.

In the meantime M. Leduc has been led to communicate to the Académie des Sciences his further experiments in cytogenesis. He finds that if a drop of solution of saccharose containing merely a trace of ferrocyanide of potassium be allowed to fall into a diluted solution of sulphate of copper, the drop becomes covered with a membrane of ferrocyanide of copper. This model cell, which he compares to the cell of Traube, will not only swell and increase permanently in size, but will throw out prolongations which also slowly increase. This he accounts for by supposing that the containing membrane is permeable to water, but impermeable to sugar. It can therefore receive assimilable material, but cannot dissipate its original contents. But mark the sequel. As the osmotic pressure within the drop increases, a slight protuberance appears at some point of its surface, which gradually developes into a bud covered also with a membrane of ferrocyanide. This, in its turn, gives birth to a second, the second to a third, and so on, until

XUM

there is thus constructed a stalk or cylinder which may be ten times the length of the parent drop. It takes this particular form, says M. Leduc, because the osmotic pressure within the drop seeks for the point in the membrane where the resistance is least, and this, one may add, seems to be always placed in one direction. Sometimes, even, the pressure is so great that the bud parts company with its parent altogether, and then begins to send forth buds and to form cylinders on its own account. It is difficult not to see in this a perfect analogy with the phenomena of nutrition, growth, and reproduction as exhibited by the more elementary forms of what is called "living" matter.

In these circumstances the importance of the study of colloids, often here alluded to, becomes more and more evident. The membranes of all living cells are formed of colloids, and it has lately been thought that the part which they play in allowing certain solutions to pass through them and others not may not be entirely mechanical. Thus Pasteur's successor, Duclaux, in an article on 'The Osmotic Pressure of Colloidal Solutions,' published in June last, thinks it certain that "the cellular membranes of living organisms have not, with regard to osmotic interchanges, the inertia generally attributed to them." And now some brilliant experiments made at the Sorbonne by M. Larguier des Bancels show how such colloids may possibly work. It has long been known that the pancreatic juice, which plays so predominant a part in the digestion of the food of man, is, nevertheless, incapable by itself of digesting albumen. For it to be effective for this purpose, it is necessary that some ferment — such as, for instance, trypsin, a negative colloid—be mixed with it, and such a ferment has hitherto never been found save in the bodies of living animals. M. Larguier des Bancels, however, inspired by the recent investigations made by him into the interaction of colloids of the same and different signs, was induced to soak cubes of albumen in solutions of certain positive colloids, such as toluidine blue, methyl violet, and the like, until they had absorbed a small quantity of the solution. On then plunging them into pure pancreatic juice with which a small quantity of an electrolyte, such as the nitrate of barium, calcium, or magnesium, had been mixed, he found that the greater part of the albumen was digested in a few hours. Neither colloid nor electrolyte was, he found, capable of acting by itself, but it was the addition of both to the pancreatic juice which set it to work, or, as M. Victor Henri, who has recorded the fact, prefers to put it, caused the positive colloid to operate as a "kinase."

Yet another means of producing either complete or local anæsthesia in the human subject has been developed from the researches made by M. Leduc into the physiological effect of intermittent currents of low tension. According to Dr. Gradenwitz in the *Revue Générale des Sciences*, a machine has been constructed by Messrs. Reiniger, Gebbert & Schall, at Erlangen, which consists virtually of an electric motor carrying a disc of insulating material furnished with four metallic sectors. Two brushes are arranged so as to press lightly on these last, and these brushes are connected with the electrodes applied to the patient. The interruptions of the current thus produced are from 4,000 to 5,000 a minute, while the current has an intensity of two to four milliamperes, and a potential difference of thirty to fifty volts. A large positive electrode applied to the back while the smaller negative rests on the forehead will, it is said, produce complete unconsciousness in a few minutes. Local anæsthesia can be produced in, say, the hand by surrounding the arm with the positive electrode, while the negative is applied to any of the nerves of the wrist. Immediately, that part of the hand ruled by the particular nerve loses sensation, and remains in this condition so long as the machine continues in operation. It is said that the chief drawback to the production of complete anæsthesia by this means is the contraction of the muscles of the face and neck, and the sensation of "pins and needles" which for a short time is present in the hands and feet. On the other hand, the patient is restored to consciousness immediately the machine is stopped, and it is claimed that, so far from suffering any ill effects, he then experiences a feeling of lightness and pleasure. If this can be substantiated in practice, the process may eventually supersede the use of narcotics administered subcutaneously or by the mouth, which, as Prof. Traube has lately pointed out in the Royal Society's *Proceedings*, can never fail to have disagreeable secondary effects, from the fact that some of the lipoid substances (cholesterine, lecithine, and the like) of the cells attacked dissolve in the narcotic.

Prof. Sommer, of Giessen, draws attention to the fact that if a new incandescent lamp without metallic conductors be quickly rubbed upon a large surface of living human skin—as, for instance, the forearm—it will become luminous on touching another part of the body, such as the cheek, or even on being breathed upon. The luminosity thus produced will, according to him, affect a photographic plate, and he seems to consider that it is evidence of some peculiar quality of the human body. Any one, however, who has passed a winter in high latitudes, such as Canada, knows how easily the human body may be made to display most of the phenomena of static electricity. The reason of this seems to be the high resistance of the human skin when not perspiring perceptibly, and it may be added that it appears to vary with different individuals.

Dr. Blumstein, of Strasburg, in the same number of the *Revue Générale des Sciences*, records the triumphs of serotherapy, or the treatment by serums, with which the name of Pasteur is generally associated. He claims that it has proved virtually efficacious in cases of tetanus, of puerperal fever, of broncho-pneumonia, of cerebro-spinal meningitis, of diphtheria, and of croup, while it has alleviated the ills of smallpox and the bites of serpents. The article, which is well "documenté," gives the history of many of the discoveries, and does not blink the inconveniences of the process. Curiously enough, it does not appear to mention hydrophobia, with the cure for which by serotherapy the name of Pasteur is perhaps most often associated in England. F. L.

ANTHROPOLOGICAL NOTES.

In the issues of *Man* for July and August there is much controversial matter, mainly relating to Egypt. Prof. Arthur Thomson replies to the challenge of Dr. Keith, and maintains that the evidence adduced in Thomson and MacIver 'On the Ancient Races of the Thebaid' justifies the distinction drawn by those authors between a negroid and a non-negroid race there. Prof. Karl Pearson dissents from both Dr. Keith and Prof. Thomson. Mr. T. A. Joyce, in an interesting paper on steatite figures from West Africa, enforces Prof. Thomson's argument by reference to certain points of correspondence between civilized Egypt and savage Africa, which may be explained by the assumption of a common ethnographical element. Prof. Flinders Petrie furnishes a photograph of a model of the temple at Serabit-el-Khādem, and enumerates the characteristics of Semitic worship which are to be found there. Mr. H. R. Hall reports the progress of the excavation at Deir el-Bahari, and appeals for further support. M. Chantre's work on 'Anthropological Researches in Egypt' is criticized as unscientific by C. S. M. Mr. B. H. Mullen describes a man's and woman's fetish from Landana, in South-West Africa, the one a male figure, the other a double-headed figure of a dog, both studded with nails, sent to the Salford Museum by Mr. Clare, who states that, owing to the great abuses of the fetish priests, the Portuguese Government about six years ago determined to destroy all the fetishes; but notwithstanding the destruction, fetishism is just as it was then. Mr. O. M. Dalton describes some experiments showing that "eoliths can be produced by mechanical means and as a result of purely natural forces." This may very well be, but does not destroy the inference that there must have been steps of human workmanship on the way to the complete palæolithic type of implement. Mr. C. A. Sadleir supplies, through Mr. Thomas, a collection of animal superstitions among the Araucanians of South America.

In the second part of the Vienna *Vierteljahrsschrift für körperliche Erziehung* is a thoughtful article by Prof. Dr. Leo Burgerstein, one of the editors, entitled 'Vorbengendes gegen sexuelle Verirrungen der Kinder in Schulalter.' The other contents, especially the reports as to practice and as to the teaching of swimming, are also of interest.

Prof. Cunningham, of Dublin, and Mr. Holmes, Curator of the National Anthropological Museum at Washington, have been elected Foreign Associates of the Society of Anthropology of Paris. Dr. Marcel Baudouin has described to that Society a fallen menhir, discovered at St. Hilaire de Riez (Vendée). M. Yves Guyot has contributed a memoir on population and subsistence, in which he arrives at the conclusions that the production of wheat and meat in the world is much below the necessary ration as determined by Atwater and other physiologists; that the increase of population in Europe during the last sixty-six years has been so great that, without importations of food from other continents, it would be in a condition of famine; that many of those who have the greatest need for recuperative alimentation can only obtain an insufficient supply; that the countries which are the greatest exporters of wheat do not offer any certainty of being able permanently to continue to be so; and that the only means of assuring food for future generations is the adoption of methods of intensive culture. Two communications by Dr. Paul Roux relate to the ethnography of the peoples of Upper Tonquin. A paper by M. Arnold van Gennep seeks to correlate the painted shields of the Germans and Cimbri, referred to by Tacitus and Ammianus Marcellinus, with the marks of property referred to in the ancient laws of Germany, and thus to account for the origin of heraldry. M. Th. Volkov drew the attention of the Society to a work in Russian, by Dr. Yachvili, on popular medicine in Transcaucasia, containing much information as to the folk-medicine practised there.

Science Gossip.

A third report of the Mediterranean Fever Commission, issued by the Royal Society, and now available, contains communications on various branches of the investigation that is in progress. Those, however, which transcend all others in importance at this stage of the inquiry are accounts by Dr. Zammit, Major Horrocks, and Capt. Kennedy of experiments relating to the susceptibility of Malta goats to the disease, and proving the presence of the infective organism (*Micrococcus melitensis*) in the milk and other secretions of these animals. In an introductory note Col. Bruce, F.R.S., the chairman of the Commission, remarks that it may be assumed with safety that the disease in man is propagated through the drinking of goats' milk, and that no time should be lost in removing such a grave and insidious danger to the public health.

Prof. Charles Augustus Young, who has during the last twenty-six years occupied with great distinction the Chair of Astronomy at Princeton, New Jersey, together with the directorship of the Halstead Observatory there, has recently retired and been nominated Professor Emeritus. The number of *The Popular Science Monthly* for July gives a sketch of his career with portrait. Born at Hanover, N.J., on December 15th, 1834, he became Professor of Natural Philosophy and Astronomy (a post formerly held by his father) at Dartmouth, Mass., in 1866, from which he removed to Princeton in 1879. His researches in solar physics are well known, and he took an active part in five expeditions to observe total eclipses of the sun, the first in 1869, and the last in 1900. This is not the place to make any detailed reference to his works, which are all of great interest and value; probably few books are more cherished than his 'Text-Book of General Astronomy,' the first edition of which appeared in 1888, and was noticed in *The Athenæum* of April 6th, 1889 (p. 442).

Prof. W. J. Hussey, having been appointed Professor of Astronomy at the University of Michigan and Director of the Detroit Observatory, will take up his residence there on the 1st of October, resigning his position at the Lick Observatory, where he has especially distinguished himself in the department of double-star work and discovery.

In *Bulletin* No. 21 of the Lowell Observatory six prints of photographs are given of Mars, which show not only the general features of the planet with much detail, but also several of the so-called canals. The photographs were taken by Mr. Lampland on the 11th of May last with the 24-inch telescope, its aperture being reduced to 12 inches or less, and a contrivance introduced for diminishing the effect of atmospheric tremor. It requires a very careful examination of these prints to feel sure as to what they do contain, and Prof. Turner remarks that those who have seen them differ a good deal in their interpretations. Mr. Lampland claims that they show eight of the "canals," and Mr. Wesley, who has made a careful drawing from them, which is reproduced in *The Observatory* for the present month, states that he is able to identify these objects. But with regard to the subsequent remark that

"the negatives thoroughly confirm the eye, in showing not only the existence of the canals, but the fact that they are continuous lines, and not a synthesis of other markings,"

a point on which there has been very much recent discussion, Mr. Wesley comments thus:

"Doubtless a photograph has no imagination, but imperfect definition applies equally to photographs and visual observations. That which is seen or photographed imperfectly as a smooth continuous line *may* be full of small irregularities, and may not be strictly continuous."

It is hoped that a further series of these photographs will shortly appear.

Another small planet was discovered by Dr. Götz at the Königstuhl Observatory, Heidelberg, on the 27th ult. A second was announced on the same day, but it subsequently proved to be identical with No. 216, which was discovered by Dr. Palisa at Pola on September 10th, 1880, and afterwards named Cleopatra. No. 494, discovered by Dr. Wolf at Heidelberg on September 3rd, 1902, has been named Virtus.

FINE ARTS

The Etchings of Rembrandt. By P. G. Hamerton. With Fifty Facsimiles in Photogravure, and an Annotated Catalogue by Campbell Dodgson. (Seeley & Co.)

This introduction to the study of Rembrandt's etchings was published as a *Portfolio* monograph in 1894, and is here reprinted with a few minor corrections of dates. Though ten years have passed since it was written, Hamerton's essay remains an excellent introduction to the subject. How much, even in that short time, thanks in part to Hamerton himself, the appreciation of Rembrandt has grown may be judged by a certain tone of apology for his enthusiasm which the author evinces, and which would now no longer be necessary. The general note is that Rembrandt was inspired, though faulty, and the ancient academic bogy of correct drawing is allowed to appear at times, so that Hamerton's instinctive preferences are not always in accordance with, since they are really truer than, the general æsthetic theory which he accepted from his contemporaries. This comes out particularly in his treatment of Rembrandt's nudes. The author admits ugliness in features and hands if that ugliness is made expressive of beauty of character or mood, but he considers that the nude is only of value for its formal beauty; whereas it is in the work of Rembrandt more than anywhere else that we recognize that the nude, and more than that, any object whatsoever, may become the vehicle for the expression of the artist's own beautiful and imaginative attitude to life by the communication of certain primary ideas about matter.

But, indeed, whatever reservations one may make in detail, the reader could not have a better guide to the first study of Rembrandt's etched work than Hamerton's, so that we welcome this reprint. Its value for such a student is, of course, immensely increased by the addition of fifty reproductions in photogravure of plates that are on the whole excellently chosen as typical of various periods and phases of Rembrandt's style. We might have liked one or two of the plates exchanged for others. The large 'Raising of Lazarus' is so popular and so much discussed that its inclusion was doubtless inevitable; but we confess to agreeing with Sir Seymour Haden's strictures upon it, though it is impossible to argue, as he did, from its theatrical conception that it was not Rembrandt's invention. It belongs to a period when Rembrandt showed himself capable of such terrible lapses into the vulgarly melodramatic as the Schönborn 'Samson,' now in the Städel Institute at Frankfort. Then the 'Uytenbogaert, Receiver-General,' is a thoroughly unsatisfactory work, though its inclusion may be justified as a lesson on the effect produced when Rembrandt handed over his "important" commercial plates to pupils for their completion. As to the reproductions themselves, they are admirable. We have compared them very closely with Amand-Durand's magnificent 'Œuvre de Rembrandt,' and in almost every case the superiority is on the side of the present publication. Generally the print from which the gravure is made is earlier and darker, and a more serious effort has been made to keep the burr of the dry-point. The French publication has aimed at even biting and clearness of line, the English at full depth of tone and richness of colour. Sometimes this leads to a slight clogging and confusion, but where it is quite successful the result is incomparably more artistic and much nearer to the quality of an original etching. The printing, too, seems to us better and less mechanical, though the paper is not nearly so agreeable in quality and texture as that employed by Amand-Durand.

Finally, the value of the book is greatly increased by Mr. Campbell Dodgson's annotated catalogue of Rembrandt's etched work. This is the first complete catalogue in which a chronological arrangement has been adopted, and it is notable for its conciseness, the clear definition of its titles, and its excellent, though rare notes. It is not pretended that it is an original work, since in almost every case the conclusions of Dr. von Seidlitz are adopted. But the reader has these put before him in the most convenient and useful form. This leads us naturally to the tangled question of the authenticity of the disputed plates, which needs a far greater space and a far more specialized knowledge than are here available. As a rule, the artist is inclined to be more lenient in his acceptance of disputed works of the great masters than the art historian, but in the case of Rembrandt the reverse has occurred. The destructive criticism has come from men who practised the same art themselves—notably from Sir Seymour Haden—and their contentions have been gradually accepted, though with many reserves, by the specialists. The result of this contrast of views is seen in the present work. In the introductory part Hamerton adopted in great measure Sir Seymour Haden's views, especially with regard to the elaborate plates; while Mr. Dodgson, following Dr. von Seidlitz, though he excludes much that found favour in earlier catalogues, still retains such works as the large 'Raising of Lazarus,' the 'Christ before Pilate' (large plate), the 'Good Samaritan' (B. 90), and the 'St. Jerome' at the foot of a tree (B. 100). In all these we confess our inclination is to the side of the artists who would allow only two large and highly finished plates, the 'Christ healing the Sick' and the 'Death of the Virgin,' as undiluted Rembrandt. But, in any case, the reader has placed before him in this sumptuous book the problem and a number of aids to its solution.

History of Scottish Seals.—Vol. I. *The Royal Seals of Scotland.* By Walter de Gray Birch, LL.D. (Stirling, Eneas Mackay; London, Fisher Unwin.)—This is a work of such a desirable character and of so attractive a title that we wish we could give it less qualified praise. It seems to consist, with omissions, of the first forty-four pages of the British Museum Catalogue of Seals, written in narrative form. It is a great pity, however, that the author has not bestowed more pains upon it, choosing finer examples of the later seals on which to base the illustrations of his book. The narrative is written in an unnecessarily full style. We find phrases like "the king appears in his majesty enthroned and paramount," "a sceptre with foliated summit," and "a dress of tight proportions." The book shows lack of care and accuracy; misprints such as "septre" may be passed over, and also several instances of *u* for *v* in the legends on the great seals themselves. The mistake in David Laing's suggestion that the legend on the seal of Duncan II., the earliest in the series, should read "Regis

Scotorum," when it was without doubt *Rex Scotorum*, like the seals of his successors, is not corrected. We doubt, also, if an incurving tail is a peculiar characteristic of the Scottish lion, as definitely stated on p. 33. We think that the author has gone astray in regard to the interesting seal of John Balliol, and that the two shields upon it are not those that he suggests, but those of the king's father and mother, the latter, as that of Devorgilla of Galloway, bearing a lion rampant; and we think this mistake is repeated in the description of the seal of Edward Balliol. The plates of the seals of Robert III. (plates 30 and 31) have the name Robert II. appended to them. We may point out to Dr. Birch that his description of the small mullet, "probably for a cadency mark," on the seal of James I. is an impossibility, as the king was not a cadet; and that Murdach, Duke of Albany, Regent of Scotland, bore the arms not of the kingdom of Scotland quartered with those of Stewart, as he states, but those of the Earldom of Fife, which he held, as did his father Duke Robert. We are told that James II. reigned "nearly thirty years," though the dates given show that he held the crown for less than twenty-four. The same want of care causes on many occasions confusion between obverse and reverse; and on p. 92 what we think are the arms of St. Margaret are given as the arms of the town of Dunfermline.

The heraldry of all the seals is by no means satisfactory. In the arms of Queen Mary there is some confusion as to the meaning of the word "dimidiated." The description should read, not "Per pale.....France.....dimidiated with Scotland," but "France dimidiated, impaled with Scotland." We suggest also that on p. 77 the word "label" should read "escroll," that the lion on the seal of Alexander II. is not really contourné, and that Queen Mary's seal bears a St. Andrew's cross, not raguly, as stated.

There is little information given of the Privy Seals, and it is unfortunate that the interesting seals of the Queens Consort should have received such meagre treatment. In short, the book—although *faute de mieux* it must have a real value—is disappointing.

ILLUSTRATED BOOKS.

Sketches on the Old Road through France to Florence. By A. H. Hallam Murray, accompanied by Henry W. Nevinson and M. Carmichael. (Murray.)—Mr. Hallam Murray must feel himself in the danger of him of whom all men speak well, for his sketches have not only received praise from fellow-artists chary of their commendations in general, but they have also been enthusiastically received by people devoid of any artistic sense, yet charmed to recognize the distinctive characteristics of the places represented. His book is beyond doubt the best colour-book yet issued, and the excellent process employed hardly needs the apology made for it. Beyond an artistic sense of character and of the picturesque, the chief charm of these sketches is the feeling of the Southern atmosphere—the sun is there. The route taken through France, which is not precisely the Old Road, as that ran through Lyons and Mont Cenis, leads the reader through the Loire country to Cahors and Toulouse, thence to the Rhone Valley, Nice, Carrara, Pisa, and Florence, a drawing or two of Verona and Venice being added. We could wish for no better interpreter of the holiday frame of mind than Mr. Nevinson. Differing from him just enough to keep the dull times off—on the merits of Beauvais, for example—we should take full advantage of his unrivalled powers of getting at once to the essential and unusual. Witness the fact that he was able to find one of the Arlesian beauties, whom we have always regarded as a vanished race, and his extraordinary good fortune in meeting M. de Granbouche, who had eaten every local dainty in its place of origin. One dainty indeed is omitted, but as Edinburgh "bun" has to be eaten there on New Year's Day, we approve Mr. Nevinson's goodness of heart in not suggesting it. One would hardly send an enemy there on that day, much less a kindly Frenchman from Touraine. Mr. Nevinson appears to have missed the controversy as to the so-called relic of St. Edmund, no longer at Toulouse. Mr. Carmichael's account of the Italian part of the journey, if not so entertaining, is certainly instructive. He devotes much space to the narrative of the cremation of Shelley's body, and is in general a mine of information on matters ranging from Tuscan history to orris root.

Ireland. Painted by Francis Walker. Described by Frank Mathew. (A. & C. Black.)—This very distinctive book professes to be the subjective views of the country taken by an artist in colours and another in words, and, while disclaiming rightly to be a vulgar guide to the vulgar traveller, cannot be regarded as less than a sentimental guide to more delicate minds. For it records the impressions of men who, by recording them, seek to interest and influence others. But the convictions of an artist, though perfectly genuine as such, may not be historic truth when conveyed to others, and so it happens that the authors' evident sincerity fails to convey a picture of the country which can be called faithful or accurate. The writer and the painter do not even agree among themselves. The one tells us that the Green Isle is a misnomer, that Ireland is rather a symphony of browns and purples, and that England is a far greener country. As a matter of fact he is wrong. Any one who will take the trouble to visit the southern Midlands of England either in late summer or in winter may find the grass dried with either heat or frost, and green crops of a miserable aspect, while during the same seasons he will find fresh grass all over Ireland. The present writer, landing at Queenstown from America in October, was amazed at the greenness of Ireland in comparison with the States. But, supposing Mr. Mathew were right, we find in Mr. Walker's illustrations a land glowing in almost tropical colour, not excepting the brightest green. If the country, according to one, is sombre and gloomy—'Il Penseroso' of landscapes, the pictures represent 'L'Allegro.' There is occasional truth in both, but in this case poetry is not more philosophical than history. Mr. Mathew desires to avoid all controversial topics, and does so most honestly—but is that giving us a true picture of Ireland? Where are the priest and the gombeen-man, the horse-dealer and the squireen, the agitator and the Jackeen, the County Councillor and the Buckeen? Without these the peasant life may indeed be dull, and the island an island of gloom. But very few Irishmen would endorse such wild statements as the following:—

"There is something uncanny about Ireland..... one is apt to be conscious of some unnatural chill, as if the place was haunted."

"There was a time when all classes in Ireland were pious; but with the increase of civilization, sanctity was left more and more to the peasants."

[The epitaph on Swift] "may remind you that Dublin has always been a city of pain. There is some shadow over it. In its indifferent peace there is something sepulchral."

If we were to quote more of such stuff our readers would exclaim that this is mere making of phrases, and that the author was not recording his impressions, but posing about them. That is not our estimate. He has plenty of real observation in him when he drops his "mooning." Here is an excellent specimen:

"Half of the bitterness and bigotry on both sides in Ireland is caused by the memory of massacres and other atrocities that never were committed

He ruins, indeed, this excellent sentence by inserting an explanatory clause on the word "memory" ("that is the belief in the occurrence"). Such an addition is worthy of an Englishman, and yet Mr. Mathew tells us he is Irish. He must have English blood in him; for what man with a sense of humour would write thus?—

"The Gaelic language has, like the Greek, an indefinable suggestion of piety. Like Greek, it has a white and austere tenderness, and some incommunicable thrill. Just as there are in Greek poignant phrases that cannot be rendered in any ordinary language, so there are in the Gaelic."

So there are in every language, "ordinary" or not. It is a "Monmouth and Macedon" likeness. A cynic would probably infer that the author knew neither Greek nor Gaelic.

But in spite of these curious vagaries of sentimentalism, the book and the pictures are very attractive, and will interest many readers who are not over-critical. We find a sympathy with the poor, a love of wild nature, an appreciation of modest perfections, an absence of all ill-temper or rancour, which are rare and refreshing in a book about Ireland. Many of the pictures are very pretty, and we may easily infer from the sketches of fishing that the painter knows how to kill a salmon. By way of corrections which may serve for a new edition, we ask, Why is the Greater Killery (between Galway and Mayo) alleged to be the only fiord in Ireland? What definition of a fiord would exclude such inlets of the sea as Ballysodare or Mulroy; or, indeed, many others? Gougane Barra is not in co. Kerry, nor is Ballynahinch Castle in the middle of Lough Corrib. Slieve League is far from being the loftiest steep headland in Europe. Tramore, on the North Donegal coast, should be distinguished from the far better-known place in Waterford. But on the whole the geography is accurate, and the painter's sketches are in their outline so also. The colours can only be true in exceptional moments, but such are probably what he proposed to give us. Still we cannot lay down this interesting book without the feeling that it is in many senses over-coloured.

Abbotsford. By the Rev. W. S. Crockett. Illustrated by William Smith. (Same publishers.)—Mr. Crockett's book on Abbotsford contains almost nothing that is new except twenty-four plates in colours by Mr. William Smith and some pages about Abbotsford in the time of Mr. Hope Scott. Of the plates, 'The Cross, Melrose,' and 'Sandyknowe Tower' are perhaps the best; and 'Cauldshiels Loch' shows a mere which few visit. There are, we believe, only perch in this loch. Mr. Crockett, as a rule, merely arranges appropriate parts of Lockhart's biography of Scott, adding his own reflections. We remark that "Clarty Hole" ("Dirty Hole"), which Lockhart gives as the previous name of the Abbotsford site, was really Cartleyhole; Newarthaugh was another name—the best of all. If Mr. Crockett's financial estimate is correct, the lands of Abbotsford must have cost at least 30,000*l.*, and the house and plenishing 25,000*l.*, while Sir Walter is said to have offered 30,000*l.* for Faldonside. Washington Irving says that he thought of buying Smailholme or Sandyknowe. As the purchases of land were all paid for, it is clear that Constable's gold was not wholly "spectral," as Scott wrote that all of Constable's affairs were. Scott's Abbotsford was anything but a large house. Mr. Crockett calculates that Mr. Hope Scott's additions make a third of the existing edifice. An interesting chapter might have been compiled on the library by aid of the excellent catalogue. It is a club book, and rare. Some readers would like to know what are the chief treasures of Scott's collection. It is new to us (though Lockhart is cited) that the dark, villainous Cristal Nixon of 'Redgauntlet' is a portrait of that excellent fellow Tom

Purdie, Sir Walter's gamekeeper. Mr. Crockett says that Hogg was "a true friend of Scott, notwithstanding Lockhart's farrago." How does he translate "farrago"? Lockhart was a good friend to the Shepherd, but was naturally annoyed by some passages—perhaps especially by the viperous notes from a Whig hand—that hiss in Hogg's 'Domestic Manners of Sir Walter Scott.' It contains, however, several interesting passages; but the Shepherd's memory was not so accurate as his fancy was exuberant, and we "must give him but a doubtsome trust," as Lockhart shows in one case. We are unaware that Dickens forgot a part of one of his works, as Scott forgot the whole of 'The Bride of Lammermoor'; but this accident occurred to Thackeray after the illness which interrupted the writing of 'Pendennis.' To "soar into the arena" is a novel phrase; people more usually descend into arenas. As to the "gabions" or curios, the portrait of Queen Mary's decapitated head is the reverse of what it is called, and we are not aware that "leave was granted for such a picture," a statement probably due to Miss Strickland, though no authority is given. The inscription on Montrose's sword, if correctly reproduced, is odd nonsense. The book is well adapted to the drawing-room table; it will be full of novel interest to students who have not had time to read Lockhart, and Mr. Crockett has the right kind of Tweedside sentiment.

The West Indies. Painted by A. S. Forrest. Described by John Henderson. (Same publishers.)—The latest addition to Messrs. Black's handsome series of colour-books is worthy of a place among its picturesque fellows. Mr. Forrest's work is impressionistic throughout—too much so, at times. But it always has meaning, and, even where one might cavil at its detail, one finds atmosphere. Upon the whole, Mr. Forrest has done better in this volume than he did in its predecessor, 'Morocco.' There, with the richest of material, his pictures, though spirited, were scarcely up to the level of his collaborator's letterpress. Here the position is reversed, and Mr. Henderson's text falls considerably short of the artistic level of its illustrations. Indeed, in this comely and desirable volume the text is little more than a running commentary upon the pictures. Mr. Henderson writes in high spirits, and is an agreeable companion enough. But in a book of this sort one wants something more than high-spirited tourist jottings. One would like real impressions, recorded with delicacy. So much from the literary standpoint. From the point of view, however, of the tourist, of the intending visitor to the West Indies, particularly of the visitor who goes there for the first time, Mr. Henderson's jovial small talk and superficial reflections regarding all that he has seen will form a pleasant enough guide to the islands of the Caribbean. The paper and printing of this colour-book are all that could be desired, and the reproduction of the artist's sketches is a revelation of the advances recently made in this class of work.

Fine-Art Gossip.

Another work by G. F. Watts has been added to the collection on view at Leighton House. The interest of the picture lies in the fact that it was painted certainly not later than 1834, when the artist was only seventeen years old. The picture is a portrait of Mr. Richard Edmonds, of New Cross, Surrey, to whom the father of the artist had "predicted that his son would become not a star, but a planet in the world of Art." Mr. Edmonds, wishing to encourage the young artist, gave him a sitting. The painting was not signed at the time, but five years ago Mr. Watts recognized it as his work, and affixed his signature to it. It is now in the possession of Mr. Edmonds's granddaughter, who kindly lends it for exhibition.

At the Lyceum Club, 128, Piccadilly, the Members' Arts and Crafts Exhibition remains open till September 14th, including a collection of Italian laces from the schools of the Countess Cora di Brazza-Savorgnan Torreano.

A correspondent wishes to know how the Bembo portrait by Titian came to England. There seems to be some mystery about it, and he would be glad to have information which will clear it up.

At Venice an International Congress of Art will be held from September 21st to 28th. The committee includes, as English representatives, Sir W. B. Richmond, Mr. Edmund Gosse, Mr. W. M. Rossetti, Sir Aston Webb, and Lord Windsor. The Congress will be divided into four sections: 1. International Exhibitions and Competitions; 2. Artistic Tuition; 3. Public Art in Relation to Modern Life; 4. International Agreement for the Protection of Valuable Works of Art. The proceedings, which are under the presidency of Prof. A. Fradeletto, will include a commemoration of the work of Ruskin.

Signor Tullo Massarani, who died last week at Milan, was in many respects a remarkable man, being a poet, an artist, a politician, a philanthropist, a scholar, and an excellent writer on art matters. He was born in 1828, of Jewish parentage, and took an active part in the Italian revolutionary movement from 1848 to 1870. In addition to many political pamphlets and books, he was the author of 'L'Arte a Parigi,' of which editions appeared in French and Italian. He was a member of the International Committee for Fine Art at the Paris Exhibition of 1900. He was a Senator in the Italian Parliament.

A number of important panels of Gobelins tapestry are in hand at the famous French workshops. The Senate is about to receive a second panel, 'Venus lamenting the Death of Adonis,' from the design of M. Maignan. This, with the 'Venus and Adonis' already placed, forms two of a series designed by the same artist for the decoration of the Senate; and the third panel, which represents 'Jupiter and Semele,' has been in hand for some months. A second series will consist of five panels of subjects taken from the 'Metamorphoses' of Ovid, and when these are finished and hung the Senate house will have a superb decoration. A very large panel, 7 metres high by 11 metres broad, is also in hand for the Mairie of the Thirteenth Arrondissement, the subject of it being 'The Glorification of Colbert,' after a design by M. J. P. Laurens, exhibited at the Salon some years since.

The new gallery of the Musée de l'Armée, Paris, will, it is expected, be opened after the vacation. It is composed of six rooms on the second floor, and will be illustrative of the military history of the Second Empire and of the War of 1870. The feature of the new rooms will be a very extensive exhibition of the works of Detaille, to the number of about two hundred. The military costumes of the period will form an important section, as well as a complete collection of the proclamations relating to the war which emanated from the Imperial Government and from the Government of the Défense Nationale.

MUSIC

MUSIC OLD AND NEW.

Church Cantatas: Christ lay in Death's dark prison; Praise thou the Lord, Jerusalem; How brightly shines!—Motets for Double Choir: The Spirit also helpeth us; Come, Jesu, come; Sing ye to the Lord. By J. S. Bach. Vocal Scores. (Novello & Co.)—Many efforts have been made to spread a knowledge of Bach's works, yet there is still much to be done, especially with regard to the church cantatas, of which there is a large number. These works in their original form are not easily accessible, while to many the reading of the scores would be a difficult matter; hence the convenience of these vocal scores. The first cantata, 'Christ lag in Todesbanden,' to give it its German title, seemed to Spitta more or less modelled on a setting of the same words by Johann Kuhnau, Bach's predecessor as cantor of St. Thomas's, which has been preserved in the Berlin Library. Talent fears lest imitation should weaken individuality; genius, however, finds it the surest means towards healthy development: Bach made himself acquainted with the art-work of all his important predecessors. Despite any traces of influence, the cantata is a fine specimen of the master's sacred music. The next one, 'Preise, Jerusalem, den Herrn,' was written in the year 1723 for the service which took place before the election of the Town Council at Leipsic. It was Bach's first year in that city, and he evidently determined to give a striking proof of his great gifts: the imposing instrumental introduction is scored for four trumpets, drums, two flutes, three oboes, strings, and organ. The work was not intended for general church use; hence its somewhat secular character. The opening chorus contains some solid workmanship; it is, nevertheless, full of life and fire. There are two delightful arias—one for tenor, the other for alto voice: the opening of the second recalls, though only for a moment, a well-known piece by Domenico Scarlatti. The opening chorus of the third cantata, 'Wie schön leuchtet der Morgenstern,' is long, but fresh and beautiful.

The first of the three motets, 'Der Geist hilft unserer Schwachheit auf,' is a grand work. Bach was a prolific composer, and though one can always find points of interest in his music, inspiration was not always, as it is here, at white heat. The 'Komm, Jesu, komm,' opens with music stately, yet emotional. Fugal writing tends with many composers to dryness. Here the phrase set to the words "My strength is gone, my hour is nigh," is full of pathos, while the descending notes after the word "strength" offer a touch of realism as natural as it is expressive. The repetition of the "come," followed by a pause, in the earlier pages, forms another impressive point. The third motet, 'Singet dem Herrn,' is one of the noblest specimens of Bach's genius. It needs no recommendation, but it is most interesting to know that it excited the admiration of Mozart. When that composer visited Leipsic in 1789, Doles, then cantor of St. Thomas's Church, assembled his choir and let the master hear that work, hitherto unknown to him. These cantatas and motets have been carefully edited by Mr. John E. West; the pianoforte parts in the former are clever reductions from the scores.

Joh. Seb. Bach: Der Streit zwischen Phoebus und Pan. Drama per Musica. Für den Konzertgebrauch eingerichtet von Felix Mottl. Klavierauszug mit Text von Otto Taubmann. (Breitkopf & Härtel.)—The name of Bach is associated with fugues, clavier suites, and especially with sacred music. But there were times, as the list of his secular cantatas shows, when he was engaged on works of a lighter order. One of these, bearing the above title, was composed in 1731, and performed at the Leipsic Musikverein, most probably under the direction of Bach himself. Picander, the librettist, adopted in free fashion the version of the Grecian fable in which the ears of Midas are changed into those of an ass for preferring Pan's playing to that of Phœbus. The poem makes clear that Pan's music is typical of a pleasant but superficial order, whereas Apollo's stands for that in which beauty of melody is combined with depth and nobility. There is also an element of satire; Midas is supposed to

represent Johann Adolph Scheibe, who criticized unfavourably Bach's music in *Der kritische Musikus*. There is an interesting matter connected with this cantata. In 1748 Johann Gottlieb Biedermann, rector of Freiburg, celebrated the hundredth anniversary of the Peace of Westphalia, on which occasion a Singspiel was performed, the music, by the cantor Doles, Bach's second successor at St. Thomas's, Leipsic, attracting great notice. In the following year Biedermann, annoyed at the excitement caused, referred in a Latin speech to Horace's classification of musicians among quacks and beggar priests; also to the objections of the early Christians to the art. Bach read the speech, and persuaded one Schröter, of Nordhausen, to write a reply. But he did more. He looked up his 'Phoebus und Pan' cantata, written eighteen years previously, and it was performed by the Leipsic Musical Society. One of the original text-books has been preserved. Picander's lines

> Ergreife, Phöbus, nun die Leyer wider
> Es ist nichts lieblichers als deine Lieder,

are changed into

> Verdopple, Phöbus, nun Musik und Lieder
> Tobt auch Hortensius und ein Orbil darwider.

Orbilius was, of course, Horace's schoolmaster. Quintus Hortensius was a contemporary of Cicero, an orator of renown, and the name points evidently to Ernesti, rector of St. Thomas's, by whom Bach twenty years before had been badly treated, and who had published a complete edition of Cicero's works. Bach, therefore, railed at two rectors in one line. We have referred to events connected with this cantata rather than to the music itself, for detailed description would not give any idea of its skill, spontaneity, and wonderful contrasts. It is a work which Dr. Davies might well introduce at one of the Bach Choir concerts.

Jean Sibelius: Sanger, Lieder (*Songs, Melodies*). 15 Numbers. (Breitkopf & Härtel.)—Of Finnish music little is heard at our public concerts, but the name of Sibelius is known, and some of his music has been given by Mr. Wood at the Promenade Concerts. The composer, born in 1865, studied at Helsingfors, then at Berlin under Bargiel and Becker, and finally at Vienna under Fuchs and Goldmark. He is at the present day Professor of Composition at the Helsingfors Institute of Music. For the moment we have to consider him as a song-writer. In some of his melodies the folk-song element is prominent, while as regards unaffected charm he occasionally recalls Schubert; there is, however, nothing which shows direct imitation. His pianoforte accompaniments are extremely interesting; by variety of rhythm and rich harmonic colouring he produces striking effects. Taken as a whole, these songs are original; the composer makes one feel that he is a genuine tone-poet.

No. 1, 'The War Song of Tyrtæus,' has breadth and character, and though outwardly simple, it is always dignified. 'Sunrise' offers an example of naïve writing. Sibelius, however, seems to take special delight in the setting of poems of a romantic, impassioned, or mournful character. In 'Was it a Dream?' the melody moves along calmly, while at times it is broadened out, producing by syncopation and other rhythmic means a peculiarly mystic effect. The characteristic accompaniment, for the most part played softly, creates just the kind of atmosphere appropriate to the words. As a specimen of an impassioned song we would name 'Fricka.' Here the important accompaniment almost appears to be a reduction from an orchestral score; not many players could grasp the chords with stretch of a tenth, while to play them in arpeggio would clearly spoil the effect. The English versions of the original poems are by Mr. William Wallace, the French by M. J. d'Offoel.

Six Pieces for the Organ. By Arthur Foote, Op. 50. (Joseph Williams.)—In Mr. Elson's 'History of American Music' the composer is said to have never written anything trivial, and if the organ pieces in question are representative of his art-work generally, the opinion is sound. The 'Meditation,' No. 1, is based on a smooth theme, which cannot, perhaps, boast of great originality, but it is developed in unobtrusive, yet skilful manner. The impressive 'Paternoster' (No. 2) has a quaint ecclesiastical theme with harmonization well in keeping. No. 3 is a quiet 'Offertory' in which the composer shows that from a simple figure he can evolve an interesting piece. No. 4 is an 'Intermezzo,' effective both in the matter of rhythm and modulation. The 'Prelude' (No. 5) seems to us the least attractive of the set. The concluding 'Nocturne' is very tasteful, however; it owes nothing to Chopin.

Musical Gossip.

The eleventh season of Promenade Concerts at Queen's Hall will begin next Saturday evening, and continue until October 27th. It has been decided to banish from the programmes the operatic fantasia, and the second part of the concerts will this season be devoted to light music—ballet suites, overtures, and marches being varied by vocal and instrumental solos. The entire concert, save the final item, will be conducted by Mr. Henry Wood. On Mondays the first half of the programme will be drawn up from Wagner's compositions, while on Wednesdays Tschaïkowsky and Richard Strauss will furnish the music, and on Fridays the classical masters will have their turn. Strauss's 'Symphonia Domestica' and 'Ein Heldenleben' will be played several times in the course of the season. Beethoven's Ninth Symphony (without the choral finale) and several of Liszt's symphonic poems are also set down for performance.

The Norfolk and Norwich Twenty-eighth Triennial Musical Festival will be held at Norwich from October 25th to 28th inclusive. The programme of the opening concert, on Wednesday, October 25th, will include Sir Charles Stanford's 'Te Deum' in B flat, Mendelssohn's 'Hymn of Praise,' and Bach's Violin Concerto in E major, the soloist being Herr Kreisler. In the evening will be presented Mr. Joseph Holbrooke's new work, 'Five Bohemian Poems,' for baritone (Mr. Andrew Black) and orchestra, Sir Frederick Bridge's overture 'La Mort d'Arthur'; Sir Alexander Mackenzie's ballad 'La Belle Dame sans Merci'; 'Five Ballads,' by Mr. Coleridge-Taylor, for baritone, chorus, and orchestra; the Masque from Sullivan's 'Merchant of Venice,' and Max Bruch's Violin Concerto in G minor (Herr Kreisler). Sir Edward Elgar will conduct the performance of his oratorio 'The Apostles' on the Thursday morning, and his Introduction and Allegro in G minor at the evening concert. Sir Hubert Parry will direct, at the second concert on Thursday, the rendering of his new setting of Browning's 'Pied Piper of Hamelin' for tenor and baritone solo, orchestra, and chorus; and the programme also includes Mr. Arthur Hervey's tone-poem 'In the East,' and two part-songs for female voices by Mr. F. Corder. Signor Luigi Mancinelli's new cantata, 'Saint Agnes,' will be produced on the Friday morning, the programme likewise comprising the Overture to Dr. Walford Davies's 'Everyman,' and the Grail scene from 'Parsifal.' In the evening Dr. Cowen's 'John Gilpin,' Mr. Edward German's 'Welsh Rhapsody,' and Tschaïkowsky's Symphony in E minor figure in the scheme. 'The Messiah' will be given on Saturday morning; and for the evening a Popular Concert has been arranged.

Under the presidency of Lord Aberdare, the Welsh National Eisteddfod was held last week at Mountain Ash. In the chief choral competition the first prize of 150*l.* was awarded to the Brynaman Choral Society. Sir Walter Parratt, the King's Master of Music, was the adjudicator.

Miss Marie Hall, who is at present touring the provinces, will sail for New York on October 28th. The young violinist has arranged to give sixty concerts in America and Canada. She returns to England to play at the London Ballad Concerts in April.

Mr. Joseph Ivimey has been appointed conductor of the Strolling Players' Amateur Orchestral Society, in place of Mr. William Shakespeare, who has resigned.

Herr Wilhelm Backhaus, the well-known pianist, has been awarded the Rubinstein Prize, which was competed for at the Salle Erard, Paris, on the 8th inst. He studied the pianoforte under Alois Reckendorf, and appeared in public when he was ten years old. His more advanced training was obtained from Mr. Eugen D'Albert at Frankfort. Appointed principal Professor of the Pianoforte at the Royal College of Music, Manchester, before he was twenty, he attained his majority on March 26th last.

At a recent sale of musical autographs at Berlin a Schubert quartet, 32 pp. in folio, fetched 44*l.*; Schumann's F minor Sonata, Op. 14, 34 pp., 30*l.*; a cadenza by Mozart, 27 bars, 14*l.* 10*s*; a chorus by Wagner, written in 1843 for the inauguration of the monument to King Frederick August, 27*l.* 10*s.*; and a fragment of 'Lohengrin,' 21*l.* 5*s.*

Among the lists of visitors preserved in the municipal museum at Carlsbad, there is one dated August 19th, 1835, containing the following:—

"August 16, 2250.—Mr. Nicolas Chopin, professor, with his wife from Warsaw.

"August 16, 2251.—Mr. Frederick Chopin, professor, from Paris. They are staying at the 'Golden Rose' in Sprudel Street."

The above is translated from *Le Ménestrel* of August 6th. The original is, of course, in German.

It is announced that Madame Sigrid Arnoldson will appear next season, and that one of her *rôles* will be Tamara in Rubinstein's 'Demon.'

Joseph Merklin, the well-known organ builder, who established his business at Brussels in 1843, died at Nancy last month at the ripe age of eighty-six.

DRAMA

THE WEEK.

Wyndham's.—*What the Butler Saw: "a Farcical Problem" in Three Acts.* By Edward A. Parry and Frederick Mouillot.

A conviction, wholly modern in growth, prevails that the lightest order of theatrical entertainment is best adapted for the period of summer heats. This is so far true that with a playgoing public such as we now possess the lightest entertainment is at all seasons the best—in the sense that it is the most likely to prove remunerative. Nothing much lighter than the programmes at Wyndham's and the Criterion is to be conceived. The only "problem" in the new piece of Judge Parry and Mr. Mouillot is how to find the butler, who is credited with exceptional powers of vision or opportunities of observation, since there is in the piece nothing in the shape of or corresponding to

a butler. Against his absence we have no disposition to protest. The piece is simply designed to show the humours of a hydropathic establishment, run by an impecunious baronet, who has in his time, with a view to a livelihood, been many things, including the driver of a hansom cab. Possibilities of romance seem to have crossed the minds of the dramatists, who have, however, dismissed them, contenting themselves with depicting the adventures of a husband and wife, who, concealing their joint relationship, indulge in promiscuous and not very compromising flirtations with other occupants of the house. The action is restless rather than bustling, and the jokes, of which there is no lack, jostle one another, as do the characters. Much amusement is, however, caused, and the whole, as a travelling entertainment, for which it seems destined, is a success. It is possible, though scarcely necessary, to trace in the action a slight indebtedness to 'Le Monde où l'on s'ennuie.' Mr. Graham Browne plays brightly as the hero, and Mrs. Mouillot as the heroine seems capable of rendering service to the stage when she has conquered stiffness of movement and has acquired a method. Mr. C. M. Lowne is good as a soldier rewarded for his incompetency with a generalship, though as yet unpromoted to the War Office.

Criterion.—*Lucky Miss Dean: a Little Comedy in Three Acts.* By Sidney Bowkett.—*Time is Money.* By Lady Bell and Arthur Cecil.

'Lucky Miss Dean' shows the shifts of an impecunious young couple, who have married on the strength of the wholly delusive prospects of the husband, a portrait painter, and a modest and eminently uncertain allowance made to the heroine by an aunt, anxious only to get rid of her. Here, again, rather curiously, the title is a misnomer, since there is no Miss Dean, lucky or otherwise. Frederick Ware, the painter, hits on the device of inserting in the press a statement to the effect that a portrait of the heroine, which he has painted and exhibited at the Royal Academy, has secured for its subject a bequest of 300,000*l*. Wholly disastrous are the effects of this bold effort at self-advertisement, and the end discloses the husband and wife starting for Paris in pursuit of a chimerical fortune, and leaving their respective flats in possession of the brokers' men. There is little of sense or reason in all this, though perhaps enough for a piece the aim of which, so far as it is not purely farcical, is to furnish opportunities for satire. Thanks to good character-acting the piece secured a favourable reception.

'Time is Money,' a one-act comedietta by Lady (then Mrs. Hugh) Bell, was first seen at the Theatre Royal, Newcastle-on-Tyne, on September 5th, 1900. On April 21st, 1902, with alterations by Arthur Cecil, thenceforward associated with the authorship, it was given at the Comedy, with Mr. Charles Hawtrey as the hero, and with Misses Lottie Venne and Vane Featherston in the other parts. For her benefit Miss Venne revived it at the Prince of Wales's with the same cast on April 25th, 1903. It is a moderately bright trifle, showing the perplexities of a man who, calling on a widow with the purpose of proposing, finds he has left his purse at home, and is constantly interrupted in his wooing by appeals from a cabman who refuses to wait. Mr. Hawtrey we see to less advantage than previously as the hero, and the other parts are indifferently played.

PLAYS.

Plays. By Leo Tolstoy. Translated by Louise and Aylmer Maude. (Constable & Co.)—In a smaller and more convenient shape we have here a reprint of the well-known Aylmer Maude translation of Tolstoy's 'Power of Darkness,' 'The First Distiller,' 'The Imp and the Crust,' and 'Fruits of Culture,' issued a couple of years ago as vol. xx. of the revised edition of the works. The portrait of Tolstoy by Répin, painted in 1887, and the photograph of a performance in Moscow of 'The Power of Darkness,' are retained, and the prefatory and supplementary matter is unchanged. In little but its reduced dimensions is the new edition to be distinguished from the old.

Iris: a Drama in Five Acts.—Letty: an Original Drama in Four Acts and an Epilogue.—A Wife without a Smile: a Comedy in Disguise in Three Acts. By Arthur W. Pinero. (Heinemann.)—The latest works of Mr. Pinero added to the list of his printed plays represent three different facets of his talent. 'Iris' is wholly serious in aim, and belongs to the same category as 'The Second Mrs. Tanqueray.' 'Letty' is a blend of the serious and the satirical, and has much in common with 'The Gay Lord Quex'; while 'A Wife without a Smile' is virtually a farce, and seems an attempt, but half successful, to recapture the gay extravagance of early pieces such as 'Dandy Dick' and 'The Amazons.' If the earliest in date is at once the most ambitious and the best, the responsibility for the declension rests with the dramatist's self-elected critics and counsellors. Pleasant and brilliant as are Mr. Pinero's social satires, they are not to be counted with his so-called problem plays, which constitute his highest accomplishment, and entitle him to a place with, if not in front of, the greatest contemporary dramatists of France, Germany, and Scandinavia. In technique Mr. Pinero may possibly have to yield to one or two modern French masters; in boldness of treatment and in psychology he may "speak unbonneted to as proud a fortune" as any of his rivals has attained. It has been Mr. Pinero's fortune of late years to be much chidden, and to have seen let slip at him the noisy, if not very formidable, pack of Mrs. Grundy. English writers have long been subject to similar treatment. In one of his more ebullient moments Thackeray declared that if he had had a less Philistine public for which to cater he would have been an English Balzac. At any rate, Mr. Pinero has yielded to discouraging influences, and has, apparently, in 'Iris' closed a line of pieces which comprised 'The Profligate,' 'The Second Mrs. Tanqueray,' and 'The Notorious Mrs. Ebbsmith.' As a study of feminine temperament 'Iris' strikes us, on perusal, as one of the most relentless works of recent times. We have to go back a century and three quarters to find in Manon Lescaut a prototype for Iris Bellamy, a being so captivating, so well-meaning, so irresponsible, so devoid of moral sense. More clearly than in witnessing the performance do we perceive that the issue is tragic, and that all that remains for the fair frail creature is "endless weeping," and probably self-inflicted death.

In 'Letty' Mr. Pinero seems to have yielded to remonstrance. In herself Letty Shell is as feeble-minded as Iris. She belongs to a lower social grade, and her surrender to her wealthy lover is so commonplace an incident as to attract no attention outside that primitive form of melodrama in which rustic innocence is the normal prey of the aristocratic spoiler. The dramatist has, however, chosen to snatch her out of the pit at the moment when she is on the point of being swallowed, and to enable her to look down from the cliffs of marriage upon those who run the risk of being engulfed. The play is clever, but inconclusive, and the contrast between fashionable vice, as exhibited in that "rotten bad lot" the Letchmeres, and plebeian rectitude as shown in the participants in the heroine's festivities on the leads of the houses, inspires us with no keen wish to enlist in the ranks of the virtuous.

'A Wife without a Smile,' meantime, is admirable as satire, but introduces no character for whom it is possible to feel a shred of sympathy. It is distractingly funny, and overflows with humour and wit. We would give, however, a score of pieces of its class for one more 'Iris.'

The Manœuvres of Jane: an Original Comedy in Four Acts.—Mrs. Dane's Defence: a Play in Four Acts. By Henry Arthur Jones. (Macmillan & Co.)—Two plays have been added to the collection of Mr. Jones's published dramas. Both were successful, though in different ways, on their stage production, and both deserve the honours of print now assigned them. One which, if we may credit report, enjoyed a triumph its author neither anticipated nor wholly desired, and grew, so to speak, immortal in its own despite, is the more directly satirical, and by far the less sympathetic. We are not therefor disposed to condemnation, and can but pity the state of the dramatist who, the moment he tries to free himself from the environment of conventionality, finds himself regarded as irreverent and iconoclastic. That a heroine needs not be absolutely sympathetic has been proved, among others, by Mr. Jones himself, whose Vashti Dethic in 'Judah' is an impostor; whose Lady Susan Harabin is something more than a daring experimentalist in morals; whose Lady Jessica Nepean might, as regards the fatality that attends her actions, be a second Belle Hélène; and whose Audrie Lesden in 'Michael and his Lost Angel' is a designed temptress of her ascetic lover. Seldom, however, has sympathy been more directly repelled than it is by Jane Nangle, who in wilfulness and petulancy, as in some other respects, might have stepped out of Restoration comedy; or by Constantia Gage, who possesses more than one attribute of Becky Sharp.

Neither less ingenious nor less designing than either of these maidens is Mrs. Dane, who is, moreover, the possessor of a past as compromising, if not so notorious, as that of Doña Clorinde in 'L'Aventurière,' with whom she has something in common. No attempt is made in her case to repel sympathy, which is, indeed, challenged and conceded. So much is this the case that we are disposed to resent the scrutiny to which her life is subjected by Sir Daniel Carteret, and to plead, with Bassanio, "To do a great right do a little wrong." That this is the safer course for the dramatist to adopt is proved by the reception of the play, which sprang at a bound into popularity, and has since counted as one of the most undisputedly successful of its author's works. The moral of these things is that in the case of pieces of serious interest it is expedient to keep the heroine within the pale of our sympathies, and assign her such faults only as are pardonable on the ground of impulse or passion. A rule such as this will scarcely exclude Ann Whitefield in 'Man and Superman,' whom, however, in spite of all Mr. Bernard Shaw's cajolery, we refuse to accept as serious. We are glad to welcome the expanding row of Mr. Jones's plays, and find them

XUM

acceptable and stimulating reading. A contrary view prevails; but we opine that a perusal of these works, in itself a pleasurable task, should qualify a capable reader to pronounce upon their fitness for stage presentation. In every case the weaknesses which strike one afresh are the same that were evident during performance. In some cases these are not to be removed, since they enter into the very spirit of the conception. Were the obstinacy of authorship less than it generally is, it is difficult to believe that some first nights' miscarriages might not be avoided by judicious consultation.

Mahasena: a Play in Three Acts. By Maurice Baring. (Oxford, Blackwell; London, Simpkin, Marshall & Co.)—Not very easy to grasp is the symbolism with which Mr. Maurice Baring's new play is filled and inspired. The scene, the Island of Lanka, may be assumed to be Oriental, perhaps Indian, though the feast of the blossoming bough on which the action opens has a suggestion of Japan. So far as the profane may venture upon interpretation, the lesson to be drawn is that only through mists of pain is to be seen the face of Peace. This not wholly unanticipated teaching is darkened by the fact that the suffering may be, or, indeed, must be, vicarious. The sin of Mahasena, King of Lanka, is that precisely of David with Bathsheba. In love with Chandra, the child wife of a famous warrior, he dispatches her husband upon an errand necessarily fatal, and, after her period of mourning is over, invites her to share his throne. In unwise expiation he tells her of the crime he has committed, and in so doing forfeits her love, since, though she remains by his side to sustain him in bearing the weight of empire, she regards him henceforth with coldness and aversion. What is most ingenious in story is the manner in which the penalty springs from the offence, since it is through his inability in consonance with the laws of Lanka to pardon a crime kindred with, though more venial than, his own, that the atonement itself, as well as the apparent need for atonement, is evolved. This obscure and nebulous story is told in language, the beauty and vigour of which constitute the chief attraction of the piece. In the lyrical passages supposedly sung without the palace by maidens the highest point is reached. Of the two following stanzas, the second and lovelier, chanted in the first act, is repeated in the third :—

Like far-seen palms in the desert air,
Like phantom isles hung over the seas,
Like glistening haze in the noontide's glare,
Or webs of silver on twilight trees:
So thou seemest, a film of light,
A baseless dream which at dawn must die;
Like dew of the morn or the snowflake bright,—
Child of the moon, descend from the sky.

Come, for the darkness has risen from earth,
And the moon has breathed o'er the sleeping sea;
We are weary of toil, we are sated with mirth,
We are fain to dream, and our dream is of thee.
The moon and the stars and the lotus flower,
The lilies and dusk are of no avail,
For thou art the dream of the twilight hour
And lotus and lily, O fair! O frail!

Mr. Baring is singularly happy in the use of interjections as expressions of rapture :—

O Miracle! O Wonder! O sweet hour!

We could, indeed, select line after line of grave and solemn beauty, and others, though less frequent, the *liaison* in which is admirable. The verse generally strikes us as being that of a sonneteer.

Speaking of Chandra, Pritha, one of her handmaidens, says :—

She is not wrought of perishable clay,
But of some delicate essence thin and rare,
Some texture whereof iris-dews are made,
Or wings of dragon-flies or petals of foam,
Or the frail, iridescent, floating shell.
In vain we liken her to star or flower;
Fairer is she than earthly semblances,
She is a spirit wandered from the moon;—
A sigh, a melody made palpable.

One further extract must serve in place of comment. This also is sung without :—

The day breaks and the darkness taketh flight,
The north wind blows upon the rippling sea;
My locks are dripping with the dews of night.
My Dawn, my Daylight, open thou to me.

The spices of thy garden fill the air,
The blossom glistens on thine apple-tree;
Sweeter than spice art thou, than flowers more fair.
My Dew, my Blossom, open thou to me.

Come, let us seek the mountains of the myrrh,
The hills of frankincense, the fragrant sea;
The north wind blows, the leaves, the water stir.
My Dove, my Springtide, open thou to me.

Short as it is, the play is hardly fitted for presentation. With an adequate mounting and acting of the highest order it might have a measure of such success as attended 'La Princesse Lointaine.'

Dramatic Gossip.

'The Taming of the Shrew' has been revived for a few weeks' performance at the Adelphi, and is over-acted in a style more popular and regrettable than before. The attempt to fight against the ignorance and vulgarity of the public is hopeless, and may be abandoned, even though the Lord of the Induction, in enjoining the trick on Christopher Sly, says :—

It will be a pastime passing excellent,
If it be husbanded with modesty.

The persistence in the mispronunciation of the name Petruchio is not a matter of special consequence, except as showing how little knowledge is now brought to the mounting of Shakspeare.

As now fixed, the production at Drury Lane of 'The Prodigal Son' will take place on the 7th of September. Enough of tradition attaches to the house to make the date of its reopening mark, under normal conditions, the beginning of the autumn season.

Before its production at the Duke of York's Theatre on the 11th of September, 'Clarice,' a drama by Mr. William Gillette, will be given at the Shakspeare Theatre, Liverpool, with the author in the principal part.

The death is announced from Vienna of Herr Paul von Schönthan, the well-known dramatist and theatrical manager. He was responsible for innumerable plays, chiefly of the lightest order, many of which have been seen in recent years in London. Among his most popular works were 'Die goldene Spinne' and 'Der Raub der Sabinerinnen.'

HENRY THE THIRD AND THE CHURCH.

A Study of his Ecclesiastical Policy, and of the Relations between England and Rome.

By the Right Rev. Abbot GASQUET, D.D. O.S.B.

"It is written with no desire to defend the Papacy from the charges which were made even by the faithful at the time, and it may fairly claim to represent an unbiassed survey of the evidence.....He has gone carefully through a large body of evidence which English historians have too much neglected; and that his investigations serve rather to confirm than upset generally received opinion is, perhaps, additional reason for gratitude. His book will be indispensable to the student of the reign of Henry III."—*Times.*

CHEAPER REISSUE. Crown 8vo, 6s. net.

THE EVE OF THE REFORMATION.

Studies in the Religious Life and Thought of the English People in the Period preceding the Rejection of the Romish Jurisdiction by Henry VIII.

By the Right Rev. Abbot GASQUET, D.D. O.S.B.

"Dr. Gasquet has produced a book which will set many men thinking. He has done an excellent piece of work, and has offered to students of history a highly interesting problem." *Athenæum.*

LITERATURE

Bushido the Soul of Japan. By I. Nitobe, Professor in the Imperial University of Kyoto. (Putnam's Sons.)

Young Japan: the Story of the Japanese People, and especially of their Educational Development. By James A. B. Scherer. (Kegan Paul.)

Our first volume is the tenth edition of Prof. Nitobe's exposition of what certain latter-day Japanese and some of their well-intentioned Western admirers exalt as a particular quality or virtue which new Japan has inherited from the Japan of the Shogunate—Bushido. The book is a signal proof of the reaction—now, apparently, in full swing—from the ideas of the seventies and eighties, when the completest Westernization was the ideal, and the Tokugawa system the abomination of Japanese reformers. Time has brought about its revenge; the faith of the Shinto revivalists is abandoned, and it is to the military caste of the Shogunate, to whose predominance Rai Sanyo, the one philosophical historian Japan has produced, ascribed all the evils of his country, that modern Japan is taught to look for the source of its national virtues. In a word, the *ishin* (restoration) government—if Prof. Nitobe's views are correct—is nothing more than the Shogunate enlarged by the abolition of the daimiates, and dignified by the presidency of the Mikado.

To our mind the whole thesis is singularly destitute of historical support. The history of old Japan is not a record which the Japanese can regard with much satisfaction. If one ignored history it would be easy to draw a picture of Napoleon as a good-natured man of genius who was kind to his relations and evolved order out of chaos.

In the same way the ideal people of Prof. Nitobe's pages is presented to the Western reader, to whom the literature of Japan is a sealed book. But a study of the histories of old Japan, from the 'Nihongi' to the 'Nihon-gwaishi,' the author of which latter work was the Rai Sanyo just mentioned, shows a record of coarse, brutal, and essentially unmeaning ambition. The truth is, and the numerous readers of the volume before us ought to be told it, that the history of old Japan, more or less authentic, from the sixth to the seventeenth century, is a mere welter of blood. The so-called *yamato-damashii* (soul of Japan) there displays itself in the concrete form of continuous slaughter—of Japanese by Japanese. In the thirteenth century the Mongol fleet of Kublai Khan was destroyed, mainly by the winds and waves. At the close of the sixteenth century the Taiko's invasion of Korea came to a disastrous conclusion. These are the only occasions on which Japan came into collision with the foreigner. It is not necessary to include Japanese piracy in the Eastern seas, the entire abolition of which was one of the best, though not directly intended, results of the policy of Iyeyasu. That policy crystallized, so to speak, the Brahmanic militarism, the worst conceivable form of that most destructive spirit, of the age of Nobunaga and Hideyoshi, in the meaningless quasi-military formalism of the Bakufu, under which the sword, undrawn from its scabbard, came to be almost worshipped, a system of merciless vendetta, often based upon trivial forms of injury, was established, and suicide, more often intellectually silly than sentimentally admirable, was made the guardian of the "honour" of the *samurai*. Here, according to Prof. Nitobe, is to be found that virtue of *bushido* which he regards as the very soul of his country. The discovery is quite recent. Neither Sir E. Satow nor Dr. Aston even mentions the word *bushido;* Prof. Chamberlain, in his 'Things Japanese' (1898), does not refer to it; the word is not contained in the admirable dictionary prepared by Capt. Brinkley, the able but intensely Japonicized correspondent of *The Times;* nor is it to be found in the principal native dictionary, the 'Kotoba no Izumi' ('Source of Language'). *Bushido* in literal Chinese is the "way of the executioner," and those who were eyewitnesses of the tyranny of the Samurai in the last years of the Bakufu—amply illustrated in Viscount Hayashi's touching story 'For His People'—will not regard the name as altogether inappropriate. The *bushi* (a Japano-Chinese but not Chinese form) or *samurai* were neither knights nor knightly; they were "followers" merely, many, if not most of them, petty officials, few of them for two hundred and fifty years possessed of any military experience whatever. Executers of the will of irresponsible petty princes or their councils, they were the instruments of oppression and themselves the victims of a pedantic and absolutely merciless ceremonialism. Of this rigid discipline contempt of life was an essential element, together with unquestioning loyalty, rather to a system than persons, and these qualities, exemplified in a worthier cause, are all that the modern Japanese soldier or sailor can be said to owe to his predecessors. The Japanese people—in a word—owe infinitely more to the social, ethical, and mental freedom for which they have acquired a Western taste than to the formalism of the Bakufu (Shogunate), which was both pedantic and pitiless, despite some pretty and touching stories which illustrate the humanity no despotism can wholly efface. What they do owe to that system is the foundation of a code of education with a formative preparation of society that was a progress towards unity of the State, and that made the *ishin* (restoration) government capable of the great achievements our own day has witnessed.

The whole of the modern advance of Japan has been upon European lines; in no single particular has the government reverted to any of the pre-*meiji* systems. It is impossible to endorse Mr. Meredith Townsend's assertion, quoted on p. 175, that the changes in Japan were entirely self-generated, except in a sense that has no meaning, for no form of civilization has ever been imposed by any other force than that of external circumstance, which operated even more powerfully in Japan than elsewhere. But Japan has understood what she has adopted, and this cannot be said of the Semites or the Hindus, who are hampered by social and religious prejudices from which Japan has always been free.

What a belief in this *bushido* may lead to is shown by Prof. Nitobe's admiration of Russian despotism as explained by M. Pobyedonostseff—an admiration that wears a wonderfully anachronistic air at the present moment. The arguments of the Russian statesman, he adds, "are doubly true of the Japanese." His ideal seems to be "a free exercise of monarchical power" (like that of Tsar or Kaiser), to be "generally moderated by paternal consideration for the feelings of the people." Such an ideal is the exact opposite of that of the best political thought of the West—which recognizes that the welfare of the people can be safely left only to the people themselves.

The present reviewer is obliged, then, to declare that Prof. Nitobe's book is a misleading piece of special pleading. He makes out his case by partial statement and wholesale suppression. Some doubts as to his own conclusions appear to beset him, for he declares that, in comparison with Christianity, "Bushido, it must be confessed, is like a dimly burning wick." Its knell, he adds, was tolled when feudalism was abolished in 1870, and "it is time for it to prepare for an honourable burial." Nevertheless, though "it will disappear as an entity," its influence will remain. But we may safely say it is not the supposed Bushido of old Japan, but that of new Japan—the military virtues shown on the plains of Manchuria and in the seas of Japan, the σωφροσύνη exhibited by the Japanese army and navy, the sincere and magnanimous, but thoroughly competent diplomacy of the Japanese Government—that reads a lesson to the West.

President Scherer's book does not call for an extended notice. It is a useful pendant to his former work, 'Japan To-day,' and is, in effect, a sort of short philosophic

history of Japan, which, however, is not treated critically. The philosophy, in a word, accepts the current history, and is, therefore, valuable just so far as the current history is true, and no further.

The almost total absence of advance, even upon Chinese lines, from the seventh to the seventeenth century is scarcely adverted to; nor is any explanation given of the sudden change from the bloody sixteenth century to the unruffled political quietism of the next two hundred and fifty years. Prof. Scherer takes rather a pessimistic view of Japan, which is in strong contrast with that of his Japanese compeer. He admits to the full, as every one must, "the five noble qualities of Japanese character: bravery, loyalty, alertness, thoroughness, and self-control," to which list courtesy should be added; but he goes on to say:—

"The two cancers at the core of the Japanese character are deep-set dishonesty and abandoned impurity; either would be sufficient to wreck the life of any nation."

Japan, again, is the only civilized Government that deals in licensed prostitution as a source of revenue, and tolerates the sale of young girls by their parents under guise of a regard for "filial piety." "Japan is still a country," we are told, "where the word 'lie'.....is not a term of reproach, but rather implies a jocular compliment." Duplicity is masked by the "Japanese smile," nauseating conceit mars popular manners. There are, however, eminent men in Japan whose eyes are open to the national faults. A Japanese judge is quoted as saying that the material civilization of the West must be supplemented by its idealism; that so far the process (of Western imitations) has been superficial only. Count Okuma questions "whether as a people we [the Japanese] have not lost fibre as a result of the many new influences to which we have been subjected." His advice is to live the noble life held up in the Bible — though he is not himself a Christian. On the other hand, the Marquis Itô looks to "science, knowledge, culture as a sufficient religion." Even the divinity of the Mikado seems thus to be abandoned. "Shall Okuma's advice or Itô's prevail? Upon the answer to this question," says Prof. Scherer, in conclusion, "depends the future manhood of Japan." We think that there can be no doubt as to the answer; but that it will not be the one Prof. Scherer would desire.

John Knox and the Reformation. By Andrew Lang. With Illustrations. (Longmans & Co.)

No one who turns over the pages of this volume, even in the most cursory manner, will run the slightest risk of wronging its author by imagining for a moment that he is one of the admirers of the chief reformer of Scotland. In him Mr. Lang, no doubt, sees many excellent qualities, which he thus sums up:—

"That Knox was a great man; a disinterested man; in his regard for the poor a truly Christian man; as a shepherd of Calvinistic souls a man fervent and considerate; of pure life; in friendship loyal; by jealousy untainted; in private character genial and amiable, I am entirely convinced."

But he finds grave fault with him as a reformer, as a politician, and as an historian. In dealing with him he has certainly put many of the facts and incidents in a new light; but his interpretation of the documents does not always seem to us allowable, and his reasoning is frequently more ingenious than convincing. Moreover, his chronology is not above reproach; and in his quotations words or clauses are occasionally altered, omitted, or inserted. In one case about five hundred words are left out of a quotation, without any indication of omission. The spelling is usually modernized, but once, at least, the Scotch form of a word is substituted for the English.

While Mr. Lang admits that Knox did as much as any man to forward a permanent political league between Scotland and England, he charges him with leaving the seeds of many sorrows by resisting a religious union, and with disuniting the two countries by rejecting the English Prayer Book. If it was wrong to set up a Church in Scotland which differed in many ways from that of England, the wrong-doing has been cordially approved, and is still applauded, by the bulk of Knox's countrymen. On such a matter there may be room for differences of opinion as to the expediency, the wisdom, or the sense of duty by which the leaders of the two Churches were guided.

Mr. Lang says that Knox spoke with two voices, and alleges that he used a Bible precedent in two absolutely contradictory ways. In 1556 he convinced the Scotch Protestants that they ought not to countenance the Mass. The principal argument of the temporizers was that Paul, by James's advice, had feigned to pay vows in the temple. Knox not only held that the cases were entirely different, but also greatly doubted whether the advice of James, or the obedience of Paul, proceeded from the Holy Ghost. And yet, according to Mr. Lang, Knox was inconsistent enough, in 1568, to bid the English brethren follow the example Paul had shown at Jerusalem. Unfortunately, neither the letter of advice to these brethren, nor any copy of it, is known to exist; and its nature is only known from the copy of a reply to it by an unnamed correspondent. A careful reading of that reply does not bear out the charge of inconsistency, for, although Paul's purifying at Jerusalem had been referred to by Knox in his letter, it is by no means clear that his conduct on that occasion was either justified or held up for imitation. The Scottish Reformer, in urging English Nonconformists not to refuse to hear the message of salvation from the mouths of men who did not please them in all things, produced, as usual, Biblical illustrations. Paul had reproved Peter sharply, but did not bid his hearers forsake his preaching. Paul and Barnabas had quarrelled; should their message, therefore, not have been heard? Again, there was "Paul, his purifying at Jerusalem." Why was this referred to? The natural inference seems to be not that they should imitate Paul's example in that respect, but that they should not withdraw from hearing the message of salvation from the lips of those who were doing wrong in following that example. This inference is supported by the whole context.

In a proclamation, which in *The Foreign Calendar*, is dated July 1st, 1559, the Queen Regent of Scotland said that the Reformers sought to subvert the sovereign authority, and to usurp the crown, and that this was manifest by, among other things, their daily receiving Englishmen with messages, and sending "siclyk" into England. Knox said that this was untrue. Mr. Lang admits that messengers may not have gone daily into England, but affirms that it would be a "babyish quibble" to stand on the Regent's words, when "five letters were written between June 21 and June 28." Five letters may have been sent to England in that short period, but Mr. Lang does not prove it; and he does not even affirm that the Congregation received English messengers before the date of that proclamation. But he insists that, if the approach of the Scots to Elizabeth at that time was to be successful, it "implied a change of 'authority,' an upsetting of 'authority'"; and that "Knox himself was intriguing with England against his queen at the very moment when in his 'History' he denies that communications were frequent between his party and England, or that any of the Regent's charges are true."

Knox had, indeed, written to Cecil in June; but that letter did not reach its destination, and is not known to exist. Again he wrote to him on the 28th of the same month; but that letter, instead of supporting, is opposed to the idea that the writer, or those with whom he was acting, desired to usurp the authority. Nevertheless Mr. Lang says:—

"What Knox wanted is very obvious. He wanted to prevent Mary Stuart from enjoying her hereditary crown.....Presently, as we shall see, he shows his hand to Cecil."

Here is the passage in Knox's letter of July 12th or 19th, 1559, to Cecil, in which he is said to show his hand:—

"Yf the most part of wemen be such as willingly we wold not thei should reing over us; and yf the most godlie, and such es have rare giftes and graces, be yitt mortall, we aught to tak head, least that we, in establissing one judged godlie and profitable to hir countrey, mack enteress and titill to many, by whom not only shall the treutht be impugned, but also shall the countrey be brought to bondaige and slavery. God geve unto you, and otheris favorars of your countrey, eis to forsee, and wisdom to avoid the dangeris appearing."

After quoting part of this passage in a mangled form, Mr. Lang labours to prove his thesis from it, but unsuccessfully. By "enteress and titill," he understands "entrance and title"; and asserts that the "many," to whom these "are not to be given, manifestly are Mary Stuart, Queen of France and Scotland," but admits that—

"it is not very clear whether Knox, while thus working against a woman's 'entrance and title' to the crown on the ground of her sex, is thinking of Mary Stuart's prospects of succession to the throne of England or of her Scottish rights, or of both."

It is not at all obvious how it could possibly refer to her "entrance and title" to the Scottish crown, since she had been crowned in Stirling sixteen years before. Yet, in a subsequent chapter, Mr. Lang

unhesitatingly affirms, as if there had been no dubiety, that in this letter, before she returned to her own country, Knox had tried to trouble her "estate," and had suggested that she should be discarded on the ground of her sex.

One of Mr. Lang's charges against Knox as an historian is that he has given a partial and one-sided account of the assurance, or truce, agreed upon at Cupar-Muir on June 13th, 1559. It is true that Knox only quotes the bond signed by the Queen-Regent's representatives. Either he or his transcriber had the original before him as he wrote. The counter-obligation was, no doubt, in possession of the adversaries, and he might not have access to a copy; but he does not hide the fact that there was such a paper: "We send unto thame our handwrittis, and we lykwyis receaved thairis." Mr. Lang lays great stress upon a statement, which is evidently imperfect and which occurs in the 'Historie,' by an unknown author, the existing transcript of which belongs to the latter half of the seventeenth century, and was made by one who was unfamiliar with the old handwriting. It runs thus:—

"At the last, it wes appointed in this manner, that the Frenchmen should incontinent remove forth of Fyffe, and that the Congregation should enterprise nothing, nor make no invasion for the space of six dayes following, for the Lords and principalls of the Congregation read the rest on another peece of paper."

Mr. Lang understands the word *read* as in the past tense. It makes much better sense to regard it as imperative, and to substitute a full stop for the comma after *following*. The terms which the Congregation were to observe were, no doubt, given more fully, and also more distinctly, on the other piece of paper. Mr. Lang evidently infers that the Protestants were bound to "enterprise" absolutely nothing, and to make no invasion of any kind for six days. The enterprise and the invasion, however, may only have respected the Queen Regent's forces, which were outnumbered; and if this were so, Mr. Lang's contention that the Protestants broke their word, by reforming Lindores Abbey during the truce, falls to the ground. This interpretation is favoured by Knox's statement to Mrs. Locke, that the lords and whole brethren had previously declared that "the feare of no mortall creature sould cause them.....to suffer idolatrie to be maintained in the bounds committed to their charge." But even although the other interpretation could be proved to be the genuine one, it would not necessarily follow that the Protestants were truce-breakers in the matter of Lindores.

Here is a specimen of Mr. Lang's exaggeration:—

"Mary landed at Leith in a thick fog on August 19, 1561. She was now in a country where she lay under sentence of death as an idolater. Her continued existence was illegal."

Neither at her landing nor at any subsequent time did the queen lie under sentence of death as an idolater. She was never at the bar for hearing, or being present at, Mass; and, besides, the Act of the Scottish Parliament did not prescribe death for the first offence or conviction.

The book is exceedingly lively in tone and style, but is, we think, rather spoilt throughout by the apparent desire to make points.

Texts and Studies.—Contributions to Biblical and Patristic Literature. Edited by J. Armitage Robinson, D.D.—*A Study of Ambrosiaster.* By Alexander Souter. (Cambridge, University Press.)

This book deals with two works. The first is a series of commentaries on thirteen Epistles of St. Paul attributed in ancient times to St. Ambrose, and the second bears the title of 'Quæstiones Veteris et Novi Testamenti,' which was ascribed to St. Augustine. Mr. Souter describes his own production as "the work of a philologist, not a theologian," and he is right. By far the most valuable portion of it consists of philological inquiries. He has been asked to examine the language of the commentaries for the new 'Thesaurus Linguæ Latinæ,' and he prints here a list of words, with the passages in which they occur, which throw light on the meanings in which they are used and their grammatical constructions, reference also being occasionally made to the usage of writers contemporary or nearly contemporary. He has also examined many of the MSS. containing the two books, has prepared a catalogue of these and other MSS. of which he has heard, adding notes in regard to them. He has, moreover, taken great pains to compare the text found in the books which differs from the Vulgate with the later version, and he has supplied a full collation of Pauline quotations in Cyprian's 'Testimonia' and the two books with the Latin of 'Codex Claromontanus.' This portion of his book deserves the warmest commendation, and merits the thanks of all scholars.

Mr. Souter has, besides this, undertaken to discuss the literary questions which have arisen in connexion with the two books, and here his results are of unequal value. The principal of these questions are two in number. The more important relates to the authorship of the books, and the other is whether the two books have been written by the same person, or whether they have been composed by two or more individuals. These two questions form the portion of Mr. Souter's book not dealing with MSS. and the language of the two works.

The external testimony in regard to the authorship of the commentaries is very strong. In the earliest MS. the name of the author is not recorded, but

"all the other MSS. of the commentaries, in number about seventy, attribute them to S. Ambrosius, with or without the designation *episcopus mediolanensis*."

Cassiodorus mentions commentaries on the Epistles of St. Paul as left by Ambrose, though he was not able to obtain a copy of them. In subsequent times the work was quoted as Ambrose's by a series of well-known writers. "Erasmus, in the year 1527, was the first to suspect the accuracy of this ascription." And Mr. Souter adds to this statement:—

"At the dawn of modern scholarship, as it is still more clearly at the present time, Ambrosian authorship was seen to be an impossibility."

Mr. Souter's assertion is calculated to mislead. The last editor of the entire works of Ambrose—Ballerini—devotes a considerable number of pages of his work to showing that the objections to the authorship of Ambrose are not well founded. He takes up all the arguments which the Benedictines had employed against their genuineness, and he disposes of them one by one in an able manner. His reasons have been considered by some who have written on Ambrose as being of great weight. Mr. Souter neglects Ballerini entirely, though he seems to know his edition, and follows Dom. Morin, who has endeavoured to discover an author for the work. Dom. Morin is one of a few, like Harnack and Dräsake, who feel great pleasure in discovering authors for works that they believe pseudonymous. These discoveries are mere conjectures, though their inventors often solidify them into facts. In this case Dom. Morin proposed Isaac, a converted Jew, and several scholars at once followed him. But he has now abandoned Isaac, and he suggests Decimius Hilarianus Hilarius, a man who occupied a high administrative position. He has chosen this Hilarius because Augustine quoted a part of the 'Commentaries on the Romans' as being the production of St. Hilarius — doubtless Hilarius of Poitiers—and because Hilarius appears in a few Irish MSS. as the name of the author of a work on the Romans. Mr. Souter agrees with Dom. Morin in this attribution, but he mentions objections to the conjecture which seem to us fatal. "There is," he says, "not a scrap of evidence to prove that this Hilarius wrote books. Of course, there is also no evidence to show that he did not." In other words, there is no document written by him by which it could be proved that the author of the 'Commentaries' and Hilarius were identical. And Mr. Souter points out that if this Hilarius had written the work there is no reason why this fact should not have been noticed by Jerome in his 'De Viris Inlustribus.' On the other hand Mr. Souter's labours supply materials for supporting the authorship of Ambrosius. He works out in full detail the opinion expressed by some before him, that the author was not a clergyman, and that he must have been a public official well practised in the administration of the law. This exactly suits the circumstances of Ambrose before he became bishop. And if Ambrose wrote the work, or a portion of the work, before this event, this may explain why he did not publish it, for he regarded himself as a learner during the period of his life anterior to his bishopric, and not a teacher. Probably Ambrose would add to it after he became a bishop, especially at the time when he delivered addresses on St. Paul's Epistles, and he may have embodied in it remarks made by St. Hilarius of Poitiers on the Romans.

The second work, the 'Quæstiones,' is attributed to Augustine in the MSS. Mr. Souter argues against the correctness of this attribution. He allows that it is a collection of 'Quæstiones' which may not all have proceeded from the same hand. He even suggests that the entire work, as an anonymous production, may have been found among the books of St. Augustine at his death, and thus become attributed to him

He also thinks that one of the 'Quæstiones' "looks like genuine Augustine." He, moreover, notes that one of the MSS. of the 'Quæstiones' ascribes a section of them to St. Ambrose. These and similar statements deserve more consideration than Mr. Souter has given them. For it may be found that St. Ambrose, St. Hilary, and St. Augustine had really something to do with the books.

The second question which Mr. Souter discusses is whether the two books were written by the same author. His arguments on this point are weak. He says that if

"the Gospel quotations were found to be almost identical in text, a very strong presumption of common authorship would be established, even in the absence of any other evidence."

Both the 'Commentaries' and the 'Quæstiones' make their quotations from a Latin version of the New Testament different from the Vulgate. Mr. Souter argues that if it was the same version that both employed, the authorship of the two works must be the same. But surely many others must have used this version. If several books cited our Revised Version it would be no proof that they were by the same author.

His second argument is that the style and language are very similar. But here again he goes on too narrow a basis. He has depended solely on the collection of words and idioms which he has made for the Berlin Thesaurus, and has not investigated the Latinity of other contemporary writers completely. So far as he has dipped into the subject his observations rather go to confirm the traditional opinion. He says: "Ambrose and Jerome seem to be nearest this author in vocabulary." And in a note written subsequently he mentions other words that might have added to his list, and asserts in regard to them, "These are all favourites with Aug[ustine]."

Mr. Souter expects much new knowledge from the editions of the 'Commentaries' and the 'Quæstiones' which are to appear in the Vienna Corpus. We think he might suspend his judgment in regard to the authorship until he has concluded his studies of the MSS. and the new texts. He ought to be careful not to come to negative conclusions from the absence of complete accordance in opinion between works written by an author at different periods of his life. The experience of the present age will bring this home to him. A critic of Carlyle in future ages may well doubt, in consequence of style, whether it was the same Carlyle who wrote the 'Essay on Burns' and the 'Life of Frederick the Great,' whether the Gladstone who wrote 'Church Principles' was the man who made the speech on the Affirmation Bill, or whether the Mr. Chamberlain who formerly recommended the Radical programme was the great advocate of his present fiscal ideas. No doubt men in early times changed their opinions as readily as in the present day, and active administrators like Ambrose would be peculiarly liable to forget what they had said or done in various periods of their career.

Mr. Souter deserves every encouragement in the investigations which he is now pursuing.

James Macpherson: an Episode in Literature. By J. S. Smart. (Nutt.)

So much has been accomplished in Celtic philology within the last decade and a half that there seems room for yet another book on the subject of Ossian. The criticisms of modern Celtic scholars have thrown a new light upon Macpherson's work which justifies, perhaps, what might have seemed an unnecessary posthumous cruelty. But his severest critics acknowledge his unique influence in giving an impetus to Celtic studies, and the entire impregnation of his style by the lonely spirit of his native hills has impressed all who have come under their spell. Of such was John Campbell Shairp, who, with Matthew Arnold, has been the most eloquent apologist of Macpherson, and no more Highland-hearted apologist could be found. Yet, as Mr. Smart observes, Macpherson's truth to nature proves nothing as to the date of his poems. The other subjective argument, the Celtic melancholy of which we hear so much in these days, the pervading presence of which in "Ossian" was thought a proof of antiquity, has, we think, been very fairly discounted by the present writer.

Melancholy, like other emotions, is expressed in very ancient Celtic poems. 'Oisin an déidh na Féinne,' the old blind bard who has survived his brother warriors, is sad enough. 'Deirdre,' too, might have been mentioned, and many another tragic tale.

"But when war was every one's occupation and violent deaths were common, honour and safety depending on the vigour of a man's frame, old age was bitter everywhere, and the vicissitude of things was painfully felt.....no other note is so frequently struck by the Anglo-Saxon poets."

Arnold was moved by Macpherson's line: "They went forth to the war, but they always fell." Mr. Smart says wisely:—

"So far as anything in history can be spoken of with certitude, we may declare that [these] words were not repeated by dejected bards in the army that followed Donald of the Isles to Harlaw; that they were not muttered in the camp of Montrose; that they were not thought of by the clansmen who hewed the Covenanters to pieces with the broadsword, and charged at Killiecrankie."

And he cites for the Highland temper Mac Mhaighstir Alaisdeir's lines to the Lion banner of Clandonald:—

If violence should assail thee
From strangers' bounds and seek thy hurt;
If foemen should draw near thee,
With ill will, and strife, and sturt;
Many an Islay hilt then,
With a strong, smooth blade in it,
Beneath thy silken stream would gleam,
To fight for thee and succour thee.
Thine are men who would not bend
In showers that pierce the body through,
Nor yet be slow to rise and go
Where heads were hack'd and fury grew;
When, over all the tumult spread,
The thundering pipes were heard afar,
That might put spirit in the dead
To rise for gallant deeds of war.

The translation is Pattison's.

The Celt of "the Forty-five" was not a mooning misanthrope, and his predecessors' outlook upon nature was clear and quick, with a love of her brightest phases. Caoilte's song on 'The Hunting of Arran,' Ossian's on 'The Land of Gold,' have nothing in common with the gloom that pervades Macpherson. Macpherson, indeed, whose childhood saw the ruin of his race and country at the hands of Cumberland, had a bias towards melancholy which was as much personal as racial, and its expression in poems "calculated to please persons of exquisite feelings of heart" at the appropriate moment when Rousseau had shown the way of naturalism and emotion, and Young's 'Night Thoughts' was just ready to "make the tour of Europe," was the secret of world-wide success. Goethe, Herder, and Klopstock, Chateaubriand, Madame de Staël, and George Sand were as enthusiastic as Napoleon over his snuffy, scented copy of the bard.

We speak of Macpherson as the poet who stirred Europe. There is no longer any "Ossianic controversy." When we reviewed in these pages (*Athen.* No. 3481, July 14th, 1894, p. 56) Mr. Bailey Saunders's 'Life and Letters of James Macpherson,' the only question was how far the "editor of Ossian" was justified in writing an epic on the fragmentary foundation at his disposal, and further, how far his critics were biassed by national prepossessions and ignorance of the materials for judgment. Since then 'The Dean's Book' and other collections included in Dr. Cameron's 'Reliquiæ Celticæ' (which appeared in the same year as Mr. Saunders's 'Life') and redactions by other Celtic scholars have put us into possession of many ballads of varying dates, ascribed, according to the bardic convention, to Ossian. The results of comparison show that the amount of genuine antique poetry in Macpherson's work is infinitesimal. It is clear that he committed various anachronisms as to the manners and customs of his heroes, and mingled in confusion the cycles of heroic myth, thus making their approximations to history (as in the case of the defeat of Magnus) even more vague and unsubstantial than they are in authentic tradition. Further, being well aware that the Ossianic fragments which survived in the Highlands agreed in giving the Fenian champions an Irish domicile, he deliberately invented the idea of an older and more genuine group of sagas which attributed their origin to Scotland. This astute method of enlisting the patriotism of his countrymen, his prefaces and notes, the contempt poured on such genuine fragments as he was able to obtain, are really the worst traits of his conduct. In the eighteenth century old ballads and the like were never regarded as other than materials for the decorative artist; it was an age of imitations, and had the mystification of the reading world not been supported by such a tissue of falsehood it might well have been condoned, and probably the reaction against the poetry itself would never have been so complete.

The translation of the English into bad Gaelic, which Macpherson undertook reluctantly, to satisfy his too zealous friends, completed his literary fall. Mr. Macbain (*Celtic Magazine*, February, March, April, 1887) and Dr. Stern, of Berlin (*Zeitschrift für vergleichende Litteratur-geschichte*, 1895), have examined the text of the Gaelic Ossian. They find that, in contradistinction to genuine extant MSS., with their elaborate metre, Macpherson's text has no fixed number of syllables, no alliteration, no

assonance, no rhyme. He omitted inflexions and particles, being wrongly of opinion that time should add to the niceties of grammar; he placed polysyllabic adjectives before the nouns, and monosyllables after them; he distorted the meanings of words, with results sometimes wholly unintelligible; and he made the sun masculine. Macpherson's Ossian is like no known Gaelic, new or old.

Mr. Smart has brought forward these and other considerations in a timely and very readable book. But what will interest more readers, perhaps, than the strictures of indignant philologists whose pet theories Macpherson trod on, is the justification of Johnson as a reasonable critic. He was ignorant, like the rest of the world, of the existence of old Scottish MSS., but he was no foe to Celtic literature. His letter to Charles O'Conor on the early history of Ireland, and his encouragement of Shaw's 'Gaelic Grammar' and 'Dictionary,' show the stout old friend of letters as well as of veracity.

Diary and Letters of Madame d'Arblay. Edited by her Niece [Mrs.] Charlotte Barrett. With Preface and Notes by Austin Dobson. 6 vols. (Macmillan & Co.)

"I COULD inform the dullest author," says Coleridge, "how he might write an interesting book. Let him relate the events of his own life, not disguising the feelings that accompanied them." The diary of Madame d'Arblay fulfils as far as may be these theoretically simple yet actually most difficult conditions; it is just such a transcript as Coleridge here prescribes of the author's life and feelings; just such a faithful register of her outward and inward, her intellectual and emotional experience. But it is also something more than this. It is a panorama reflecting with an extraordinary plenitude and variety of detail the social environment and career of one whose pencil was as facile as her powers of observation were rapid and minute, and who—whether she dashes off a thumbnail sketch of Miss Kitty Cooke ("Fat Kit Square") of Chessington Hall, or adds a final touch to the careful full-length of her royal mistress, Queen Charlotte, still shows the same unerring eye for the picturesque, the same happy gift of projecting and vitalizing her subject. Yet there are critical stalwarts who profess to find this delightful book, with its gallery of breathing portraits, flimsy in structure and merely relative in its appeal! Some of us—can it be that we are not yet out of our swaddling clothes, or else, haply, the second time come to them?—will, notwithstanding, be fain to confess a hearty relish for this simple fare, unsatisfying though it prove to the *dura ilia* of a sensation-loving age. For ourselves, far from consigning the 'Diary,' along with 'Camilla' and 'The Wanderer,' to the top shelf of our bookcase, we shall find room for it, not, indeed, beside Boswell's immortal work—this, in truth, its epical scale, alike of subject and treatment, places in a category by itself—but beside the 'Journal' and 'Familiar Letters' of Sir Walter Scott, who, amidst many points of difference in mind and character, possessed in common with the author of 'Evelina' a veritable genius for friendship, and a rare intensity and tenacity of family affection.

Of the taste and special knowledge of Mr. Austin Dobson this reissue of the 'Diary and Letters' affords pleasant evidence. The text, which is here arranged in six, instead of the original seven, volumes, is printed in bold, spacious type on good paper, with a degree of accuracy nowadays, unhappily, rare. Each volume has its own index, which in vol. vi. becomes a general index to the whole; on this side the book is disappointing.

The illustrations, in nearly every case contemporaneous with the narrative, have been chosen with practised judgment. The portraits include those of Johnson, Dr. Burney, Mrs. Montagu, Mrs. Crewe, and the artist himself, after Sir Joshua; profiles by George Dance of Dr. Burney and Mrs. Thrale; Opie's delightful picture of Mrs. Delany; Queen Charlotte by Gainsborough and King George by Allan Ramsay; Edmund Burke (Romney), Windham (Reynolds) and Warren Hastings (Tilly Kettle). All these have been more or less frequently engraved before, and the originals of many are in the National Portrait Gallery. Amongst the portraits new to the reader are a crayon drawing of M. d'Arblay, lent by the present owner of Camilla Lacey, and a painting by Sir Thomas Lawrence of Fanny's brother, the eminent Greek scholar, Dr. Charles Burney, reproduced by permission of Archdeacon Burney, of Surbiton. The portrait of Fanny herself, painted in 1782 by her cousin and reputed lover, Edward Francis Burney—the E. B. of Lamb's charming anecdote in 'Valentine's Day'—and prefixed to the original 'Diary and Letters' of 1842-6, forms the frontispiece to the first volume of the present edition also. While gratefully acknowledging what is given, one cannot but regret the absence from the family portrait gallery of "Admiral Jem," and of Fanny's best-beloved sister Susan, Mrs. Phillips. William Locke, of Norbury, and his wife, the "dearest Fredy" of the 'Diary,' might also have been represented; and one other at least of the bevy of fair women whose charms are so generously celebrated in Fanny's pages—Goldsmith's "Jessamy Bride," Mary Horneck, later the wife of Col. Edward Gwyn, equerry to George III.—who sat both to Reynolds and to Hoppner, and of whom Fanny testifies that in her thirty-seventh year "she is still in her first bloom—soft, pleasing, and as beautiful as an angel," adding significantly that, after ten years' experience of marriage, she "still idolizes her husband, and seizes every opportunity to see him when he is in waiting."

If the portraits are too few, not so the views, of which more than thirty interpret and adorn the story. Here one may travel with Johnson from his "seraglio" at No. 8, Bolt Court, to Streatham Place, thence back to his "little Burney's" home in Leicester Fields, to the stately mansion built by that attenuated but majestic muse Mrs. Montagu in Portman Square; or, once more afield, to Wick House, Sir Joshua's pleasant villa on Richmond Hill. Those, again, who prefer to follow Fanny's personal fortunes may hie to Chessington Hall, the den of her literary lion *manqué*, Daddy Crisp, or post down to Mrs. Delaney's house at Windsor, or to Norbury Park with its ring of dependencies — spots hallowed by dear and solemn memories; Mickleham Church, where Fanny plighted troth with her "partner-in-all" (as Talleyrand called him); the Hermitage (now Fairfield), where her son was born; and Camilla Cottage (now Camilla Lacey), planned and built by d'Arblay with the money gained from her third novel. Of yet livelier interest to many will be the prints accompanying Fanny's account of the visit of the Court to Oxford in 1786, and, again, of the King's progress to Weymouth after his recovery in the summer of 1789. These number views of Nuneham Courtney, the seat of Lord Harcourt, visited by the diarist in the days of her official noviciate; of Lulworth Castle, the fortress of the Welds, where, erstwhile, Mrs. Fitzherbert had played the stately *rôle* of chatelaine; of Mount Edgecumbe, with its woods and seaward vistas; of Longleat, the palace of the Thynne family, whose head, Thomas, third Viscount Weymouth, had recently (August, 1789) been elevated to the Marquessate of Bath; of Weymouth itself, with Gloucester Lodge; and, lastly, of the Royal Lodges in Windsor Castle (demolished in 1823), of Frogmore, and of the Queen's Lodge and the Prince of Wales's House (now the Palace) at Kew. Amongst a full score of place-illustrations yet remaining may be named the print and sketch-plan, after Dayes, of Westminster Hall during the trial of Warren Hastings; views of Juniper Hall and of the house of Richard Owen Cambridge — Walpole's "Cambridge the Everything"—in Twickenham Meadows; a sketch of the Capstan Rock at Ilfracombe, where in 1817 Madame d'Arblay narrowly escaped drowning; and a bird's-eye view, dated 1830, of Brussels, where, with many a British wife and mother, she waited, and watched, and wept through the long hours of that fateful Sunday of Waterloo, praying for the triumph of the allied arms and for the safety of the beloved partner, then absent from her side at the call of duty.

In the notes to this reissue "conciseness has," it appears, "been carefully considered." Had the editor aimed at compactness, to that there could be no demurring; but in the case of a chronicle so leisurely, so desultory, so frankly pleasurable as the present, concise annotation is, we conceive, out of place. Fanny Burney's affluent confidences, designed originally for the ear of her sister Mrs. Phillips, and of her bosom friend Mrs. Locke, are never "read through," save by such as, liking this easy, intimate style of writing, have ample time to give to it, and prefer to read deliberately, a page or two at a sitting, and to find at hand in the foot-notes all that they can possibly need for the full understanding of their author. For the man of scanty leisure there is always Vizetelly's epitome of the 'Diary' or Mr. Seeley's 'Fanny Burney and her Friends.' Mr. Austin Dobson may perhaps feel tempted to rejoin, as Mrs. Thrale once quietly observed to Johnson, when he rated her for banishing the young ones to the nursery, "It is difficult to please everybody." That our criticism, however, is not merely idle or

captious will appear from the fact that, of the many who delight in the 'Diary and Letters,' hardly one shall be found whom these notes fully satisfy. "It has been held," writes the editor,

"that to give some idea of the position or achievement of the persons named at the precise moment when they come under the pen of the diarist, is more useful than to recount their histories from the cradle to the grave."

This sounds plausible enough; but let us see how the principle is carried out in the case, say, of Madame de Genlis, a personage of some importance, both in herself and in relation to Madame d'Arblay. "During the spring of 1785 Dr. Burney and his daughter," runs the 'Diary,'

"became acquainted with the celebrated Madame de Genlis, who was then for the first time in England, and who 'warmly, and with predetermined partiality, sought the friendship of Miss Burney.'"

This passage Mr. Austin Dobson annotates as follows:—

"Stephanie-Félicité-Ducrest de St. Aubin, Countess de Genlis, 1746–1830, a fertile writer, who was entrusted with the education of the children of the Orleans family."

Just that, and nothing more! Yet here, surely, was a case demanding a brief *résumé* of the lady's life, if but to revive the possibly fading impressions of the reader. Examples of this unwise parsimony abound, and take not a little from our enjoyment, since they compel us either to lay down these pleasant pages in order to consult some dry book of reference, or else to read on, albeit labouring under a painful sense of confused ideas, and with a feeble grasp of the author's meaning. "A prompting whisper at the page-foot" may be very well in its place, but its effectiveness necessarily depends on the responsive agility and alert vigilance of the reader—virtues which, however admirably he may have developed them, are not usually in evidence when one surrenders oneself to the luxury of lazy reading in a favourite lounge-book.

On that hotly disputed question—how far the lengthy dialogues in the 'Diary' may be regarded as *bonâ fide* reports of actual conversations—Mr. Austin Dobson writes so much to the purpose that we cannot do better than reproduce his observations at length:—

"Madame d'Arblay was painfully short-sighted. A very natural result of such a defect would be to concentrate her attention upon what she heard; and this, coupled with the bird-lime memory her father attributed to her, accounts in a measure for the marked prevalence in her work of those long conversations which, when they were reported of real people, roused the watchful incredulity of Croker. They serve also to accentuate the superiority of the 'Diary' to the novels. Burke, it is known, commended the way in which her fictitious personages made 'themselves known by their own words'; and what they do in her books they do in her 'Diary.' Having invented a character, she proceeds to make it talk itself into being, carefully contriving not to make it resemble any living original. She does much the same, though without restrictions, in the case of the living Mr. Windham or the living Col. Digby. Their mere looks she neglects; but, having mentally noted their tricks of speech, their favourite topic, their line of argument, she sets about what she calls 'theatricalizing a dialogue,' in which they reveal themselves. In one case fiction operates upon fiction; in the other, fiction operates upon fact, with manifest advantages. The outcome of the latter has not the literal precision of shorthand, but, at least, its calculated disclosure of individual traits is vivid and conceivable. And it is probably far more convincing than history, for, however imagination may have coloured the picture, the artist's intention was to be veracious. 'I never mix Truth and Fiction,' she writes to 'Daddy' Crisp in 1779; 'all that I relate in Journalizing is *strictly*, nay, *plainly*, Fact: I never, in all my Life, have been a Sayer of the Thing that is not, and *now* I should be not *only* a Knave, but a Fool also in so doing, as I have other purposes for Imaginary Characters than filling Letters with them.'"

Of all women who have handled a pen, Fanny Burney was the one best fitted by nature to find her happiness within the four walls of home: could temperament control destiny—were character alone the arbiter of fate—her way of life had lain along the *fallentis semita vitæ*. But circumstance, ever stronger than the bent of nature, led her at first through a train of brilliant social successes, only to plunge her later amidst a series of "perplexing labyrinths, abrupt precipitations, and untoward straits." The changes and chances of her life, unfriendly to her peace, have lent a vivid and sustained interest to her story. But through all vicissitudes she kept herself pure from every taint of worldliness, and remained to the end the same single-minded creature of the affections to whom, in her early womanhood, the rugged Johnson had opened once for all his heart and his arms. "Cling to those who cling to you," he once solemnly admonished her; and she had locked his lesson in her memory, and acted upon it in her daily life. The indiscriminate flattery of the world never subverted her judgment, or alienated her loyalty from those whom she held to be her best counsellers and sagest critics. With a quick sense of the absurd and a wholesome love of laughter she united a genuine respect for virtue and, as we have said already, a veritable genius for making and keeping friends. "She could be cheerful," writes her latest editor, "in the most unpromising circumstances; she could be content with what to most people would be grinding poverty; she could be generous when others would be asking alms."

And of her 'Diary and Letters' we may truly say—what Southey, with a pardonable leniency, said of the 'Memoirs of Dr. Burney':

"Except Boswell's, there is no other work in our language which carries us into such society, and makes us fancy that we are acquainted with the persons to whom we are there introduced."

NEW NOVELS.

A Jay of Italy. By Bernard Capes. (Methuen & Co.)

Mr. Bernard Capes has hitherto never received his due, because he has never done justice to himself. But in his latest work he has put himself, beyond a possibility of doubt, in the front rank of romantic writers. There is, indeed, left in the reader's mind, after finishing this remarkable novel, a vague comparison between the author and Mr. Maurice Hewlett. Both have the same vehemence, often the same violence, and usually the same richness of language and generosity of phrase. In both the style tends to be exuberant, although in 'A Jay of Italy' Mr. Capes is more restrained than he is wont to be. This change is altogether for the better, as he tended oftentimes to become unbridled, to ramp through his pages in a riot of epithet. Greater decorum is displayed in this, his masterpiece, which would have excused a licence better than any of his previous works; for the scene is Italy, and the time that of the atrocious Sforzas, the tyrants of Milan. Mr. Capes's scheme is audacity itself. He conceives the introduction into the abominable Court of the Duke Galeazzo of a young saint and reformer, determined to win the world from evil. This has the air, as thus announced, of extravagance; but Mr. Capes renders the plot astonishingly real. In the first chapter we make the acquaintance of Bernardo Bembo, pretty youth, lutist, and improvisator, also of Messer Carlo Zanti, the bullying but not ignoble lord, and his paramour, Beatrice, Countess of Casa Caprona. The encounter strikes the characteristic note of the story. The saint emerges from the tavern, and comes face to face with the Jay of Italy, "whose mother was her painting," and who should betray him, and this picture met the eyes of the wanton!

"The soft umber eyes of the youth looked into hers. They were round and velvety as a rabbit's, with high, clean-pencilled brows over. His nose was short, and pretty broad at the bridge, and his mouth was a little mouth, pouting as a child's, something combative, and with lips like tinted wax. Like a girl's his jaw was round and beardless, and his hair in a golden fleece, cut square at the neck, and its ends brittle, as if they had been singed in fire. His doublet and his hose were of the palest pink; his bonnet, shoes, and mantlet of cypress-green velvet. Rose-coloured ribbons, knotted into silver buckles, adorned his feet; and on his shoulder, pendent from a strand of the same hue, was slung a fair lute. He could not have passed, by his looks, his sixteenth summer."

There is Mr. Capes at his most characteristic. Generally he visualizes graphically and with particularity. But this tale is wonderful in that way. Not even Mr. Hewlett has so successfully reproduced the mediæval atmosphere. This tragedy (for tragedy it is) beats with blood and life. Beatrice steps out of an Italian canvas, a veritable woman! Or might we say that she is worthy of Boccaccio? The whole characterization is of a piece with the swing and virility of the style. It is a fine work, and reaches the high-water mark of living romance.

The Storm Centre. By Charles Egbert Craddock. (New York, the Macmillan Company.)

The consoling feature about this book for the critical reader is that its author shows a distinct feeling—a kind of groping—after style. Here and there the fact stands out clearly, suggesting that Stevenson's dangerous advice as to playing the sedulous ape has been acted upon, with Stevenson himself for model. This sincere feeling for style, though occasionally it is overdone, is

certainly the best thing about a story which barely misses being exceedingly dull. The period is that of the war between North and South in America, and the Storm Centre of the title is the mansion of an old Southern judge, whose lands are surrounded by the Federal forces. The sons of the house are away fighting for the South, and in the house the master, with his niece and little grandchildren, entertains a Federal officer, the son of an old family friend, who is stricken down by a severe illness. Very much of the story is told in retrospect, a fact which naturally does not contribute to its force or liveliness. The author displays some talent for the sketching of character. 'The Storm Centre' suffers from a general vagueness and faulty construction.

The Parish Nurse. By Mary E. Mann. (Methuen & Co.)

Emily Geldart, the orphan daughter of an English general, goes to nurse the sick poor in a country village in order to forget a fancied sorrow—and finds real happiness. The author of 'Olivia's Summer' has again set herself to analyze, with skill and delicacy, the effect of love that comes to a woman after the years of girlhood are past, and by unwonted ways. The heroine is influenced in turn by men who represent weakness and strength, each displayed in a crude form. In making strength gain the day Mrs. Mann shows a shrewd knowledge of human nature, although many modern critics would indignantly repudiate the suggestion that such a woman as Emily Geldart, with grace, distinction, and force of character, could submit for a moment to the overbearing behaviour of Everard Vorst, the big self-made man from South Africa. He is, perhaps, unnecessarily brutal, and on his first introduction is detestable; but there are redeeming traits which are ably indicated by degrees. In regard to the other man, Edward Tyrrell, the heroine feels "in intensity, the desire to protect, to console," but she feels more keenly the fascination of yielding to a will stronger than her own, and as the story progresses the reader sees that this is inevitable. Nurse Emily's incidental experiences among her rustic patients are well described, the plot, which we forbear to disclose, is ingenious, and among the clearly drawn characters there is a clerical female whose final discomfiture affords us sincere gratification.

Alton of Somasco. By Harold Bindloss. (John Long.)

Those who know Mr. Bindloss only in connexion with West African tales will probably admit, after perusal of the present stirring story, that Our Lady of the Snows has inspired him to better purpose than did the dreaded Guinea Coast. 'Alton of Somasco' is of no particular literary importance; indeed, one occasionally feels in it—what should never be felt in a novel—the tired if practised hand of the bookmaker who has set himself to turn out his ordered tale of literary bricks at every sitting. The fact remains, however, that, even though the stage properties may creak a little, and momentary lapses afford unrehearsed glimpses of the work going on in the wings, the play is yet rattling, full of strong human interest, and capable of carrying its audience over halting moments to the desired haven of a very effective and appealing *dénoûment*. Alton of Somasco is a pioneer rancher, townmaker, and silver-miner, in the back-blocks of British Columbia. He is a fine—if somewhat exaggerated—type of the class that make up Mr. Kipling's "legion that never was 'listed"; a good and useful type, whose portrayal in English fiction cannot but be wholesome, even when, as in the present case, an occasional too heavy stroke of the pen suggests Bret Harte's 'Guy Heavystone.' There are two distinct love interests in this tale, which, in view of the fact that they have to be subordinated to the main interest of strenuous pioneering and a long struggle between honest ranchers and rascally speculators of the cities, are really managed very deftly. There is something genuinely heroic about the ranchers' bitter, plucky fight with Nature and with men's villainy among the wild mountain gorges of the untracked Columbian back ranges. Mr. Bindloss has handled the rugged scenic effects of his chosen background with force and feeling. We have no hesitation in pronouncing this his best story, nor in recommending it particularly to the attention of adventurous Young England.

The New Minister. By Orme Agnus. (Ward, Lock & Co.)

This book looks as if it had been written in parts for serial publication. Whether this be so or not, it is impossible to commend the form it takes, as the various chapters are merely episodic—strung together by the personality of the minister. There is nothing either very new or very interesting in this figure. He is a Methodist parson in a Dorset village, and his labours among his people are sympathetically described. One looked for better work from the author of 'Sarah Tuldon.' This seems perfunctory and sentimental. The titles of some of the chapters will give an indication of the temper of the book—as, for example, 'His Only Son,' 'Mrs. Plissell's Cross,' and 'The Conversion of Hosea Fream.' How far Mr. Agnus has studied verisimilitude in his latest book may be judged from the story of the prodigal son, who has been driven into evil courses by the lack of sympathy of his father. He has been sentenced to prison for assault, and is met by the minister as he is discharged. The minister wrestles with the ne'er-do-well, but all is in vain. He will continue his bad ways. But, behold, some time later the prodigal puts in an appearance at a love feast, and testifies and repents. Mr. Agnus handles the Dorset dialect successfully.

Alix of the Glen. By Curtis Yorke. (John Long.)

It is difficult to feel a great deal of sympathy for a hero who "fears his fate" so much that he twice lets his happiness slip through his fingers, even though his pusillanimity may arise from the highest and most conscientious of motives. It is probable that Jem Lessingham lost less than he imagined when he failed to make Alix of the Glen his wife, for she was evidently incapable of any deeper sentiment than the sisterly affection she felt for her oldest friend. But the latter's selfless devotion was put to a hard test when he had to give shelter to her first worthless husband, who so inconveniently survived the railway accident which was supposed to have killed him, and turned up after Alix's second and more prosperous marriage. It was apparently the same spirit of self-renunciation which led Jem to marry Alix's very young daughter, when he might easily have found real happiness in Nan's lifelong devotion to himself. But this is a story in which everybody is doomed to be at cross purposes, which is not saying that it is at all less readable than Curtis Yorke's novels usually contrive to be. There is plenty of incident of a sentimental order and some good character-drawing, notably in the case of Alix herself.

The Exploits of Jo Salis. By William Greener. (Hurst & Blackett.)

Even in fiction it is difficult for a spy to be successful as a hero. His occupation is against him, especially when, as in the case of the resourceful hero of this story of the Russo-Japanese war, he transfers his services from one side to the other, and is none too careful to end the old employment before beginning the new. Jo Salis has all the courage and ingenuity of the most fearless of his race. He contrives to get into Port Arthur as a Japanese spy and to leave it in the service of the Russians. There is no enterprise too dangerous for him if only the pay is good enough, and not one of his astonishing exploits but is followed by a still more astonishing escape. His adventures, as numerous as they are daring, fail, however, to excite one's keen interest, because, with one's sympathies untouched by their central figure, one cares but little how they end. Perhaps the strangest of all Jo Salis's performances is that he succeeds in winning the affection of a beautiful American girl, who, with her father, is exhibiting a novel taste in holiday-making by endeavouring "to see the war." Mr. Greener has a bright and easy style, and his picture of life in Tientsin—the headquarters of his hero—is full of movement and colour. He would appear to be far better acquainted with Manchuria than with Wordsworth. "The ancient plan, that he takes who has the power and he shall hold who can" is his version of some famous lines.

The Rebel Prince. By Seth Cook Comstock. (John Long.)

A tale of daring and hairbreadth escape in the days of Good Queen Bess can never fail to find an appreciative public, even though it run to upwards of five hundred pages and its manner of narration be much decorated with such cumbersome if forcible epithets as the braves of that glorious period may be supposed to have employed. The scene in this instance is laid in the Netherlands, where two young Englishmen are sent by Walsingham to spy upon the movements of

Don John of Austria, and incidentally to intercept the correspondence of the Duke of Anjou, a would-be suitor of the English queen. The rebel prince, at whose hands they receive much help and encouragement, is Prince William of Orange, and is a good portrait of that single-minded patriot. Sir Philip Sidney's *protégé*, the hero, Dick Harrod, is a typical Elizabethan of romance, with a stout heart, an unquestioning loyalty to his sovereign, and a sword-arm he is not afraid to use, while his colleague, the fat Hugh Douglas, has a charming personality. The blood-curdling adventures of these two, their many escapes from the machinations of two evil Spaniards, their chivalrous protection of Mlle. De St. Bris, the suspicion which they have to suffer of having betrayed their trust, are all clothed with an ingenuity of detail and recounted with a vigour which does not relax from the first page to the last.

The House of Cards. By John Heigh, sometime Major U.S.V. (New York, the Macmillan Company.)

Few novels have come recently from America that have deserved a warmer welcome than this story of the struggle between the North and the South. Linsey Cards, when we first see him, is a great American financier, despising the self-seeking politicians and other sycophants who surround him, but yet unwilling to sever his connexion with them. Apart from the introductory chapters, in which modern life in the United States is sketched with a strong satiric touch, the story is concerned with the romantic part played by Cards's youthful friends in the Civil War. The style is epigrammatic without being laboured, the dramatic situations are handled with artistic restraint, and a vein of quiet humour runs all through the book. Waltham Eliot, the priggish student who developes into a high-minded soldier, is a particularly good piece of portraiture; Cards's early career, with its subtle suggestions of his subsequent achievements, is drawn with real insight and skill; while Kriemhild West, who touches intimately both their lives, is a delightful specimen of American girlhood. One may regret that the author was not content to tell his romantic story without encumbering it with the introductory chapters. There is, too, an irritating suggestion of an allegorical meaning in the closing scene, in which the narrative returns briefly to the point from which it started.

LOCAL HISTORY.

Shrewsbury: a Historical and Topographical Account of the Town. By Thomas Auden. "Ancient Cities" Series. (Methuen.)—The writer's endeavour, as set out in his preface, has been to produce a readable book, not unduly technical, which may be acceptable to the general reader, yet include nothing as history which cannot be relied upon as accurate. We congratulate Mr. Auden in having succeeded in a remarkable degree in his self-imposed task. The book is pleasantly written, and the facts are presented, on the whole, in such an attractive form that even those not keenly interested in the history of Shrewsbury will find the book worth reading. Mr. Auden also appears to have been at great pains to verify his facts, and when any doubt exists he has cautiously adopted an attitude of reserve.

Perhaps the best section of the work is that which deals with ecclesiastical history; and if ever a guide was needed certainly Shrewsbury churches need one. The changes that have befallen some of the buildings and their contents render them almost unintelligible to an average visitor, unless the key is supplied, either by a guide well versed in their story or by such a book as the one we are reviewing. Take, for instance, the well-known case of the glass in St. Mary's. The great east window, which came from St. Chad's when that church fell into decay in the eighteenth century, is glass which traditionally is said to have been formerly in the church of the Franciscan Friars in Shrewsbury. On the north side of the chancel is some early sixteenth-century glass from Altenberg, in Germany; while elsewhere is to be seen fifteenth-century Flemish glass, taken, so Mr. Auden tells us, from the dissolved abbey of Herchenrode in 1802; and in the vestry and south porch later work, also from the Low Countries.

Mr. Auden is very fair in his treatment of the vexed questions that arise in dealing with church history during the sixteenth and seventeenth centuries; but we are not sure that it is altogether a sign of "good feeling" that so few changes took place among the Shrewsbury clergy during the Reformation period; and if Mr. Auden would examine and compare the lists of unbeneficed clergy, say in 1545, 1555, and 1565, he would find a very different state of affairs. A rather serious omission is the lack of any account of the early Nonconformists. When Mr. Auden finds space for a sketch of the Orthodox British Church, as the descendants of the Nonjurors styled themselves, he might have given some account of the men who were ejected in 1662 and of the causes they founded.

The section entitled 'Municipal Life' is not quite equal to that on the ecclesiastical history. It would have borne expansion, and we should like to have seen more reference to the town records. Mr. Auden also apparently falls into the error of supposing that the grant of a charter to the town was a signal mark of royal favour, instead of being the usual indication that the royal funds were running low. The illustrations are delightful, and the book includes a useful index.

Worcestershire Place-Names. By W. H. Duignan. (Frowde.) — We noticed, with praise, a small work on the place-names of Staffordshire in 1902 by Mr. Duignan, and the same author has now produced a companion volume on Worcestershire. In this work, as in its predecessor, Mr. Duignan has been fortunate to secure the help of both Prof. Skeat and Mr. Stevenson, and by basing most of his philological work on the sure foundation of Anglo-Saxon charters—of which Worcestershire possesses an unusually large number—he has avoided the pitfalls that beset many hasty writers on local nomenclature. The preface forms a good summary of the early history of the county.

"The inhabitants," writes Mr. Duignan,

"were probably not much troubled by wolves, but the charters occasionally refer to them. Wolf-pits (*seathe*) are mentioned as existing in Bredicote and Broadwas, and a wolf (*hayan*) in Longdon. Domesday Book records also a *haia* in Kington 'in which wild animals were captured.' As late as 1167 the sheriff pays three shilling to a hunter for destroying wolves in Feckenham Forest. The price seems very moderate; but in 1233 the sheriff of Shropshire paid only 57 shillings to Richard of Myndtown for the heads of 57 Welshmen whom he caught marauding at Church Stretton—and Richard appears to have been content."

Mr. Duignan seem to consider 1167 an exceptionally late date for the killing of an English wolf; but there are various records in forest proceedings *temp.* Edward I. of damage done by wolves to sheep, cattle, foals, and deer—notably in Derbyshire—whilst the best authorities believe they tarried in some parts of England down to the reign of Henry VII.

A History of Warwick and its People. By Thomas Kemp. (Warwick, Cooke & Son.)—Mr. Kemp, who has previously done good work for his native town, notably in editing 'The Black Book of Warwick,' has now done further service by producing a general history of the town. For this there was abundant room, as no general history of Warwick has been put forth since that by William Field, which was issued in 1815. The book is based to a considerable extent on the borough records, and supplies lists of charters and of bailiffs and mayors. It would have been possible, with further research, to have made the volume more satisfactory, particularly with regard to the old religious foundations—we see no reference to the hospital of St. Thomas—but it is a praiseworthy effort in the right direction.

The History of Suffolk. Collected and edited by W. A. Copinger, LL.D. Vol. IV. (Sotheran.) — This remarkable and most laborious work, which indexes a vast amount of record and other documentary information under the different parishes, has now made another step towards completion. The fourth volume extends from L to S, and covers nearly five hundred pages with notices that should be invaluable to topographical writers. There is no falling off in the extraordinary completeness of the work. The references to several small villages occupy over a page of compact small type, whilst a place like Southwold runs to eight pages.

The Book of the Cinque Ports. (Stock.)—An index volume to the Decrees of the Courts of Brotherhood and Guestling of the Cinque Ports from 1433 down to the present time cannot fail to be useful to both local and general historians. The archives of these ancient courts or parliaments of the Cinque Ports are preserved at New Romney, as the centre port, where the largest harbour formerly existed and the chief meetings used to be held. They are contained in volumes called the Great White Book and the Black Book. The decrees passed at these courts, which are herein indexed, governed the five ports and the two ancient towns of Rye and Winchelsea in their corporate action; they afford details of the liberties or restrictions under which trade and shipping interests were carried on, and also serve as chronicles of the part taken in the naval events of those times. Many curious customs and regulations relating to the respective rights claimed by the seven towns, as well as to the privileges and duties of the Lord Warden, occur in these entries. In this volume the decrees are all entered in epitome, down to the address of congratulation on the coronation of Edward VII. and Queen Alexandra. They were carefully prepared by the late Mr. Henry Bacheler Walker, who was twelve times Mayor of New Romney. Only 250 copies have been printed.

Memorials of Old Devonshire. By F. J. Snell. (Bemrose & Sons.)—The object of this volume, says the editor, is "a history of Devon in episode." Such a book, with contributions by a score of writers, is bound to be uneven in treatment, and some of the subjects selected by the editor can scarcely claim to be episodes in the history of a great county. For instance, 'Honiton Lace,' by Miss Dryden, is out of place. Every old lace lover knows that Miss Dryden is an authority on the subject; but even if such a paper was required, the one supplied is thin and thread-

bare. 'Ottery St. Mary and its Memories' is far too brief and sketchy to have any real value; Lord Coleridge must himself have felt this as he wrote these seven pages. Another shallow paper is that on 'French Prisoners on Dartmoor.' This is certainly an episode in Devonshire history, well worth a place here, but it required more original handling. There is hardly any part of England about which so much poor stuff has been written as Dartmoor. The mere list of books and publications on the history, scenery, antiquities, and convicts of this bleak district covers twelve pages of the last edition of Rowe's 'Perambulation of Dartmoor'; but of all that has been written and scribbled about it, there are, perhaps, only two works of real value—namely, the one just cited, and Page's 'Exploration of Dartmoor.' If Mr. Snell, as editor of this volume, had asked a contributor to search the Public Record Office for material relating to the actual working of the forest of Dartmoor as the great feeding-ground of Devonshire cattle and horses, an entirely original and valuable paper might have been the result. If any other volumes of this "Memorials" series are to be produced, the publishers should do their best to secure editors who will insist on at least a few genuinely original papers on unhackneyed subjects, to serve as salt amid the re-serving of old materials.

'The Blowing-up of Great Torrington Church,' in February, 1645, is a striking incident of the Civil War in the West of England. We have no quarrel with Mr. Doe for supplying a condensed account of what he has elsewhere published at greater length; but he might have spoken with more confidence on the considerable remains of the old church which are incorporated in the rebuilding of 1651. 'The Landing of the Prince of Orange at Brixham,' by the late Mr. Windeatt, is an honest piece of history; but, unless we are much mistaken, it has appeared before. Other good papers are 'The Affair of the Crediton Barns, A.D. 1549,' by the Rev. Chancellor Edmonds; and 'Peter Pindar, the Thersites of Kingsbridge,' by the Rev. W. T. Adey. 'Reynolds's Birthplace' is the rather fanciful title of a fairly good paper, by Mr. Hine, on Plympton, though it is marred by the confusion of monks with canons, and other mistakes as to mediæval ecclesiology.

The best paper is one by the editor, with which the volume closes, entitled 'Tiverton as a Pocket Borough.' It is based on a considerable store of documents, presented to the Corporation of Tiverton in 1903 by the Earl of Harrowby, and relating to the parliamentary connexion of his ancestors with the borough before the Municipal Reform Act of 1834-5. Mr. Snell's account of Tiverton when it was an appanage of the Ryders is at once entertaining and instructive, as illustrating the almost forgotten condition of some scores of these "political tied-houses."

It is forty years now since Alexander Smith, the Scottish poet who at one time seemed likely to vie in popularity with Tennyson, published his 'Summer in Skye.' The work is always in demand, and a new edition of it was published a month or two ago. That edition has been followed by a volume on *The Misty Isle of Skye*, by J. A. MacCulloch (Edinburgh, Oliphant, Anderson & Ferrier). It has nothing of the literary charm of Smith's book, but its variety of interest is much greater; for while Smith, for the most part, sought only to record his holiday experiences, Mr. MacCulloch deals with all the general characteristics and particular features of Skye and its people—with the industries and the crofting system (a thorny question), with the climate and the geology, the folklore and the antiquities, the mountains and the lakes and the moors, and the historical and literary associations of the "misty island," which he says is not misty. He writes not only after an intimate study of all the literature (and that is by no means inconsiderable) to which Skye has given birth, but after eight years of close and sympathetic contact with the natives. The result is an informative and exceedingly interesting work on an island which is the embodiment of much that is remarkable in the history and scenery of the Western Highlands. The book is well illustrated from photographs, and there is a good index.

There is no reason why a series of volumes "written up" to illustrations should not be made interesting, and even of value. Such a series has been projected by Messrs. Valentine & Sons, the well-known Dundee photographers, under the name of the "Shire Series" and under the editorship of Mr. A. H. Millar. A beginning has been made with *Picturesque Forfarshire*, by Alan Reid. Mr. Reid is peculiarly fitted to deal with the county which holds "Thrums" within its borders, being himself a native of Forfarshire, and the author of a standard history of the county town. His style is apt to run into the "picturesque," but that is a venial fault in a work which is meant for popular use rather than for study. In connexion with Airlie Castle we should have been glad to see some attempt to reconcile the statements in the ballad of 'The Bonnie House o' Airlie' with authentic history; and perhaps the "ghosts" of Glamis Castle should have been treated more seriously. In regard to Kirriemuir we note the statement that Mr. Barrie's townsmen are "more inclined to resent than to receive" the title of "Thrums" which he has bestowed on a place they know better as "Kirrie." The book furnishes, on the whole, an entertaining and accurate account of a shire as rich in story as it is in natural beauty. It is illustrated with thirty views from Messrs. Valentine's series.

PUBLICATIONS OF THE S.P.C.K.

The progress of linguistic knowledge among Europeans, and of education among the natives of Uganda, has resulted in a revised edition of the *Luganda Prayer-Book of 1900*, reduced from 486 to 429 pages. This is owing not to any omissions, but to the fact that some parts of the new edition (*e.g.*, the Collects, Epistles, and Gospels, and the Thirty-nine Articles) are printed in smaller type. We have noticed no changes of any importance, beyond the necessary modifications in the State prayers; but there are numerous minor corrections, all tending, no doubt, towards a more precise and idiomatic rendering. Among these we may mention the frequent use of the "continued-action" suffix *nga* (*tulemenga*, *okwatulanga*, *tusabenga*, instead of *tuleme*, &c., on p. 2), and the substitution of *Ainza-byona* for *Omuinza webintu byona*, as the rendering of "Almighty," and of *Omuwereza* for *Omusabisa* (="minister" or "curate"), while *Omukade* still stands as the translation of "priest." The apostrophe before a consonant, denoting the "long consonant" (see W. A. C., 'Elements of Luganda Grammar,' p. 14) has been substituted for the signs used in the older edition. These lengthened consonants are by some (*e.g.*, in the 'Manuel de Langue Luganda,' published by the White Fathers, 1894) expressed by doubling, as, "N'abakazi bonna n'abaddu bonna, byonna ne bibula," and denote an omitted root-letter.

Pending the publication of the authoritative Luganda dictionary, we have a fairly complete *Luganda-English and English-Luganda Vocabulary*, compiled by the Rev. G. R. Blackledge. It is fuller than the tentative one given in the 'Elements' above referred to, if not, perhaps, so scientifically arranged, and should be most useful.

Of other Bantu languages represented in the publications of the Society we have this time only two to notice. A Swahili *Geography of Africa* (*Giogarafia ya nti nzima ya Afarika*) for use in the schools of Mombasa will be a welcome addition to the stock of vernacular literature.—*Atinsimu ni Wsiyimbelelo wsaka Davide Hixironga* is a book of hymns and psalms in the language of the Baronga (Delagoa Bay). The weird combination *ws* looks startling at first sight, but apparently it represents the sound rendered by M. Junod either as *ps* or *s* ('Grammaire Ronga,' p. 34), and described as a "labial sibilant."

"Les lèvres.....doivent être placées comme quand on veut souffler dans une clef ou dans une flûte. Un sifflement de nature forte (*s*) ou faible (*z*) est alors produit.....*Ps* et *bz* sont, dans nos langages, les sons qui s'en rapprochent le plus."

The labial would appear to be the intermediate sound between *b* and *w*, noted by Bantu students in various languages. The hymns (all, apparently, translations) are accompanied by tunes printed in the tonic sol-fa notation. Concerning these tunes, we read in the preface,—

"The genius of the Shi Ronga language involved a *slight* amount of adaptation in setting the music to some of the words, generally only by the addition or division of a beat, in two or three cases by a variation of rhythm."

We are glad to see so much concession to "the genius of the language"; but regret the absence of any allusion to M. Junod's most interesting studies in Ronga music. It is hard to believe that hymn-tunes and chants of a genuinely native character could not be built up on the basis of such melodies as some of those printed in 'Chants et Contes des Baronga.'

Our list of African books concludes with a *Nupe Reading Book*—Nupe being the principal language spoken at Lokoja on the Niger; a "negro" tongue, more or less allied to Ibo—and a partial version of the Prayer Book in Malagasy. This last, being a Malayo-Polynesian rather than an African tongue, forms a convenient transition to the Melanesian languages spoken in New Guinea, of which hardly any one in this country knows anything, with the exception of Mr. Sidney H. Ray. The languages of New Guinea mostly belong to the totally distinct Papuan stock, but grammatical notes have been made of about thirty-two Melanesian dialects spoken in the islands. Two of these, Mukawa and Wedau, are exemplified in the books before us, which include portions of the Prayer Book in both languages—Hymns, Catechism, and Preparation for Holy Communion in Mukawa, and a Reading Book ('Latonana') in Wedau. The last-named is the most interesting to the student, as each chapter is headed by a few words with their English equivalents, and the text includes, besides the usual translations and adaptations, a few native tales.

YEAR-BOOKS AND ROLLS.

The Great Roll of the Pipe for the Twenty-second Year of Henry II., 1175-1176. (Pipe Roll Society.)—Since 1899 the publications of the Pipe Roll Society have been suspended for lack of funds; but a vigorous effort on the part of those interested has happily resulted in the revival of this most useful society, and the present volume is the first fruit of its renewed activity. A respectable list of members affords evidence that the new series will enjoy some measure of permanence, and a revised scheme for transcribing the rolls will secure both diminished printers' bills and a larger measure of convenience for readers. The somewhat irritating "record type" em-

ployed in the first twenty-four volumes of the Society's *Transactions* has now been abandoned for the more rational plan of "extending" the rolls, after the fashion that is rapidly becoming almost universal. Well-devised "rules for copying" ensure that most real ambiguities of the text, notably in the extension of personal and place names, shall be duly recorded. When there is any doubt the transcriber is to "copy the roll and add an apostrophe." We are not told to whom the text of the present volume is due; but a short preface by Mr. J. H. Round suggests that the supervision and responsibility has been entrusted to that eminent scholar, and the work of transcription is competently and adequately performed. With commendable brevity Mr. Round indicates some of the chief characteristics of the roll, and points out some of the new information which it supplies to historians and genealogists. On one point a statement of Mr. Round's requires some amplification. Warning us not to confuse the separate treatment of honours and other exceptional sources of royal revenue by the example of the honour of Eye, he adds, "So also the Honour of Lancaster, which might here be mistaken for Lancashire," comprises Suffolk, Leicestershire, and other manors located in distant shires. This might turn the unwary reader to seek for an independent entry for Lancashire, though, of course, all that is to be found about it is recorded under the honour. There was no "Lancashire," in a formal sense, in 1175; but the practice—which, as Prof. Tait has noted, began in the Pipe Roll of 15 Henry II.—of mentioning under the head of the honour of Lancaster, a county as well as well as the honour, is here continued in the words which record the accounting for the sum of 47*s.*, "De communi assisa *comitatus* de Lancastra," and again when the same person accounts for 74*l.* 15*s.* 10*d.*, "De *comitatu* de Lancastra ut reguarda foreste ponatur in respectum." In other words, the process by which the lands of the honour locally situated round its *caput* were becoming evolved into an ordinary shire was already advanced a considerable way. For some purposes, then, there was already a Lancashire.

Year-Books of Edward II.—Vol. II. *2 and 3 Edward II.* Edited by F. W. Maitland. (Selden Society.)—The Selden Society's standard of output is admittedly so high that its members deserve warm congratulations on the flourishing state of its finances, which enable it to issue in the present work an "extra volume" for the year 1904. We are warned by the secretary that it must be regarded as an "occasional bonus" rather than as "part of a normal dividend"; but as he holds out hopes of its occasional repetition, we may wish that, as is the case with some prosperous commercial ventures, which avoid the invidiousness of a too inflated dividend by the regular distribution of a "bonus," the exception now noted may ultimately become the rule. Anyhow, it is of good augury that the increased output allows us an early opportunity to welcome the second volume of Prof. Maitland's admirable edition of the 'Year-Books of Edward II.' We wrote at such length on the first volume of this series that there is no need to say more on this occasion than that the new instalment is in every respect worthy of its excellent predecessor. We must note, however, the almost complete answer which the editor has given to some of the critics who complained that the cases in the first volume were obtained from a single manuscript. A "composite text" has always dangers of its own, especially when it has to be compiled out of independent versions of the same event. In this volume, however, Prof. Maitland has made use of many manuscripts, and has, instead of building up a "standard" text from them, preferred to go to the length of printing in some instances two or three "reports" of the same case. An examination of the curiously interesting differences brought out by this laborious process leads us to maintain confidently that Prof. Maitland's method is preferable. We should also note that the editor's researches have led to the discovery of reports earlier in probable date than those already printed by Mr. Horwood. Prof. Maitland holds out hopes of being able to assign some of these to quite the early years of Edward I.'s reign. In conclusion, attention should be called to the large proportion of new matter in the present volume. Of the fifty cases of 2 Edward II. which Prof. Maitland prints, no fewer than thirty-five have no place in the seventeenth-century edition, while new versions have been discovered of about half the remainder. Thus not only in deeper scholarship and enhanced convenience, but also in regard to the mass of inedited matter, the Selden Society's edition of the Year-Books breaks up new ground.

Calendar of Close Rolls: Edward III.—Vol. VIII. *1346-1349.* (H.M. Stationery Office.)—This is the sixth volume of this 'Calendar' which Mr. A. B. Hinds has published since 1898, a remarkable rate of progress in view of the difficulties of his task and the immense labour involved in each of the indexes. In the present instalment we have only to note that the quality of the work is well sustained, and that the index is exceedingly careful and accurate so far as we have been able to test it. A few *corrigenda* may be suggested as additions to those already prefixed to the volume. "Clerussel," given in the index as the modern equivalent of the priory "de claro rivulo," should rather be "Clair-Ruyssel com. Gaillefontaine dept. Seine-Inférieure." The priory of Noyon, which possessed lands in Berkshire and elsewhere in England, is wrongly described as "Noyon (Orne)," where "Orne" looks like a slip for Oise, the department of the episcopal city of Noyon. The Noyon in question is the place now called Charleval (Eure), which until the sixteenth century was called Noyon. The "Hogges" where Edward III. landed in 1346 should not have been identified with "La Hague," but with "La Hougue." No one could land off the high rocks of the former cape, while La Hougue is still a port, though a bad one. Some of the names of the Welsh lordships of the Hastings family might perhaps have been more clearly explained. "Bloreys" is Bloringe, the "town of Michael" looks like Llanvihangel, and "Engliston" Englishtown.

OUR LIBRARY TABLE.

Tales and Fantasies. By Robert Louis Stevenson. (Chatto & Windus.)—The second volume of the posthumous issue of Stevenson's uncollected pieces comprises three stories which have been printed only in the Edinburgh edition. It is probable that the author had not desired to put them forth in any save this limited issue, and there was good reason for his reluctance. For, to say the truth, none of these stories is at all on the level of his published work. 'The Misadventures of John Nicholson,' which was written in 1886 "to order," as he tells us in his letters, is highly Stevensonian in its atmosphere, but is indifferently constructed and unconvincing. It was obviously designed to demonstrate the favourite theory of this writer, that chance is a main factor in human events. There is in it little of real character, and the narrative strikes one as perfunctory. His own opinion was, "Some of it is passable, in its mouldy way," which is a very just estimate. On the other hand, the 'Body Snatcher' is vastly inferior to his average work, and, we should say, was actually the worst piece of fiction he wrote. It was written as "a Christmas story of the blood-curdling kind," for a magazine, after 'Markheim' had been declined, which is a pretty comment on the taste and ideals of the magazine. Stevenson showed his own good taste and judgment, as well as a rare self-denial, by refusing to take the full payment which had been offered. It is nothing short of a crude and savage welter of crime, unredeemed by any literary grace or human generosity. It merely repels and disgusts. How Stevenson could handle the horrible is demonstrated in many stories, as, for example, in 'The Merry Men,' 'The Master of Ballantrae,' and 'Thrawn Janet.' The most considerable of the tales, as it is the best, is 'The Story of a Lie,' written so far back as 1879, "in a great anxiety of mind." Stevenson apparently wrote it on his steerage voyage to America, and some years later expressed his intention of rewriting it, as it was "too weak and ragged, yet is worth saving for the Admiral." The Admiral is the salient figure in it, otherwise Van Tromp, the "shiftless, thriftless, worthless, sponging parasite," who was not, however, without a redeeming good-nature. He seems to have emerged, with certain alterations of his raiment, from Thackeray or Dickens. Yet he is neither Capt. Costigan nor Micawber, and Stevenson may claim him as his personal property. For the rest, he indicates herein his weakness in dealing with the young woman—a weakness, we conceive, derived mostly from lack of confidence. The charm of his manner is, however, already present; and what could be more characteristic or acute than such an observation as this?—

> "We have learned to think of women in a sort of symbolic transfiguration, based on clothes; and one of the readiest ways in which we conceive our mistress is as a composite thing, principally petticoats. But humanity has triumphed over clothes: the look, the touch of a dress has become alive; and the woman who stitched herself into these material integuments has now permeated right through and gone out to the tip of her skirt."

The interest of these stories lies not so much in themselves as in their value as marks in the literary education of Stevenson. He had travelled far from any of them when he died, and it is even possible that he winced at their inclusion in the "Edinburgh Edition."

Of recent years the importance of encouraging a return to the land has become apparent in this country, and researches have been instituted into the best means of stimulating an exodus from the towns. Various causes contribute to the concentration in such crowded centres. One of these is undoubtedly the lack of cheap and suitable dwellings in the country. The mediæval traditions under which village life is too often conducted in England serve to restrict or constrict the growth of the village, and thus lead directly to emigration into the freer centres of population. The movement, therefore, in favour of cheap houses in the country is of considerable value, and *Country Cottages: How to Build, Buy, and Fit Them Up* (Heinemann), is a welcome contribution to the literature of the subject. The author chooses to be known as "Home Counties"; but Mr. Henry Norman, in his introduction, declares him to be merely "a rural resident interested in cottage-building, desirous of affording practical assistance to the would-be rural resident with less experience than his own." Certainly "Home Counties" cannot lay claim to any great literary talent, for he is slipshod and careless in style; but he has a shrewd eye, and has acquired experience, and is certainly qualified to give hints. The difficulty in the way of the cheap house is, as the author points out, and as has been demonstrated by several cases in recent

months, the existence of the by-laws of the district councils. These by-laws were originally intended to apply to urban districts, where they may be regarded as indispensable. But, unhappily, the Act gave local authorities power to adopt the sections regarding building, with the result that in many counties by-laws are in force in rural districts which are suitable only for towns. The author suggests that the rural councils are often improperly interested in adopting these regulations; but it is not necessary to suppose that. Without the presence on the council of builders concerned to defend their trade, or farmers alarmed at the risk of rick fires, it is easy to see that measures of over-precaution may be undertaken by local authorities. But it is obvious that it is not essential for "dwellings" to be constructed of brick and mortar or stone in the depths of the country, whatever may be requisite in urban streets. Thus, where the building by-laws are in force, houses may not be built of stud and plaster or wood or iron. The price, consequently, is unduly enhanced, and rent becomes a heavy item for the poorer classes. The difference between 150*l.* and 300*l.* for a cottage is the margin between comfort and poverty. It is to be hoped that the present agitation will result in a wiser policy on the part of rural authorities. As it is, in some of the counties of England the disastrous by-laws have not been adopted, and in others they are ignored; but it seems ridiculous that, say in Surrey, all the rural districts should have adopted the Act, and in Essex ten out of seventeen. This book is likely to assist the builder of a cheap cottage if he be so fortunate as to escape the by-laws.

Almost every point which would occur to the builder is here anticipated. There are chapters on plans, picturesqueness, sanitation, water, furniture, and lighting. Many architects have contributed designs to the book which are reproduced, and which enable the reader to get an idea of what may be accomplished economically. It is safe to say that any amateur who is contemplating building a country cottage would do well to get this book. "Home Counties" has plenty of sound common sense, if he does sometimes leave us in the air, as in such a sentence as this: "Waring's told me lately, when I wrote up to town for something or other, that they would be pleased to send down a representative to see me." This is sheer vacuity. Messrs. Waring's and other advertisements are included in the volume.

A SIMILAR book is Mr. James Cornes's *Modern Housing in Town and Country* (Batsford). Mr. Cornes, who is a member of a provincial Town Council, deals more particularly with urban districts and the housing of the working classes. But this subject is inseparable from the larger and more comprehensive problem of cheap cottages. This volume gives particulars of many schemes undertaken by various municipal and other authorities, and Mr. Cornes points out that even these selected schemes involve an outlay of over a million, while the "whole of the schemes carried out by the bodies mentioned represent no less a sum than ten millions sterling." Mr. Cornes has himself carried out successful experiments in building, and is therefore the better qualified to speak. The authorities included here are various, and among them are the London County Council, the Peabody Trust, sundry metropolitan boroughs, Rowton Houses, Limited, Messrs. Lever Brothers, and numerous corporations. The book includes a voluminous account of the Letchworth exhibition, and Mr. Cornes gives an opinion as to the garden city which is interesting on account of his own practical experience. He says that the workmen are seldom attracted towards the garden, preferring other relaxations, and deduces therefrom this not over-sanguine view: "I do not think the attainment of its magnificent ideals would have been possible had it not been decided to make it a city in fact, by providing employment for the wage-earning classes." Yet the most hopeful sign is that cottages can be let at Letchworth at 3*s.* 6*d.* a week, and still return 5 per cent. We feel sure that possibilities in this direction once realized will lead to a great advance.

The Jewish Encyclopædia. — Vol. X. *Philipson — Samoscz.* (Funk & Wagnalls.)—The new volume of this 'Encyclopædia' reaches as high a standard as any of its predecessors. It is noteworthy that American writers have gradually been coming to the fore in the pages of this voluminous undertaking, but the 'Encyclopædia' at the same time retains the cosmopolitan character which, by its list of contributors, it from the first assumed. Prof. Emil G. Hirsch, of Chicago, writes on the Psalms; the Book of Proverbs is treated by Prof. C. H. Fry, of Harvard; and Dr. Kaufmann Kohler, of the Hebrew Union College, Cincinnati, is responsible for the article on the Book of Revelation. An interesting and refreshing mode of treatment is pursued in all the three contributions. Prof. W. Bacher, of Budapest, writes very scholarly and highly instructive articles on 'Punctuation' and the most prominent Jewish figure of the tenth century, 'Saadia Gaon.' The principal article on 'Philo Judæus' is from the pen of the late Prof. Siegfried, of Jena; Dr. J. Z. Lauterbach, of New York, adding remarks on Philo's relation to early Jewish Rabbinism. An important and thoroughly trustworthy account of the Samaritans and their literature is contributed by Mr. A. Cowley, of the Bodleian Library, Oxford. Prof. H. M. Huxley, of Harvard, who writes on the Samaritans from the anthropological point of view, arrives at the conclusion that "they are to-day the sole, though degenerate representatives of the ancient Hebrews." Among the countries and cities dealt with in the present volume are Russia, Portugal, Roumania, Prussia; Rome, Prague, Riga. There are biographies of the Rothschilds, and a large number of other people, both English and foreign. Among the further articles which will fully repay the attention of diverse readers are those on 'Plants,' 'Pottery,' 'Popes,' 'Pseudo-Messiahs,' 'Printers' Marks,' and 'Polemics and Polemical Literature.' The illustrations are as profuse as ever.

The Religion of Israel: a Historical Sketch. By R. L. Ottley. (Cambridge, University Press.)—This book is intended to supplement the same author's 'Short History of the Hebrews,' which was reviewed in *The Athenæum* for March 8th, 1902. The main strength of Canon Ottley's contribution to the now voluminous literature on the subject lies in his able and earnest effort to harmonize modern theory with Church tradition. His work must, in fact, be regarded as a direct and loyal development of some of the views advanced a number of years ago in 'Lux Mundi,' and since continued with varying success by different writers. The results of genuine Old Testament criticism are here unreservedly accepted in all their fullness. The application of the theory of evolution to religious systems is also frankly countenanced. But the spirit and substance of the traditional faith remain just where they were before either Darwin or the higher critics had made their appearance. The following sentences are part of Canon Ottley's summing up of his results:—

"The history, then, of the Hebrews was a progressive preparation for the Gospel; the prophets were inspired to lay hold of the principles at work in the history, to proclaim their tendency and to forecast their issue; the Law was at once a discipline of mind and character, and a typical presentation of truths yet to be disclosed. In a rudimentary form a theocracy was actually established on earth by Moses—a visible kingdom, in whose chequered history prophecy gradually recognized the lineaments of the kingdom of heaven revealed by Jesus Christ."

Where, then, one may ask, is the harm of criticism and evolution if a belief like this can be held by one who is quite ready to subscribe to both? The chapters of Canon Ottley's book which are likely to be read with some special eagerness are those on 'The Primitive Religion of the Semites,' 'The Contact of Judaism with Hellenism,' and 'The Final Stage in Pre-Christian Judaism.' We must point out, however, that the archæological information is clearly second-hand matter. What Canon Ottley tells us is in the main correct, but we note an entire lack of picturesqueness, and occasionally also of insight. Even the perusal of a work like Maspero's 'Dawn of Civilization' would have prevented such a mistake as the description of the moon-god Sin as a "moon-*goddess*." Those belonging to the author's school of thought—and their number is very considerable—will, however, maintain that the good points of the book far outweigh its drawbacks. We are ourselves able to commend it as an earnest and serious contribution to a perplexing and deeply interesting problem.

AMONG the numerous excellent studies in German literature which France has produced within the last few years *N. Lenau, Poète Lyrique*, par L. Reynaud (Paris, Société Nouvelle de Librairie et d'Édition), may claim an honourable place. It is not only a very satisfactory study of the poet himself, but also a valuable contribution to literary criticism in general. Certainly Lenau is a suggestive subject, and supplies plenty of food for reflection on the problem of the literary life. Few poets have been born with a richer lyric endowment than he, and few have ended more miserably. He was unfortunate no less in his temperament than in his age, and throughout his life the one acted fatally on the other. If ever in his youth he began with gladness—and in his student days, at least, he does seem to have known happiness—the despondency and madness of which Wordsworth speaks were not long in showing themselves, and thenceforth they gained ground continually. And the pitiable thing is that he assiduously cultivated these flowers of evil, and was encouraged to do so by his contemporaries. No doubt he was naturally weak—weak as a breaking wave; yet, had he been born in a healthier age, he might have overcome his failings and won to the mastery of himself. But in that astonishing era it was thought preposterous that a poetical genius should practise self-restraint and cultivate the quieter virtues. Byronism was at its height in Germany, and Lenau must needs pose as a child of melancholy, dogged by a gloomy and mysterious destiny. It was this pose, combined with a native lack of energy and a failure to obey any moral obligation, that spoilt not only his life, but his literary work. All this is admirably brought out by M. Reynaud, who has treated his subject with judgment and penetration. He does not attempt to give a detailed biography of Lenau, but none the less he succeeds in presenting a very complete picture of the man, showing by what influences, external and internal, literary and philosophical, his life was moulded, while in the second half of the volume he analyzes at some length the poet's lyric production, indicates its characteristics, and points out how intimately it is connected with his personality. M. Reynaud is never carried away by an undue enthusiasm. Indeed, he is sometimes decidedly severe, as, for instance, in his estimate of 'Savonarola,' to which, we think, he hardly does justice; but his criticism is always keen and worthy of attention. Lenau, we imagine, is little read in England; he is not nearly so well known as Uhland, for

XUM

example, and perhaps this is natural enough. After all, he is a poet of brilliant passages, and cannot be said to have produced any great and complete work. But he is worth reading, were it only for his purple patches, and the student will find the present volume an excellent commentary on his work. The absence of an index is to be regretted.

Moral Discipline in the Christian Church. By H. Hensley Henson, B.D. (Longmans & Co.)—Canon Hensley Henson has done well in publishing his Lenten Lectures, delivered in 1904 in Westminster Abbey, not only on account of the subject, but also because he has devoted nearly a third of the book to printing extracts from works not as a rule easily accessible to the ordinary reader. It is very convenient to have in the same volume the canons of the Council of Trent on penance, extracts from St. Alfonso Liguori 'Of the Functions of a Confessor,' John Wesley's descriptive 'Confession in the Methodist Societies,' Archbishop Benson's remarks on 'Confession in Schools,' and Paul Bert's views on 'La Morale des Jésuites.'

But we are far from desirous of paying Canon Henson a left-handed compliment by praising the appendix and ignoring the main body of the book. He has chosen a subject on which few people are in agreement, and he probably does not expect many to endorse every word he writes. Perhaps the only possible way to do justice to the author of a volume like the one before us is to give a statement of his views on the subject.

Canon Henson begins by stating that the practice of private confession was "fairly frequent among strict Anglicans of the seventeenth century, and perhaps never died out in the eighteenth." Its revival in our day is a significant fact, and the author thinks it necessary to declare his own view of the matter:—

"Personally I must confess to no slight perplexity. On the one hand.....I cannot but regard with sympathy and approval a practice which seems to me both natural in itself and eminently adapted to meet some of the gravest of the distinctive needs created by the abnormal conditions under which Christianity must now be professed."

But Canon Henson cannot but regard with apprehension the signs that in the present day some English confessors are inclined to follow Roman methods, from which the dread of Rome in the seventeenth century protected the Anglican divines of that age. In order that there may be no mistake as to his meaning, our author refers his readers to the opinions held by Pascal in regard to the methods of the Jesuits of his day, to the 'Theologia Moralis' of St. Alfonso Liguori, and to Bert's book cited above.

But, nevertheless, despite scandals and exposures, as well as "strong ancestral" prejudice, the practice of confession attracts devout Anglicans; and that its merits are, indeed, great is shown by the "fact that, in the judgment of so many sincere and religious men, they can outweigh such grave and manifest evils." The source of these evils Mr. Henson traces entirely to the sacerdotal system. This, he maintains, is inherent in the Church of England as at present constituted, chiefly owing to the presence of the form of Absolution in the office for Visitation of the Sick, and the words at the Ordination of Priests. The *fons malorum* is, from every standpoint, the sacerdotal theory of the Christian ministry; and that is the theory which, in this connexion, the Prayer-Book affirms.

Of the six lectures, the first deals with the 'Moral Discipline of the Christian Church,' the second with 'The Range of Moral Discipline,' the next two are devoted to 'Ecclesiastical Discipline and Repentance,' and the fifth, 'Of the Ends of Moral Discipline,' has a very fair and able vindication of the general aims of the Church during the dark ages. The series concludes with 'Moral Discipline in the Modern Church,' in which the following sentence alone provides food for abundant thought:—

"The Christian Church must henceforth reckon with a greater moral authority than its own, an authority, indeed, which is largely its own creation—the authority of the general conscience."

Canon Henson wants a "reformed and regulated confessional; probably," he adds, "a necessary institution in the modern church." He wishes to give the clergy no monopoly in this ministration, but to throw it open to lay men and women:—

"It does not appear that any ecclesiastical principle would be violated if the Church recognized as confessors laymen and women.....The very principle of 'the confessional' is sacerdotalism, and nothing would so effectually facilitate and moralize the practice of confession as to sever it openly and decisively from the ministry as such."

But in another place he remarks:—

"The youth will then cease to frequent the confessional when, in the Church of Christ, they find the purifying confidences and joys of religious friendship.....The devout and scrupulous members of our congregations will dispense with sacerdotal direction when they find, in the society of sympathetic and like-minded fellow disciples the invigorating pleasure of exchanging counsel and comparing experience."

We have quoted the *ipsissima verba* of our author without comment, because it is no easy task to discuss his statements without expressing more distaste than we really feel for the principles which underlie them. In discussing the moral discipline of the Church of England, Canon Henson has done the cause of religion a service. The most serious charge which can be made against the modern Church is that she does not take the lead in inculcating the highest ideals of life, and that she does not advance the morality of the age. This an undisciplined body often fails to accomplish, and the great fault of the Anglican communion, especially of its laity, is that there is no effective moral discipline. The warnings against using Roman methods to introduce this appear to us to be well timed; but we wish that so able a writer and speaker as Canon Henson would refrain from starting so many subjects as he has done without following them up to some definite conclusion, or attempting to discover the logical outcome of his theories.

A Country Bunch. By Mrs. Henry Dudeney. (Hurst & Blackett.)—Mrs. Dudeney's "bunch" of country characters cannot be accused of any resemblance to the conventionally virtuous Arcadian of sixteenth-century poets. In at least four out of these twelve tales murder, under conditions of peculiar treachery, forms the principal *motif*, and all throughout the general suggestion is of the disquieting possibilities which may underlie exteriors the most respectably commonplace. The intention to startle at all hazards is, indeed, rather too plainly manifest in the choice of situations—either, as in 'The Traveller Swan,' frankly impossible, or, as in 'The Obscure Port,' very difficult of acceptance. Some instances, however, notably 'The Way Out' and 'Men call it Conscience,' show originality and that gift of dramatic condensation essential to the successful short story. It is inevitable that in a book so modern in tone we should have an occasional hint of the supernatural—an effective, but also rather a dangerous resource.

Plon-Nourrit et Cie. publish a new volume by M. Paul Bourget, of which more than half is devoted to the novel which gives the title to the book, *Les Deux Sœurs*. The short stories which follow are unimportant and less new. While M. Bourget has written little of less merit than some of these six tales, which, though grouped under a second title, 'Le Cœur et le Métier,' have, in fact, no bond of union, 'Les Deux Sœurs' is, we think, as powerful as any work of his pen. This short novel is a study of jealousy in a double form, that of two sisters being dominant in the story.

In *The Wild Marquis: the Life and Adventures of de Maubreuil* (Chatto & Windus) Mr. E. A. Vizetelly exhibits the attitude in which he approaches historical questions by presenting in his opening scene a tragi-comic account of an attempted murder of a woman on a balcony in Paris. Diligent inquiries afterwards elicited the fact that she was the sister of the "wild marquis," and that he was still living in the time of the Second Empire, though, happily, not connected with this attempt. Such being the introduction, we are not surprised at finding ourselves, as it were, in a series of historical red chambers. Mr. Vizetelly is an entertaining guide; he chats pleasantly about all the personages on show, and about their connexions as well. The fact that Maubreuil when young became equerry to Jerôme Bonaparte enables the author to discourse about the juvenile escapades of that prince, including the Paterson affair at Baltimore, and to hint the possibility that France after the Second Empire might have had "an American emperor"—the son of that early union. He well describes Catherine of Würtemberg and the general surroundings of the Court at Cassel. More interesting are the later adventures of the young marquis—his brush with a Col. Wilson, near Alcantara (whom the author rightly distinguishes from Sir Robert Wilson), his attempt to evade the behests of Napoleon respecting the continental blockade, his ruin, and his share in the events which accompanied the Emperor's downfall. Maubreuil, it seems, was one of those who escorted the allied sovereigns into Paris in the spring of 1814. With his usual whimsicality of nature, he tied to his horse's tail the Cross of the Legion of Honour which Lapisse had presented to him for his valour at Torralba. As to later events, we are not convinced by the evidence which Mr. Vizetelly offers as to the supposed plot for kidnapping or murdering Napoleon at the time of his first abdication. The suggestion that Alexander I. had even the remotest connexion with any such plan ought to be scouted. The whole scheme reads very much like a *réchauffé* of that of Cadoudal ten years before. De Maubreuil's whole career shows how much of the legendary can gather around a man; but this work does little towards winnowing fact from fiction. As the author says later (p. 269): "Whenever a conspiracy was suspected certain sapient police agents pretended that they detected his (de Maubreuil's) hand in it." Seeing that this was so, Mr. Vizetelly should have hesitated before bringing the name of the Czar of Russia into connexion with a conspiracy the details of which are on many grounds open to grave suspicion. To do him justice, the author supplies the means to check his narrative, and sometimes points out discrepancies in the evidence. By excluding the merely sensational and strengthening the critical side of his work he would have increased its real interest.

Hierurgia Anglicana. Part III. Edited by Vernon Staley. (De La More Press.)—The editor of this new edition of 'Hierurgia Anglicana,' originally issued in 1848, can fairly claim that it is "revised and considerably enlarged." The third volume deals with questions of ritual and discipline, as contrasted with ceremonial; fully two-thirds of the paragraphs or excerpts are marked by the asterisks which signify that they did not appear in the original edition. This volume is certainly not so interesting or valuable as its predecessors; in fact, the greater part of it is a mere scrap-book of controversial docu-

ments and declarations of particular coteries of clergy who have thought it advisable to make *ex parte* pronouncements in modern days on such questions as the Eucharist, confession, inspiration, ceremonial, &c. Even the answer of the two archbishops to the apostolic letter of Pope Leo XIII. on English ordinations, though it has recently had a very wide circulation of its own, is dragged in and reprinted in full. At this rate, there seems no reason why the work should not be spun out to six or more volumes, instead of being concluded in three. It is difficult to understand on what principle selections have been made illustrating such matters as the post-Reformation use of Church discipline in a white sheet, or licences for eating meat in Lent, &c. Much more striking and far later examples could have been easily found if greater diligence and care had been exercised.

Thought Transference. By Northcote W. Thomas. (De La More Press.)—The title of Mr. Thomas's book on 'Thought Transference,' describes it as "a critical and historical review of the evidence for telepathy, with a record of new experiments." Two hundred and ten pages hardly suffice for an historical review of the evidence, even though what are regarded as "spontaneous" cases of telepathy (*e.g.*, wraiths coinciding with a crisis) are not discussed and experiments in crystal-gazing, though a few are given, are treated in a separate volume by the same author. Mr. Thomas, though his work is that of popularization, is not a born *vulgarisateur*. His style and logic are so serried that the general reader, who wants to know "what it is all about" at the least expense of trouble and reflection, will scarcely find in this book the thing that he desires. "Ces choses ne se disent pas succinctement." From the beginning the burden of Mr. Thomas's book is that the experimental proofs of thought transference (as by guessing numbers, cards, diagrams, and so forth, known to another person) are insufficient, are not recent, and are subject to discounts of various kinds, from collusion to hyperæsthesia. The Society for Psychical Research, he says, have almost abandoned this sort of experiments in favour of study of entranced mediums, like Mrs. Piper and others, who (in trance, if not when awake) indicate that they are in touch with surviving dead spirits. Mr. Thomas insists on the need of full and immediate record of more experiments in thought transference. He himself has taken part in many, in 1902, and the account does not seem encouraging to ourselves. For example, the telepathy, if it existed, was not "tele" enough; the experimenters were only seven feet distant from each other, though separated by a double screen. Mr. Thomas is better pleased with some of the results than, to judge from his descriptions, we can bring ourselves to be. If the "percipient" sees (in a glass ball this time) animals and men which were not in the picture which she should have seen, the thing is not good enough. To adopt the convenient language of Bisley, only five shots were bull's-eyes. Out of 160, nine were centres, and thirty-two, if favourably scanned, were outers. The best we can say is that, with a little collusion, or a little hyperæsthesia, or a little "unconscious whispering," the results ought to have been much better. Excellent directions for making experiments are given, but they involve minute care, and, if the results are good, they will be explained away easily, as the taste and fancy of the explainer may direct. This is discouraging, and, in Mr. Thomas's opinion, "much more systematic effort is needed before we can safely assert that telepathy is a proved fact"—that is, "a fact proved by direct experiment." We entirely agree with him, and conceive that we can only be led to believe that there is "a sort of a something"—an exercise of faculty not officially recognized—by the evidence of many well-recorded spontaneous cases of coincidental appearances. These, whatever they may be, are not the result of conscious mental effort by the "agent" and the "percipient," as in the experiments.

As to "telepathy," Mr. Thomas not superfluously repeats that the term conveys no hypothesis: "is not a theory, but a designation," covering a large set of alleged experiences, but not pretending to explain them. Even the definition of telepathy as "an influence of mind on mind exerted through other than the ordinary channels of the senses" seems too explicit. What is "mind"? The ordinary senses, again, appear to be active in the phenomena, but not in the ordinary way. The facts happen; that is all we can say, speaking for ourselves; we say nothing about "the deadly heresy of action at a distance." We would merely go on collecting examples of the facts, subjecting them to critical examination, and trying to popularize a sense of the need of exact, contemporary, and legally attested records. An instance reaches us of what is called "telepathy" between Australia and England—the appearance of A in New South Wales to B in England, the communication by A to B of an accurate piece of information, the contemporary record in B's diary, and so on. We can do no more than cross-examine the narrators and file their statements for reference in company with cases of failure, as when A's message to B, in similar circumstances, is false. We are "prepared," as Mr. Thomas says, "to leave the explanation to future generations." All that psychical research has to do is to collect, criticize, and record the alleged phenomena, forswearing metaphysics. The practice is useful, as a check on the natural inaccuracy of the human mind. Faulty as many psychical records are, they are not more so than the daily distortions of evidence which we meet, for example, in works of history. Mr. Thomas, had he wished to be truly popular, would have included more anecdote, and less criticism and polemics with dealers in objections of science. These gentlemen seldom, in our experience, take the trouble to get up their cases carefully, or to understand what their opponents mean.

Crystal Gazing, the book we have referred to above, is also published by the De La More Press for Mr. Thomas, and is enlivened by an introduction from the pen of Mr. Lang, who has already dealt with the subject in his book 'The Making of Religion.' His witty *résumé*, with a record of striking experiments within his knowledge, should, we think, persuade the unprejudiced person that there is something in "scrying" or crystal gazing. It seems allied to 'Illusions Hypnagogiques,' but Mr. Lang points out that in the experiments with which he was concerned the percipients were all awake, and did not suspend such ordinary operations as smoking. Mr. Lang very properly suggests that "some official professor of psychology might make experiments." The view which classes all percipients as liars, practical jokers, or hopelessly neurotic and abnormal persons ought no longer to command general respect. Mr. Thomas's historical survey shows that experiments of the kind—combined, no doubt, with a great deal of nonsense—have been made centuries back, and, coming to more recent times, by the famous Egyptian scholar Lane, and by Kinglake, for whom an Arab boy "saw a lovely, golden-haired, azure-eyed girl, when Kinglake was thinking of the flogging Eton head master, Dr. Keate." There are, however, records of modern visions, or guesses, if the reader prefers it so, by Miss Angus, which are enough to startle the most Philistine unbeliever by their accuracy in detail. Some few experimenters can trace the genesis of the crystal picture to actual points of light and dark in the glass; but this is not apparently the general experience. Mr. Thomas's book ought to clear away some of the prejudice attached to the subject, of which no explanation can be expected until we have a large number of well-attested data justifying comparative conclusions. It is astonishing that the visualizing faculty should remain generally unrecognized, important as it is to many people who profit by its possession. Incidentally we find references to M. Blondlot's N rays, and his unenviable position. But, as Mr. Lang hints, unmerited obloquy is not new in the field of research.

The France Book, designed and coloured by M. Lanchester (De La More Press), is a charming little book, written and illustrated to teach a small child something of what geography means. It is admirably adapted for its purpose. The drawings are simple, just fitted for a child, without any superfluous ornament, and the teacher can explain everything in them without wandering from the subject. We heartily commend the book to any mother or aunt who may wish to follow Miss Lanchester's example without having her skill with pen and pencil. The part of France described is that seen on a round tour from Dieppe to the Vosges and back to Ostend.

The Catalogue of the Imperial Library at Calcutta bears evidence of its compiler's experience in the British Museum in its completeness and thoroughness. The modifications in plan introduced to meet the special requirements of the case show Mr. Macfarlane's ability as a librarian.

We have on our table *The Truth about Man*, by a Spinster (Hutchinson),—*The Fall of the Grand Sarrasin*, by W. J. Ferrar (S.P.C.K.),—*Virginia*, by L. T. Meade (Digby & Long),—*The Dog from Clarkson's*, by Desmond F. T. Coke (Jarrold),—*A Doctor in Corduroy*, by Max Baring (Greening),—*The Matrimonial Bureau*, by Carolyn Wells and Harry Persons Taber (Nash),—*The Reason Why*, by Iza Duffus Hardy (Digby & Long),—*The Suburbans*, by T. W. H. Crosland (John Long),—*Pioneers*, by Silas K. Hocking (Warne),—*Horses I have Known*, by "G. G." (H. G. Harper), (John Long),—*Stories and Essays*, by Kate Scanlen (Drane),—*Old Testament Criticism in New Testament Light*, by G. H. Rouse (R.T.S.),—*Talks with Lay Preachers*, by R. F. Horton (Melrose),—*The Gospel of St. Mark in West-Saxon*, edited from the Manuscripts by J. W. Bright (Heath),—*The Meaning of Rationalism, and other Essays*, by Charles Watts (Watts),—*Mediæval and Modern History*, by Philip Van Ness Myers (Ginn),—*Studies on Anglo-Saxon Institutions*, by H. Munro Chadwick (Cambridge, University Press),—*The State and Agriculture in Hungary: Report of Dr. Ignatius Darányi*, translated by Andrew György (Macmillan),—*The Geology of the North Staffordshire Coalfields*, by Walcot Gibson (H.M. Stationery Office),—*Zanzibar in Contemporary Times*, by Robert Nunez Lyne (Hurst & Blackett),—*Twenty Years in the Far East*, by William Spencer Percival (Simpkin & Marshall),—*Life of Michael Bruce*, by James Mackenzie (Dent),—*Spectroscopy*, by E. C. C. Baly (Longmans),—*Foundations of Sociology*, by E. A. Ross (Macmillan),—*Reinforced Concrete Construction*, by A. W. Buel (Constable),—*Riding and Driving*, by E. L. Anderson and P. Collier (New York, the Macmillan Company),—*Schiehallion*, by Rev. John Sinclair (Stirling, Mackay),—*Sonnets and Songs*, by A. T. Strong (Blackwood),—*The Ballad of Rosalie, and other Poems*, by Ethel Neele (Gooderham),—*The Gull's Hornbook*, by Thomas Dekker, edited by R. B. McKerrow (Moring),—*Bussy d'Ambois and the Revenge of Bussy d'Ambois*, by George Chapman, edited by F. S. Boas (Heath),—*An*

Elementary Algebra for Junior Students, by J. Lightfoot (Holland),—*Susan Clegg and Her Friend Mrs. Lathrop*, by Anne Warner (Dean),—*Purple and White*, by H. Byatt (Everett),—*The Passenger from Calais*, by Major Arthur Griffiths (Nash),—*Maurice Woodvil*, by Errington Gray (Walter Scott),—and *The Pride o' the Morning*, by Agnes Giberne (Brown & Langham). Among New Editions we have *Life of Madame Guyon*, by Thomas C. Upham (Allenson),—*A Digest for the Intermediate Examination of the Law Society*, by R. M. Stephenson (Cox),—*The Principles of Argumentation*, by G. P. Baker and H. B. Huntington (Ginn),—*The Preparation and Mounting of Microscopic Objects*, by Thomas Davies (Pearson),—and *Hints on Early Education*, by Mrs. Hoare (S.P.C.K.).

LIST OF NEW BOOKS.

ENGLISH.

Fine Art and Archæology.

Florence, by A. Philippi, translated by P. G. Konody, roy. 8vo, sewed, 4/ net.
Pictures in Colour of Warwickshire, with Notes by F. L. Sabatini, 4to, 2/6 net.

Poetry and the Drama.

Pilgrim of India (The), cr. 8vo, 3/6 net.

Geography and Travel.

'THE BON GAULTIER BALLADS.'

12, South Castle Street, Liverpool, August 9th, 1905.

I am indebted to your correspondent Mr. James Sinton for drawing my attention to the publication of a seventeenth edition of this book, containing a list of all the editions issued. I suggested the publication of such a list to Sir Theodore Martin as far back as November, 1903, immediately after the issue of the sixteenth edition, and was not aware that the suggestion had been adopted.

Having the said list before me, I venture to suggest that the compiler has fallen into an error in regard to the third and fourth editions, and that consequently Mr. Sinton, by following the list without having the two editions before him, has also fallen into the same error. The third and fourth editions are the only two undated, and my reasons for placing one before the other are as follow. The one I place third contains the *same* rustic border round the pages as the second edition, and not "corner cartoons" (or an Elf border), as stated in the official list. It also contains a new frontispiece, signed "A. Crowquill Del., J. Lee Sc.," printed on a yellow background; also nineteen illustrations which did not appear in the previous edition; and two new ballads, 'Little John and the Red Friar' and 'The Rhyme of Sir Launcelot Bogle.'

In the edition I have placed fourth the frontispiece is reprinted *without* the yellow background; the name of the artist and engraver are omitted, having been rubbed off the stone, together with a small part of the original design, when the yellow background was removed; the said frontispiece is enclosed by a double-line gold border, matching the border-line round the illuminated title-pages of that and the previous editions. All the ballads in the edition I place third are reprinted in this edition, and a new ballad, 'The Meeting,' is added; while a new border, viz., the Elf border, replaces the rustic border of the second and third editions. All the illustrations in the edition I have placed third are reprinted in the one I have placed fourth.

I consider that as the edition I have placed third contains the same border as the second edition; that as the new frontispiece appears in a full and complete form in this edition only; and that as the edition contains one ballad less than the edition I placed fourth; together with the fact that the edition I place fourth shows unmistakeable signs of change, both in respect of frontispiece, border, and the ballads themselves; and all these circumstances, combined with the fact that no one having the two editions before him could doubt that the illustrations in the one I have placed fourth are reprints of those in the one I have placed third—all these facts are, I consider, so nearly conclusive as to justify my contention until stronger evidence to the contrary has been produced.

If I am right in placing these two editions as I did in my bibliography for the reasons now given, then it follows that my statements as to the Elf border are also correct. In any case, the statement in the 'List of Editions,' printed in the seventeenth edition of the book, that corner cartoons (or the Elf border, as I named it) were used in the third and fourth editions cannot be correct, for we have already seen that one of those editions contains the same rustic border as the second edition. It also follows that the sixteenth and seventeenth editions were the second and third (not the third and fourth as stated in the list) to contain the Elf or cartoon border.

I thank Mr. Sinton for his flattering reference to my previous contribution, and I can assure him that a minute comparison of the various editions of this interesting volume will repay the time it costs if his interests lie that way. The greatest difficulty is to obtain the complete series of editions, and, as stated before, my own collection is probably the only one that exists at present.

Henry Selden Young.

DRYDEN'S 'ART OF PAINTING.'

I cannot allow the assertion of my friend, Mr. Edmund Gosse, that the first edition of Dryden's paraphrase of Du Fresnoy's 'De Arte Graphica' (1695) is "one of the rarest [works] in the literature of its time" to pass unchallenged.

I can never remember the time when this was other than a fairly common book. It is frequently found in booksellers' catalogues, and I myself bought a copy the other day for a few shillings. This, of course, does not lessen the great interest of Mr. Gosse's communication, but it does accentuate the amazing action of editors of Dryden, who, instead of reprinting that great writer's work, foisted on the public Jervas's version, which was stated by its editor to be corrected and amended from Dryden's original translation.

'A Table of the Precepts,' which Mr. Gosse says is omitted in the edition of 1716, is included in the third edition (1750), edited by Richard Graham, the author of the 'Short Account of the Most Eminent Painters, both Ancient and Modern,' which is described in the first edition (1695) as "by another hand."

I had the privilege many years ago of handling an interesting copy of Dryden's first edition in a private library situated not many miles from London, which contained Pope's original verses 'To Mr. Jervas with Fresnoy's Art of Painting; translated by Mr. Dryden,' printed in 1717, and also included in the third edition of Dufresnoy (1750). This library was dispersed a few years ago, and I do know where this copy is now.

Henry B. Wheatley.

August 14th, 1905.

Referring to Mr. Edmund Gosse's communication under the above heading in your issue of the 12th inst., it will no doubt interest many if I furnish (as below) my copy of the advertisements contained in some contemporary newspapers, which have hitherto escaped research, respecting the rare original edition of this book. The statement that it was published on the 27th of June, 1695, I cannot, however, confirm. Indeed, one of these advertisements, which appeared in print at least six days earlier than that date, seems to show that it was either published or ready for publication between the 14th and 21st of that month.

In a scarce and curious small folio weekly, entitled *A Collection for Improvement of Husbandry and Trade*, vol. vii. No. 151, Friday, June 21st, 1695, I find, under "Advertisements":—

"De Arte Graphica, The Art of Painting, by C. A. Du Fresnoy; with Remarks. Translated into English: Together with an Original Preface containing a Parallel betwixt Painting and Poetry. By Mr. Dryden. As also a Short Account of the most Eminent Painters, both Ancient and Modern, continued down to the present Times, according to the Order of their Succession, by another Hand. London, Printed for W. Rogers at the Sun against St. Dunstan's Church in Fleetstreet. 1695."

Except an insertion of a similar advertisement in *The London Gazette*, No. 3092, July 1st, 1695, which issue covers the period from the 27th of the previous month, I find no earlier or later notice in the like sources respecting this edition. Upon collating the advertisement with the full title, as given by Mr. Gosse from the copy of the book to which he had access, it will be apparent how closely they agree.

William J. Harvey.

With reference to Mr. Edmund Gosse's article in last week's *Athenæum* on the 1695 edition of Dryden's paraphrase of Du Fresnoy's 'De Arte Graphica,' it may be useful to know that a copy (750 D 1) of that edition can be seen in the Manchester Free Reference Library. It is printed on thick paper, and is complete. The Library acquired it in 1894.

A copy of the book referred to in Mr. E. D. Ross's note in the same issue—Capt. Symson's 'New Voyage to the East Indies,' 1715—is also in the same library (915–4 S 12). Two variations from Mr. Ross's transcript of the title-page may be noted: "peculiar" is "particular," and the price 3*s.* 6*d.*, not 13*s.* 6*d.*

J. H. Swann.

THE LOST EIGHTH-CENTURY GREGORIANUM OF THE ROMAN CHURCH.

II.

In a previous communication I endeavoured to explain and justify my theoretical reconstruction of the "Gregorianum" from which Alcuin seems to have taken most of the component materials of his Libellus; and I intimated that a comparison of the materials which by my hypothesis he excluded from his little book and of those which by the same hypothesis he co-opted into it from sources foreign to the "Gregorianum" enforces the claim to substantial veracity which I make in behalf of that reconstruction. To this latter subject, in so far as it concerns the period between Advent Sunday and Maundy Thursday, I now invite the attention of scholars.

My hypothesis assumes that Alcuin, working upon an early eighth-century "Gregorianum" of the Roman Church, possibly and presumably the book that Adrian I. sent to Charles the Great, displaced or discarded its masses for the following occasions:—

Advent: 345, 378, 335, 485, 325, 872, 349	3089
After Christmas: 432, 324	756
„ Epiphany: 301, 318, 298	917
„ „ 370	370
„ „ 304, 280	584
St. Soteris (II. x.: 28)	274
St. Juliana (II. xii.: 29)	513
St. Peter's Chair (II. xxx.: 30)	439
SS. Perpetua and Felicitas (II. xiii.: 30)	428
	7370

Here in the case of doubly allotted items I add in Roman numerals the references to the Queen of Sweden's "Gelasianum," and in Arabic numerals the reference to Gerbert's edition of the St. Gallen hybrid. The De Tempore masses are easily found at Mur. Greg. 133 *et seqq.* and 158 *et seqq.*

On the other hand, my hypothesis assumes that Alcuin introduced new work as follows, where the bracketed references are to Muratori:

Eight *aliæ* (10–12): 116, 197, 216, 149, 182, 182, 179, 213	1434
Two „ (13): 162, 155	317
Two „ (13, 14): 175, 173	348
One *alia* (14): 169	169
Mass and two prayers (15, 16): 400, 118, 136	654
Seven *aliæ* (17, 18): 152, 130, 171, 146, 159, 114, 150	1022
Three „ (24): 122, 126, 113	361
	4305

Since, then, the difference between these totals is (7370−4305=) 3065, I see in it a confirmation of my theory concerning the material contained in the document on which Alcuin worked. What he found in that book for the period beginning with Advent Sunday and stopping short at the Annunciation had the value of (4563+4569+4570+4569=) 18271 (=48×380$\frac{3}{14}$) letters, or 48 pages;* what in his Libellus he gave to his contemporaries had the value of (18271−3065=) 15206 (=40×380$\frac{5}{70}$) letters, or 40 pages. That is to say, he found 12 membranes of rubric and text, but he left 10. I observe, however, that he was less constantly ingenious than his predecessors of the "Gregorianum," for although, as the curious reader will see for himself, his "Yppapanti" began at the head of a *verso* page, his Epiphany was less fortunate. Like contrasts between ultimate success and intermediate failure to succeed await us in the sequel.

For the interval between the Annunciation and Maundy Thursday he discarded the doubly allotted mass for the Saturday after Quinquagesima (I. xvii: 36) in 513 letters, and by way of compensation introduced

Two prayers (30): 83, 92	175
Two *aliæ* (34): 120, 83	203
One *alia* (43): 145	145
	523

the insignificant difference of 10 letters being distributed over 66 pages.

Divisions E, F.—I have already remarked in No. 3989 of *The Athenæum* that the Benedictio Salis at Mur. Greg. 60 looks like a post-editorial addition to the Libellus. It is equally irreconcilable with the manifest plan, whether of Libellus or of "Gregorianum." I therefore exclude it from computation, and, merely observing that Alcuin seems to have left this part of the document as he found it, summarize it thus:—

E.

	I.		II.
Good Friday	3021

Division G.—We now enter on the post-Paschal series, which, like the Lenten group, would seem to represent three editorial efforts, the second and third more ingenious than the first. (1) If I am right in attributing the last of them to Gregorius Dialogus we must, tentatively at least, neglect the feast of St. George, whose institution cannot safely be assigned to an earlier date than the year 742.* On the other hand, (2) I reinstate, for reasons explained in No. 3989, the *Pascha annotinum*, SS. Nereus and Achilleus and the Vigil of the Ascension. (3) I eliminate the numerous *aliæ* which my theory attributes to Alcuin; (4) I set in their proper places, printing them in italics, the items which it assumes him to have cancelled; and (5) I group in the first of the paired columns headed "I." the values for anniversaries which it assumes Gregory the Great to have recognized before he issued his sacramentary, (6) setting in the second that for April 25th and those for two others which the *terminus a quo* already found for the nucleus invites me to add to it. I refer to the Dedication of S.M. ad Martyres (A.D. 607–614) and to the Invention of the Cross, which, though of unknown date, cannot prudently be thought posterior to the Exaltation, a feast instituted by Honorius I. (625–638). The result is all that could be wished in justification of this the complex resetting demanded by my theory. The first redaction filled the 16 pages of a quaternion, the second and third expanded these to 20 and 22 pages respectively. But so adroitly was the new work economized that the masses for the greater litanies, for SS. Philip and James, and for the Invention of the Cross had each of them the distinction of a fresh page; the first of these objects being effected by the simple expedient of adding an *alia o'io in atrio* (Mur. Greg. 80) of 126 letters to the preliminary prayers. The vertical cleavages and transverse subdivisions are as follows:—

	I.	II.	III.
Pascha annotinum [N.B.]			758
By *γ*: 2×379=			758
Second Sunday	344		
St. Euphemia			347
SS. Tiburtius, &c.* * *	383		
Third Sunday	375		
[St. George, 399]			
April 25th, Prayers		708	126
By *β*: 6×380$\frac{1}{2}$=2283=	1102,	708,	473
By *γ*: 8×380$\frac{1}{8}$=3041=	1102,	708,	473, 758
April 25th, Mass		331	
St. Vitalis*			349
Fourth Sunday	429		
From the following	33		
By *β*: 9×380$\frac{5}{9}$=3425=	1564,	1039,	822
By *γ*: 11×380$\frac{3}{11}$=4183=	1564,	1039,	822, 758
SS. Philip and James	327		
SS. Alexander, &c.	396		
St. Juvenalis, conf^{r}			395
From the following		18	8
By *β*: 12×380$\frac{3}{4}$=4569=	2287,	1057,	1225
By *γ*: 14×380$\frac{1}{2}$=5327=	2287,	1057,	1225, 758
Inventio s'cæ Crucis		508	
Fifth Sunday	329		
Port Latin Day			298
SS. Gordian, &c.	385		
SS. Nereus, &c.* * [N.B.]	369		
St. Pancras*	355		
S.M. ad Martyres		364	
Vigil of Ascension [N.B.]	436		
By *α*: 16×380$\frac{1}{8}$=6090=	4161,	1929	
By *β*: 20×380$\frac{1}{10}$=7613=	4161,	1929,	1523
By *γ*: 22×380$\frac{1}{2}$=8371=	4161,	1929,	1523, 758

How, then, did Alcuin deal with this? Simply, but sagaciously. He omitted—

Four Sundays: 344, 375, 429, 329	1477
St. Euphemia (II. xv.: 105)	347
St. Juvenalis (II. xvii.: 111)	395
Inventio s'cæ Crucis (II. xviii.: 112)	534
	2753

He inserted—

One *alia* (76)	138
Eighteen *aliæ* (76–78): 178, 137, 212, 188, 133, 162, 206, 160, 98, 145, 111, 194, 104, 91, 155, 124, 85, 141	2624
Two *ad complendum* (78): 116, 143	259
St. George	399
One *alia ad complendum* (81)	95
	3515

The difference between these totals is 762; so that, whereas he found 8371 letters, distributed over five membranes and a half, for the interval between the Octave of Easter and Ascension Day, he left (8371+762=) 9133 (=24×380$\frac{13}{14}$) letters, or the complement of two *terniones*.

Division H.—This is full of interest. Let me begin with Alcuin, who had nothing to cancel but one Sunday mass of 270 letters, who wanted more space than its removal allowed him, but who yet was bibliographer enough to wish the Whitsun Eve office to begin, as heretofore, at the head of a *recto* page. By substituting—see Mur. Greg. 85, 86—"In ascensca d'ni" for "In ascensione d'ni ad sc'um petrum," by omitting "cum angelis" at the end of the Preface, and by boldly docking the Communicantes of a necessary clause, he made the mass for the

* See *The Athenæum* of August 5th, p. 179.

* On this see my Canterbury Missal, p. xxii.

Ascension shorter by (3 + 12 + 13 + 64 =) 92 letters than its normal value—a number which, added to the 270 of the cancelled mass, yielded a total abatement of 362 letters, the precise equivalent of the two very beautiful *aliæ* now found at Mur. Greg. 86.

But at Mur. Greg. 88, 89, and preceding the first Whitsun mass, there are two pairs of *aliæ* which must be due to successive editors of the "Gregorianum" itself; the second of them to the compiler of the primary document, as necessary "padding" for his pages, ten in number; the first to the compiler of either β or γ, who, burdened with the mass for St. Urban, was fain to expand by whatever means ten pages to twelve, and who must be held responsible for the needless 20 letters of "In sabbato pentecosten," another piece of "padding," smuggled in at the foot of his ninth page. The two redactions may be thus formulated :—

	I.		II.
Ascension Day	912		
Sunday	270		
St. Urban*			325
From the following	15		
By β or γ: $4\times380\frac{1}{2}=1522=$	1197,		325
Prayers and lessons	1096		
Additional prayers			410
Additional prayers		370	
Superfluous rubric			20
By α: $7\times380\frac{3}{7}=2663=$	2293,	370	
By β or γ: $9\times379\frac{5}{9}=3418=$	2293,	370,	755
First Whitsun Mass	1134		
From the following	11		
By α: $10\times380\frac{2}{5}=3808=$	3438,	370	
By β or γ: $12\times380\frac{1}{4}=4563=$	3438,	370,	755

Division I. — Liturgical compilers in the eighth century were familiar with two groups of ember masses designed for the second quarter of the year. One of these began with the prayer "Mentes nostras," &c., the other, considerably longer, began with the "Omnipotens et misericors," &c. I believe that both were St. Gregory's, but that the latter represents his maturer judgment; and that, though either might have been adopted by the compilers of the book I am endeavouring to reconstruct, the latter had the stronger claim on their choice, and is therefore the more likely of the two to have been preferred by them. But this is precisely the group which Alcuin's theory would seem to have required him to supersede; for it is the group which, if the Queen of Sweden's book (I. lxxxiii) may be trusted, he must have found in the sacramentary that served as his criterion of "gelasianism." Has he superseded it? I think so; first, because, although his "Mentes nostras" is replete with Pentecostal suggestion, and was clearly meant for use in Whitsun week, he has appended to it, with an unmistakable "Die dominico uacat," the mass proper to the third Sunday of the post-Pentecostal series; and, secondly, because this mass has, on his own theory, no right to a place in his collection, for it recurs in the appendix (Mur. Greg., 165). I infer, therefore, that what Alcuin found was the group "Omnipotens," &c., and (1) set down their totals, 539, 406, 1064, accordingly; (2) I distribute three Sundays over as many weeks of menology; (3) I introduce, in obedience to my theory, the doubly allotted *missæ* for St. Cirinus, &c., and for St. Vitus, and (4) reinstate that for SS. Primus and Felician, which I believe to have been in the first edition of the Libellus, if not in that represented by surviving copies. These conditions fulfilled, I remember that the basilica of St. Nicomedes was dedicated by Boniface V. (A.D. 617 *et seqq.*), predecessor of the Honorius who has given us our *terminus a quo*, and therefore (5) set the value of its commemorative mass in the second of the paired columns under I. The result is this :—

	I.		II.
Whitsunday	859		
Monday	336		
Tuesday	316		
From the following	9		
By α: $4\times380=$	1520
